3. Granting the request and permitting the development of the subject property with a stadium having even considerably less than the seating capacity here proposed would be materially detrimental to public welfare and to the character of the existing and potential development in the immediate neighborhood unless detailed conditions and limitations are imposed governing among other things the following matters:

   (a) Approval of plans, plot plans, and landscaping plans for the Stadium, various buildings and development of the site;

   (b) Provision of adequate offstreet automobile parking facilities and public transportation facilities;

   (c) The recording of Tentative Subdivision Tract No. 25130 including dedication and improvement of certain boundary streets, the installation of various public utility and drainage facilities and the opening and widening of access roads to the Stadium site as recommended by the City Engineer and Traffic Department for handling generated traffic, all prior to utilization of the Stadium for public assembly purposes;

(d) Relieving the City police and traffic officials of responsibility for directing and controlling pedestrian and vehicular traffic on the private streets and roads within the Stadium facility;

(e) The control of lights, public address systems, and signs so as to prevent annoyance to occupants of adjacent properties;

(f) Control over the frequency of large crowd events in the Stadium, other than baseball, and control over the timing of events to reduce conflict with the peak evening traffic rush on weekdays and anticipated weekend and holiday traffic during the daytime if the World Zoo is built in Elysian Park; and

(g) Retention of essentially the entire property as the site for the Stadium and its accessory and appurtenant structures;

however, under the detailed conditions and limitations hereinafter set forth, granting the request will not be materially detrimental but will assure for Los Angeles a modern Major League baseball stadium of which it can be proud as a home for its "Dodgers". Furthermore, development of this property as proposed will return this dormant area to the tax rolls and provide a "paying partner" for other taxpaying citizens of the community.

Therefore, by virtue of authority contained in Section 98 of the City Charter and Section 12.24-C of the Municipal Code, the development and use of that approximately 275-acre area of land described as Parcels 1 through 7, inclusive, in Exhibit "A" attached to the application and as depicted on the 300-ft. radius map marked Exhibit "B", attached to the application, both of which are by reference included in and made a part hereof, and which, when recorded, will include all of the land constituting Tentative Tract No. 25130, except for the area depicted thereon as Lots 2, 3, 4, 10, the northeasterly 85 ft. of Lot 13, any additional land adjacent to Lot 2 necessary to provide the full 40-acre recreation area in compliance with Condition No. 16 of the subdivision tract approval, and portions thereof to be dedicated or reserved for public streets or public ways; and all located in that general area known as "Chavez Ravine" and located northeasterly of the complicated intersection of Elysian Park Avenue, Chavez Ravine Road, Lilac Terrace, and Boylston Street, as a site for the construction, maintenance and operation of a Major League baseball stadium having a seating capacity of not to exceed 56,000 persons instead of the maximum 3,000-seat stadium automatically permitted, together with automobile and transportation vehicle parking facilities and the following appurtenant and accessory structures and uses:

1. Staff Quarters buildings,

2. Hall of Fame museum type building,

3. Will Call and advance ticket sales buildings,

4. "Knot Hole" gang clubhouse,

5. Ticket and parking booth structures including souvenir sales facilities and security guard gate houses,

6. Automobile service and filling station,

7. Greenhouses and maintenance yard facilities,

8. "Mule Train" Depot,

is hereby authorized as far as zoning regulations are concerned, all upon the following terms and conditions:

1. That the baseball stadium herein authorized shall have a maximum seating capacity of 56,000 persons and shall be constructed and located on the C2 zoned portion of the site in substantial conformity with the plot plan (Exhibit "M"), the architectural rendering (Exhibit "K"), and the architectural plans (Exhibits F-1 and 2) submitted with the application. Furthermore, that complete plans for the Stadium building together with general plot plan for developing the site showing location and arrangement of offstreet automobile parking areas, on-site roadways and other details be first submitted to and approved by the Chief Zoning Administrator before any building permit for the Stadium development is issued or construction work thereon is started.

2. That all accessory and appurtenant buildings and structures shall be of attractive design to harmonize with the general stadium atmosphere, not exceeding two stories in height, and all located on the C2 zoned portion of the site and at least 75 ft. from the exterior boundary of the site area. Furthermore, that plans for each of these buildings and uses together with plot plan showing the location on the site shall be first submitted to and approved by the Chief Zoning Administrator before building permit is issued for the particular building or construction thereof if started.

3. That automobile parking facilities for a minimum of one (1) automobile for each 3.6 seats provided in the Stadium shall be provided and maintained on the site generally as shown on Exhibit "G" (1). Furthermore, that the parking facility shall be so laid out and improved that each parking space is readily accessible for self-parking and removal purposes in full compliance with the regulations of Section 12.21-A, 4 and A, 6 of the Municipal Code, except that not to exceed 15 per cent of the minimum parking spaces required above may be designed and arranged to accommodate the modern "compact" automobile,

with such spaces having minimum dimensions of 7.5 ft. x 16 ft., provided such spaces are arranged in groups to which only drivers of such compact cars may be directed.

4. That in addition to the above required automobile parking facilities, ample space shall be provided for loading and unloading of public transit busses, taxicabs and other mass transportation devices. Furthermore, the operators of the Stadium facility shall collaborate with the Metropolitan Transit Authority and other transportation agencies as well as the Traffic Department in devising mass transportation service to the Stadium site which will be sufficiently efficient to encourage patronage thereof and thus reduce the number of private automobiles driven to the Stadium events.

5. That the area around the Stadium building and parking areas, together with all portions of the site not utilized for buildings, parking area, driveways, streets, and maintenance yards shall be attractively landscaped and maintained in first-class condition at all times, said landscaping to include the space not used for paved sidewalks or driveways between the property line and curb along all public streets within the site or bordering on the site. The areas around the borders of the immediately to be developed portions of the site and which are held for future expanded parking facilities shall be kept free of weeds and debris with slopes created by grading operations covered with lawn, ivy, or other green ground cover. Furthermore, that a professionally prepared landscape plan for the entire site shall be first submitted to and approved by the Chief Zoning Administrator after rough grading is completed and prior to final grading and surfacing of the parking areas.

6. That prior to the issuance of a Certificate of Occupancy for the use of the Stadium or the use thereof for any spectator event or any public assembly purpose:

   a. The street dedications and improvements, the relocation and/or reconstruction of utilities, etc., required in connection with the approval of Tentative Tract 25130 be completed in a manner satisfactory to the concerned agencies and that Final Map of said Tract be recorded;

   b. That the access roads to the site be in an opened, widened and improved condition satisfactory to the City Engineer subject to the limitations of the $2,740,000 being provided by the County of Los Angeles to finance said improvements; it being understood that the City Engineer will consult with the General Manager of the Department of Traffic

concerning the adequacy of such access roads and that the use of any existing roads or opening of new roadways through adjacent Elysian Park shall be subject to approval of the Department of Recreation and Parks;

c. That the general site improvements including appearance of buildings, landscaping, lighting, and interior circulation and arrangements be reviewed and approved by the Chief Zoning Administrator.

7. That responsibility for the direction and control of both pedestrian and vehicular traffic on the private streets, roadways, and walks within the Stadium site area shall rest with the operators of the Stadium facilities subject to correlation with traffic control measures of the Police Department and the Traffic Department on the public streets providing access to the Stadium area.

8. That all lights installed in connection with the Stadium and the incidental automobile parking areas shall be so designed and deflected as to prevent annoyance to occupants of adjoining properties or interference with passing traffic. Furthermore, considering the predominant night use of the Stadium area and the elevated nature of most of the automobile parking areas, a hedge row of compact evergreen shrubs or a solid ornamental fence or wall having a height of approximately 42 in. shall be installed and maintained where necessary for the purpose of diffusing automobile headlight beams which otherwise would be disturbing and objectionable to existing or future residential developments on adjacent properties.

9. That all loudspeaker and public address systems utilized on the site shall be so modulated and directed that the sound emanating therefrom will not be detrimental to occupants of adjacent properties.

10. That considering the proximity of the immediately planned facilities to the homes along the easterly side of Boylston Street and the Barlow Sanitarium properties, special attention shall be given in the over-all landscaping plan to the planting and maintenance of hedge rows of broadleaf evergreen trees or dense evergreen foliage of sufficient height to screen the Stadium and related activities from these properties and to give the occupants thereof reasonable protection from noises, reflected lights, etc., emanating from the Stadium site. Furthermore, when the parking areas for expanded seating along the easterly and northerly portions of the site as indicated on Exhibit "G" (1) are developed, additional landscaping similar to that discussed above shall be installed to protect the adjoining residential property in the Yale Street-Lookout Drive area, the Figueroa Terrace-White Knoll Drive area,

the Amador-Solano Canyon area, and the adjacent Elysian Park areas, with the landscaping adjacent to Elysian Park meeting the approval of the Department of Recreation and Parks.

11. That the use of the Stadium and accessory and appurtenant facilities shall be limited primarily to the conduct of baseball games and activities incidental and accessory thereto. Any other use of the Stadium or premises for public assemblage events or spectacles which could attract in excess of 3,000 persons shall be limited to an average throughout the calendar year of not exceeding four (4) such events per month but under no circumstance shall there be more than two (2) such events in any one (1) week except on infrequent occasions when first approved by the Chief Zoning Administrator. Provided, however, that if, as, and when a zoo is developed in adjacent Elysian Park, consideration should be given to making the automobile parking facilities on the Stadium site available for automobile parking by visitors to the zoo. The Chief Zoning Administrator reserves jurisdiction to modify the provisions of this condition and to authorize an increase in the number of other events permitted throughout the year or in each week, if after actual observation of and experience with the Stadium in operation under varied crowd conditions, it is ascertained from reports of other concerned public agencies that a serious traffic problem would not result from such increased use.

12. That in order to avoid conflicts with the evening traffic rush hours, reasonable endeavor shall be made to avoid the scheduling of games or events which would begin earlier than 7:00 p.m. on weekdays Monday through Friday (legal holidays excluded); it being understood that some daytime games would be necessary to comply with League rules and schedules. Furthermore, that if, as, and when the proposed World Zoo is constructed and opened in adjacent Elysian Park, reasonable endeavor shall be made to avoid scheduling daytime games or other daytime events on Saturdays, Sundays or holidays unless in the opinion of the City Department of Traffic ingress and egress roads designed to be used jointly for those patronizing the Stadium area and the World Zoo area, are adequate to prevent the creation of a serious traffic problem or adequate traffic control systems are set up and enforced to prevent traffic conflicts between groups attending both installations; provided, however, that when necessary to hold daytime baseball games or other events on a Saturday, Sunday, or holiday, the operators of the Stadium shall cooperate with the Departments of Police, Traffic and Recreation and Parks in devising and enforcing traffic control systems which will minimize traffic conflicts between persons attending the game and those visiting such a World Zoo.

13. That the entire site described in Exhibit "A" attached to the application and which is the subject of this Conditional Use, except for such areas as may be dedicated for public streets, easements, or ways, the minimum five-acre oil drilling site referred to in the contract and sufficient land to provide the 40-acre recreational area also referred to in the contract, shall be utilized as a site for the Stadium development, the offstreet automobile parking areas and the accessory and appurtenant structures and uses, all as herein authorized; provided, however, that if and when approval is first obtained in each instance from the Chief Zoning Administrator, sliver and residue parcels resulting from the grading and development of the property may be utilized for other purposes permitted under the applicable zoning regulations.

14. All signs established and maintained on the property and which can be seen from outside of the Stadium shall be limited to identification or directional signs or a sign to identify a sponsor of Stadium broadcasts, all of a conservative nature and in harmony with the site development. Furthermore, that the design, nature, and location of all such signs except nonilluminated directional type signs shall be first submitted to and approved by a Zoning Administrator before being placed on the property.

15. That in view of the extensive grading operations to yet be performed on the site and difficulty of visualizing the final grade level of the various portions of the property with that of adjoining properties in both public and private ownership and the effect the use of final graded property might have upon these adjoining properties, the Chief Zoning Administrator reserves the right to specify additional conditions such as provision of additional landscaping or enclosing fixtures or to require corrective measures to be taken if he finds after actual observation or experience with the finished development and its operation that such additional conditions are necessary to afford more effective protection to surrounding property or to better integrate the use with that of adjacent property.

16. That the landscaped areas on the property shall be equipped with a well-designed watering or irrigation system which shall be installed prior to the issuance of any certificate of occupancy. Furthermore, that all the landscaped areas and the grounds, structures and improvements on the site shall be maintained in a first-class, attractive and safe condition at all times.

17. That the maintenance yard for the development shall be so located in a depressed area of the property or so enclosed and screened as to provide no unsightly appearance to adjacent properties including Elysian Park, with

the details of the location and enclosures approved by the Chief Zoning Administrator.

18. The use hereby authorized is conditional upon the privileges being utilized within one hundred-eighty (180) days after the effective date hereof, and if they are not utilized or construction work is not begun within said time, and carried on diligently to completion of at least one usable unit, this authorization shall become void, and any privilege or use granted hereby shall be deemed to have lapsed, unless a Zoning Administrator has granted an extension of the time limit, after sufficient evidence has been submitted that there was unavoidable delay in taking advantage of the grant. Once any portion of the privilege hereby granted is utilized, the other conditions thereof become immediately operative and must be strictly complied with. Furthermore, that this Conditional Use approval shall be subject to revocation in the same manner as provided under Section 12.27-B, 7 of the Municipal Code for revocation of zone variances, if the conditions herein contained are not strictly complied with.

The applicants' attention is called to the fact that this grant is not a permit or license, and that any permits and licenses required by law must be obtained from the proper public agency. Furthermore, that if any condition of this grant is violated, or if the same be not complied with in every respect, then the applicants or their successors in interest may be prosecuted for violating these conditions the same as for any violation of the requirements contained in the Municipal Code. In the event the property is to be sold, leased, rented, or occupied by any person or corporation other than yourself, it is incumbent that you advise them regarding the conditions of this grant. The Chief Zoning Administrator's determination in this matter will become effective after an elapsed period of ten (10) days from the date of this communication, unless an appeal therefrom is filed with the Board of Zoning Appeals.

Very truly yours,

HUBER E. SMUTZ
Chief Zoning Administrator

STATE OF CALIFORNIA

QUITCLAIM DEED

Pursuant to the provisions of Chapter 1358, Statutes of 1987, the STATE OF CALIFORNIA, acting through its Director of General Services, hereby quitclaims to CITY OF LOS ANGELES, all its right, title and interest in and to the real property described in Exhibit A hereto, which Exhibit is incorporated herein by this reference, in the County of Los Angeles, State of California.

EXCEPTING AND RESERVING to the State of California all mineral deposits as defined in Section 6407 of the Public Resources Code below a depth of 500 feet, without surface rights of entry.

This deed is subject to the following express conditions subsequent:

1. The property shall be known as El Pueblo de Los Angeles Historic Monument and shall be used as a public park or monument.

2. The development and operation shall conform to the General Plan for El Pueblo de Los Angeles State Historic Park adopted April 11, 1980 pursuant to Section 5002.2 of the Public Resources Code. The Plan may be amended by the CITY in accordance with procedures for amendment set forth in Article 8 (commencing with Section 65450) and Article 9 (commencing with

Section 6500) of Chapter 3 of Division 1 of Title 7 of the Government Code. The CITY shall consider the development criteria of Section 5019.59 of the Public Resources Code.

3. The City of Los Angeles shall operate, improve, maintain, construct, remodel, and perform any and all necessary activities at the Historic Monument in compliance with the U.S. Secretary of the Interior's "Standards for Rehabilitation and Guidelines for Rehabilitating Historic Structures".

4. The State of California shall be allowed, at the STATE'S option, free occupancy of the existing STATE offices on the entire first and second floors of the Hellman Quan Building, located at 128 Paseo De La Plaza, Los Angeles, California (See Exhibit B, Sheet 1) incorporated herein by this reference, with the exception of the CITY Archives Room on the second floor (See Exhibit B, Sheet 2) together with four existing parking spaces located along Sanchez Street. Upon termination of parking along Sanchez Street, the CITY will provide four new parking spaces to be identified within future parking Lot No. 2 located on the corner of Main Street and Macy Street.

Should any of said express conditions be violated, the State of California shall have the right to reenter and take possession of the real property and upon such re-entry title thereto shall revert to the STATE.

GENERAL PLAN

STATE OF CALIFORNIA—RESOURCES AGENCY Edmund G. Brown Jr., Governor

DEPARTMENT OF PARKS AND RECREATION
STATE PARK AND RECREATION COMMISSION
P.O. BOX 2390, SACRAMENTO 95811

Eleven items of concern to be included in the El Pueblo de Los Angeles State Historic Park General Plan adopted in Resolution 19-80 are as follows:

1. That El Pueblo managers and staff be sensitive to the Hispanic cultural background which has made Olvera Street the major attraction it has been for 48 years.

2. That the merchants of Olvera Street shall be identified as a human cultural resource of El Pueblo.

3. Pages 119 and 120 to be rewritten to be in compliance with State law.

4. That new development and commercial development does not overshadow the merchants of Olvera Street.

5. Commission support be given to the closure of Main Street.

6. That the Commission is concerned for the safety of pedestrian crossing at Macy Street.

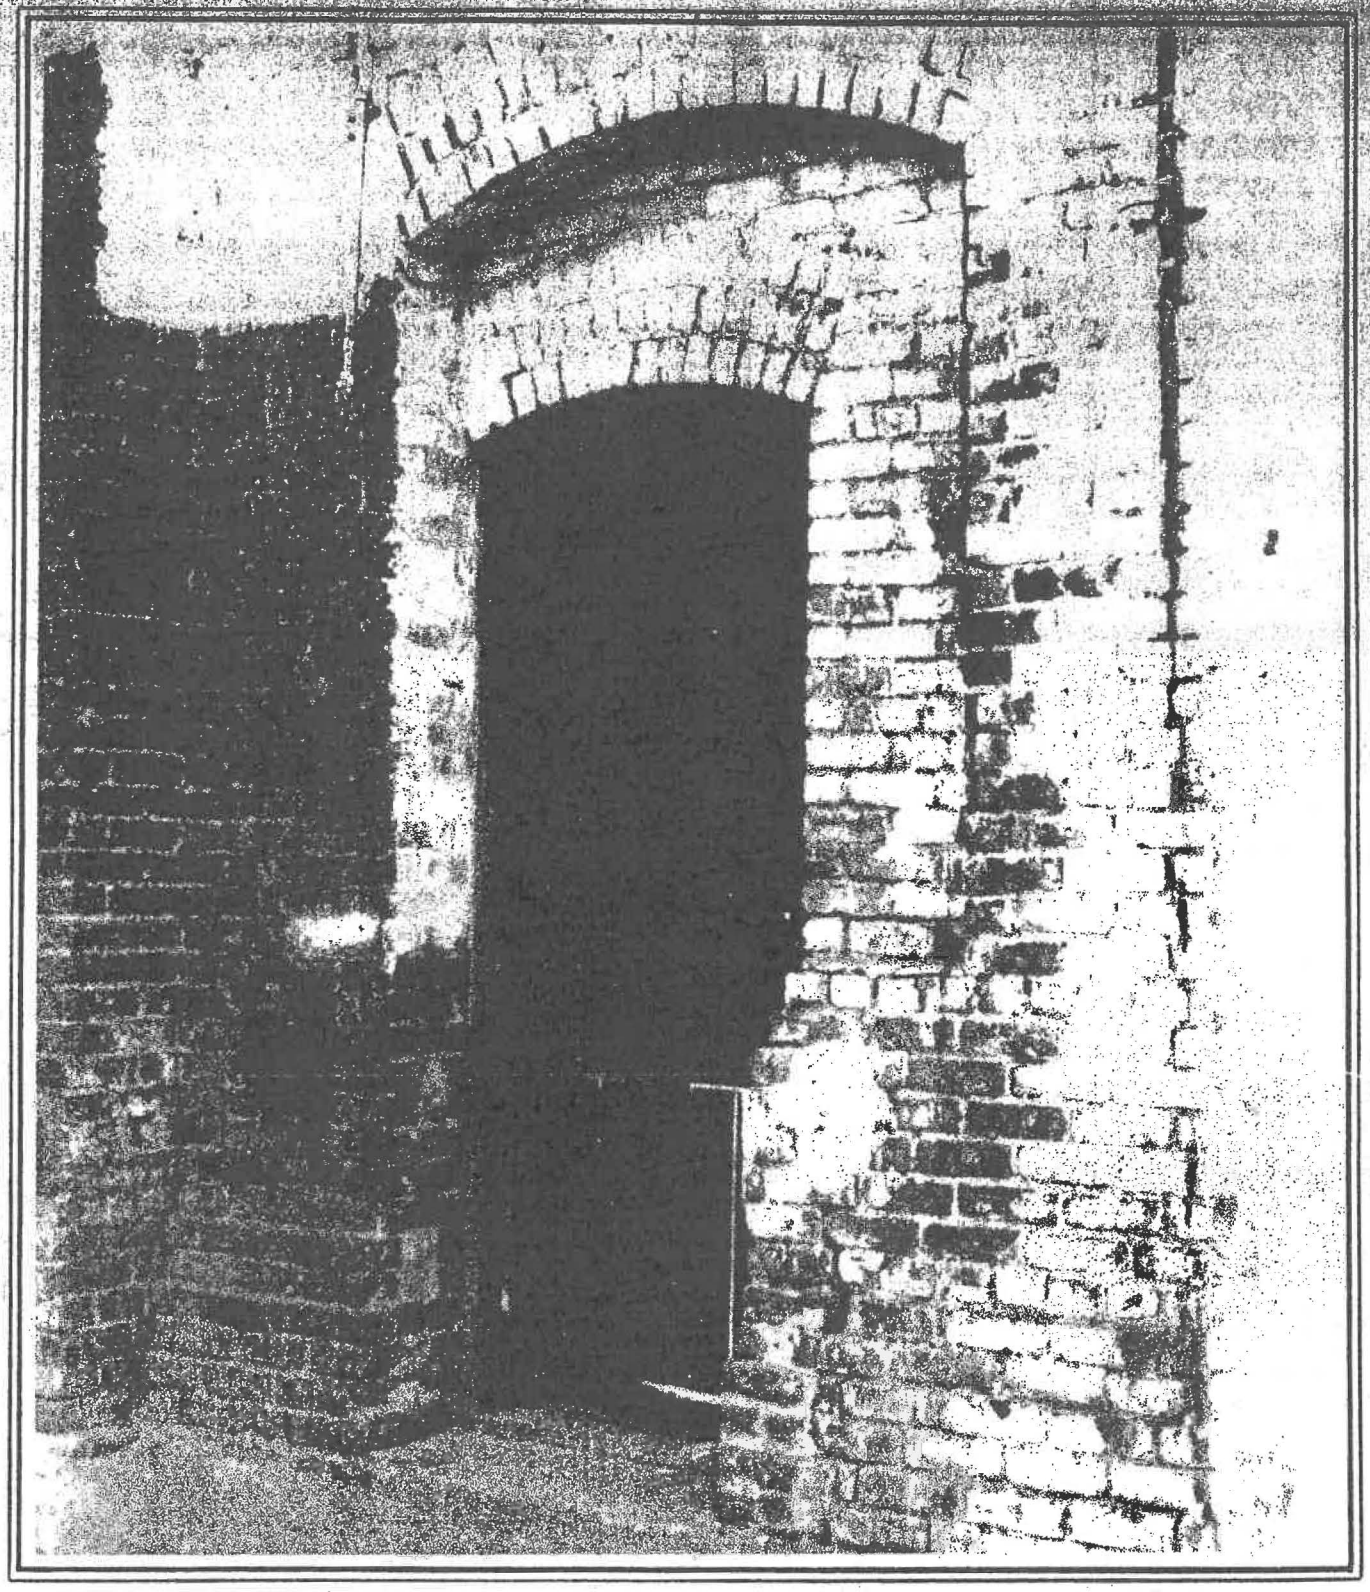
7. That the resource element be updated with the reference with the new materials which have been presented.

8. That the title page reflect the joint powers involved.

9. That references to "park" be made "park" rather than a "unit".

10. That Commission support is given to allocating resources needed to implement the plan.

11. That the Commission be kept informed of the position of the County and be available to hold public hearings on this issue.



INTRODUCTION

INTRODUCTION

Purpose of Plan

General Purpose

The purpose of the general plan is to provide general guidelines for management, interpretation, and development of El Pueblo de Los Angeles State Historic Park. This plan will serve as a vehicle for communication of the city, county, and state's intentions to the public, in accordance with the park's classification, declaration of purpose, and the stated purpose in the Joint Powers Agreement of 1974. This reads as follows:

> "WHEREAS, STATE, COUNTY, and CITY have cooperated to establish within the territorial boundaries of the City of Los Angeles a permanent historical park to be developed, maintained, and operated as a living memorial to the history and tradition of California life and environment, as a part of the State Park System, to preserve and recreate the Old Pueblo of Los Angeles and the colorful life of the period in which it was established, operated, and maintained, and to interpret the story of its founding, growth, and evolution into the Los Angeles of today, with the understanding that in the attainment of these objectives, cultural, commercial, and economic activities in keeping with the spirit and atmosphere of Los Angeles shall be encouraged..."

This plan was prepared by the State Department of Parks and Recreation, in collaboration with the City of Los Angeles (through its El Pueblo staff of the Department of Parks and Recreation) and with the County of Los Angeles.

The plan is the first for this park in response to the mandate of the Public Resources Code. The plan is also intended to meet the City of Los Angeles' "Master Plan" requirement, under the 1974 Joint Powers Agreement for El Pueblo.

Specific Purpose:

1. To identify and evaluate the park's natural, cultural, and recreational resources.

2. To establish policies for management, protection, and interpretation of these resources.

3. To determine visitor activities and land uses that are compatible with the purpose of the park, the available resources, and the surrounding area.

4. To determine the potential environmental impact of visitor activities, land use, and related development.

5. To establish guidelines for the recommended sequence of park development.

6. To provide an informational document for the public, the legislature, park personnel, and other government agencies.

Project Description/Location

El Pueblo de Los Angeles State Historic Park lies in the center of the busy and extensive downtown Los Angeles area. The historic park is near Los Angeles City Hall to the southwest, Union Station to the east, and Chinatown to the north. The southern boundary of El Pueblo is the Hollywood-Santa Ana Freeway, and major freeway interchanges are nearby. This park is easily accessible from the downtown area, while freeways provide ready access to areas outside the downtown sector.

Ownership/Project Boundaries

El Pueblo is an amalgamation of many plots of land in the downtown area. Lands owned by the State of California include properties in the Pico-Garnier Block, the Olvera Street Block, and smaller parcels north of these blocks. Many parcels outside these areas have been slated for inclusion in the historic park. These parcels, in combination with the state-owned and local government properties, make up the property within the ultimate boundary (Figure 1). The total land within the ultimate boundary is 17.8 ha. (44 acres).

Existing Project Area

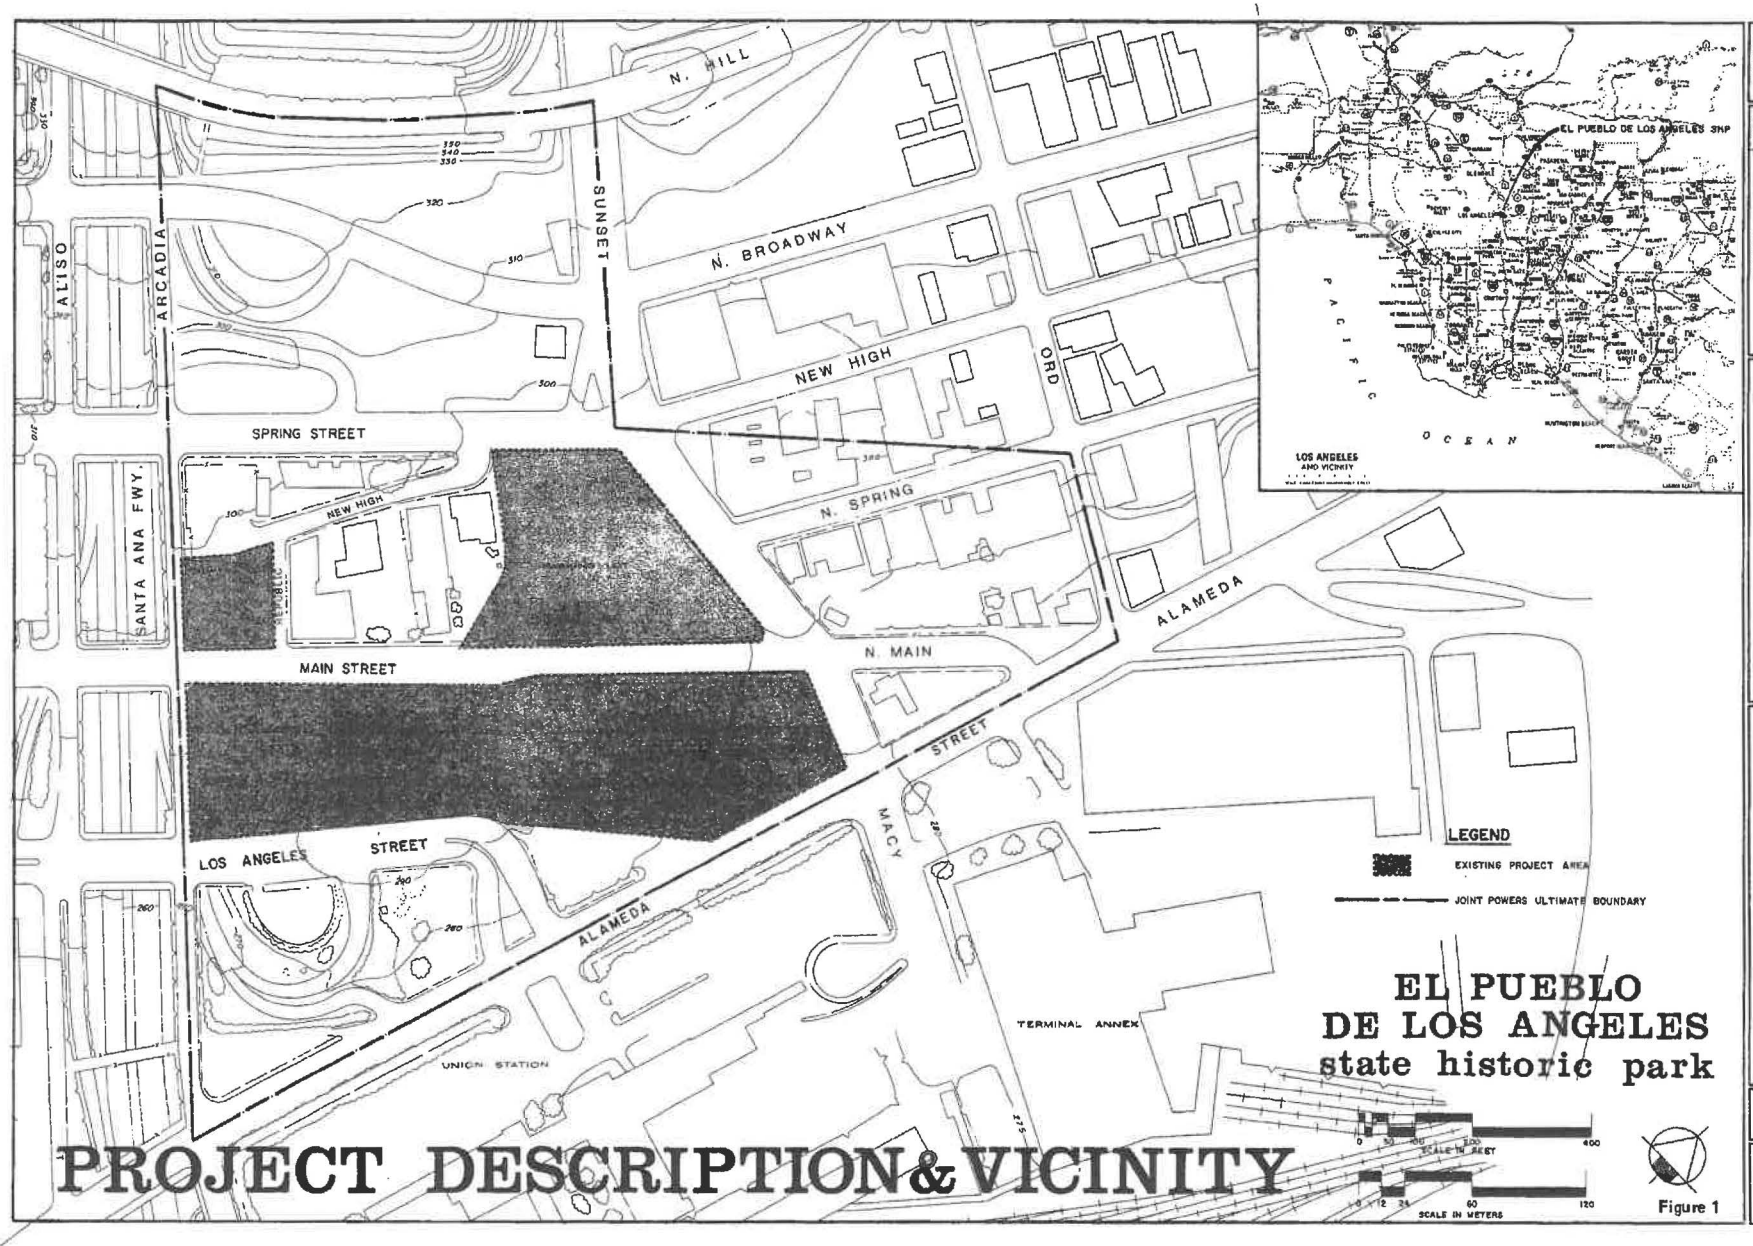
This includes lands owned by the State of California and the City of Los Angeles. The City is the authorized administrator of the park under the 1974 Joint Powers Agreement executed by the State, City, and County of Los Angeles. Lands within the project area are subject to all policies, rules, and regulations of the State Department of Parks and Recreation and this General Plan.

Historical Background

By September 4, 1781, establishment of the pueblo of Los Angeles was complete. The official name of the Spanish town founded by the Governor of the Californios, Felipe de Neve, was El Pueblo de La Reina de Los Angeles, (the town of the Queen of the Angels). From its earliest days, the settlers of the pueblo were of varied ethnic origins: Indian, Spanish, African, and mixed parentage. They were farmers, who had been recruited by Captain Fernando Rivera y Moncada from the areas of Sinaloa and Sonora in Mexico, and included 11 families, with a total of 44 people.

It was not until after the torrential rains of 1815 that the pueblo was moved away from the Los Angeles River to higher grounds at the present site of El Pueblo de Los Angeles State Historic Park. Construction of a new church, which opened onto a plaza immediately northwest of the present-day plaza, began in 1818; the building was not completed until 1822. The area now known as the plaza was probably not laid out until sometime after 1825. One-story adobes, similar in style to the Avila Adobe built on Vine Street about 1818, were constructed around the plaza and in the nearby streets.

By the time Mexico had achieved its independence from Spain, the population of the pueblo had risen to about 800 people; one visitor counted 82 houses in the pueblo in 1828. The descendants of the Gabrielino Indians who had been living near the Los Angeles River when the Spanish explored the region in 1769 continued to live in the area, and were the major work force of the pueblo and the outlying ranchos and missions.



PROJECT DESCRIPTION & VICINITY

DRAWING NO. 17269

SHEET NO. OF

The state historic park is located within the former territory of the Gabrielino Indians (the name derives from Mission San Gabriel). The Gabrielino were a Shoshonean-speaking people who occupied much of the plain that is now the Los Angeles basin. Their range also extended to the islands of San Clemente and Santa Catalina. As with many coastal groups in California, contact between Euroamerican and native peoples resulted in a rapid decline in the indigenous human population, and a loss of many features of traditional lifestyle. The original site of the pueblo, which is generally considered to have been southeast of the present site, is said to have been near the village of Yang-na. No evidence has been found in the historical or archeological records of prehistoric occupation of the lands now included in the state historic park.

Ample evidence for Gabrielino involvement with the plaza area during the historic period, however, can be found in the historical and archeological record. Almost 4,000 Gabrielino people lived in the Los Angeles area during the early 1850s. Gabrielino manufactured "mission ware." Pieces of this coarse, unglazed pottery were found in recent excavations in the Chinese store. This same pottery was unearthed in the Avila adobe, along with a hammerstone, a lithic core, two scrapers, and numerous stone flakes.

Los Angeles was raised to the status of a city by the Congress of Mexico, and was named the capital of Alta California on May 23, 1835. However, the officials did not see fit to move south from Monterey for another ten years.

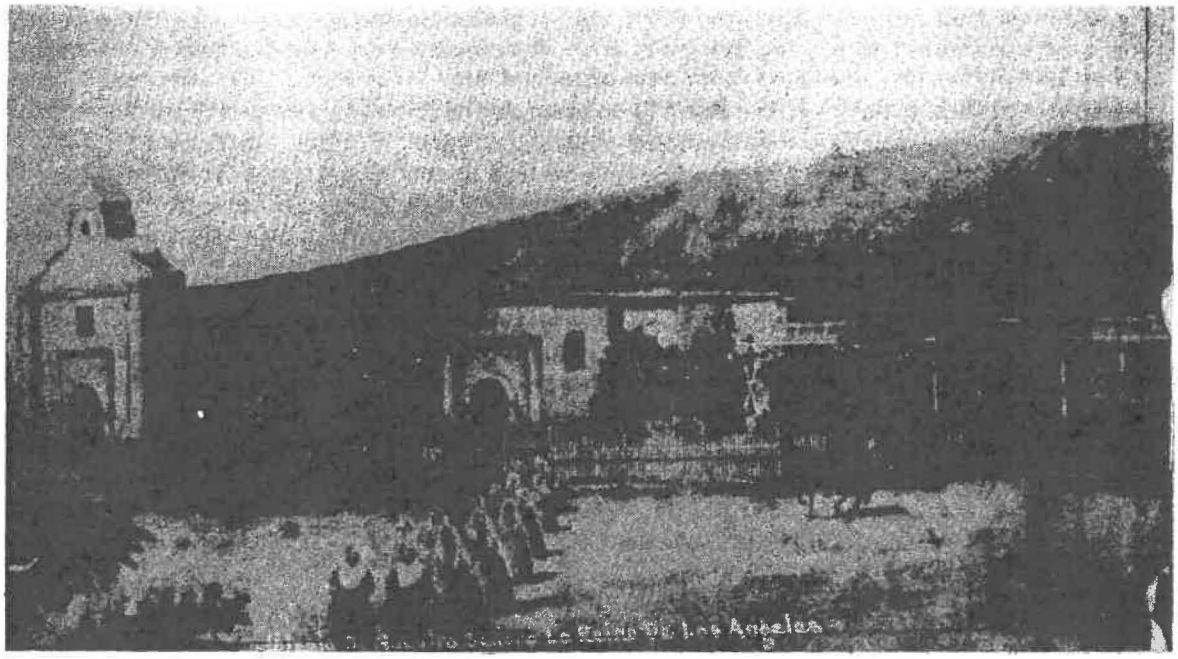
By the 1830s, non-Spanish-speaking foreigners had arrived in Los Angeles. In order to acquire land, many of them married daughters of the ranchers, became naturalized Mexican citizens, and were converted to the Catholic faith. Some of them became successful merchants and large landowners.

For political reasons, the United States and Mexico went to war in 1846. Los Angeles was taken by Commodore Stockton in January 1847, and for ten days, the Avila Adobe was Stockton's headquarters while peace was being negotiated.

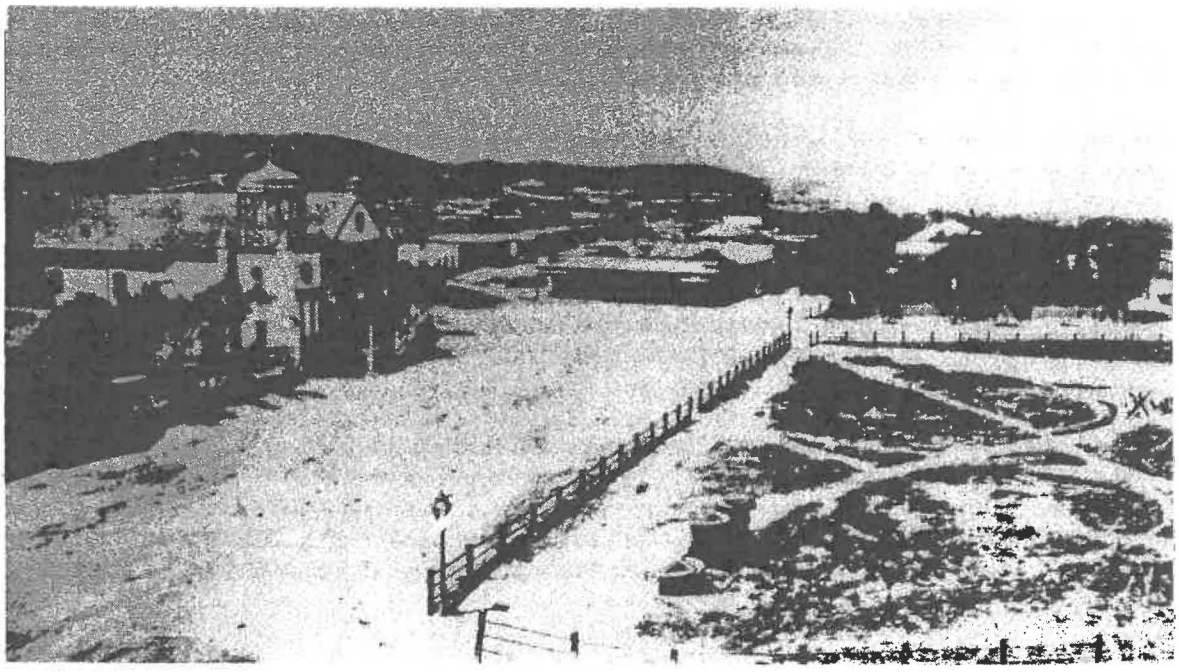
No drastic changes occurred in Los Angeles following California statehood in 1850. The excitement was in northern California, where gold had been discovered in 1848. Los Angeles remained Mexican in both tradition and speech.

As the city slowly began to grow, new ideas came to Los Angeles. For example, brickmaking began to replace the sun-dried adobe slabs used in construction. The Pelanconi House on Olvera Street, from this period, still stands. The last bullfight took place in 1860 and, almost simultaneously, the first baseball team was organized--a mark of the changing times.

In the 1860s, the Avila Adobe was turned into a boarding house, and was known variously as the Hotel Italia Unita and the Plaza Lodging House. For one brief period it served as a restaurant. The house remained the property of the Avila-Rimpau family and their descendants until 1953, when it was acquired by the State of California. In 1877, Vine Street was officially renamed Olvera Street, after Judge Agustin Olvera, whose house fronted on the north side of the Plaza.



Plaza church ca. 1857



Plaza and church, 1869

By 1860, the population of Los Angeles was more than 4,000 persons, including about 400 people of French origin. Many of the old families had moved away to the newer areas of Los Angeles, and the Chinese and other newcomers moved into the Plaza area. Statewide, the Chinese had been a target for discrimination and abuse, and racial tension was strong in Los Angeles as well. On October 24, 1871, Los Angeles had a race riot in which 19 Chinese were killed, and their homes looted and burned.

The census of 1860 showed a population of 4,399. (Of this number, 400 were of French origin.) By this time, many of the old families living in town houses around the Plaza had moved away or back to their ranchos, and Chinese people and other newcomers moved into the area. The Chinese were not popular with the American and Mexican members of the community. Racial tensions arose, and trouble followed. The most serious outcome of this situation was a dreadful massacre which took place on October 24, 1871. Two men, members of different Chinese tongs or nations, were fighting close to the old Coronel adobe, off the Calle de Los Negros. An American bystander tried to intervene, and was accidentally killed. This set off a wave of mob violence, which ended with the deaths of 19 innocent Chinese. Although some 50 people participated in the mob scene, only 7 men were convicted, and they were later set free on a legal technicality. Life in Los Angeles continued much as before, although the rest of the world was outraged at such brutality. The Chinese were considered second-class citizens, and the city council passed ordinances discriminating against them.

In order to revive the old Plaza area, Pio Pico built a grand hotel in 1869. To raise funds for this venture, he mortgaged his landholding in the San Fernando Valley for $115,000. The hotel was designed by Ezra F. Kysor, and built of brick. When the hotel opened in June 1870, it was elegantly furnished, with bathrooms on each floor. However, it was a poor financial venture, and in 1880, it sold at auction for $16,000. South of the Pico House, William and Merced Abbot built the Merced Theater. Although not a very successful theater, it was the first building constructed for this purpose in Los Angeles.

At the same time the Abbots and Pio Pico were building on the Plaza, a landscaping project was begun. The Plaza took on the circular shape it has today, and sometime between 1875 and 1877, the large Moreton Bay fig trees (Ficus macrophylla) were planted.

In 1884, men of the Volunteer 38's fire engine company built the city's first official fire house on the southwest corner of the plaza. These men were the first paid firefighting unit in the city, and they remained on the Plaza until 1897. The building was later used as a saloon, lodging house, and store.

In 1890, Philippe Garnier constructed a sandstone and brick building on Los Angeles Street. This was for use of the Chinese tenants, who completed the building to their own specifications. In the custom of the period, this building, like the Merced Theater, had large underground basements, used for various kinds of purposes.

In 1887, Eloisa Martinez de Sepulveda built a two-story brick building, the "Sepulveda Block," fronting Main Street, with a rear entrance on Olvera Street. It was to serve as a combination of businesses and residences, and still stands as a good example of Eastlake Victorian architecture.

By 1900, the area had declined considerably, and was chosen by Henry Huntington's Los Angeles Railway Company as a logical site for a power transforming plant located between Olvera and Los Angeles streets. The Plaza Substation (built in 1904) was a large brick building with arched windows, pilasters, and a roof supported by elaborate wooden trusses.

The old Plaza Church outgrew the needs of the modern-day congregation, and in 1965, a larger structure was erected behind the old church to meet this need.

In 1926, a Methodist Church was constructed facing the Plaza. The church conference headquarters were located next to the church, in a building now named for Sheriff Eugene W. Biscailuz, a man who served in the Los Angeles County Sheriff's Department for nearly fifty-two years.

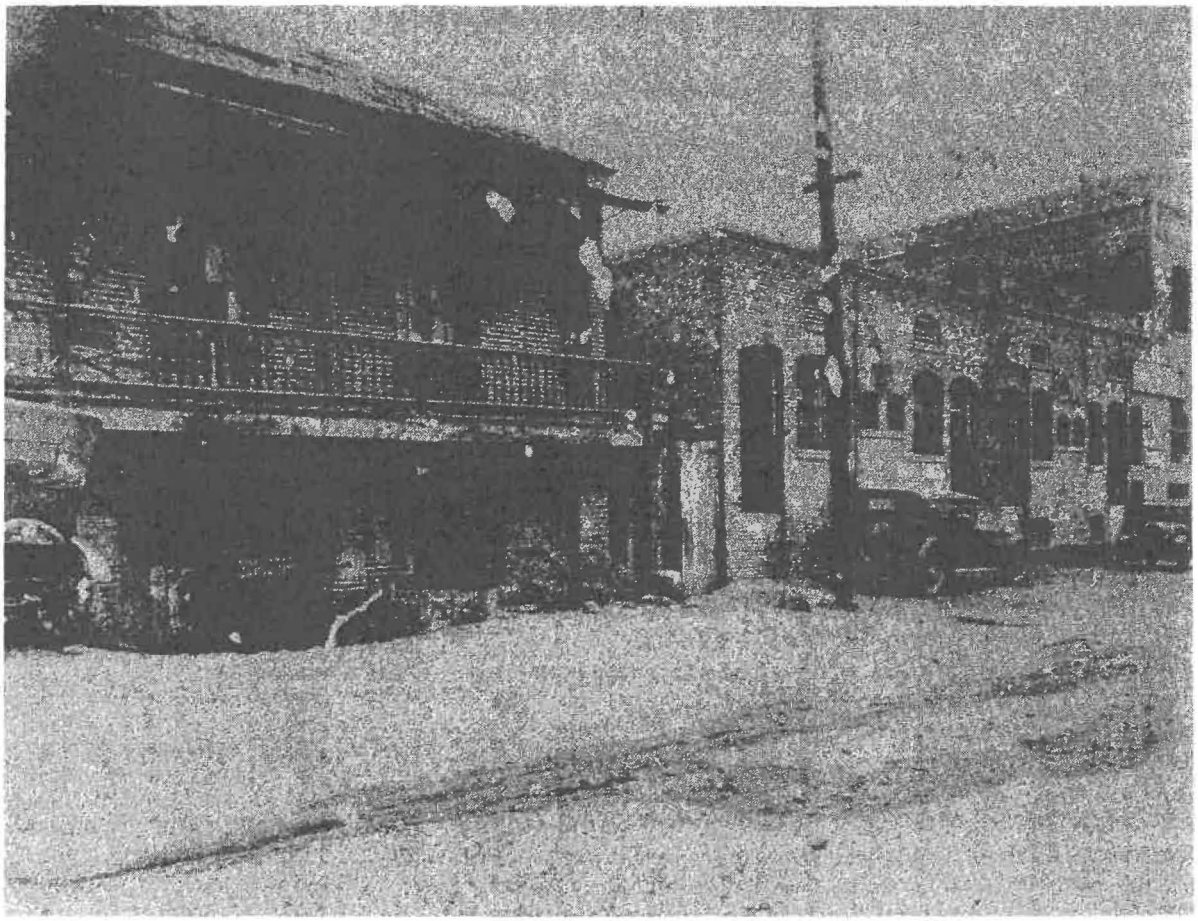
That same year, Christine Sterling found the historic section around the Old Plaza in a dirty, disreputable condition. Olvera Street was a slum, and on November 22, 1928, the Avila Adobe had a condemnation notice tacked to its front door. With the help of Harry Chandler, publisher of the LOS ANGELES TIMES, and several other prominent business and professional leaders of the community, she saved the adobe, and in 1930, created a colorful Mexican marketplace in Olvera Street. She brought fiestas and colorful Mexican traditions to Olvera Street, with the help of the Mexican-American community.

Across the street from the Plaza to the east, the old Chinatown was demolished to make way for the Union Station. Designed by Donald and John Parkinson shortly before World War II, it was the last large railroad terminal built in the United States. Chinatown was relocated north of Olvera Street.

For many years, Olvera Street was managed by a group of citizens called the El Pueblo Corporation. In 1953, the street became part of El Pueblo de Los Angeles State Historic Park, and other historic buildings in the area were acquired soon after. A new commission was created to administer the park, consisting of representatives from the state, county, and city. After a few years, it became apparent that little could be accomplished by this group, and it was dissolved, along with the El Pueblo Corporation. A new tripartite agreement was drawn up and signed on April 1, 1974, by the same signators. It specified that the City of Los Angeles would administer the historic park, with the state holding the right to review and approve the operating budget and capital improvements.

During the 1950s and '60s, the facades of several of the historic buildings were restored. Unfortunately, funds ran out, and except for the rebuilding and refurbishing of the Avila Adobe, the Firehouse, and the Masonic Lodge (built in 1858) as museums, very little restoration has been accomplished. Considerably more restoration efforts, however, have been started in the 1970s.

The twentieth century has been the time of the greatest expansion of the City of Los Angeles, particularly since the Second World War. It is hoped that by the Pueblo's 200th birthday in 1981, a program of intensive, careful restoration will be in progress, designed to create for all the diverse peoples of California a true historic park in the area that contains so much of their heritage.



Pelanconi House - Olvera Street 1925

Planning Background

Some acknowledgement must be given of the enormous amount of planning that has gone into development (or lack thereof) of the park.

The following is a list of plans that have been prepared over the years between 1947 (when the idea of an historic park was first conceived) and today, when the present general plan is offered as a guide to the ultimate development for the area, and to satisfy the legal requirements of the State of California Department of Parks and Recreation.

July 21, 1947, REDEVELOPMENT OF THE LOS ANGELES PLAZA AREA, a preliminary report to the Plaza de Los Angeles Inc. prepared by Burnett C. Turner, with Charles Bennett of the City Planning Department. A plan to initiate urban redevelopment in the restoration of the Plaza area from its then blighted condition.

July 18, 1958, MASTER PLAN, approved by State, County, and City. Set up boundaries and planned for acquisition of buildings in area of proposed development.

October 19, 1967, PUEBLO DE LOS ANGELES STATE HISTORICAL MONUMENT PLAN. A brief document prepared by the Los Angeles City Planning Department. Called for development of park, restoration of buildings and revision of street patterns to accommodate needs of both pedestrians and automobiles.

May 12, 1967, MASTER PLAN, prepared by Burnett C. Turner. Based on 1957/58 Master Plan, it provided drawings for streets, sewers, and utilities and other plans for buildings to be restored. It called for Main Street traffic to be realigned to Spring Street and for the demolition of County buildings in the area.

1969-70, A major COMPREHENSIVE DEVELOPMENT PLAN was prepared by Pollak-Barsocchini and Associates in 1969, revised 1970, and approved by the State Commission on July 10, 1970.

This was the first really far-reaching plan made for El Pueblo. It called not only for the restoration of the historic buildings but also for creating a pedestrian system for the entire area, and for providing links between Little Tokyo, the Civic Center, Chinatown, and Union Station. It went even further in suggesting that multicultural activity centers be built in different areas to reflect the various ethnic groups that make up the history of Los Angeles, and to create a focus for expanded tourist and visitor activities.

This plan called for changing the name of El Pueblo from "State Historic Monument" to State Historic Park," which it has been called from this date on.

March 5, 1971, EL PUEBLO GARAGE FEASIBILITY STUDY. Associated Parking Consultants (Linscott Associates and Robert Crommelin Associates) recommended a site for a proposed 500 space parking garage on an area now used for surface parking (County Lot 25 and El Pueblo Lot 1). (This plan was prepared before archeology had been done on Parking Lot 1 which revealed significant archeological deposits.)

November 1, 1972, AD HOC MASTER PLAN COMMITTEE REPORT. Los Angeles Plaza Historic Park proposed General Plan. This was a geographic development plan which took into account the "historical patterns as well as the ethnic occupation of the Plaza area." This plan set out policies in a form which was intentionally brief, allowing for details to be delineated in a future development plan.

The plan was prepared by a committee between April and November 1972. It was not concerned with commercial development of the Pueblo.

July 20, 1976, EL PUEBLO DE LOS ANGELES STATE HISTORIC PARK DEVELOPMENT PLAN by A. C. Martin and Associates. On a less grand scale than the Pollak-Barsocchini plan, this plan nevertheless tried to define the park as a distinctive place and recognized its enormous potential. It recommended "practical strategies for implementation" and of "realistic market projections."

The plan called for a phased approach for restoration of the historic buildings. It defined El Pueblo as a place of great historic significance and suggested improved ways of interpreting this. It also described the problems caused by existing street and traffic patterns.

A major part of the plan was devoted to a Market Feasibility Analysis prepared by Russell/Speicher and Associates to determine the commercial development potential at El Pueblo park, with particular reference to the Pico-Garnier Block.

The A. C. Martin Plan was accepted by both the Advisory Committee for El Pueblo and by the City Recreation and Parks Commission, but was not officially presented to the State, since it had not yet been offically approved by the County. However, unofficial word had been received from State officials indicating that the plan would not be acceptable as it was because it did not place sufficient emphasis on historic preservation and restoration in the park.

Accordingly, in 1977/78 the State Department of Parks and Recreation prepared, with the help of the El Pueblo staff, a RESOURCE MANAGEMENT PLAN outlining the history and cultural resources of the historic park. This plan was approved by the State Park and Recreation Commission on September 15, 1978, and is now incorporated in the General Plan for El Pueblo as the Resource Element.

During the preparation of the General Plan some further studies were made:

EL PUEBLO DE LOS ANGELES STATE HISTORIC PARK: TRAFFIC STUDY by Daniel S. Kupfer, September 1979, which attempted to show the feasibility of preventing disruptive vehicular traffic on Main Street through the park and of providing alternative routes without adversely affecting surrounding community streets.

LONG-RANGE CONCEPTUAL PLAN FOR THE PUEBLO DE LOS ANGELES HISTORICAL PARK by students of the Landscape Architecture Senior Design Studio, UCLA, May 1979.

A study of PARKING AT EL PUEBLO DE LOS ANGELES STATE HISTORIC PARK by Shirley Hsiao, April 1979. This assessed the amount of parking available in the park and the adjacent areas and recommended the formation of a joint City/County parking authority to administer it.

Management History of the El Pueblo Area

Through the efforts of Mrs. Christine Sterling, a group of public-spirited people banded together in the 1920s to try to save the historic area of Los Angeles from destruction. On May 2, 1928, they formed a corporation known as Plaza de Los Angeles, Inc., and together, they saved the Avila Adobe from destruction, restored it, and created a Mexican market place in Olvera Street, which opened in 1930. This corporation (dissolved on July 19, 1957) was replaced by a non-profit corporation, El Pueblo de Los Angeles, Inc., formed March 9, 1954.

In the meantime, an agreement was signed on June 22, 1953, by the state (through its State Park Commission), the County of Los Angeles, and the City of Los Angeles. Under the terms of this document, the county and city each deposited $375,000 in the State Treasury, to match $750,000 approved by the State Legislature for the purpose of acquiring properties in the area bounded by Arcadia, Main, Alameda, and Macy streets, in order to establish a "permanent historic monument as part of the State Park System." The city was also to make Sanchez and Olvera Streets available for the monument. The state contracted with the city and county for management of the area. Development was to be "pursuant to the Master Plan" which was to be prepared. Provision was made for contracting to other parties the development, management, and operation of the monument, and for concession agreements.

On October 22, 1955, the state contracted with the county and city for operation of El Pueblo de Los Angeles State Historic Monument, and for making a master plan to "delineate development construction."

On November 18, 1955, the state approved an agreement between the county and city, authorizing the city's Department of Recreation and Parks to act as administrator of the monument.

On June 12, 1956, the county and city designated the city's Department of Recreation and Parks as county/city representative, and stated that the department should "perform, exercise and enjoy all the duties, powers, rights and privileges for and on behalf of both City and County."

On May 18, 1956, the California State Park Commission approved a management agreement whereby El Pueblo de Los Angeles, a non-profit corporation, would "manage the Olvera Street unit."

On December 1, 1965, a joint powers agreement was signed by all three governmental bodies, setting up a new commission composed of eleven members, including five state appointees and three members each appointed by city and county. (There were also three alternates.) This commission continued to contract out management of Olvera Street to the El Pueblo de Los Angeles Corporation.

This agreement and contractual arrangement were revoked by a new agreement signed by the state, county, and city on April 1, 1974, under which the city, through its Recreation and Parks department, was charged with the administration and development of El Pueblo, while the state retained the right to approve both operating and capital improvement budgets and all development activity. The agreement also called for preparation of a new master plan. The park is operated today under this agreement.

Public Involvement Program

Citizen participation has been important to the existence and continuing success of Olvera Street, and the area now defined as a historic park.

A public meeting to begin the planning process for a general plan for the park was held in February 1979 by the California Department of Parks and Recreation, in cooperation with the El Pueblo State Historic Park staff.

Representatives of the City of Los Angeles, which administers the park, and the Department of Parks and Recreation discussed the background and present status of the park, explained the planning process, and conducted a workshop session to receive suggestions and public comments on major issues and concerns for the park's development.

In attendance were about 135 people from the Mexican and Chinese communities in the Los Angeles area. Others who attended were representatives of Los Angeles city and county agencies, and individuals of various professional backgrounds, all with particular interests in future development and management of El Pueblo.

As a result of the workshop sessions, the planning team received more than 650 individual comments concerning every aspect of the general plan, and El Pueblo in particular. This information was organized into a summary newsletter, sent to more than 500 people on the El Pueblo mailing list.

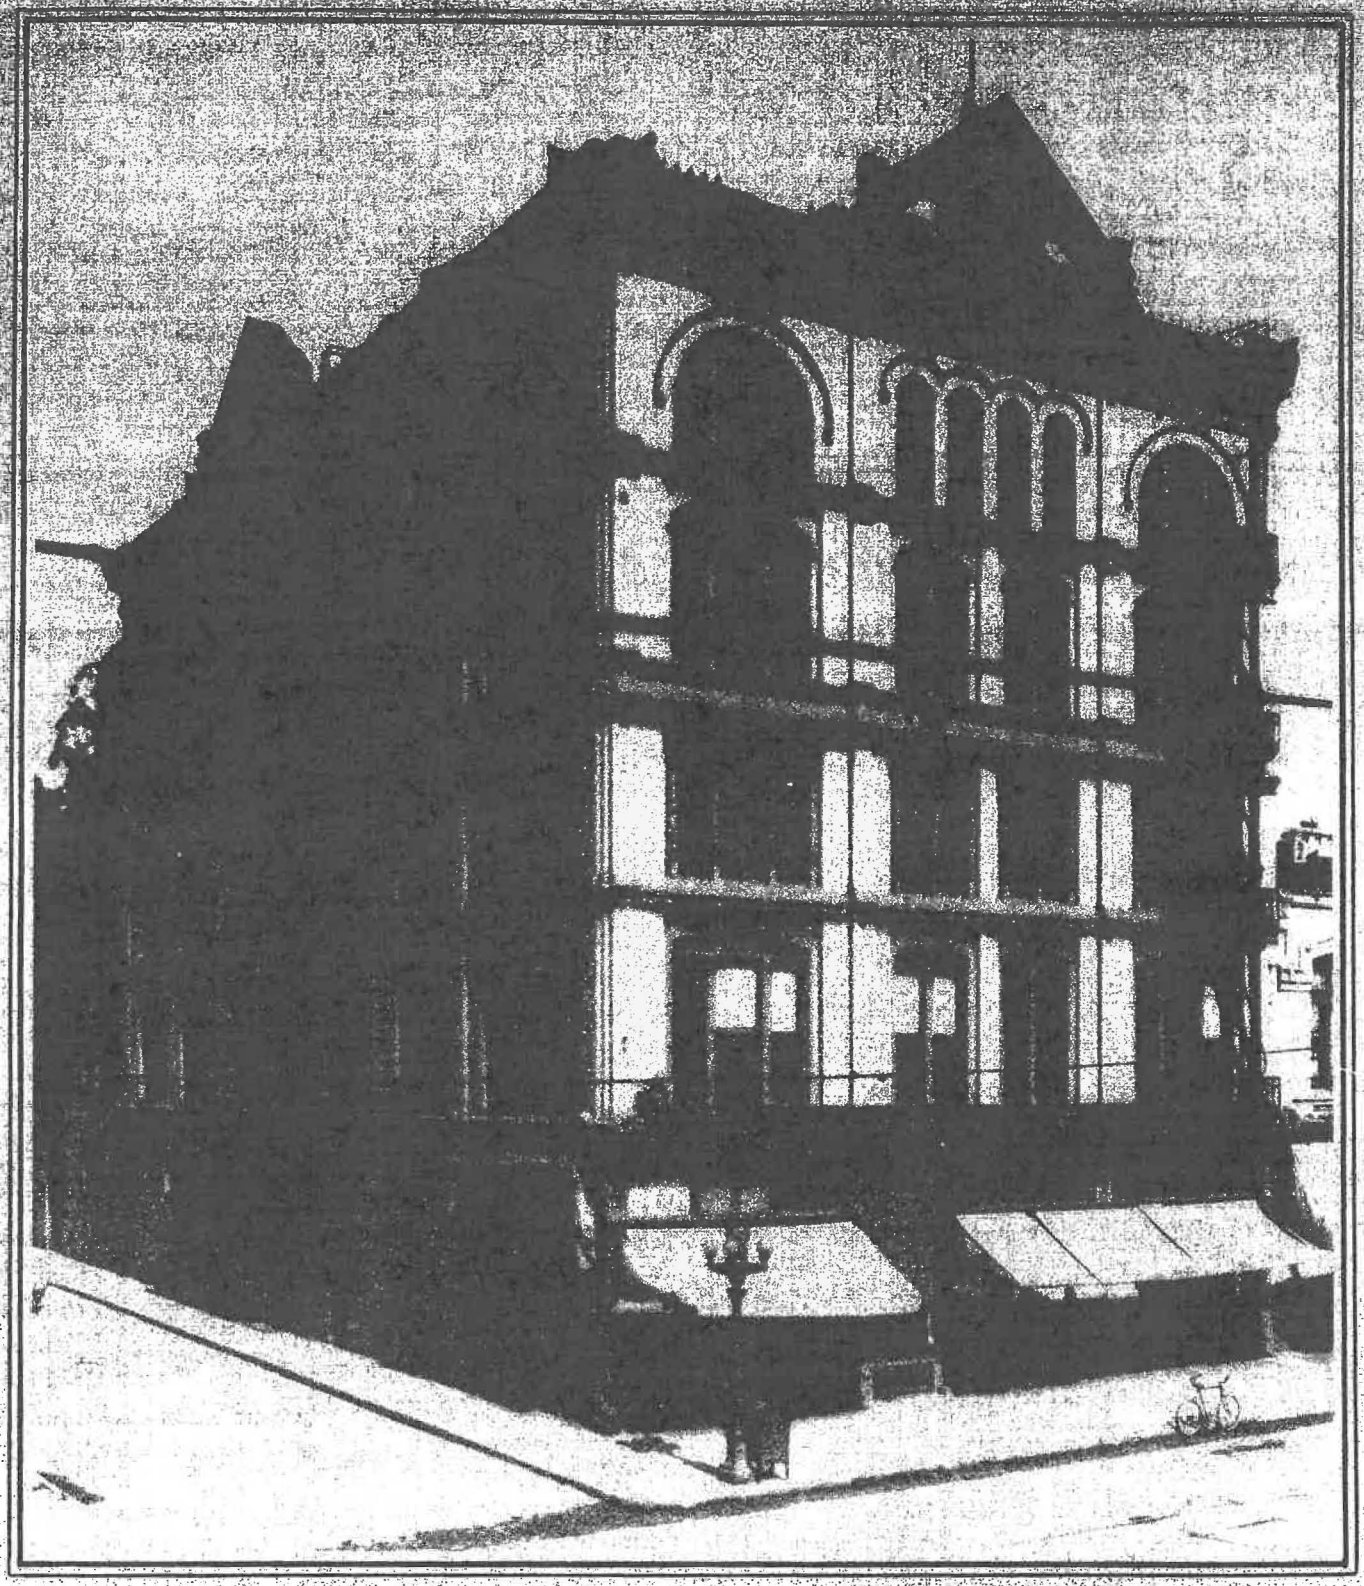
In order to adequately address public concerns about this plan, a program of meetings, newsletters, and personal contacts was developed to gather and exchange information and to hear local opinions and concerns for the future of the park.

Additional meetings, workshops, and an open house were conducted by state and city historic park staff, to further evaluate public and agency comments, and to develop a single plan recommendation.

The final plan presented in this report can not necessarily provide for all the desires and concerns expressed by the general public. However, it attempts to provide the necessary guidelines, and to develop solutions that incorporate facilities and activities compatible with the cultural and historic community values of the park.

The "Community" with interests at El Pueblo is represented by various organizations: the El Pueblo Advisory Committee, the Olvera Street Merchants' Association, the support groups Las Angelitas and Los Amigos del Pueblo, Les Dames de Los Angeles, and the Box 15 Club, as well as the conservation and historic groups of Southern California.

Recently, the work of staff and support groups has been augmented by the contributions of a special subcommittee of professionals from the LA 200 Committee, which convened regularly to assist in preparation of this plan.



RESOURCE ELEMENT

RESOURCE ELEMENT

Declaration of Purpose

An interim statement of purpose has thus far guided management of resources at El Pueblo de Los Angeles SHP. The following Declaration of Purpose was approved by the State Park and Recreation Commission in 1978:

> The purpose of El Pueblo de Los Angeles State Historic Park, in the City of Los Angeles, is to preserve and, where appropriate, restore and reconstruct for the enlightenment and enjoyment of the public forever, the remaining features of one of the three official Spanish pueblos of Alta California, as well as structures and other features characteristic of the flow of history and diverse populations associated with the development of the Pueblo and the City of Los Angeles. Emphasis will be on the span from the Spanish Era through the Mexican and American Eras 1818-1932.

Resource Summary and Evaluation

Prime Period

In accordance with Directive 62 of the Department of Parks and Recreation's Resouce Management Directives, a prime historical period is established for El Pueblo. This period is 1818 to 1932. It was chosen to reflect significant above-ground historic resources of this area. Preservation and interpretation efforts will emphasize this period. Such efforts, however, need not be restricted to the prime period, although they must be placed in the perspective of the events of this time.

Cultural Resources

The list below represents the remaining cultural features of El Pueblo SHP, described in three major areas. (NOTE: The building numbers correspond with Figures 7, 8, 9 - pages 79-84.)

Pico-Garnier Block

(Bldg. #4) The Garnier Building (1890), constructed by Philippe Garnier, a two-story sand and brick structure, is in need of internal restoration. This building was used, from the time of its construction until 1953, by Chinese merchants and societies. Half of the bullding was demolished for freeway construction at that time.

(Bldg. #5) 425 N. Los Angeles Street, a narrow, two-story brick building, probably constructed between 1895 and 1905. This structure has not been restored, except for the exterior. It was also used by Chinese tenants.

(Bldg. #6) The Turner Building, a one-story brick building, constructed in the 1960s as part of the early restoration effort in the park. The structure has been designed to blend with surrounding buildings. This building was used for El Pueblo State Historic Park Commission hearings between 1965 and 1971, and was intended as a service building for the Pico-Garnier Block.

(Bldg. #9) A Chinese store (built between 1895 and 1905), composed of the single building, divided in half. This building is occupied by state offices and the Park's Visitor's Center and Volunteer office. Another portion of this building is intended for use as an exhibition devoted to the history of the Los Angeles Sheriffs' Department, featuring Martin Aguirre who was Sheriff in 1886.

(Bldg. #8) The Plaza Firehouse (1884), a two-story fire station which has been restored, and currently houses historical displays associated with the history of fire fighting in Los Angeles.

(Bldg. #10) The Pico House (1869-70), a three-story masonry structure with a large central courtyard. This is one of the earliest quality hotels in the city. The building has been restored outside, and the interior is currently undergoing extensive restoration.

(Bldg. #11) The Merced Theater (1870), a three-story brick structure, slightly taller than its neighbor, the Pico House. The building was the first theater in Los Angeles, and featured well-known touring theater companies. The building now houses park offices on the ground floor, while the upper stories are vacant, and awaiting restoration. The exterior has been restored.

(Bldg. #12) The Masonic Hall (1858), where Lodge #42, F.&A.M. met on the second floor for 10 years. The exterior of this two-story brick building has been restored, and the interior houses lodge artifacts. Originally, and until recently, the first floor was used commercially. The upper floor is now used by Lodge #814.

The basements under the Merced Theater and the Garnier Building were used for many purposes, including wine storage. Today, these serve as storage and interpretive displays. The tunnel under Sanchez Street was cut through in the 1960s to provide service access to the Pico House.

Olvera Street Block

(Bldg. #16) The Simpson Building, constructed c. 1900 on the corner of Main and Sunset, which now houses a branch of the Bank of America and a restaurant. The Bank of America modified the structure significantly at the time of its restoration and occupancy in 1959.

(Bldg. #17) The Jones Building, a single-story brick structure, probably built in the late 1880s, which is divided into several parts. It is now used for shops and storage associated with Olvera Street.

(Bldg. #18) 10 W. Olvera Street, a narrow brick structure, built between 1910 and 1920. It is currently in use for Olvera Street commercial activities. During the 1930s it served as a theater.

(Bldg. #19) The Sepulveda House (1887), a Victorian-period building of two stories (Eastlake style), with elaborate exterior ornamentation. This building has been stripped in the interior, and is slated for restoration. It was built by Dona Eloisa Martinez de Sepulveda for combination residential and commercial use.

(Bldg. #20) The Pelanconi House, a two-story brick home (ca. 1855) that was remodeled and extended in 1930 when it became La Golondrina Restaurant. It is one of the oldest brick buildings still standing in Los Angeles.

(Bldg. #21) The Machine Shop Building, a small, rectangular brick structure, built between 1910 and 1920, now used by merchants fronting on Olvera Street.

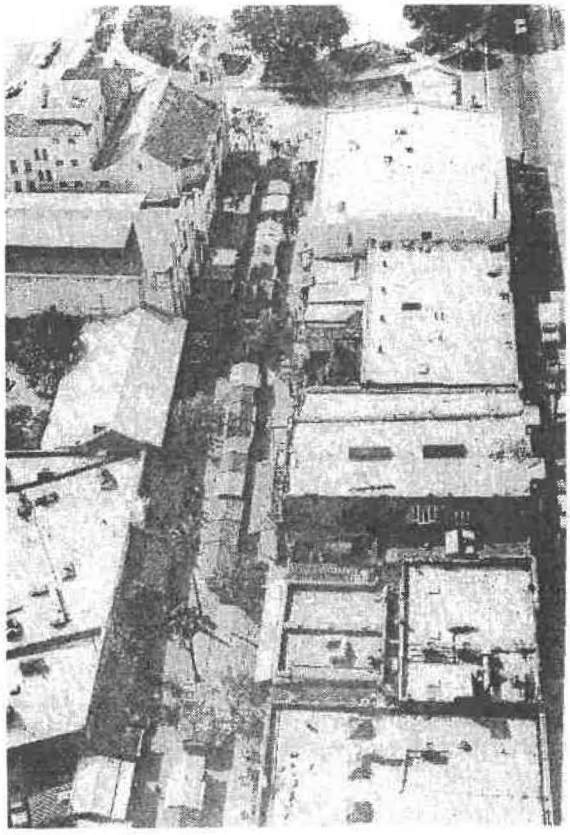
(Bldg. #22) Italian Hall, a two-story brick structure built between 1907 and 1908 for Italian organizations. The lower floors are used by Olvera Street merchants and the upper story serves as park storage.

(Bldg. #24) La Plaza United Methodist Church, which stands on the corner of the Plaza and Olvera Street. The structure was completed in 1926, and has been in continuous use by the church since.

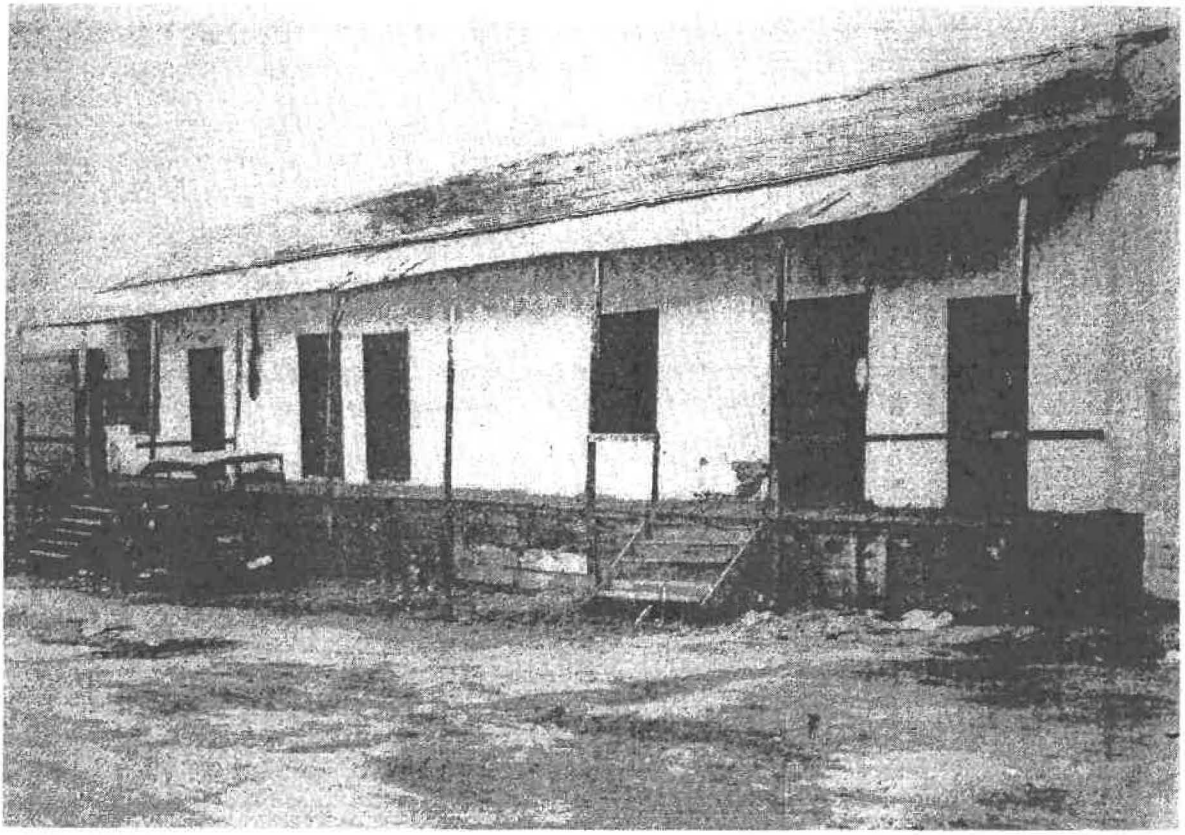
(Bldg. #25) The Biscailuz Building, a large, multi-story structure built in 1926 as the area headquarters of the Methodist Church; it now serves as the offices of the Mexican Consul General in Los Angeles and other offices.

(Bldg. #26) The Plaza Substation (1904) (MTA Building), a three-story structure first used as a power transforming plant for the Los Angeles Railway Company. The interior is now bare, and is in need of restoration.

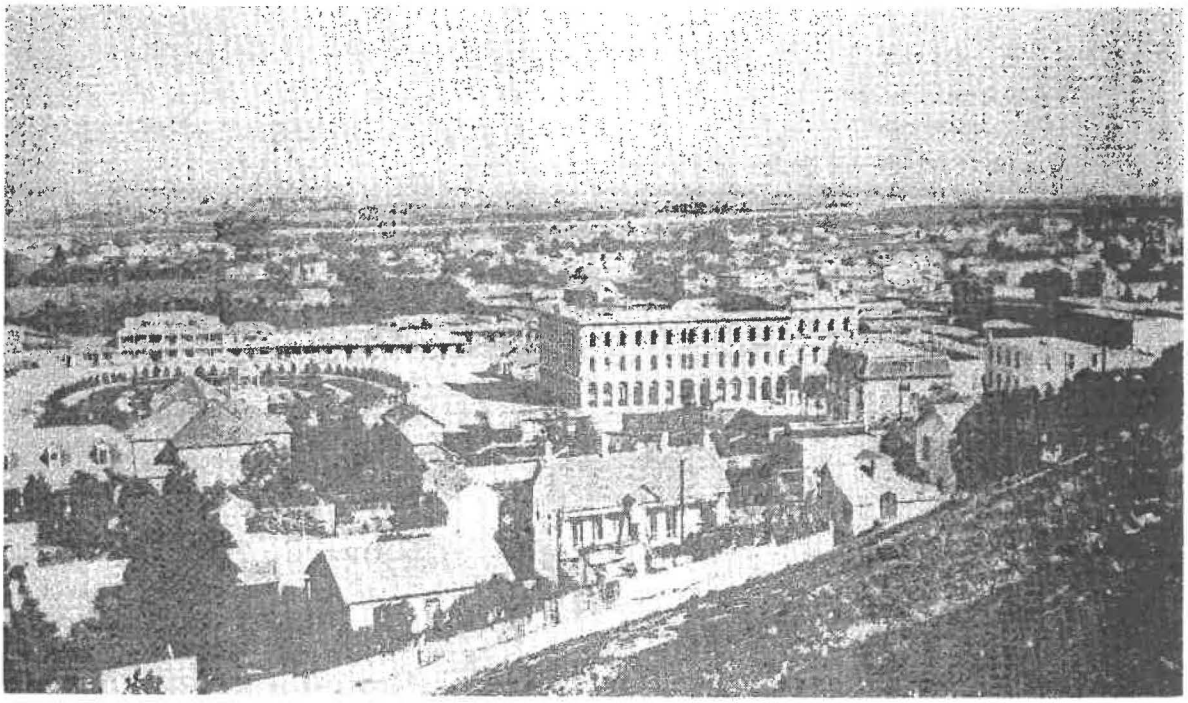
(Bldg. #27) The Avila Adobe, a single-story rectangular structure fronting on Olvera Street; this is the oldest surviving home in the city. The adobe was constructed ca. 1818 by Don Francisco Avila and has been restored to reflect the Hispanic Era of the early 1840s. It is now in use for tours and interpretive displays.



Olvera Street in February 1972, facing south toward the plaza



Avila Adobe in the 1920s, before restoration and revitalization of Olvera Street



Overlooking the Plaza area around 1875

(Bldg. #28) Avila Adobe Annex, built in 1976, encloses the courtyard of the Avila. This structure is currently used by park staff, and one wing houses visitor restrooms. In the basement portion of this structure, a segment of the original water ditch (Zanja Madre) has been exposed.

(Bldg. #29) The El Pueblo-Olvera Street office building, which houses some offices and an art gallery. It has entrances on Olvera and Alameda Streets. The site was used as a winery from the early 1880s until 1979. The present building was constructed in 1914.

West Side of Main Street. (The following buildings are currently owned by Los Angeles County)

(Bldg. #35) The Beaudry Building, built in 1871 by Prudent Beaudry as a combination residence and business establishment. The bricks from the 1857 reservoir in the Plaza were used for its foundations. It has been much altered.

(Bldg. #36) The Los Angeles Gas Company Building, circa 1871. This three story brick structure was remodeled in 1909, to form an annex to the Vickrey-Brunswig Building, and was the showroom for the Brunswig Drug Company.

(Bldg. #34) The Vickrey-Brunswig Building, a five-story brick structure, constructed in 1888 for business and some residential use. In 1907 it was bought by Lucien N. Brunswig and became the headquarters for his drug company. This building is currently vacant.

(Bldg. #37) The Plaza House, constructed in 1883 by P. H. Garnier for business and as a residential hotel. The building is currently vacant.

(Bldg. #38a) Campo Santo. Between the Plaza House, the Juvenile Courts Building and the Church lies the former Campo Santo of the Church. This was used as a burial ground for the early settlers of the pueblo between 1826 and 1844. This site is currently used for parking.

(Bldg #39) The Church of Nuestra Senora la Reina de Los Angeles, constructed between 1818 and 1822. Altered many times, the old adobe church was outgrown by its parishioners and finally a new large church was built in 1965, leaving the old church to serve as a chapel. Next door to the church buildings is a two-story structure housing an office and meeting rooms and stalls for commercial use on Sundays. An additional recreational and office facility is planned for the area between the adobe church and El Pueblo Parking Lot 2.

The Church buildings are owned by the Catholic Archdiocese of Los Angeles.

Juvenile Courts Building (Old Brunswig Building), constructed by Lucien N. Brunswig in 1918 as a warehouse and packing plant for his drug company, it was acquired in 1930 by Los Angeles County and used for the Juvenile Courts Division of the Superior Courts.

The Old Warehouse. This five-story concrete building was originally constructed with an east-west axis in 1924 for use as a laboratory by the Brunswig drug company. Acquired by the Los Angeles County in 1930 its axis was changed to the north-south direction when Spring Street was widened. It is currently used by the County as a center for Indo-Chinese refugees and other purposes.

The Plaza and the East Side

(Bldg. #43) Plaza probably laid out between 1825 and 1830 in a rectangular shape with the corners at the cardinal points of the compass. It was landscaped and the shape changed to a circle shortly after the Pico House was built. It has been relandscaped several times and is paved with brick and concrete. It contains a "kiosko" built in 1962 which houses restroom facilities. The plaza is owned by the city of Los Angeles.

(Bldg. #46) Father Serra Park, on the east side of the Plaza is at the site of the old Lugo House (razed in 1951); contains lawns, trees, shrubs, and a statue of Father Serra.

(Bldg. #47) Placita de Dolores, 1979, a triangular lot containing a semi-circular tiled mural depicting "El Grito", a stage and a replica of the Bell of Dolores. Owned by the Department of Public Works, it was constructed on top of the old Zanja Madre.

A significant aspect of the cultural resources of El Pueblo exists as subsurface archeological remains. These values have not been systematically explored for the entire park; however, archeological excavations near the Avila Adobe and in other areas have revealed that significant remains are present. Such remains may be expected to include at least the following: foundation or structural remains from the span of history of the pueblo; remains of the Zanja Madre and other utility-related features; early road surfaces; and artifacts discarded as debris around older structure or over the bluff known to have existed along present-day Los Angeles Street.

Recent restoration work associated with archeological investigations along the foundations of older structures, and development work near the Biscailuz Building, indicate that such materials do exist, and are probably distributed throughout the historic park. Test excavations have been done recently in the area of El Pueblo Parking Lot #1; these have also revealed significant resources. Based on the investigations, it is clear that significant cultural resources are to be found below the surface.

Natural and Scenic Values

The natural resources of El Pueblo consist entirely of plant and animal species introduced after the appearance of Euroamericans and the founding of the pueblo. Thus, no native species exist today, except for some plants in the Avila Adobe patio, introduced for interpretive purposes. The most predominant of the exotic forms present are the large Moreton Bay fig trees (Ficus macrophyilla), planted ca. 1877 in the Plaza. Ornamental shrubs and trees are interspersed in parking lots and next to structures. Some garden species are regularly planted in the courtyard of the Avila Adobe. Besides the usual urban assortment of pigeons and house sparrows, the very rare grey ring-necked dove occurs in the park. This bird is found only in Florida and on Olvera Street, in the United States.

The park was originally part of the Southern Oak Woodland biotic community, although the congested urban environment of which El Pueblo is a part has long since supplanted this community. The only natural element left is the climate, although today's weather conditions have been modified by persistent atmospheric pollution.

El Pueblo possesses some scenic values. The taller structures of the Pico-Garnier Block are easily visible landmarks from the surrounding surface streets; the Pico House (a hotel) is probably the most notable. The plaza area presents a green relief from the surrounding grey of government buildings and freeways. In the historic park, both Olvera Street and the Pico-Garnier Block can be appreciated from the vantage of the Plaza. For many, the stalls and shops of Olvera Street present a colorful and bustling scene. Many areas of the park, however, are not visible from the outside. The Main Street side of the Olvera Street block presents a blank wall, relieved only by the ornamental facade of the Sepulveda House.

Recreation

El Pueblo de Los Angeles SHP offers many forms of recreational activities. The park offers yearly cultural events, including: Mardi Gras; The Blessing of the Animals; Cinco de Mayo festivities; a summer concert series in the Plaza; celebration of the city's birthday in September; and La Posadas, a nine-day celebration preceding Christmas. Numerous other events dot the yearly calendar, as well as special "once-only" events. "Las Angelitas del Pueblo," an active support group, offers guided walking tours of the historic park, Tuesday through Saturday.

Additional activities that can be considered recreational revolve around the daily activities of the park. The shops and puestos (stalls) along Olvera Street offer a chance for visitors to take leisurely strolls. This is often combined with lunch or dinner at one of the many restaurants along the street. Bands often play in the Plaza at the noon hour, and many visitors relax there.

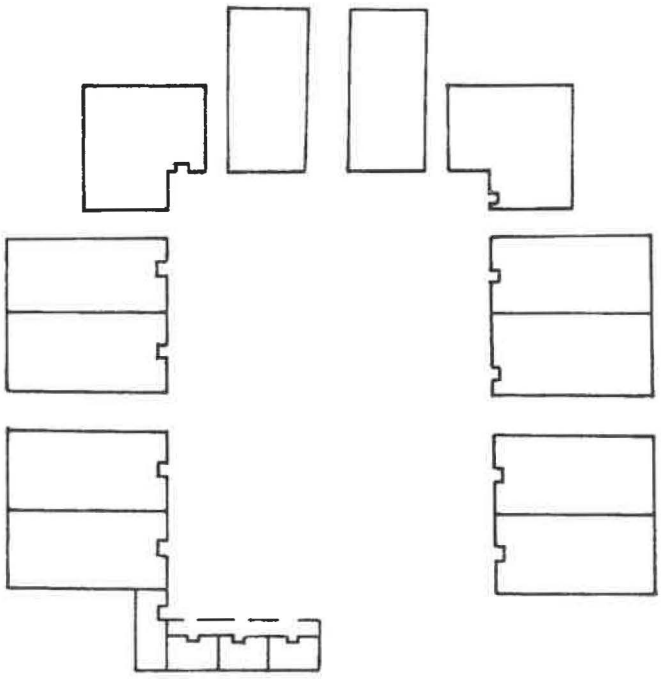
Resource Relationships to the Environment

The resources of El Pueblo de Los Angeles SHP are inextricable from the busy urban environment which surrounds them. This has affected, and will continue to affect, management and interpretation of these important resources. The presence of downtown Los Angeles is inescapable in most areas of the unit. The horizon to the south is dotted with massive government structures, and busy throughfares surround and divide the unit, with the attendant problems of noise and atmospheric pollution. As a result, the boundaries of the historic park are all but unrecognizable to first-time visitors, and the specter of parking and crossing the busy streets may discourage some visitor use.

The location of the park has many positive aspects. The presence of surface streets and freeways makes it easily accessible from anywhere in the Los Angeles basin. The unit is convenient to pedestrians from the government buildings to the south, and has traditionally been a favorite spot for lunch. The park, especially the Plaza and Olvera Street, presents a relief from the surrounding landscape.

At present, it does not appear that the surrounding environment presents an imminent threat to the historic structures. Several conditions will, however, have to be considered and monitored in the future. Traffic and vibration may, to some degree, affect the structures. Weather conditions and smog may affect the integrity of some building exteriors and the remains of the Siqueiros mural. Historic buildings also face the danger of earthquake damage.

Plaza - 1857, showing the Lugo House Adobe and other buildings surrounding the Plaza before major changes took place (background is site of Union Station)



Derived from a map of the suggested plan of the first plaza. On file, H. H. Bancroft Collection, Bancroft Library, Berkeley.

Resource Deficiencies and Recommendations

Certain phases of El Pueblo's historical span are poorly represented in the park. This is partially acceptable, since it would be infeasible to interpret, in depth, the entire historic period. In some instances, however, these deficiencies should be corrected by augmenting the present resources of the park through state acquisition, or transfer of jurisdiction of adjacent parcels of land (see Figure 1). Specifically, these theme-related deficiencies and possible corrective measures are:

Early Hispanic (Spanish) Era. El Pueblo de Los Angeles (1781) is the second of only three official pueblos established by the Spanish in Alta California. Although it has been at its present location only since about 1818,[1] the site relates significantly to the Early Spanish period. This period is physically represented by the Avila Adobe, the church, and the site of the Plaza, although the latter two have been heavily altered through the years, and are not state-owned.

It is important, therefore, to make every effort to augment the resources of this era. Specifically, increased archival research should be ongoing for the era. A comprehensive archeological recovery program must be instituted and applied at every opportunity, throughout the park. Equal consideration must be given to reconstruction of period adobe structures wherever an appropriate lot becomes available.

Late Hispanic (Mexican) Era. This period (1822-1848) was an important one in the pueblo, and to California as well. It was a time of turmoil, when Mexico broke away from Spain and imposed new regulations on the colony of California. It was an important period of development in El Pueblo. Unfortunately, only two structures have survived from this period, the Avila Adobe and the church, both built in the earlier (Spanish) period. Measures similar to those outlined above must be undertaken to correct these deficiencies.

American Era. This historical period (1848-present) is well represented, especially the span from 1850 to 1900. The physical resources of this period dominate all others in the park. Some significant structures that lie outside state ownership, yet within the ultimate boundary, need to be acquired to ensure adequate interpretation and rehabilitation. Specifically, these include the Vickery- Brunswig and Plaza House structures. A significant problem is the lack of knowledge concerning historical ethnic populations, which were very important to development of El Pueblo. Every effort must be made to acquire this understanding, through archival, oral historical, and archeological investigation.

1 *A plaza, near the location of the present one, was apparently laid out sometime after the intensive rains of 1815 forced relocation of the pueblo to higher ground from its original location in the nearby flood plain (see plan of first plaza, bottom of page 28). The actual layout of the relocated plaza may have occurred between 1815 and 1825 (cf. Appendix B). It is said that the pueblo's second plaza location (1814-1825) overlaps a portion of the third (and present) plaza--its northwestern corner. The third plaza may have been laid out by 1825-1830; it is known that the second plaza was abandoned by 1832. The 1818 date is used in the text, and for the initial date of the park's "prime period," as a convenience, because the date that is being generally accepted for construction of the Avila Adobe (the earliest state-owned structure in the historic park) is 1818. Contrary to what many believe, early Alta California settlements were informal, in contrast to the inset of the planned plaza; in fact, Sola, in an 1818 communication, complained of the "casual" arrangements of the Los Angeles and San Jose pueblos (Mason, 1979: personal communications).*

Allowable Use Intensity

All areas now within El Pueblo de Los Angeles SHP will sustain high use intensity, assuming that all currently existing hazards associated with unstabilized or unrestored structures are corrected. It is conceivable that some restrictions might be placed on particular structures, based on local health and safety regulations or on the needs of specific structures or other resources.

Theme Identification

The California History Plan has identified the major themes and periods of California history. El Pueblo de Los Angeles SHP contains elements that represent two major eras (Hispanic and American), as well as suberas, themes, and subthemes.

The park, when viewed as an archeological site, represents aspects of the Hispanic Era, including both the Spanish and Mexican suberas. Specifically, the Avila Adobe, the Plaza, and the church were established before ca. 1825. Also, many areas in the park were initially developed during the Mexican subera, including many adobe structures located around the Plaza. Although these structures are not standing, their locations may yield significant archeological resources.

Construction and development boomed around the Plaza, and in the surrounding area as well, during the American Era. Many of the historic structures now in the park are dated from the period 1850 to 1900. All of the Pico-Garnier block falls roughly in this period, as do many of the buildings along Olvera Street. An important component of this period is the general development of the Los Angeles urban area, as it is reflected in El Pueblo. This development was accompanied by a change in the national and ethnic population of the area. A large Chinese population occupied buildings on all but the west side of the Plaza. Many other national groups are represented by residences and businesses throughout the pueblo area.

Many resources in the park reflect the later period of the American Era. After 1900, El Pueblo began to decline; by the 1920s, it could be characterized only as a slum. Some construction did take place, however, along Olvera Street and next to the Plaza. The Biscailuz Building (1926), the Methodist Church (1926), and the Plaza Substation (1904), which served the urban electric railway system, are from this period. One of the most significant resources of El Pueblo is David Alfaro Siqueiros' mural, Tropical America, painted in 1932 on the south face of the second story of the Italian Hall. Although this work was condemned at the time and the wall whitewashed, remnants of the mural are visible from many areas of the park.

In summary, the resources of El Pueblo represent a significant span of California history. The park contains resources worthy of preservation and interpretation that date from 1818 to 1932.

Theme Statements

Numerous themes and subthemes identified in the California History Plan are represented at El Pueblo. Within the Spanish period of the Hispanic Era, applicable themes include: Spanish exploration and settlement; political and religious affairs, specifically colonization; and economic and material growth, specifically agriculture, adobe architecture, and energy and water transmission. For the Mexican period of the Hispanic Era, the following themes are pertinent: military affairs; economic and material growth, specifically agriculture and architecture; and social history, including lifestyles and recreation.

Themes relevant during the American Era include: political and military affaris; economic and material growth; population growth and patterns; transportation; architecture, including adobe, Victorian, and later styles; cultural development, especially drama; and social history, with an emphasis on ethnic populations and interethnic relations.

These themes are more fully delineated in the Interpretive Prospectus. The prospectus and this general Plan will serve as guides for development of an interpretive plan for El Pueblo.

The following table lists the specific interpretive periods and themes that were derived from the Interpretive Prospectus. These are divided into primary and secondary interpretive categories.

Table 1

INTERPRETIVE PERIODS AND THEMES

Primary Interpretive Periods

1818 - 1822	Spanish Period
1822 - 1848	Mexican Period
1848 - 1932	American Period

Secondary Interpretive Periods

	Pre-history - Indian Lifestyles
1781 - 1818	Pueblo Founding; First Plaza
1932 - Present	Recent History

Primary Interpretive Themes

El Pueblo De Los Angeles - Then and Now
- --Settlement
- --Religion
- --Agriculture
- --Energy and Water Transmission
- --Political
- --Commerce and Trade
- --Social History
- --Military Affairs
- --Ethnic populations
- --Christine Sterling
- --Recent History

Secondary Interpretive Themes

- Native Americans
- Portola Expedition
- San Garbiel Mission
- People Important to El Pueblo

Declaration of Resource Management Policy

Preservation, Restoration and Reconstruction of Cultural Values

Maintenance of the historical resources at El Pueblo through preservation, restoration, and reconstruction is the most important aspect of development in the park. Most resources in the park are historic structures, and the sites of past structures of historic importance. Resource Management Directive #64 creates guidelines for this work:

> "AS FAR AS POSSIBLE, HISTORIC FEATURES IN HISTORICAL UNITS, OR IN HISTORICAL ZONES OF OTHER UNITS, SHALL INCLUDE ALL PHYSICAL EVIDENCES OF SIGNIFICANT HUMAN ACTIVITY AT THE SITES AND BE DEALT WITH AS FOLLOWS:
>
> a. WHEN STRUCTURES OR OTHER FEATURES OF HUMAN ORIGIN ARE INCLUDED IN A HISTORICAL PRESENTATION, IT IS THE DEPARTMENT'S OBJECTIVE: FIRST, TO PRESERVE WHAT EXISTS: SECOND, TO RESTORE WHAT EXISTS: THIRD, TO RECONSTRUCT ON ORIGINAL SITES: AND FOURTH, TO RECONSTRUCT ON OTHER THAN ORIGINAL SITES. NO RESTORATION OR RECONSTRUCTION SHALL BE UNDERTAKEN UNLESS THERE IS SUFFICIENT INFORMATION TO ASSURE ACCURATE AND AUTHENTIC WORK. IN EVERY CASE, SUFFICIENT HISTORICAL AND ARCHITECTURAL RESEARCH SHALL BE ACCOMPLISHED TO ESTABLISH ACCURACY AND AUTHENTICITY.
>
> b. EXISTING FEATURES OF HISTORICAL AGE WILL ALWAYS BE PRESERVED AND/OR RESTORED (1) UNLESS THEY ARE NOT HISTORICALLY IMPORTANT WITHIN THE PRIMARY PERIOD FOR THE UNIT; (2) UNLESS THEY OCCUPY SITES REQUIRED FOR RECONSTRUCTION OF OTHER FEATURES OF OVERRIDING IMPORTANCE IN INTERPRETATION OF THE UNIT; (3) UNLESS THEY EXERT A NEGATIVE INFLUENCE ON THE UNITS, AND SHOULD BE REMOVED.
>
> c. FOR HISTORIC FEATURES THAT FALL WITHIN THE PRIMARY PERIOD OF A UNIT, AND ARE IMPORTANT FOR PRESENTATION AND INTERPRETATION, THE DEPARTMENT SHALL PRESERVE, RESTORE, OR RECONSTRUCT, AS MAY BE NECESSARY.
>
> d. FOR EXISTING HISTORIC FEATURES OUTSIDE THE PRIMARY PERIOD FOR A UNIT, THE DEPARTMENT SHALL PRESERVE, AND RESTORE AS REQUIRED TO PRESERVE, BUT WILL NOT RECONSTRUCT.

In accordance with these guidelines, all structures constructed during the prime period (1818-1932) shall be preserved. These structures will be stabilized where necessary, to preserve the integrity of the resources. Such work has been ongoing in some areas of the park, notably on the Pico-Garnier Block and the Avila Adobe on Olvera Street. In other areas of the park, structures have not been dealt with; in these areas, stabilization action will be taken. Particularly important are: The Sepulveda House; the Pelanconi House; the Plaza Substation; and other structures along the northwest side of Olvera Street.

Restoration will be necessary in many structures in the park, both for purposes of stabilization and to reestablish historical authenticity with respect to the prime period. Almost all of the buildings have been modified since the time of their construction, and a decision regarding the prime period for each structure will have to be made before restoration work. This period shall reflect the date of construction and/or the period when the structure reached the ultimate expression of its purpose. For example, the Pico House, constructed in 1869, may be said to have reached its zenith in ca. 1875-6. Thus, this later date may, in fact, be the best guide for restoration work, leading to the fullest possible interpretation of the place of the building in the history of the area. Such a decision will be made for each structure when restoration begins, based on more indepth research to be guided by the information in this plan.

All restoration work shall follow the above-listed guidelines of the department. Historical authenticity shall be sought on exterior restorations. Authenticity shall be sought on any interior restorations that will be open for public viewing, or that will serve any public function, such as museum facilities, support group facilities, or office space. Interior adaptive use restorations shall conform to the period emphasized in the exterior restoration of any building. Thus, no single structure shall be used to represent multiple periods, but rather shall be preserved, restored, and interpreted as a whole, with internal integrity in respect to theme and period.

Extensive archival and other historical research shall be done before restoration work, to insure complete accuracy. These endeavors shall be oriented toward gathering information on the architectural styles, as well as the history of the uses of the buildings. This information shall form the basis of the interpretive efforts undertaken in each structure.

Serious consideration shall be given to reconstruction of specific buildings in the park. Reconstructions offer the opportunity to mitigate resource deficiencies in reference to specific historical periods. Priority shall be given to reconstruction of adobe buildings from the Spanish and Mexican periods. These reconstructions shall be based on complete historical and archeological research, and shall not proceed until a sufficient body of information regarding the structures has been compiled. In all reconstructions, complete authenticity shall be sought. Reconstructions shall take place on the original building sites, whenever possible.

Generic or period structures that do not reflect actual dwellings that existed shall not be acceptable. Reconstructions shall occur on property that is currently occupied by structures outside the primary historical period, and/or on unoccupied land.

Historical archeology shall be employed wherever necessary to ensure the authenticity of restoration and reconstruction work. Archeological testing and monitoring shall also be employed whenever surface or subsurface disturbance associated with any work in the unit occurs, as delineated in Resource Management Directive 59. Any proposed demolition, alteration, or encroachment on historic structures must have approval from the State Department of Parks and Recreation.

Objectives for Interpretation

In accordance with the approved Declaration of Purpose, interpretation at El Pueblo shall emphasize history during the prime period, 1818-1932, but shall also include the flow of history from the Hispanic Era to the present, so as to depict the diverse populations of the area and the development of Los Angeles. Efforts will concentrate on general themes from the California History Plan that pertain to El Pueblo. Specific themes and methods of interpretation shall be determined by this plan and the Interpretive Prospectus.

Interpretation of Cultural Values

The department is committed to communicating to park visitors the historical significance of El Pueblo, and the history of Los Angeles from its founding in 1781 to the present. This must be done with a well-planned interpretive program that will provide continuity for the flow of history from the Spanish era through the Mexican and American eras, and will act as a strong unifier of the diverse facilities offered at El Pueblo.

Activities such as concessions, house museums, interpretive displays, tours, and special events will be appropriate to the historical integrity of the park, and will contribute to visitor enrichment and understanding of the resources of El Pueblo.

Adaptive Use

While the department seeks historical authenticity in state historic parks, it is recognized that from time to time, visitor services must be provided through concessions. In the case of historical parks, adaptive use in the historic preservationist's sense is an appropriate means of providing visitor services. Such use is covered in part by Resource Management Directive 68, which states:

> "BUSINESSES ESTABLISHED UNDER CONCESSION AGREEMENTS IN HISTORIC STRUCTURES COMMITTED TO AUTHENTIC PRESENTATIONS MUST BE COMPATIBLE WITH THOSE BUSINESSES THAT OCCUPIED THE STRUCTURES DURING THE HISTORIC PERIOD, AND MUST BE CONSISTENT WITH THE APPLICABLE RESOURCE ELEMENTS..."

El Pueblo offers an unique opportunity to interpret the story of the development of a city. This interpretation shall include the facts associated with the founding of the pueblo and the events of the Hispanic and American Eras, and shall impart to the public, wherever possible, a deeper sense of the relationship between events, and a concept of the flow of history. It is important that the public understand that the events, and especially the cosmopolitan makeup of the population of El Pueblo, are exemplary of the development of the City of Los Angeles. This emphasis will heighten the awareness of the citizens of Los Angeles, and will allow visitors a broader understanding of the processes of urbanization.

SUBJECT: Los Angeles Aerial Rapid Transit Project SCH Number 2020100007 Notice of Availability (NOA)

Re: Comments of Draft Environmental Impact Report (DEIR)

Project description, assessments, and alternatives considerations are totally inadequate and incomplete and without engineering and construction considerations and descriptions. Many references mention future studies, engineering, and designs to be done before construction, but all such would be without public review and comments and thereby not in compliance with CEQA. GO18-1

Although Goals/Purposes and Objectives are required for a DEIR, this DEIR provides vague and ambiguous descriptions and totally inadequate development of the Project, its objectives, and its alternatives and their numerical/quantified comparisons. Thus, the discussion of alternatives and Project and their numerical/quantified comparisons are totally inadequate. GO18-2

Although directly related to the DEIR descriptions and assessments, the DEIR does not even minimally use/mention the LA City Department of City Planning database, ZIMAS, which must be fully incorporated if the Project is to be placed within the City of Los Angeles. As no Memorandum of Understanding or Agreement between the sponsor, Metro, and City of Los Angeles is provided or even mentioned, this absence is understandable avoidance, but renders the DEIR unacceptable, incomplete, and inadequate. GO18-3

Without an adequate and complete DEIR, alternatives to the proposed Project cannot be adequately formed and compared. Thereby the consideration of alternative cannot be considered adequate nor complete, but should include ZE/NG buses and dedicated bus lanes and perhaps with congestion pricing for DTLA and the Project site. GO18-4

For detailed comments see below, including pertinent identified portions of the DEIR with **highlighted** issues of the current texts for the specific ***comments.*** GO18-5

ES-1/3 When complete, the proposed Project would have a maximum capacity of approximately 5,000 people per hour per direction, and the travel time from LAUS to Dodger Stadium would be approximately seven minutes.

5000passengers/hr and 40p/gondola = 125 gondolas(g)/hr = 1 g/29 sec

Travel ROT = 14 min including loading/unloading = 3 sec/person x 40 = 120 sec = 7min transit + 2 min ld/uld = 60/9 = 7 g-trips/hr x 40pgr = 280 total passenger/hr x 2 hr = 560 p/game – nine/9 gondolas/cabins operating each game/event

Provide Project operations for peak passenger processing and gondola travel for 2 hours prior to Stadium events.

Provide seating/standing design floor capacity for each gondola/cabin used for Project's process flow and movements.

Provide total weight of all loaded gondolas and angular load distribution for each tower (one way loaded/opposite way unloaded).

ES-2/3 The standards of **adequacy** of an EIR, defined by Section 15151 of the CEQA Guidelines, are as follows: GO18-6

An EIR should be prepared with **sufficient level** of **analysis** to provide decision-makers with information which enables them to make a decision which intelligently takes account of environmental consequences. An evaluation of the environmental effect of the proposed project need not be exhaustive, but **sufficiency of an EIR is to be reviewed in light of what is reasonably <u>feasible</u>**….The courts have not looked for perfection but for adequacy, completeness, and good faith effort at full disclosure.

First of 79 mentions of feasible, vs financial and fiscal of <10, and must be considered as an acceptable alternative for costs. Provide "costs" comparisons for each use of "feasible" or "fiscal" and for alternatives throughout the DEIR.

Provide documentation of database for the "analysis" and numerical/quantified assessments and comparisons in table forms.

Provide Project definitions and demonstrations of feasible and infeasible conditions within the Project. Definitions of feasible commonly include "practical" issues, costs, funding, probability of changed conditions, and unexpected costs for safety, hazards, and changed conditions claims.

Overall the DEIR is inadequate and incomplete for reasonably public accessible considerations (review and comments) of the Project, its impacts, mitigations, and alternatives.

Lack of use of LACity-DCP-ZIMAS database for issues along the entire route and for specific facilities located along the route. Provide ZIMAS database for any DEIR references to equivalent data from elsewhere, e.g., seismicity, landslide, liquefaction, etc..

cont'd GO18-6

ES-3/4 The ART system has the **ability** to overcome **grade and elevation issues** between LAUS and Dodger Stadium, and would provide **safe, zero-emission, environmentally friendly, and high-capacity transit connectivity** in the Project area that would **reduce greenhouse gas (GHG) emissions** as a result of reduced vehicular congestion in and around Dodger Stadium and on neighborhood streets, arterial roadways, and freeways. The proposed Project would operate daily to **serve existing residents, workers, park users**, and visitors to Los Angeles.

Provide engineering design drawings and calculations and all derived assessment of engineering forces on towers and cableway given the imbalance of cabin loads during specially events with no passengers on one side and full capacity loads on the opposing cableways.

GO18-7

ES-4/2 The proposed Project "alignment" includes the suspended above-grade cables and **cabins** following the position of the Project components along the ART route….

Provide assessment of engineering forces on towers and cableway given the imbalance of cabin loads during specially events with no passengers on one side and full capacity loads on the opposing cableways.

GO18-8

ES-4/4 When complete, the proposed Project would have a maximum capacity of approximately 5,000 people per hour per direction, and the **travel time from LAUS to Dodger Stadium would be approximately seven minutes**.

Provide Gondola loading/unloading/travel timing cycles as part of the overall 23 second/7 minute travel patterns including a time chart for each cycle element.

e.g., Loading/unloading 3 sec / passenger 40p/g = 120sec each for loading and unloading

Provide same cycles including 10% ADA passengers.

GO18-9

ES-4/7 The alignment then crosses over the western edge of the Los Angeles State Historic Park and the Metro L Line (Gold) tracks.

No mention of Buena Vista til pg.3.11/20. Provide currently proposed building outlines for both ground area and heights compared to this Project along with full cabin presents during target events.

GO18-10

ES-10/2 The Dodger Stadium Station….The Project Sponsor **will request consideration** by the Los Angeles Dodgers of the potential for the Dodger Stadium Station to include **a mobility hub**…to access Elysian Park and other nearby neighborhoods, including Solano Canyon.

No specific design or drawings are provided for the mobility hub or for the access to surrounding neighborhoods, and no beneficial effects are proposed for such a hub and accesses. No proposed schedules for LA ART are proposed for daily services, frequencies and loads or for pedestrian/bike/handicapped movements from/to hub and the neighborhoods.

GO18-11

Provide Daily and Daytime schedules, frequencies, and ridership access for non-games days public access.
Provide definition of specific considerations by LAD for non-game day operations and riderships.

cont'd GO18-11

ES-10/6 At the Chinatown/State Park Station, cabins would detach from the rope and decelerate to the station speed. Since passenger access would be provided at this station, the cabins would **decelerate to about one foot per second (less than one mile per hour) and the doors would open**.
Provide station speeds schedules and pathways other than zero/dead stop and temporal sequencing for unloading and reloading of 40 passenger each. Provide same for at least 10% ADA related passengers and seniors (65+yr olds).

GO18-12

ES-11/1 Operation of the proposed Project would require approximately 20 personnel. Station **attendants would be located within each station to assure safe boarding or to execute stops, if necessary**. Attendants would also provide customer interaction and observation; if a passenger needs special assistance, an attendant may either **further slow or stop a cabin**.
Provide personnel/staffing levels for each Project element during an event operations. Provide for full element operations, e.g., three stations and as to any staff shifting during event operations, e.g., No staff at Park Station and rotating staffs for initial Alameda Out-bounds vs later Stadium outbounds.
Provide Gondola loading/unloading/travel timing cycles as part of the overall 23 second/7 minute travel patterns including a time chart for each cycle element e.g., Loading/unloading 3 sec / passenger 40p/g = 120sec each for loading and unloading
Provide same cycles including 10% ADA passengers.
Provide requirements for agent-initiated stoppage (=0.0fps).

GO18-13

ES-13/2 The proposed Project's stations, junction, towers, and gondola cabins would incorporate energy efficient, **sustainable**, water and waste efficient, and resilient features, **as feasible**. The proposed stations and junction are designed to be open-air buildings, allowing for **passive ventilation strategies** and providing direct access to outdoor air and natural daylight, while also providing adequate shade protection from heat. **The cabins would be ventilated to enhance air quality for passengers**.
Provide definitions for sustainable (40+ years operations) and feasibility calculations.
Provide definition and design for cabin ventilation and for any station ventilation (e.g., fans).
Provide definitions and designs of Passive Ventilation and enclosing solar panels for shading.

GO18-14

ES-13/3 Materials for the stations, junction, and towers would be locally sourced **where possible**, and would include recycled content **where possible**.
Provide conditions for "possible" sourcing and recycled contents, rather than "where feasible".

GO18-15

ES-14 Table ES-1: Proposed Project Construction
Maximum Depth of Drilled Piles ***Maximum Depth below pile cap***
Clarify Maximum depth of pile tip = 10ft + 120ft bpc = 130ft bgs
Maximum Depth of Excavation ***Provide Maximum Depth to base of pile cap and top of pile***
Amount of Excavation
Provide excavation volume including bulking for pile cap, 10ft depth = 3 cuyd/sq yd plus times surface area.
Provide piles boring/auguring volumes for all Project stations, towers, and junction e.g., = 1 yds x 40yd = 40 cu yd/pile x 25-40 piles = 1000-1600 cu yd, Stn Pile 55-80-125 Exc 2700-6300 cuyd, and Twr Pile 120-125 Exc 1300-6400 cuyd.
Provide clarifications regarding pile depth below ground levels vs pile lengths (feet and below pile cap bottom/floor.

GO18-16

ES-**19/1** Furthermore, the existing DSE service operates up to **8 buses per hour**, while the **TSM Alternative would require 77 buses per hour**.
Based on 5000-6000 passengers/hour, bus loads would be 65-80 passengers (sitting and standing). Provide a round trip flow chart and process flow (in seconds) including times for unloading/loading, start up and stopping times, and travel times (loaded and unloaded).

GO18-17

Provide comparative table for both cabin- and bus-based alternatives, especially for unloading/loading of single-door-cabins vs double-door-buses and for total cabin/bus seated/standing capacities.
Provide calculations and design requirements for bus-only lane access to Stadium Station site.
Provide a Project Alternative and comparisons for single- vs double door cabins/gondolas along with examples of existing operational double-door ART systems worldwide.

cont'd GO18-17

ES-19/4 Of the alternatives analyzed in this Draft EIR,…Although the No Project Alternative would not meet any of the Project Objectives, it would avoid all of the Project's significant impacts, including the Project's significant and unavoidable construction noise and vibration impacts. Conversely, the No Project Alternative would not result in ART **connections between the neighborhoods noted above**. Additionally, VMT and vehicle congestion would not be reduced, and the associated reduction in GHG emissions and air quality improvements would not take place.
Provide non-game days road transportation equivalent to that of the Project. Assume all electric buses with solar shade panels on buses and transit stops.

GO18-18

ES-19/5 Because the TSM Alternative would also avoid the Project's significant and unavoidable impact with respect to construction noise and vibration without the need for mitigation, and would reduce the range of impacts to the greatest extent listed in Table 4-3, it is deemed the Environmentally Superior Alternative. However, the TSM Alternative would not meet the **majority of the Project's Objectives in full or in part**. Conversely, the Spring Street Alignment Alterative would meet all of the Project Objectives.
Provide comparisons of TSM and proposed Project numerical rankings for each Project Objective. Provide required mitigations for full or equivalent compliance for each objective compared to the proposed Project alternative configuration.

GO18-19

ES-22 - ES-84/Table ES-2: Summary of Environmental Impacts
No references to sections/pages/paragraphs.
Project Design Feature(s) (PDF) and/or Mitigation Measure(s) (MM) without clear references within 62 pages of text tables and columns.
Table provisions are inadequate, incomplete, and unrelatable to the DEIR for public review and comments. Provide revised table including specific page/paragraph references to Project and alternatives descriptions.

GO18-20

ES-29/4 ES 13. SUMMARY OF ENVIRONMENTAL IMPACTS Table ES-2 provides a **summary of the environmental impacts** of the proposed Project evaluated in this Draft EIR. Based on the analysis in Chapter 3.0, Environmental Impact Analysis, **implementation of the proposed Project would result in significant and unavoidable impacts related to** Noise and Vibration.

The Table is not coordinated and referenced with the text to assure consistency and thereby renders the table irrelevant, inadequate, and incomplete for public review and comments.

As indicated elsewhere below, significant, unavoidable, and unmitigated impacts would arise in the Hydrology, Geology, Visual, Aesthetics, and Services/Infrastructure elements of DTLA.

Provide a fully cross-referenced table with text citations to each sector, and clearly identify significant impacts and required mitigation/compensation.

GO18-21

ES-29/5 Project Design Features (PDFs), while **not necessary** for the **impact significance determination**, are included in Table ES-2 because **they** are inherent in the design of the proposed Project. Best Management Practices, or other measures required by law and/or permit approvals, are also requirements of the proposed Project. Additionally, Mitigation Measures have been identified and are additional actions designed to avoid, minimize, or compensate for significant environmental impacts and are required where significant impacts have been identified based on the analyses in Chapter 3.0 of this document. Where applicable, Mitigation Measures are described on Table ES-2.

54 pages of Table ES-2, while not necessary, are confusing and distractive compared to Chapters 3 and 4 for public reviewing the EIR. Especially distractive when the DEIR repeatedly references preparation of future final design studies and documents and final design conditions based on further site conditions analyses, descriptions, and changes of Project design conditions.

Provide fully rectified/cross-referenced table or eliminate.

GO18-22

ES-30 – ES-84 – Table ES-2

No coordination of table summaries and texts (pages/paragraphs). Table is a morass of uncoordinated words in boxes and texts. Totally inadequate and incomplete for public review and comments and purposefully distractive and destructive of meaningful public review/comments.

GO18-23

ES-50 Table ES-2: Summary of Environmental Impacts Geology and Soils

MM-GEO-A: Prepare a **Site-Specific Final Geotechnical Report**. The Project Sponsor shall engage a California-registered geotechnical engineer to prepare and submit a **site-specific final geotechnical investigation and report to the City of Los Angeles for review, consistent with the requirements of the CBC, applicable Los Angeles amendments, and California Geological Survey Special Publication 117 (as amended)**. A **site-specific geotechnical exploration program**, along with associated laboratory testing, is necessary to complete a **design-level evaluation of the geologic hazards and conditions, seismic hazards, grading conditions, and foundation capacities**. The **site-specific final geotechnical report** shall provide

a description of the geological and geotechnical conditions at the site;

the findings, conclusions, and mitigation recommendations for potential geologic and seismic hazards; and

design-level geotechnical **<u>recommendations</u>** in support of grading and foundation design….

<u>recommended</u> measures to reduce potential impacts related to landslides, subsidence, liquefaction, differential settlement, expansive soils, soil corrosivity, or other potential ground failures induced by the proposed Project. …ES-51…**The submittal and approval** of the final geotechnical report **shall be a condition of the grading and construction permits issued by the City of Los Angeles Department of Building and Safety.** The Project Sponsor shall implement the **recommendations** contained in the **approved report during project design and <u>construction</u>**.

Geology and hazards/hazardous materials sections both reference the "Site Specific Final Geotechnical Report" which must be prepared and considered during final pre-construction stages and which will not be available for public review and comments.

This current discussion of impacts clearly is biased, vague, inadequate, and incomplete for descriptions and assessments and not provided by qualified specialists.

Provide a sites specific geotechnical report based on actual borehole and sediments/groundwater chemical analyses as part of a revised/subsequent Environmental Impact Report for the Project.

Current literature reviews and discussions do not include Metro's extensive experiences with soil and groundwater contamination experienced during construction of the Red Line Station at

GO18-24

Union Station which required millions of additional change-order costs, major groundwater collection and treatment of contaminated groundwater. Then experiences indicated that methane, numerous hydrocarbons, and creosote had sources between Chavez and Broadway from oil fields, oil processing facilities, railroad yards, and railroad ties/wood soaking pits.

Provide review of existing conditions and potential impacts from foundations/pile caps, pile drilling, and pile placement/formation at each tower and project support features. Provide geotechnical/chemical composition testing and drilling/sampling in at least four borings per tower and revise the Project area description and impact assessment accordingly.

cont'd GO18-24

ES-52 A PRMMP **shall** be developed by a qualified paleontologist meeting the criteria established by the Society for Vertebrate Paleontology. The plan **shall** apply to paleontologically sensitive deposits, including older Quaternary alluvium and Puente formation deposits, that may be impacted by the proposed Project, as determined by a qualified paleontologist in consultation with the construction team and guided by geotechnical coring. The qualified paleontologist **shall** supervise the paleontological monitor, who **shall** be present during construction excavations into older Quaternary alluvial deposits and Miocene Puente formation deposits. Monitoring **shall** consist of visually inspecting fresh exposures of rock for larger fossil remains, and where appropriate, collecting wet or dry screened sediment samples of promising horizons for smaller fossil remains. The frequency of monitoring inspections **shall** be determined by the paleontologist, and **shall** be based on the rate of ground-disturbing activities, the material being excavated, and the depth of excavation; and if found, the abundance and type of paleontological materials. If any paleontological materials are found, the paleontological monitor **shall** temporarily divert or redirect ground-disturbing activities in the area of the exposed fossil to facilitate evaluation, and if necessary, salvage. The paleontologist **shall** assess the discovered material(s) and provide a recommendation(s), if necessary, for the preservation, conservation, or relocation of the resource, as appropriate. The Project Sponsor **shall** comply with the recommendations of the…53…evaluating paleontologist, and ground-disturbing activities may resume once the paleontologist's recommendations have been implemented to the paleontologist's satisfaction. If paleontological materials are found, the paleontologist **shall** prepare a report identifying the resource and the recommendations proposed and implemented, within 1 year of completion of the fieldwork. A copy of the report **shall** be submitted to the Los Angeles County Natural History Museum.

Compared to 6-37/1 "Mitigation Measures GEO-A (prepared a site-specific final geotechnical report) and GEO-B (prepare a paleontological resource monitoring and mitigation plan (PRMMP)) **would** also be implemented."

Unlike other future mitigation measures, the PRMMP is laced with "shall" rather than "would" although no such document is or would be available for public review and comments prior to approval of the Project by Metro Board. Provide all mitigation measures with "shall" and remove any conditional instructions as a required and dependent condition for all impact assessments. Provide a thoroughly revised and supplemented Subsequent Draft Environmental Report (S-DEIR) for public review and comments.

GO18-25

ES-53 MM-HAZ-A: Prepare a Soil and Groundwater Management Plan. The Project Sponsor **shall** retain a qualified environmental consultant to **prepare a Soil and Groundwater Management Plan prior to** any re-grading, decommissioning, or construction activities. The Soil and Groundwater Management Plan **would be prepared** and implemented to specify methods for handling and disposal in the event contaminated groundwater, contaminated soil, or structures are encountered during Project construction. The Soil and Groundwater Management Plan **shall** provide a summary of…54…the environmental conditions at each Project component site, including stations and towers.

The Soil and Groundwater Management Plan **shall** include methods and procedures for sampling and analyzing soils and/or groundwater to classify them as either hazardous or non-hazardous; and if identified as hazardous, **shall** include additional methods and procedures for the proper handling and removal of impacted soils and/or groundwater for off-site disposal and/or recycle.

Methods and procedures in the Soil and Groundwater Management Plan **shall** be in accordance with current federal, state, and local regulations, and be protective of workers and the environment.

Unlike other future mitigation measures, the S&GWMP is laced with some "shall" and a "would", although no such document is or would be available for public review and comments prior to approval of the Project by Metro Board.

Provide a S&GWMP with all mitigation measures with "shall" and remove any conditional instructions as a required and dependent condition for all impact assessments.

GO18-26

1-1/4 The aerial gondola system would consist of cables, three passenger stations, a non-passenger junction, towers, and gondola cabins. When complete, the proposed Project would have a maximum capacity of approximately 5,000 people per hour per direction, and the travel time from LAUS to Dodger Stadium would be approximately **seven minutes**.

Attempts to confirm passenger transport requires more specific information than provided, the DEIR is inadequate to confirm Project capacities and therefore is incomplete and inadequate for public review and comments.

Provide full engineering drawings for any type of gondolas to be used for this Project and demonstrate typical event passenger positions and the total number of passengers to be safely transported.

Provide a numerical and timed flow chart for passenger conveyance from Alameda to Stadium stations using 420 seconds for total trips (including loading/unloading, seating/standing, Park Station stops/goes and other identifiable activities).

GO18-27

1-1/6 1.2 PURPOSE OF THIS DRAFT ENVIRONMENTAL IMPACT REPORT In accordance with Sections 15050 and 15367 of the CEQA Guidelines, Metro is the **Lead Agency for the proposed Project**, and has the principal responsibility for approving the proposed Project. This Draft EIR has been prepared for the following purposes:

Given the number of agencies involved in Project, absence of an Memorandum of Agreement/Understanding must be provided especially for the responsibilities and origins of design and engineering aspects, without such the DEIR is incomplete and inadequate for CEQA.

Provide MOA/MOU regarding Lead Agency agreement, parties, status, and responsibilities.

Provide MOA with LACity-DPW, DOT, DB&S.

Provide submission date for DEIR and NOA via SCH/OPR. NOP was issued to SCH but not so far for NOA/EIR.

Provide MOA of Metro and Calif. State Lands Commission.

GO18-28

1-2/2 • To inform public, agency decision makers and the public of the environmental effects of the proposed Project, including
any **significant** environmental effects, as well as
possible ways to minimize those significant effects, and
reasonable alternatives to the proposed Project.
• To enable Metro to consider environmental consequences when deciding whether to approve the proposed Project.
• To enable other **responsible public agencies** that must approve activities undertaken with respect to the proposed Project, including permits and other approvals,
to consider the environmental effects of the proposed Project.

Given the number of agencies involved in Project, absence of an Memorandum of Agreement/Understanding must be provided especially for the responsibilities and origins of design and engineering aspects, without such the DEIR is incomplete and inadequate for CEQA.

Provide definitions and requirements for use of Possible vs Feasible,

Provide draft MMRP for summary of mitigation and enforcement.

Provide contracts (drafts of issued) for inspection and construction operations.

Provide drafts of Preliminary/Final Design Documents and their use in construction contracts.

Provide a thoroughly revised and supplemented Subsequent Draft Environmental Report (S-DEIR) for public review and comments.

GO18-29

1-2/3 As described in CEQA and the **CEQA Guidelines**, lead agencies are charged with the duty to avoid or substantially lessen significant environmental impacts of a project, **where feasible**. For some effects, significant environmental impacts cannot be mitigated to a level considered less than significant; in such cases, impacts are considered significant and unavoidable. In discharging this duty, a lead agency has an obligation to **balance the economic, social, technological, legal, and other benefits** of a project against its significant unavoidable impacts on the environment. This Draft EIR is an informational document, designed
to **identify the potentially significant impacts** of the proposed Project on the environment;
to indicate the manner in which those **significant impacts can be minimized**;

GO18-30

to identify **reasonable and potentially feasible alternatives** to the proposed Project that would avoid or reduce the significant impacts; and
to identify any significant unavoidable adverse **impacts that cannot be mitigated**.

Provide Citations/References list including specific page and paragraph for each document reference.
Provide clear definition of feasible and economic benefits, including costs/financials/fiscal aspect and apply same to all aspects of the Project.
Provide financial assessments of all construction and operations activities and public/private cost/economic sharing/distributions.
Provide financial and economic analyses for first five years of operations after stated targets of event ridership are attained.
Provide summary list of all significant impacts based on current level of design and those following detailed construction design documentation.
Provide a thoroughly revised and supplemented Subsequent Draft Environmental Report (S-DEIR) for public review and comments.

cont'd GO18-30

1-2/4 1.3 CEQA RESPONSIBLE AND TRUSTEE AGENCIES
The information in this Draft EIR may also be used by other agencies involved with the Project that have a responsibility under CEQA, including but not limited to, the following:
• California Department of Parks and Recreation
• California Department of Transportation
• City of Los Angeles

Provide a list of all agency and the lead-agency agreements (MOA/MOU) and all assigned responsibilities for each and for Metro/MTA.
Provide all funding requirements and assignments for full implementation of construction and initial operations for each responsible agency.
Provide a list of organizations and assignees for LA City Boards/Commissions and Dept.s of Transportation, Building and Safety, and Public Works (City Engineer, Bureaus of Street Services and Engineering).
For CEQA OPR/SCH# SCH# 2020100007, Add County departments (DPW, DRP, LASD, etc).
Provide a thoroughly revised and supplemented Subsequent Draft Environmental Report (S-DEIR) for public review and comments.

GO18-31

2-42/2 During peak operations, the proposed Project would carry up to approximately 5,000 people per hour per direction, and the travel time from LAUS to Dodger Stadium would be approximately seven minutes. The cabins would move at a maximum speed of **13.4 miles per hour** with headways of **approximately 23 seconds**, which represents the time between cabins.
40 passengers/gondola loading in 19sec w/ 2sec / closing and opening doors = 4 pass/sec 40 out =10sec + 40 in = 9sec

Provide a quantified flowchart/model for a single RT Cabin travel with speeds and durations to confirm the stated speeds and headways, along with durations of travel, stopping/starting, loading/unloading, and total RT.
Provide a thoroughly revised and supplemented Subsequent Draft Environmental Report (S-DEIR) for public review and comments.

GO18-32

2-9/5 2.3.6 Project **Purpose, Need**, and Objectives

Remove "Need" which is a federal NEPA replacement for Objective-CEQA, perhaps replace all "Purposes" with "Goals".

2-10/1 2.3.7 **Purpose and Need**
2-12/1 Within two hours prior to the start of and after a game or event at Dodger Stadium, more than 10,000 people could be transported to the stadium via the proposed Project. The average attendance at a Dodger game was approximately 49,000 for the 2019 season.\18 Given the capacity of this system, approximately 20 percent of the fans could take aerial transit connected to Metro's regional transit system. This would reduce vehicular congestion in and around Dodger Stadium, on neighborhood streets, arterial roadways, and freeways during game and special event days.

Remove "Need" which is a federal NEPA replacement for Objective-CEQA, perhaps replace all "Purposes" with "Goals".

GO18-33

2-12/4 2.3.8 Project Objectives
Provide clear and quantifiable definitions of Goals/Purposes, their directly related objectives, and the policies/programs related thereto for the specifics of this Project and its alternatives.
Provide a thoroughly revised and supplemented Subsequent Draft Environmental Report (S-DEIR) for public review and comments.
GO18-34

3.5-1/1 3.5 CULTURAL RESOURCES This section evaluates the potential impacts of the proposed Project as it relates to cultural resources, including built resources and archaeological resources. The analysis in this section is **based in part** on information contained in the Archaeological and Paleontological Resources Assessment for the…Project and the Historical Resource Technical Report for the…Project prepared for the proposed Project (Appendices F and G of this Draft EIR, respectively).
Provide specific page/par citations for all base information for this description and assessment. Provide a mandatory Mitigation, Monitoring, and Report Plan, including recovery of significant remains for all foundation and piling construction activities.
GO18-35

3.5-24/1 Overall, the mitigation measures discussed above **would ensure** that the proposed Project, **when combined with other related projects**, would not result in significant impacts to historic resources. Therefore, cumulative impacts with respect to historic resources would be less than significant.
No identification of "other related projects" has been provided related to either historic, archaeologic, or paleontological resources.
Use of conditionals for assurances is vague and uncommittable for this and any other environmental sector. Provide replacements of "shall" for all "would's".
GO18-36

3.7-1/3 Before a project can be permitted, a geologic investigation is required to demonstrate that proposed buildings would not be constructed across active faults capable of surface fault rupture. An evaluation and written report of a specific site **must be prepared** by a licensed geologist. If an **active fault capable of surface fault rupture** is found, a structure for **human occupancy** cannot be placed over the trace of the fault, and must be **set back from the fault (generally 50 feet)**.\2 **Because no active faults capable of surface rupture cross the Project alignment, a fault investigation is not required**. The **fault closest** to the Project alignment is the Elysian Park fault. The Upper Elysian Park fault is a north-to-northeast–dipping fault that underlies the northern Los Angeles basin from Griffith Park to Garvey Reservoir. **However, the Elysian Park fault is a blind thrust fault, which means it is not capable of surface fault rupture, and therefore is not subject to the conditions of the Alquist-Priolo Act**.
The Project is planned for elements (Stadium and Park Stations, Broadway Junction, & SR-110 Tower) to be located "Within Fault Zone" (ZIMAS) on the surface of the Upper Elysian Park Fault.
As a signatory agency for this Project, such assignment of seismic hazards to the ground for this Project must be considered reliable and worthy of evaluation and assessment.
The Project must provide a thorough review of the ZIMAS backup/-ground for the Upper Elysian Park Fault. Such review must be available for public review and comments under CEQA and therefore must be included in the supplemental/subsequent DEIR.
GO18-37

3.7-11/1 Additionally, the Stadium Tower and Dodger Stadium Station sites are in a **City-designated hillside area**, which increases the sites' potential susceptibility to landslides.**\16** Because of the steep slopes and high seismicity in the vicinity of the proposed Stadium Tower and the…Stadium Station, the potential for earthquake-induced slope failure **could be considered moderate to high** in the landslide hazard zone. FN\16 City of Los Angeles. Zone Information and Map Access (ZIMAS). Interactive map available at: http://zimas.lacity.org/. Accessed August 2022.
Provide map of "City-Designated Hillside Area" including various failure considerations mentioned and pertinent references for such. Such review must be provided for public review and comments under CEQA and therefore must be included in the supplemental/subsequent DEIR.
GO18-38

3.7-11/2 3.7.2.6 Subsidence Subsidence is the loss of surface elevation due to the removal of subsurface support. Subsidence is caused by the reduction of pore space in the ground that was formerly
GO18-39

occupied by a fluid such as water or oil, caused by activities that contribute to the loss of support materials within the underlying soils, such as agricultural practices or the overdraft of an aquifer. The **existing alluvium of the Project area is susceptible to collapse or settlements**; therefore, there is a **moderate potential for subsidence** to occur.

No factual backup is provided for such statements, nor is any reference provided for both the alluvial and bedrock areas of the alignment.

Provide all LiDAR sources and topographic reference materials and conduct assessments of past and thereby potential future subsidence of ground surfaces along the alignment and at each ground facility to be constructed. Provide review of past and potentials for subsidences at all ground facilities sites, especially those within the Elysian Park Fault surface zones (ZIMAS).

Provide estimates of dewatering requirements for towers, junction, and stations.

Such assessments and reviews must be provided for public review and comments under CEQA and therefore must be included in the supplemental/subsequent DEIR.

cont'd GO18-39

3.7-8/1 The southern California area contains numerous active and potentially active earthquake faults….**The Project site is not in a State of California Earthquake Fault Zone for known Holocene active faults capable of fault surface rupture, or in an Alquist-Priolo Earthquake Fault Zone**.\13

The Project must provide a thorough review of the ZIMAS backup/-ground for the Upper Elysian Park Fault. Such review must be provided for public review and comments under CEQA and therefore must be included in the supplemental/subsequent DEIR.

GO18-40

3.7-8/2 The fault closest to the Project site is the Elysian Park fault. According to the **U.S. Geological Survey Quaternary fault and fold database**, the **location of the Upper Elysian Park fault is inferred to cross under the alignment**. The Upper Elysian Park fault is a north-to-northeast–dipping fault that **underlies the northern Los Angeles basin from Griffith Park to Garvey Reservoir [Monterey Park]**. However, the Elysian Park fault is a blind thrust fault, **which means it is not capable of surface fault rupture**,….The Elysian Park thrust fault is considered to be seismogenic (capable of generating earthquakes) from a depth of approximately 2 miles below ground surface in the south-southwest, to approximately 10 miles below ground surface in the north-northeast.

Provide reference to USGS Quaternary fault and fold database.

The Project is planned and located for Project elements (Stadium and Park Stations, Broadway Junction, & SR-110 Tower) to be located "Within Fault Zone" (ZIMAS) on the surface of the Upper Elysian Park Fault.

As a signatory agency for this Project, such assignment of seismic hazards to the ground for this Project must be considered reliable and worthy of evaluation and assessment.

The Project must provide a thorough review of the ZIMAS backup/-ground for the Upper Elysian Park Fault. Such review must be available for public review and comments under CEQA and therefore must be included in the supplemental/subsequent DEIR.

All areas south of Broadway are indicated by ZIMAS as being subject to liquefaction during an earthquake. Provide all engineering design consideration for liquefaction, subsidence, and shaking from a 6.4 magnitude earthquake in the Upper Elysian Park Fault.

Provide a thoroughly revised and supplemented Subsequent Draft Environmental Report (S-DEIR) for public review and comments.

GO18-41

3.7-11/2 3.7.2.6 Subsidence Subsidence is the loss of surface elevation due to the removal of subsurface support. Subsidence is caused by the reduction of pore space in the ground that was formerly occupied by a fluid such as water or oil, caused by activities that contribute to the loss of support materials within the underlying soils…. The existing alluvium of the Project area is susceptible to collapse or settlements; therefore, there is a **moderate potential** for subsidence to occur.

EIR does not mention any subsidence experienced over the Union Station and Los Angeles Oil Fields and their production.

As these fields and their underlying reservoirs were not subject to injection and other returns of fluids/pressures, subsidence would be assumed to be dominant, and the DEIR would be considered incomplete and inadequate.

Provide a review and engineering considerations for an earthquake on the Upper Elysian Park Fault and associated impacts from liquefaction and subsidence associated for the Project.

GO18-42

3.7-11/4 The majority of the Project area is on the floodplain of the Los Angeles River and its tributaries: Cemetery Ravine, and Chavez Ravine. As shown in Figure 3.7-1, the geologic unit for the Project area is mapped as **younger Quaternary alluvium**, and consists of unconsolidated deposits of silt, sand, and gravel deposited relatively **recently** by the meandering Los Angeles River and its tributaries. The sediments were deposited during the **Holocene**, within the **last approximately 11,700 years**, and are therefore **too young to typically contain significant fossil deposits**. Along the Los Angeles River, the younger Quaternary deposits **can be** tens of feet thick.

DEIR requires facts rather than conjecture and possibilities; DEIR requires borings and samplings at each tower/station/junction sites, and assessment of ages and potential scientific importance of fossil contained within each site.

Provide 1-4 borings for each construction site and assess for pollen, wood, micro-fossils, and bone fragments

Provide usage of consistent terms, younger Quaternary or Holocene or <11,700 years old, throughout the document. Encountering of any remains would be significant as Paleoindian deposits are known from more than 10,000 years old and associated with mammoth elephants.

Provide a thoroughly revised and supplemented Subsequent Draft Environmental Report (S-DEIR) for public review and comments.

GO18-43

Mitigation Measures GEO-A (prepared a site-specific final geotechnical report) and GEO-B (prepare a paleontological resource monitoring and mitigation plan (PRMMP)) **would also be implemented**.

Use of conditionals for mitigation renders the document inadequate. Provide an adequate and well-established MMP for paleontological and archaeological remains and include as required plans before certification of the CEQA documents and processes..

3.7-12/4 / 71/2 There are also significant fossil deposits in the Miocene Puente Formation near the Area of Direct Impacts. Northeast of the Area of Direct Impacts, near the intersection of North San Fernando Road and Humboldt Street, a fossil snake mackerel….At locality LACM 4967, just outside the Project area in Elysian Park, an extinct fossil herring (Clupea tiejei) was recovered. Fossil fish and marine mammals are commonly found at localities in the Puente Formation, which is considered to have a **high sensitivity for significant fossil remains**.

Identify potential significant impacts for paleontological remains for the Broadway Junction, Tower, and Stadium Station construction and mitigation provided by an adequate MMP for paleontological resources and specifically for excavations and pile borings for these sites.

Provide for thorough investigation of boring samples for ostracodes, diatoms, and foraminifera within Project sites.

Provide results for potential and mitigation from Buena Vista Project investigations.

Provide a thoroughly revised and supplemented Subsequent Draft Environmental Report (S-DEIR) for public review and comments.

GO18-44

3.7-14/1 As discussed above, the Elysian Park fault traverses the Project area; however, it is a blind thrust fault, which means it is **not capable of surface fault rupture**. Accordingly, the risk of surface rupture due to faulting is **considered low**. Construction of the proposed Project would not directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving rupture of a known earthquake fault. **Impacts related to rupture of a known earthquake fault would be less than significant.**

The EIR is totally inadequate and incomplete, as the City of Los Angeles ZIMAS (DCP) Database clearly designates northern half (north of College St. to Casanova St.) of the Project route within the "Fault Zone" of the Upper Elysian Park North Fault in surface parcels.

As a signatory agency for this Project, such LA City assignment of seismic hazards to the ground for this Project must be considered reliable and worthy of evaluation and assessment.

The Project must provide a thorough review of the ZIMAS backup/-ground for the Upper Elysian Park Fault. Such review must be available for public review and comments under CEQA and therefore must be included in the supplemental/subsequent DEIR.

All areas south of Broadway are indicated by ZIMAS as being subject to liquefaction during an earthquake. Provide all engineering design consideration for liquefaction, subsidence, and shaking from a 6.4 magnitude earthquake in the Upper Elysian Park Fault.

GO18-45

3.7-14/2 The Alameda Station,…are in an area mapped as potentially subject to liquefaction, as shown on Figure 3.7-2. The **Stadium Tower and Dodger Stadium Station are approximately 20 feet and 60 feet from a mapped liquefaction zone, respectively**.

The EIR is totally inadequate and incomplete, as the City of Los Angeles ZIMAS (DCP) Database clearly designates the parcel including the tower and station as being subject to landslides AND liquefaction and being within the "Fault Zone" for the Upper Elysian Park North Fault.

GO18-46

3.7-14/2 Liquefaction-induced settlement can occur during a seismic event, but can also be **exacerbated by increased loading during construction activities**. Because there is potential for liquefaction-induced settlement and collapse during a strong to severe ground-shaking event, damage to on-site structures and infrastructure could occur during construction of the proposed Project. Therefore, **impacts related to strong seismic ground shaking, seismic-related ground failure, and/or liquefaction during construction of the proposed Project would be potentially significant**.

Seismic impacts on the Project facilities would be significant if occurring during construction but would even be more significant if occurring during operations and especially during a game day operations. Provide revised DEIR and add "operations" of at least 50 years. Provide Project safety and operations response plans to the DEIR and Mitigation, Monitoring and Report Plan.

Although stated as "potentially significant", the DEIR does not clearly identify such as significant, only noise and vibration. Revise throughout the DEIR to include seismic impacts as significant and provide for suitable mitigation measures in the subsequent/supplement DEIR when recirculated.

GO18-47

3.7-14/3 The proposed Project…**would** ensure structural integrity and safe construction. Additionally, Mitigation Measure GEO-A, **development of a site-specific geotechnical investigation and report to be approved by the City of Los Angeles, <u>would</u> be required**. The geotechnical investigation and report **<u>would include geotechnical recommendations</u>** for project design and construction. **With <u>compliance to existing standards and codes and implementation of Mitigation Measure GEO-A</u>, impacts related to the strong seismic ground shaking, seismic-related ground failure, and/or liquefaction during construction of the proposed Project <u>would be reduced to less than significant</u>.**

Conditional references and allusions to future studies and assessment cannot be considered as Project commitments especially as no design nor construction contract designs and specifications have been provided. Provide contract specifications and drawings to confirm "recommendations" will be incorporated into the Design and into the construction contract documents.

As the investigation, report, and recommendations are not part of the current DEIR, they cannot be considered in the review for completeness and adequacy and the potential for seismic related impacts must be considered significant and the DEIR must be considered as incomplete and inadequate.

Once provided, the DEIR must be recirculated as a supplement, subsequent DEIR for public review and comments.

GO18-48

3.7-15/1 Therefore, impacts related to earthquake-induced slope failure **<u>could be</u> considered moderately significant to significant**. However, **compliance with existing laws and regulations**, and implementation of **Mitigation Measure GEO-A**, requiring the development and implementation of **geotechnical recommendations** to be incorporated into the **<u>design plans and specifications</u>**, including applicable site stabilization based on grading conditions and foundation capacities, would prevent instability of the slope during construction, and **<u>reduce impacts to less than significant</u>** under the proposed Project.

Based on ZIMAS assignments of the Elysian Fault Zone. Provide description and assessment for facilities located in the LA City-documented fault zone and liquefaction/landslide risks.

Provide technical evaluation of current designs for a proposed 6.4 magnitude earthquake at >10,000 depth, and specifically the effects on a gondola with 40 passengers between Park Station and Broadway Tower.

As the investigation, report, and recommendations are not part of the current DEIR, they cannot be considered in the review for completeness and adequacy and the potential for seismic related impacts must be considered significant and the DEIR must be considered as incomplete and inadequate. Once provided, the DEIR maybe recirculated as a supplement, subsequent DEIR for public review and comments.

GO18-49

3.7-15/3 In addition, the proposed Project **would adhere to its Emergency Operations Plan**, as described in Chapter 2, Project Description….**would** include **emergency response protocols**, and **would** state that in the event of a major earthquake, the system **would** be fully evacuated and shut down, and would not operate. The proposed Project **would be designed and constructed** in accordance with applicable building codes, and therefore **would not directly or indirectly cause potential substantial adverse effects**, including the risk of loss, injury, or death involving rupture of a known earthquake fault; strong seismic ground shaking; seismic-related ground failure, including liquefaction; or landslides, and the impact **would be less than significant**.

No draft EOP has been provided and references to it are incomplete, inadequate, and conditional without any public review or comments. Provide a draft Emergency Operations/Response Plan within the EIR and recirculate EIR.

Provide definition of "potential", "substantial", and adverse effects.

As mentioned, once the system is shutdown, provide detailed response plan to remove 30-40 passengers from a gondola above the Park.

As the Plan, protocols, report, plans, designs, and recommendations are not part of the current DEIR, they cannot be considered in the review for completeness and adequacy and the potential for seismic related impacts must be considered significant and the DEIR must be considered as incomplete and inadequate. Once provided, the DEIR maybe recirculated as a supplement, subsequent DEIR for public review and comments.

GO18-50

3.7-19/5 Construction Impacts Less Than Significant Impact with Mitigation. Surface deposits in the majority of the proposed Project alignment and surrounding area consist of **younger Quaternary alluvium** deposited by the Los Angeles River. These deposits are younger than 10,000 years, and have a **low probability of yielding scientifically significant fossils**….deposits are underlain with older Quaternary Alluvium and Miocene Monterey or Puente Formation, where fossils have been encountered at depths ranging from 35 feet to 100 feet at locations southeast and northeast of the Project site. An **assessment of paleontological resources** in the Project vicinity indicated that older Quaternary alluvium is expected to be present at **differential** depths in the Project area. **Construction work is anticipated to reach up to 125 feet in depth for installation of the piles and an excavation depth of up to 10 feet,** except for at the proposed Dodger Stadium Station, which has an excavation depth of 42 feet, **and therefore may encounter paleontological deposits.**

Differential/different spelling error for depths of pile cap block and tops of piles beneath the capping block.

Revise as pile-caps are estimated to be based at about 10ft below ground surface and piles extend from the base of the pile-cap to 125 ft below the base, = 135ft below ground surface.

Younger Quaternary (Holocene) deposits, south of Broadway, are known to contain "paleo-indian" remains and artifacts elsewhere in the US and California. Paleo-indian remains and artifacts could be encountered during pile borings. Similarly at depths of 5-feet and deeper American Indian remains and artifacts could be expected.

Provide for archaeological monitoring and protection programs for all foundation excavations and representative sampling of produced debris for all pile boring at all Project sites, and a special paleontologic and archaeologic monitoring program be required for the Stadium Station and SR-110 Tower.

GO18-51

3.7-20/1 To avoid potentially high sensitivity areas for paleontological resources, or in the event paleontological resources are encountered, implementation of **Mitigation Measure GEO-B** would minimize impacts that would directly or indirectly destroy a **unique paleontological resource or site**, or unique geologic feature. **Mitigation Measure GEO-B would require the development of a Paleontological Resources Monitoring and Mitigation Plan (PRMMP)** to provide direction on the identification of high-sensitivity areas and appropriate monitoring, excavation, and preservation processes during construction excavation activities. With the implementation of **Mitigation Measure GEO-B, impacts related to paleontological resources would be reduced to less than significant**.

The Mitigation Measure requires additional studies before construction and development of a specific PRMMP monitoring and reporting plan to mitigate potential significant impacts for fossils.

A tentative "mitigation measure" does not provide adequate nor complete mitigation or compensation for potential paleontological impacts from excavations for towers and stations

GO18-52

foundations and >100 borings for piles. Provide a draft PRMMP for all excavations deeper than 3ft and recirculate DEIR.

As no PRMMP is available for review, revision, and comments, the impacts on paleontological resources must be considered as greater than significant, or at least "significant". With the supplemental provision of the MMGeo-B and PRMMP, such impacts maybe mitigated but not without the full reports for public review and comments.

cont'd GO18-52

3.7-20/3 3.7.5 Mitigation Measures The following mitigation measures are **proposed to reduce** significant impacts related to geology and soils to a level that is **less than significant**.

MM-GEO-A: Prepare a Site-Specific Final Geotechnical Report: The Project Sponsor shall engage a California-registered geotechnical engineer to prepare and submit a site-specific final geotechnical **investigation and report** to the City of Los Angeles for review, consistent with the requirements of the CBC, applicable Los Angeles amendments, and California Geological Survey Special Publication 117 (as amended).

As proposed the provision of a future FINAL geotechnical investigation and report does not mitigate impacts and does not provide for public review and comments on the adequacy of the future document. Provide a site specific (for each excavation site) investigation and a Geotechnical Report based on at least four borings to the same or deeper depths than the proposed 100+foot soldier piles and recirculate the augmented DEIR for public review and comments.

Impacts on geological resources must be considered as greater than significant, or at least "significant" until such a report has been provided. With the supplemental provision of the MMGeo-B and PRMMP, such impacts maybe mitigated but not without the full reports for public review and comments. Geological impacts must be considered as significant until such a report is available.

GO18-53

3.7-21/2 Implementation of Mitigation Measure GEO-B **would include the preparation of a PRMMP** to provide direction on the identification of high sensitivity areas for paleontological resources and appropriate monitoring, excavation, and preservation processes during construction activities. **Upon implementation of Mitigation Measures GEO-A and GEO-B**, significant impacts related to geology and soils would be reduced to less than significant.

Therefore only after implementation of the MM-GEO-A/-B including their public presentation can impacts be considered "less than significant". Therefore the DEIR must be considered incomplete as the MM-GEO-A/-B have not been prepared, reviewed, nor implemented. Provide the mitigation monitoring and report plan for all geological, paleontological, and archeological resources sectors along with mandatory requirements for agencies and contractors.

Provide complete and adequate MM-GEO-A/-B as part of the FEIR or as part of a SEIR.

GO18-54

3.9-1/1 Hazards and Hazardous Materials This section evaluates the potential impacts related to hazards and hazardous materials from construction, operation, and maintenance of the proposed Project. This section is based in part on the Phase I Environmental Site Assessment (ESA) that was prepared for the proposed Project by AECOM in July 2022 (Appendix K of this Draft EIR). The environmental regulatory database report and records review prepared for the proposed Project in April 2022 is provided in Section 6 of Appendix K.

The "database report" is not based on specific borings at the Project's tower, junction, and station locations and in the vicinity of proposed foundation and piling sites for towers and stations. And thus the DEIR is inadequate and incomplete for the geotechnical setting of hazardous materials. The same situation occurred for the excavation of the Union Station and US-Yard tunnels which lead to major contaminations and massive change orders for mitigation of groundwater and soils contaminations. Provide specific citations (appendix, page, and paragraphs) when referencing other sources and add such information herein.

Provide four borings and appropriate gas, fluids, and soil monitoring and samples for analyses of hazardous materials and potential impacts from such during excavations and boring at each of the Project tower/station sites prior to certification of the FEIR.

Provide a thoroughly revised and supplemented Subsequent Draft Environmental Report (S-DEIR) for public review and comments.

GO18-55

3.9-10/1 City of Los Angeles Municipal Code The Los Angeles Municipal Code, Chapter IX (Building Regulations), Article 1 (Buildings), Division 71 (Methane Seepage Regulations), commonly known as the City Methane Ordinance ***No references***, describes methane testing and control requirements based on building type, building use/occupation, and whether a structure is in a methane zone or buffer zone. Requirements for new construction in such zones include methane gas sampling; and depending on the detected concentrations of methane and gas pressure at the site, application of design remedies for reducing potential methane impacts ***No references***. The **City has prepared a map** of methane zones and methane buffer areas in the City ***No references***. The proposed Project alignment crosses a methane zone and buffer zone and **may require site-specific methane testing** for particular structures, depending on the final architectural design.

Entire paragraph is incomplete and inadequate for this DEIR. No references/mentions (report/pg/par) are to given to ZIMAS where parcel-parcel notations are given as to presence in methane or buffer zones.

As known and designated gas zones lie within the Project area and construction site, methane gas issues must be considered significant and require an appropriate mitigation program in a supplemental/subsequent DEIR.

Provide for a thorough review and provisions of all relevant references are provided. Provide a gas survey of each site with gas probes/boring and their analyses and assessments. Provide such along with pertinent mitigation measures for a supplemental/subsequent DEIR.

GO18-56

3.9-10 22/6 Division 71 (Methane Seepage Regulations) describes methane testing and mitigation requirements based on building type, building use/occupation, and whether a structure is located within a methane zone or buffer zone. The proposed Project alignment crosses a methane zone and buffer zone and **may require site-specific methane testing** for particular structures, depending on the **final <u>architectural</u> design**.

As known and LA City designated gas zones lie beneath the Project area and construction sites, methane gas issues must be considered significant and require an appropriate mitigation program in a supplemental/subsequent DEIR.

Provide final Project designs and documents, their description, and their bases for draft Mitigation, Monitoring, and Reporting Plans for public review and comments prior to preparation of the Project FEIR.

Provide for a thorough review and provisions of all relevant references are provided. Provide a gas survey of each site with gas probes/boring and their analyses and assessments. Provide such along with pertinent mitigation measures for a supplemental/subsequent DEIR.

GO18-57

3.9-18/2 3 Methane Zones Methane zones are usually a result of naturally occurring tar and crude oil, or shallow soil contamination by old oil drilling wells….Non-pressurized methane is not normally problematic **<u>if properly monitored and controlled per Cal/OSHA regulations</u>**….Methane ***and associated oil field gas*** exposure to workers during construction can be hazardous at higher levels, especially in confined spaces. In addition, methane seepage can result in an explosion if an adequate concentration of methane gas exists where combustion is possible.

During 1985 Ross Dress for Less Store Explosion, RTD/Construction Management staff for Phase 1 Red Line assisted LAFD in monitoring, control, and treatment of methane leakage and fire and such activities laid base for the Methane Gas ordinances and restrictions.

Methane and Methane-buffer zones are identified for all Project sites, except for Alameda Station. Revise/recirculate the DEIR based on significant impacts related to methane for the Project. Provide MMRP within the SDEIR for the Project sites in methane and methane-buffer zones based on gases found in soils/boring of each Project site for public review and comments of the recirculated DEIR.

GO18-58

3.9-18/3 Methane gas is known to be generated in the **area**. The City of Los Angeles Department of Building and Safety's Los Angeles Methane Zone Map categorizes two types of zones: Methane Zones and Methane Buffer Zones….based on the proximity to a methane gas source. According to the City of Los Angeles Department of Building and Safety maps, portions of the proposed Project alignment pass through identified Methane Zones and/or Methane Buffer Zones (Figure 3.9-1). The proposed Chinatown/State Park Station, Broadway Junction, Alpine Tower, and Stadium Tower are in a Methane Zone and/or Methane Buffer Zone.

GO18-59

RTD/MTA project experience of Red Line Phase 1 Union Station Tunnel/Station construction included major change orders for groundwater and methane, creosote, and hydrogen sulfide gases released from groundwater and dry soils.
Methane and Methane-buffer zones are identified for all Project sites, except for Alameda Station. Revise/recirculate the DEIR based on significant impacts related to methane for the Project. Provide MMRP within the SDEIR for the Project sites in methane and methane-buffer zones based on gases found in soils/boring of each Project site for public review and comments of the recirculated DEIR.

cont'd GO18-59

3.9-19/Fig.3.9-1: Methane Zones Within the Project Area
No source for figure is provided as reference and hazard zone seems different from CalGEM boundaries for the Los Angeles Oil Field, and map appears to also differ from parcel designations in ZIMAS. Provide references for all gas issues.
Provide sources and analyses for development of map. Provide comparison with ZIMAS and basis for comparisons and mitigative requirements for safe construction of the Project.

GO18-60

3.9-26/3 As shown in Figure 3.9-1,…portions of the proposed Project alignment pass through Methane Zones and/or Methane Buffer Zones….Chinatown/State Park Station, Broadway Junction, Alpine Tower, and Stadium Tower are in a Methane Zone and/or Methane Buffer Zone….usually a result of naturally occurring tar and crude oil, or shallow soil contamination by old oil-drilling wells. Non-pressurized methane is not normally problematic **if properly monitored and controlled….** If the gas accumulates to **high concentrations** and becomes pressurized, detectable levels may enter the interior of a structure through cracks or other penetrations present in floor slabs.
Given methane's buoyancy, the gas must be pressurized or contained or released in massive volumes in order to reach monitorable levels. Provide MTA/Metro action levels for construction sites and for publicly occupied/used areas, e.g., gas alarm levels for Red Line tunnel, Union Station-Civic Center.
Provide borehole monitoring for 24 hours and of at least borings within the excavation areas for stations, junction, and towers.
Revise/recirculate the DEIR based on significant impacts related to methane for the Project. Provide MMRP within the SDEIR for the Project sites in methane and methane-buffer zones based on gases found in soils/boring of each Project site for public review and comments of the recirculated DEIR.

GO18-61

3.9-26/4 Methane exposure to workers during construction **can be hazardous at higher levels**, especially in confined spaces. In addition, methane seepage can result in an explosion if an adequate concentration of methane gas exists where combustion is possible. The anticipated construction methods for the proposed Project involve relatively shallow and wide excavations and **would not be considered confined spaces**; therefore, this reduces the likelihood of construction workers being exposed to methane gas concentrations that **would be hazardous due to inhalation**. Further, construction activities and workers **would be required** to comply with OSHA and Cal/OSHA regulations, including but not limited to 29 CFR Section 1926.55 and 8 CCR Section 5416, **to develop and enforce workplace safety standards and ensure worker safety during construction**, and project **contractors would be required to comply with OSHA and Cal/OSHA regulations** regarding any potential construction activities that may cause methane release***.***
Provide approved MTA construction requirements for methane and exposure. Provide for mandatory requirements and enforceable statements of certainty rather than "would", "could", or "should".
Provide borehole monitoring for 24 hours and of at least borings within the excavation areas for stations, junction, and towers.
Revise/recirculate the DEIR based on significant impacts related to methane for the Project. Provide MMRP within the SDEIR for the Project sites in methane and methane-buffer zones based on gases found in soils/boring of each Project site for public review and comments of the recirculated DEIR.

GO18-62

3.9-27/1 The proposed Project **would also be required to be designed and constructed to comply** with the regulations…. **Compliance**…which includes appropriate methane exposure or release

GO18-63

identification **protocols based on a site-specific evaluation** of the risk during construction, would be required to ensure worker health and safe construction.

Recognition of a potential threat/risk has not led to provision of a Methane Plan/Protocol presented in the DEIR.

As the project has not been designed, provide a thorough investigation and appropriate gas control designs to avoid/treat methane and other heavier hydrocarbon gases (e.g., BTEX and PAHs) and perhaps contaminated soils before construction begin, during construction, and for operations.

Following review and assessment of methane monitoring, provide appropriate protocols for mitigation of methane exposures and appropriate assessment of hazards and impacts upon the Project and environment. Integrate findings, mitigations, and residual impacts for significance and in cooperate in a supplemental/subsequent DEIR and recirculate for public review and comments.

Revise/recirculate the DEIR based on significant impacts related to methane for the Project. Provide MMRP within the SDEIR for the Project sites in methane and methane-buffer zones based on gases found in soils/boring of each Project site for public review and comments of the recirculated DEIR.

cont'd GO18-63

3.9-27/2 With adherence to OSHA, Cal/OSHA, and Division 71 of the Los Angeles Municipal Code, impacts related to methane gas exposure or release during construction of the proposed Project would be less than significant.

As no methane plan/protocol is presented in the Project, no adherence can be reviewed or assumed. Provide mandatory measures for gas controls, releases, and safe exposures.

Provide gas-vapor monitoring results from any/all geotechnical borings conducted to date. If no monitoring, provide for gas monitoring of soil vapors from at least 5 borings of 20ft into the underlying soils/alluvium with specific mandatory mitigation for all impacts.

Revise/recirculate the DEIR based on significant impacts related to methane for the Project. Provide MMRP within the SDEIR for the Project sites in methane and methane-buffer zones based on gases found in soils/boring of each Project site for public review and comments of the recirculated DEIR.

GO18-64

3.10-21/1 Groundwater levels in the Project study area generally range from depths of approximately 20 to 60 feet below ground surface (bgs).\37 \38 Groundwater levels range from 20 to 25 feet bgs in the vicinity of LAUS, 25 feet bgs near the intersection of North Alameda Street and North Main Street, 27 to 35 feet bgs in the vicinity of the southern portion of the Los Angeles State Historic Park, more than 60 feet bgs in the vicinity of the intersection of North Broadway and Bishops Road, and estimated at 60 feet bgs below the proposed Dodger Stadium Station.\39

No direct citations and cannot confirm/deny values given. Provide direct web address and process to locate values by page/paragraph/Figure No..

No map of groundwater level, sources of such information, nor the surface elevations. Provide map of elevations and depths to groundwater at 100ft intervals along proposed alignment.

Provide for and conduct preliminary groundwater characterization at each Project facility site based on at least four borings at each facility site with appropriate testing and monitoring for ground gases, contaminations, and water qualities for each site as part of supplemental review and assessment and then circulate a revised-subsequent/supplemental DEIR for public review and comments.

Revise/recirculate the DEIR based on significant impacts related to methane for the Project. Provide MMRP within the SDEIR for the Project sites in methane and methane-buffer zones based on gases found in soils/boring of each Project site for public review and comments of the recirculated DEIR.

GO18-65

3.10-21/2
Groundwater Quality Regional groundwater basin water quality is poor in some areas due to natural conditions resulting in high total dissolved solids (TDS) levels, while in other areas groundwater quality has been degraded due to infiltration from commercial and industrial discharges, agricultural chemical application, and contaminants from urban runoff.**\40** Deterioration of water quality in some areas has occurred due to inadequate storage, handling, and disposal of chemicals resulting in releases to groundwater. The groundwater in the portions of the Central Basin is known to contain elevated levels of TDS, volatile organic chemicals, perchlorate, nitrate, iron, manganese, and chromium.**\41**

Searches appear totally inadequate and incomplete with regard to Metro and City departments and relevant files related to Gold and Red Line construction along with the Park reviews.
Citations are only to the general document and do not lead to or support groundwater quality descriptions. Provide specific chapters, pages, and paragraphs to summary provided.
Provide Metro contracts and specific citations to Metro files for Red Line Station and US<>CC twin tunnels and Gold Line CEQA documents and construction files dealing with groundwater and water quality along the alignment from Los Angeles Str. to Broadway.
Provide revised descriptions and assessments along with appropriate mitigation or compensation and then circulate a revised-subsequent/supplemental DEIR for public review and comments.

GO18-67

3.10-24/3 3.10.2 Methodology To establish baseline conditions, a search of publicly accessible databases and information from various sources and agencies was conducted….include but are not limited to the SWRCB, California DWR, State of California Natural Resources Agency, FEMA, Los Angeles RWQCB, Los Angeles County Department of Public Works, Los Angeles County Flood Control, **City of Los Angeles** Department of City Planning, LADWP, and Metropolitan Water District of Southern California.
Search appears totally inadequate and incomplete with regard to Metro and City departments and relevant files related to Gold and Red Line construction along with the Park reviews.
Provide Metro contracts and specific citations to Metro files for Red Line Station and US<>CC twin tunnels and Gold Line CEQA documents and construction files dealing with groundwater and water quality along the alignment from Los Angeles Str. to Broadway.
Provide accessible databases for roads and construction information along the proposed alignment for Department of Public Works (Bureaus of Engineering, Streets LA, Sanitation/Environment, etc.) and for Metro construction and CEQA related departments.

GO18-68

Provide revised descriptions and assessments along with appropriate mitigation or compensation and then circulate a revised-subsequent/supplemental DEIR for public review and comments. cont'd GO18-68

3.10-25/4 Construction Impacts Less Than Significant Impact. Construction of the proposed Project components would include site preparation and installation of foundations and columns; erection of stations, towers, and the junction; replacement or restoration of paving, sidewalk, and landscaping; and cable and cabin installation.

No design and related supportive studies/designs have been provided and references indicate none may exist and await final design. No foundation drawings are provided to establish how deep excavations and dewatering may be required. No specific locations and numbers of deep piles (mentioned to be >50ft depths) are located along with their capping foundations. Provide final design drawings and specifications for all towers and stations prior to approval and further considerations.

Current documentation is totally inadequate and incomplete for a pronouncement of "Less than Significant Impacts". Provide a completely revised Supplemental DEIR with adequate descriptions, assessments, and mitigation for alternative projects along with numerical/quantitative comparisons and selection.

Provide contract drawings and description and revised Supplemental EIR for public review and comments. GO18-69

3.10-25/5 Groundwater Construction activities associated with foundations would involve general earthwork and **concrete work to prepare the foundations, with excavations for foundations at depths ranging between seven feet and 42 feet, and piles to be installed between 55 feet and 125 feet below pile depth….**; therefore, the proposed Project may require the **removal of nuisance water** that **seeps** into boreholes during construction. Water removed from the boreholes would be containerized, and analyzed to determine the proper disposal method.

Provide pre-construction contract drawings of all foundations and pilings, especially for the Union Station facilities and their relation to the Un.Stn.<>Civic Center Tunnels and the groundwater levels (and copies of all boring records for the same).

Provide definition and differentiation between "nuisance" water and dewatered groundwater. Also provide definition of seeps, gal/min, and how big (provide dimensions) the "containers" would be.

Provide a completely revised Supplemental DEIR with adequate descriptions, assessments, and mitigation for alternative projects along with numerical/quantitative comparisons and selection. GO18-70

3.10-25/6 Groundwater levels range from 20 to 25 feet bgs in the vicinity of LAUS. The foundations for the Alameda Station would be at a depth of 10 feet. Based on these anticipated depths to groundwater, it is considered unlikely groundwater would be encountered during construction of the foundations; however, **piles would be drilled to 125 feet below pile depth**, and may require removal of nuisance water that seeps into boreholes during installation of the piles of this station.

Provide pre-construction contract drawings of all foundations and pilings, especially for the Union Station facilities and their relation to the Un.Stn.<>Civic Center Tunnels and the groundwater levels (and copies of all boring records for the same).

Define: "drilled to 125 feet below pile depth" provide specific dimensions of below ground level or below foundation levels.

Provide a completely revised Supplemental DEIR with adequate descriptions, assessments, and mitigation for alternative projects along with numerical/quantitative comparisons and selection. GO18-71

3.10-26/1 Groundwater occurs at a depth of approximately 25 feet bgs near the intersection of North Alameda Street and North Main Street. The foundations for the Alameda Tower and the Alpine Tower would be at a **depth of 10 feet**….; however, piles for the Alameda Tower and the Alpine Tower would be drilled to 120 feet below pile depth, and may require removal of nuisance water that seeps into boreholes during installation of the piles of these towers.

Provide engineering considerations loads and dimensions for the Alameda/US Station and the higher angled Alameda and Alpine towers foundations.

Provide geotechnical boring logs and reports for each of the aerial structures considered.

Provide a completely revised Supplemental DEIR with adequate descriptions, assessments, and mitigation for alternative projects along with numerical/quantitative comparisons and selection. GO18-72

3.10-26/5 Based on groundwater depths, none of the proposed excavations for foundations are anticipated to encounter groundwater; however, removal of **nuisance water** that seeps into boreholes during construction may be required for the pile installations at each of the components.
Groundwater may be encountered during installation of piles, and any **nuisance water** removed **would need to be analyzed prior to disposal**.
Detections of total petroleum hydrocarbons ***TPH*** and volatile organic compounds ***VOCs*** including **BTEX** are known to be present in groundwater at the Los Angeles State Historic Park property, which is directly beneath the proposed Project alignment.\53 Although the groundwater quality in the remainder of the Project study area is **not specifically known**, it may contain elevated levels of constituents such as petroleum hydrocarbons and solvents resulting from commercial and industrial discharges, in addition to potentially elevated TDS and metals related to natural conditions. **Uncontrolled discharge of groundwater carrying these potential pollutants could result in degradation of groundwater and surface water if it is not properly.**

As pile boring will extend well below the top of groundwater, Provide two mitigations for hydrological impacts and potential water discharge violations for groundwater and nuisance waters removal, storage/monitoring for all VOCs, H2S, dioxin, creosote, and other chemicals encountered and treated for in construction for the Metro Union Station in 1980s.

RTD/MTA Red Line Union Station groundwater dewatering required aeration, activated carbon, and H2O2 treatments.

Provide all pile boring drilling systems with H2S and CH4 monitoring sensors and shutdown and require for monitoring, gas/liquids treatment and shutdown, if needed.

Provide a completely revised Supplemental DEIR with adequate descriptions, assessments, and mitigation for alternative projects along with numerical/quantitative comparisons and selection.

GO18-73

3.10-27/1 Additionally, as stated in Section 3.9, Hazards and Hazardous Materials, a S**oil and Groundwater Management Plan** **would be prepared** to **specify methods for handling and disposal** in the event **contaminated groundwater is encountered** during construction. Because…, there is the **potential that excavation in certain areas would encounter groundwater**, and therefore, **dewatering could be required**….Discharges from dewatering operations can contain high levels of fine sediments, which if not properly treated, could lead to exceedance of the NPDES requirements….The **temporary system would comply with all relevant NPDES requirements related to construction and discharges from dewatering operations**. If dewatering is required, the treatment and disposal of the removed water would occur in accordance with the requirements of **LARWQCB's WDRs** for Discharges of Groundwater….

As no specific plans have been prepared and presented in the DEIR, references to such is totally inadequate and incomplete and requires full presentation of such to establish adequacy and completeness of the assessment and mitigation. Provide a draft groundwater management plan for the Project and specific areas most probable to encounter groundwater in excavation and/or pile drilling for public review and comments.

None referenced/cited and no summary of conditions provided.

Provide a completely revised Supplemental DEIR with adequate descriptions, assessments, and mitigation for alternative projects along with numerical/quantitative comparisons and selection.

GO18-74

3.10-36/4 **Nuisance groundwater** may be encountered during installation of piles for each of the components, which **may result in degradation of groundwater quality if not addressed properly**….Refer to Section 3.9 (Hazards and Hazardous Materials) for additional details should contaminated groundwater and/or soil be encountered. However, construction activities are not anticipated to **interfere substantially with groundwater recharge**, **groundwater resource supplies, or groundwater quality**.

No definition nor reference is provided for "nuisance groundwater" and no relationships are provided regarding contamination of the groundwater, its recharge, supplies, and quality during Project construction. Provide definitions for "nuisance groundwater" and its expected characteristics and qualities. Provide a mitigation plan for its control and reduction of all impacts derived from its presence. Provide review and assess potential impacts of construction on the recharge, supplies, and quality of groundwater within and beneath the Project area.

Provide a completely revised Supplemental DEIR with adequate descriptions, assessments, and mitigation for alternative projects along with numerical/quantitative comparisons and selection.

GO18-75

3.10-36/6 With adherence to these laws and regulations, impacts related to implementation of a water quality control plan or sustainable groundwater management plan during construction **would be less than significant**.
Provide specific laws and regulations and the Project compliance measures with such and include in a specific plan with requirements for direct and continuing compliance with requirements on the part of the agencies and contractors. Provide such to be incorporated into all construction contracts along with specific documentation of measures and achievement of regulatory limits.
Provide a completely revised Supplemental DEIR with adequate descriptions, assessments, and mitigation for alternative projects along with numerical/quantitative comparisons and selection.

GO18-76

3.10-37/1 As discussed above, the Sponsor **would comply** with all applicable federal, State, regional, and local agency water quality protection laws and regulations, water quality control and/or sustainable **groundwater management plans**, including the Basin Plan and City of Los Angeles General Plan, as well as **commonly used industry standards**.
As indicated the Basin Plan and appropriate sections of the LA General Plan are referenced but without any specifics as to what would mitigate this specific Project.
As indicate the Project would comply at some time in the future, supposedly before construction contracts, would be approved for construction but without public review and comments before sponsor and relevant authorities would certify completion of the CEQA process. Provide a specific groundwater plan for the Project and all elements specifically venturing into the groundwater resources of the Project area.
Provide a completely revised Supplemental DEIR with adequate descriptions, assessments, and mitigation for alternative projects along with numerical/quantitative comparisons and selection.

GO18-77

3.10-37/4 **It would** also **comply** with all applicable federal, State, regional, and local agency water quality protection laws and regulations, **water quality control and/or sustainable groundwater management plans**, including the Basin Plan and City of Los Angeles General Plan, the **MS4 Permit**, as well as **commonly used industry standards**.
Provide references (doc and page/paragraphs) for mentioned laws, regulations, and requirements.
Provide commonly used industry standards references (docs, pages, and paragraphs) and compiled regulations, laws, and standards requirements as a mandatory compliance mitigation measure.
Provide revised supplemental/subsequent DEIR for public review and comments.

GO18-78

3.10-38/2 With **adherence** to these laws and regulations, and **groundwater management plans**, impacts related to implementation of a water quality **control plan** or sustainable groundwater **management plan** during operations **would be less than significant**.
As no specific plans have been prepared and presented in the DEIR, references to such is totally inadequate and incomplete and requires full presentation of such to establish adequacy and completeness of the assessment and mitigation.
Provide differentiation between compliance and adherence and provide draft construction contract sections for both and for mitigation measures.
Provide a draft groundwater management plan for the Project and specific areas most probable to encounter groundwater in excavation and/or pile drilling for public review and comments.
Provide above in a completely revised Supplemental DEIR with adequate descriptions, assessments, and mitigation for alternative projects along with numerical/quantitative comparisons and selection.

GO18-79

3.10-38/3 3.10.5 Mitigation Measures With **adherence** to applicable federal, State, regional, and local laws and regulations, including **compliance with applicable stormwater permits, wastewater permits, and other water quality regulations**, construction and operation of the proposed Project would result in **less than significant impacts to hydrology and water quality**. No mitigation measures are required for the proposed Project.
Provide references (doc and page/paragraphs) for mentioned laws, regulations, permits, and their requirements.

GO18-80

Provide commonly used industry standards references (docs, pages, and paragraphs) and compiled regulations, laws, and standards requirements as a mandatory compliance mitigation measure.
Provide contractual requirements for all construction contracts and differentiate between requirements and mitigations.
Provide revised supplemental/subsequent DEIR for public review and comments.

cont'd GO18-80

3.10-38/4 Mitigation Measures With **adherence** to **applicable** federal, State, regional, and local laws and regulations, including compliance with **applicable** stormwater permits, wastewater permits, and other water quality regulations, **construction and operation of the proposed Project would result in less than significant impacts to hydrology and water quality**. No mitigation measures are required for the proposed Project.

Provide references (doc and page/paragraphs) for mentioned laws, regulations, permits, and their requirements.
Provide commonly used industry standards references (docs, pages, and paragraphs) and compiled regulations, laws, and standards requirements as a mandatory compliance mitigation measure.
Provide contractual requirements for all construction contracts and differentiate between requirements and mitigations.
Provide revised supplemental/subsequent DEIR for public review and comments.
Repetitive comments as required by repetitive references and deficiencies.

GO18-81

Mineral Resources

3.12-2/2 The majority of wells in the Los Angeles City Oil Field, including the wells closest to the proposed Project alignment, are either **plugged or idle**. The nearest **active** well is approximately 1.5 miles west of the proposed Project alignment.\5

Provide a map of all known well sites within 1000ft of the Project excavations and provide and assess historic (1920-1950) aerial photos of the Project site for historic well sites and on-ground facilities which may have contaminated the Project sites. Assess potential impacts and provide specific mitigations for such, and recirculate the DEIR for further public review and comments.
Provide a completely revised Supplemental DEIR with adequate descriptions, assessments, and mitigation for alternative projects along with numerical/quantitative comparisons and selection.

GO18-82

3.12-3/3 Additionally, although the proposed Project alignment is in the Los Angeles City Oil Field, the closest **active well is approximately 1.5 miles west** of the proposed Project alignment, and would not be affected by implementation of the proposed Project. Therefore, the proposed Project would not result in the loss of availability of a known mineral resource that would be of value to the region or State, and no impact would occur.

Plugged and idled wells lie within 500ft of the Project surface footprint and within 1000ft of the Park Station and Broadway Tower. Plugged and idled wells can be easily renovated for production of mineral resources (oil and gas) and can impact the Project construction excavations. More than 50 idled but not plugged wells lie within 1/2mile of the Park Station, and idled (and even plugged) wells can be returned to service cheaply and within a matter of months.
Revise and provide adequate review and assessment of the Project on return to service of more than 50 idled wells to the west of Park Station. Provide a revised review and assessment of mineral resources in a revised and recirculated DEIR.

GO18-83

3.15-20/6

The plan would also address the unlikely scenario where the system cannot be moved to unload passengers normally at stations. The **robust design, periodic and preventative maintenance, and equipment redundancies** are intended to minimize these potential impacts. However, the plan would include procedures to evacuate passengers directly from cabins, if needed. An **Evacuation Plan would be developed** as part of the **Project-specific Emergency Operations Plan**, as required by **industry standards and State regulations**….**would describe** the **preferred methods**….**would also include** the required equipment and procedures for evacuation, site control, and passenger communications….**would**

GO18-84

be performed in advance of opening the system….**would document** the procedures, equipment, and personnel necessary to evacuate the system,….. **Such analysis, practice, and documentation is required by OSHA.**

Provide a draft Project description demonstrating a robust design vs typical design for the Project. Provide a draft maintenance manual for the Project, along with a clear assessment of equipment redundancy and service cycling of such.

Provide a draft evacuation plan for in-station and on-line gondolas and related equipment for such operations.

Provide draft comparisons of industry standards and preferred measures for this Project and relate such to potential impacts or mitigations.

Provide a listing and citations for related references of industry standards and regulations related to the above.

Provide a draft for all OSHA related analysis, practices, and documentation for such a Project, and provide references for such for at least three similar elevated projects in the US.

Provide a completely revised Supplemental DEIR with the above requests along with adequate descriptions, assessments, and mitigation for alternative projects along with numerical/quantitative comparisons and selection.

cont'd GO18-84

3.16-31/3 3.17.1 Regulatory Setting Federal Americans with Disabilities (ADA) Act of 1990 Titles I, II, III, and V of the ADA have been codified in Title 42 of the United States Code, beginning at Section 12101….establishing minimum standards for ensuring accessibility when designing and constructing a new facility or altering an existing facility. **The Project <u>will be designed</u> to meet all ADA design requirements**.

Provide a thorough and complete review and draft illustrations/drawings for all ADA design sites within Project and related equipment, especially for wheelchair and walker/stroller devices.

Provide

Provide a completely revised Supplemental DEIR with adequate descriptions, assessments, and mitigation for ADA compliance along with alternative projects and their numerical/quantitative comparisons and selection.

GO18-85

4-1/1 4.0 ALTERNATIVES 4.1 INTRODUCTION Alternatives have been considered in this Draft EIR to explore potential means to mitigate or avoid the significant environmental impacts associated with implementation of the proposed Project, while still achieving the **primary objectives** of the proposed Project….an EIR shall describe the range of **reasonable** alternatives, which may include alternatives to the location of the project, which would **feasibly** attain most of the basic objectives of the project….EIR… does not need to consider every conceivable alternative or consider alternatives that are **infeasible**, but rather only alternatives necessary to permit a **reasoned choice**….No Project Alternative…to determine the consequences of not implementing the project…., and **comparison of alternatives, the relative advantages and disadvantages of each alternative can be determined**.

Provide goals/purposes of the Project and their related dependent objectives and policies/program.

Provide definitions of reasonable, feasibly, infeasible, and reasoned-choice and provide examples of such within the Project description and alternatives.

As required by CEQA, provide a numerical/quantified comparison of all environmental sectors and for all alternatives.

Provide a completely revised Supplemental DEIR in accordance with above deficiencies with adequate descriptions, assessments, and mitigation for alternative projects along with numerical/quantitative comparisons and selection.

GO18-86

Apdx K 1979/ & 1980/ During the late nineteenth and early twentieth centuries, crude oil was extracted from multiple small oilfields nearby and processed at the former **Southern Refining Company** located **immediately northwest** of the Site. **Historical aerial photos and Sanborn maps** indicate that the refinery contained four aboveground storage tanks (ASTs) for storing crude oil. The refinery was apparently dismantled by 1921 and the ASTs were removed sometime between 1921 and 1928. The Site

GO18-87

has been used as a railroad junction for over 100 years and is currently maintained as such for use by three major passenger and freight lines.

Revise mis-directions of historic uses (SE rather than NW) and provide historic aerial photos of such site.

Provide address of site: e.g., 1300 CARDINAL STREET 1700 ft SE-E of Alameda for Southern Refining Company and Amalgamated Oil Company, now Williams Mead Housing Project.

Provide historic aerial photos and maps and revised Apdx K.

The entire DEIR and appendices do not consider or provide information provided in ZIMAS, LA City Dept. City Planning online database Very limited references in DEIR with singular mentions in the DEIR and geotechnical report, only. Withdraw current DEIR, revise, and update and recirculate as supplemental/subsequent DEIR with incorporated ZIMAS information for all pertinent descriptions.

cont'd GO18-87

Sept. 2022 Los Angeles Aerial Rapid Transit 16037.000.000 Geotechnical Document in Support of the Environmental Impact Report

APPENDIX I

Apdx. I-1 GeoTechnical Report ENGEO Project No. 16037.000.000

We are pleased to submit this document characterizing the **general geologic/geotechnical conditions** of the Los Angeles Aerial Rapid Transit (LA ART) project in Los Angeles, California. This report is a **compilation of adjacent publicly available previous geotechnical assessments and explorations** to assist in preparation of the Draft Environmental Impact Report (EIR).

Provide references (doc and page/paragraphs) for mentioned assessments and explorations. Provide geotechnical documentation for RTD/MTA Red Line Union Station and US-Civic Center rail Tunnels beneath this Project and adjacent to the Project's Alameda Station.

Provide review and pertinent information from geotechnical documents related to the Buena Vista Project along south side of Broadway and under and adjacent to the Broadway/Bishop Tower.

Provide commonly used industry standards references (docs, pages, and paragraphs) and compiled regulations, laws, and standards requirements for geotechnical settings and impacts as a mandatory compliance mitigation measure.

Provide contractual requirements for all construction contracts and differentiate between geotechnical requirements and mitigations.

Provide revised supplemental/subsequent DEIR for public review and comments.

GO18-88

Apdx. I - 2/1 This document was prepared based on a **desktop study** of **readily available publicly accessible geotechnical reports and data**. Geotechnical explorations and laboratory testing were not a part of this **initial preliminary** study scope.

No project borings, No records of vicinity geotechnical borings, Including Red Line Phase 1, Alameda – Tunnel and UStn, Buena Vista, Cornfields/Historic park, and William Mead Project.

The DEIR is totally deficient and inadequate regarding to geotechnical (and other EIR elements') settings, impacts assessments, and mitigations. Provide at least 4 borings per Project element to establish geological conditions and potential impacts of the Project on the area resources, and their hazards upon the Project.

Provide review of all recorded seismic events within 5000ft of the Project area limits and potential sources (including SCEC, Pasadena).

GO18-89

Apdx. I-13/1 approximately 10 miles within the earth (Wallace, 1990). The predominant fault system affecting the Project area is the Transverse Ranges **fault system**, which **trends east-west** and relieves strain primarily through reverse-slip, and left-lateral, strike-slip displacement.

Provide review of all recorded seismic events within 5000ft of the Project area limits, potential sources (including SCEC, Pasadena).

Provide review of the Elysian Park North Fault (see ZIMAS and others) underlying the Project sites and others north of Broadway.

GO18-90

Apdx. I-13/2 4.1.2 Site Topography The **majority (3/4)** of the proposed Project alignment occupies a gentle, south-sloping alluvial plain located **approximately ½ mile** west of the Los Angeles River (Figures 1 and 2).
Provide measurements in feet: 4057/6260 ft (65%) of length and 2880-3500ft west of LA River low flow channel rather than two different units (% and miles)in same sentence.

GO18-91

Apdx. I -13/5 [**Qyf 1 Holocene-Pleistocene**] This geologic unit was deposited primarily from flood deposits and debris flows.
As used, Qyf includes the entire Quaternary (Holocene and Pleistocene). Provide specific technical term usage, Holocene is an interval of the Quaternary, not Pleistocene.

GO18-92

Apdx. I-13/6 4.1.3.3 Flood and Stream Channel Deposits According to geologic **mapping by Campbell (2014)**, the alignment from the southern end to where it crosses North Broadway is underlain by **late Pleistocene** alluvium (Figure 3 - Qya2).
Provide accessible, specific sources (page/paragraph) for reference or provide copy of map in Appendix.
Provide differentiation between Late Pleistocene (Qo) and Holocene (Qy), as this designation would indicate all surface deposits would have potential for important fossils.

GO18-93

Apdx. I -14/2 The geologic structure in the area of the site is characterized by the **northeast-southwest**-trending Elysian Park Anticline and the underlying **Elysian Park Blind Thrust fault**. The Project site is located over the **southwest limb of the anticline**. Bedding in the **Puente Formation** in the area generally dips from 25 to 50 degrees towards the **southwest**.
Other geotechnical sources (ZIMAS, et al) indicate that the EPBT Fault is aligned NW-SE rather than NE-SW beneath the Project.
Similarly general anticline axis orientation of NE-SW would require the flanks to dip from the axis to the NW and SE, rather than the SW; anticline axis (top of fold) maybe to SW.
Provide review and revisions by qualified geologist for review of relevant appendices and DEIR text for a Supplement DEIR.

GO18-94

Apdx. I -16/ TABLE 4.2.1.1-1: Nearby Active Faults (USGS 2008) Lat.=34.065019; Long.=-118.235495
FAULT NAME **Elysian Park (Upper)***
Provide a single consistent name/term for the fault.

GO18-95

Apdx. I -17/2 **Elysian Park Fault** (Blind Thrust Fault) The fault closest to the Project site is the **Elysian Park fault**. According to the USGS Quaternary fault and fold database, the location of the **Upper Elysian Park fault** is inferred to cross under the alignment.
The **Upper Elysian Park fault** is a north-to-northeast-dipping fault that underlies the northern Los Angeles basin from Griffith Park to Garvey Reservoir. ***ZIMAS***
However, the **Upper Elysian Park fault** is a blind thrust fault, which means **it is not capable of surface fault rupture** and; therefore, is not subject to the conditions of the Alquist-Priolo Act. ***ZIMAS***
It is thought to be seismogenic (capable of generating earthquakes) from a depth….
Because **there is no surface expression of the Elysian Park fault**, constraints on the long-term slip rates on the fault…, rather than from paleoseismic data.
Although these constraints are limiting, the **most current models (UCERF3)** indicate… it has approximately 1.2% probability of participating in an earthquake of magnitude greater than 6.7 before 2038….The likelihood of experiencing an event of Magnitude > 7.0 is 0.8%, and the likelihood of experiencing an event of Magnitude > 7.5 is less than 0.1% in that time period.
Provide references for all such statements along with page/paragraph so that discussion of faults can be verified as accurate.
As ZIMAS shows the Project to cross and extend through the fault zone, this discussion needs to be thoroughly and adequately displayed and rectified as it is wrong, based on LACity ZIMAS.
Provide specifics assessments/mitigation regarding fault/design inclusions for Park Station, Broadway and Elysian towers, and Stadium Station and supports within the ZIMAS designated surface fault zone.
Provide accessible reference for UCERF3 as applied to this fault and location.
Provide seismic assessment of structural responses for towers, stations, cables, and gondolas during a 6.4-6.7 magnitude on the Elysian Park Fault.

GO18-96

Provide description and assessments reflecting the LACity-DCP ZIMAS info-base. cont'd GO18-96

Apdx. I -17/4 These portions of the Project alignment are located in an area mapped as potentially subject to liquefaction on the Safety Element Exhibit B of **City of Los Angeles General Plan** and the State of California Seismic Hazards Zones map as shown on Figure 5. The Alameda Station, Alameda Tower, Alpine Tower, Chinatown/State Park Station, and Broadway Junction are located in an area mapped as potentially subject to liquefaction.
Provide appropriate ZIMAS references. No specific references to ZIMAS. GO18-97

Apdx. I -18/4 The proposed Project alignment is located in an area classified as MRZ-3 as shown on Figure 6. MRZ-3…." The proposed Project alignment is also located just beyond the eastern end of, but not within, what is designated as the Los Angeles City Oil Field.
Although not within the surface delineation of the LA Oil Field, close enough that may reflect the underlying oil/gas occurrences and production zones.
CalGEM Wellfinder shows the route alignment within the mapped oil field. North of Bruno/Alameda intersection, the Project Park Station lies within the well field along with 1200+ft of the cableway, and the Broadway Junction lies 550 ft east of the mapped field.
As many parcels through which the Project alignment passes are designated as "Methane Zones" they would be within the land above the designated Los Angeles Oil Field.
No references given. Provide appropriate ZIMAS references and DOC CalGEM WellFinder site. GO18-98

Apdx. I -19/1 …located in a **City-designated hillside area, indicating the sites may have an increased susceptibility to landslides.\3 \3 City of Los Angeles. Zone Information and Map Access (ZIMAS). Available at: http://zimas.lacity.org/.** Accessed May 2022
Only reference to ZIMAS in the entire DEIR although landslides are indicated by ZIMAS for parcels NW of SR-110 and for the Alpine Tower and Stadium Station areas.
Provide review of all Project element locations with regard to ZIMAS database information, e.g., faults, landslide, and liquefactions.
Provide review of liquefaction potential as indicated by ZIMAS for Project area and facilities south of Broadway. Provide appropriate mitigation for liquefaction and for landslides especially when seismically induced. GO18-99

Apdx. I -20/1 …which require monitoring **before and during construction**. Although **long-term methane controls are not required**, **preliminary construction planning** should adhere to Section 91.7101 of the Los Angeles Municipal Code, which controls for methane intrusion emanating from geologic formations. The need for methane controls **may be reduced or eliminated by conducting site-specific methane testing** for elements constructed within the methane zones and buffer zones to evaluate the potential hazard, pursuant to Section 91.7104.1.
ZIMAS clearly indicates parcels which are designated as being in a Methane Zone or Methane Buffer Zone, is not so designated in the DEIR setting and no mitigation measures are proposed.
As no methane surveys, testing, and monitoring has been conducted within the Project sites, the needs for methane monitoring and controls must be implemented before and throughout construction, especially for towers, the junction, and Park Station.
The appendix does not clearly describe the Project sites but states that monitoring will be conducted before construction and hopefully would be assessed before construction contracts are offered. Without any direct information or assessment, the DEIR assesses that construction and longer term methane controls will not be needed, even though the Park Station and Broadway Tower lie within designated Methane Zones.
Provide a thorough description of methane gas conditions of surface and subsurface based on >10ft borings for each Project site and as required by Metro for construction of major surface and subsurface facilities. Provide suitable mitigation and safety plans for those sites with methane gases in soils and groundwater.
Provide specific contractor programs to monitor, to control, and to assess measures required for continuing safe operations at all Project facilities located in ZIMAS recognized Methane Zones. GO18-100

Apdx. I -21/1 5.2.2 Seismic Hazards Mapping Act of 1990…addresses earthquake hazards other than surface fault rupture, including liquefaction and seismically induced landslides….identifying and mapping seismic hazard zones and mitigating seismic hazards to protect public health and safety.
Provide specific page/paragraph citations and include specific parcel references for ZIMAS assignments to surface zones, liquefaction, and landslides.
Provide a thoroughly revised and supplemented Subsequent Draft Environmental Report (S-DEIR) for public review and comments.

GO18-101

Apdx. I -21/1 It requires the California Department of Conservation, Division of Mines and Geology, to map **seismic hazards** and establishes specific criteria for project approval that apply within **seismic hazard zones**, including the requirement for a geological technical report. The California Department of Conservation has mapped seismic hazards or established specific criteria for the area that includes the Project site **(CGS, 1998)**.
Provide specific page/paragraph citations and include specific parcel references for ZIMAS assignments to surface zones, liquefaction, and landslides.
Provide parcel specific seismic hazard zones for all Project construction sites.

GO18-102

Apdx. I -21/2 The geological reports prepared for the Project satisfy the requirements of the Seismic Hazards Mapping Act at the **preliminary project level**. Additional **site-specific studies designed to explore the subsurface conditions in areas of planned development will be completed prior to submittal of final plans**.
Define "preliminary project level" and provide schedule/contents for final plans (and designs) and current/2023 industry standards for designs and project description used for basis of CEQA/EIR compliance and agency certification of this Project.
Provide list, outlines, and completion schedules for all site specific studies. Provide requirements for all such future studies to be incorporated into a subsequent DEIR.
Provide above and a total revision of DEIR, and especially geotechnical considerations, and resubmit as a supplemental/subsequent DEIR for public review and comments.

GO18-103

Apdx. I -22/5 5.2.2 Seismic Hazards Mapping Act of 1990 The California State Seismic Hazards Mapping Act of 1990 addresses earthquake hazards other than surface fault rupture, including liquefaction and seismically induced landslides….The **geological reports prepared for the Project satisfy the requirements of the Seismic Hazards Mapping Act at the preliminary project level**. **Additional site-specific studies designed to explore the subsurface conditions in areas of planned development will be completed prior to submittal of final plans.**
Define "preliminary project level" and provide schedule/contents for final plans (and designs) along with citations + page/paragraph of any references and provide current/2023 industry standards for designs and project description used for basis of CEQA/EIR compliance and agency certification of this Project.
Provide list, outlines, and completion schedules for all site specific studies.
Provide the above and total revision of DEIR, and especially geotechnical considerations, and resubmit as a supplemental/subsequent DEIR for public review and comments.

GO18-104

Apdx. I -22/6 Division 71 (Methane Seepage Regulations) describes methane testing and mitigation requirements based on building type, building use/occupation, and whether a structure is located within a methane zone or buffer zone. The proposed Project alignment crosses a methane zone and buffer zone and **may require site-specific methane testing for particular structures, depending on the final architectural design**.
Provide and implement a methane monitoring and assessment program for all construction sites prior to preparation of a supplemental/subsequent DEIR for public review and comments.
Provide all of the above and total revision of DEIR, and especially geotechnical considerations, and resubmit as a supplemental/subsequent DEIR for public review and comments.

GO18-105

Apdx. I -24/1 Impact: There is potential for the proposed Project to expose people or structures to seismic hazards listed above. **Mitigation measures would be required to reduce impacts to a less than significant level.**

GO18-106

Provide review and assessment of all fault and seismic impacts given for an event equal to 6.4 magnitude as noted in ZIMAS. Provide for pre-construction and ongoing microseismic monitoring for the Upper Elysian Park Fault zone beneath the Project.
Replace all "would's" with shall's or must's.
Provide for additional mitigation programs for at least 120 minute emergency evacuation programs and for damage prevention for surrounding land uses in the event of tower ccollapses or toppling.
Provide all of the above and total revision of DEIR, and especially geotechnical considerations, and resubmit as a supplemental/subsequent DEIR for public review and comments.

cont'd GO18-106

Apdx. I -24/2 To mitigate the shaking effects, structures **should be designed using sound engineering judgment and the current CBC requirements, as a minimum.**
Provide definitions and comparisons for should's and would's vs shall's and will's. Replace all "should's" with shall's or must's.
Provide all of the above and total revision of DEIR, and especially geotechnical considerations, and resubmit as a supplemental/subsequent DEIR for public review and comments.

GO18-107

Apdx. I -24/2 However, the proposed Project alignment is not located within a State of California Earthquake Fault Zone for known Holocene-active faults capable of fault surface rupture (CGS, 2017) or located within an Alquist-Priolo Earthquake Fault Zone. Accordingly, the **risk of surface rupture due to faulting is considered low.** As such, the Project **would** not directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving rupture of a known earthquake fault. Impacts **would be considered less than significant.**
Replace all "would's" with shall's or must's.
No reference to ZIMAS nor to Buena Vista Scoping and related studies. No references to competent certified reviewers for such statements and use of conditionals.
Provide an adequate and complete technical review and statement of significance by competent certified engineer. All such additions must be provided in a subsequent/supplemental DEIR prior to further consideration of the Project and public review and comments.

GO18-108

Apdx. I -24/4 The **actual risk** of the liquefaction hazard and related damages **should be evaluated in the site-specific geotechnical report.** The Project **would be required to comply** with all standards, requirements, and conditions contained in construction-related codes (e.g.,…), **which would ensure structural integrity and safe construction.**
Actual risks and mitigation measures must be evaluated in a sites-specific review and assessment by a competent, certified engineer(s), must be based on adequate and complete geotechnical studies and assessments, and must provide appropriate mitigation and compensation measures to warrant a less-than-significant risks to structures and passengers.
Provide an adequate and complete technical review and statement of significance by competent certified engineer. All such additions must be provided in a subsequent/supplemental DEIR prior to further consideration of the Project and public review and comments.

GO18-109

Apdx. I -25/1 Therefore, impacts related to earthquake-induced slope failure **could be considered moderately significant to significant** and **should be addressed** per Mitigation Measure GEO-A.
Use of could/should and ranges of significance are inconsistent with CEQA and must be based on factual evidence for the Project sites and assessments by competent, certified reviewers.
Provide an adequate and complete technical review and statement of significance by competent certified engineer. All such additions must be provided in a subsequent/supplemental DEIR prior to further consideration of the Project and public review and comments.

GO18-110

Apdx. I -25/2 Compliance with existing laws and regulations, and implementation of **Mitigation Measure GEO-A**, requiring the development and implementation of geotechnical recommendations to be incorporated into the design plans and specifications, **would reduce** impacts to less than significant.
As indicated in text, the current DEIR finds current designs would generate significant impacts for seismicity/Geological Resources, as the referenced programs have not been conducted and the public has not had a public review and comments for the mitigation measures to be considered.

GO18-111

Apdx. I -25/3 Operation Upon completion of the construction activities, the proposed Project would have complied with…, as well as Mitigation Measure GEO-A. **Operation of the aerial gondola system would have a less than significant impact with respect to exposing people or structures to seismic hazards if appropriate mitigation measures are applied during construction**.

As indicated, appropriate mitigation measures (which are unknown in this DEIR and not based on evidence) are not available for public review and comment.

As indicated in this text, the current DEIR finds current designs would generate significant impacts for seismicity/Geological Resources, as the referenced programs have not been conducted and the public has not had a public review and comments for the mitigation measures to be considered.

Provide an adequate and complete technical review and statement of significance by competent certified engineer prior to further considerations of this DEIR.

Provide such additions in an adequate and complete subsequent/supplemental DEIR prior to further consideration of the Project and public review and comments.

GO18-112

Apdx. I -29/8 8. CONCLUSION The proposed Project **would** have **less than significant impacts with respect to geologic and geotechnical hazards with application of the recommended mitigation measures**. Prior to grading and construction permits being issued, a **site-specific final geotechnical report should be prepared, as recommended in Mitigation Measure GEO-A**. …**should include site-specific measures and design considerations for the stations, junction, and towers**. The recommendations may vary depending on the geologic and geotechnical conditions at each location.

Replace ALL would's + should's with shall or musts and provide specific and contractual required (must) mitigation along with numerical evaluation of assessed impacts before and after required mitigation.

Provide such additions in an adequate and complete subsequent/supplemental DEIR prior to further consideration of the Project and public review and comments.

GO18-113

Apdx J Greenhouse Gas Emissions Technical Report 20/4 2.2.2.5 Senate Bill 44 Senate Bill (SB) 44, signed October 7, 2021, provides specialized procedures for the administrative and judicial review of processes and approvals for an "environmental leadership transit project." SB 44 defines an "environmental leadership transit project" as "a project to construct a fixed guideway and related fixed facilities" that meets all of the following conditions:

A. The fixed guideway operates at zero-emissions.

B. (i) If the project is more than **two miles in length**,…

(ii) If the project is no more than two miles in length, the project reduces emissions by no less than 50,000 metric tons of greenhouse gases directly in the corridor of the project defined in the applicable environmental document over the useful life of the project, without using offsets.

C. The project reduces no less than 30,000,000 vehicle miles traveled in the corridor of the project defined in the applicable environmental document over the **useful life** of the project.

Provide a specific table of SB44 requirements and Project achievements in quantitative form consistent with the specific requirements of SB44, including for events only and for non-event calendar only.

Provide a useful life period for events-based and full-time base for Project operations.

Provide such additions in an adequate and complete subsequent/supplemental DEIR prior to further consideration of the Project and public review and comments.

GO18-114

Apdx L-58/1 7. Conclusion Construction and operation of the proposed Project **could** result in adverse effects to surface water and groundwater quality in the Los Angeles River and Central Basin, and violate water quality standards and waste discharge requirements, **if not appropriately managed**. However, **adherence** to applicable federal, State, regional, and local laws and regulations **would result in less than significant impacts.**

Provide Project-specific definitions, procedures, and designs of "appropriate" management and adherence. Provide hydrologic model and numerical results based on specific design and operational conditions for each Project construction site.

GO18-115

Apdx L-58/2 Additionally, the proposed Project would not **substantially decrease groundwater supplies** or **interfere substantially with groundwater recharge**….Although the proposed Project would result in increases to impervious surfaces, the additional impervious surface areas are **nominal**, and **all proposed Project components would comply** with the LID ordinance as applicable, thereby reducing runoff. Impacts would be less than significant.

No numerical description and assessment are provided for current and Project conditions and no definitions of "substantially" or "nominal" are provided. Provide numerical analyses for each project construction site and provide specific LID measures and their mitigative effects to bypass rainfall into groundwater for each site, none are provided here and elsewhere.

Provide designs and flowcharts for all LID related designs for collection, conveyance, storage, and recharging for each Project site.

GO18-116

Apdx L-58/4 The proposed Project **could potentially conflict with or obstruct implementation of water quality control** or sustainable groundwater management plans. Although construction and operation of the proposed Project **would potentially impact** the water quality of the Los Angeles River and Central Basin…, **adherence** to applicable federal, State, regional, and local laws and regulations **would ensure** the proposed Project would comply with all federal, State, and local water quality control or sustainable groundwater management plans. Impacts would be less than significant.

No numerical description and assessment are provided for current and Project conditions and no definitions of "substantially" or "nominal" are provided. Provide numerical analyses for each project construction site and provide specific LID measures and their mitigative effects to bypass rainfall into groundwater for each site, none are provided here and elsewhere.

Reference to adherence to laws and regulations is totally unacceptable and must be replaced with a design-operations based mitigation manual with assigned actions/procedure and equipment for all contractors, and associated approved permits from regulatory agencies.

Provide designs and flowcharts for all LID related designs for collection, conveyance, storage, and recharging for each Project site.

Provide a revised, supplemental/subsequent DEIR for all hydrologic elements.

GO18-117

Apdx L-58/5 The proposed Project could have potential adverse impacts related to hydrology and **water quality**; however, with **adherence to applicable…**, significant impacts **would** be less than significant level. The proposed Project **would not result in any significant impacts** related to hydrology and water quality.

No numerical description and assessment are provided for current and Project conditions and no definitions of "substantially" or "nominal" are provided. Provide numerical analyses for each project construction site and provide specific LID measures and their mitigative effects to bypass rainfall into groundwater for each site, none are provided here and elsewhere.

Provide designs and flowcharts for all LID related designs for collection, conveyance, storage, and recharging for each Project site.

Provide a revised, supplemental/subsequent DEIR for all hydrologic elements.

GO18-118

Apdx.F Archaeological and Paleontological Resources Assessment

No mentions are made in DEIR regarding significant historic/archaeological remains recovered from excavations conducted at the Union Station area (for mitigation of suspected impacts from Union Station and subway construction for Red Line Phase 1.

Archaeology – SW Park Station and Alameda/Chavez location (China town 2, 1900-1925) and American Indian – (1800-1900)

Bishop Str. historic uses of Italian (1890-1925) and Chinese (Post 1920) origins - Chinatown 2

Provide four borehole drilling/analyses to depths of 10ft and assessment for potential historic archaeological remains at each Project construction sites, and especially those from Alameda – Broadway sites. Provide at least two boreholes for sites north of Broadway.

Apdx F-70/2 The results of the records search, shown in Table 7, indicated that there are no known NHM vertebrate fossil localities within the Area of Direct Impacts. Moreover, the majority of the Area of Direct Impacts, consisting of surficial deposits of **younger Quaternary alluvium**, is not anticipated to contain significant fossil remains in its **uppermost layers** because the sediment is **too young** to contain such fossils.

Provide the specific technical basis for such identification of "younger", "uppermost" (?= 0.1ft or 10ft) and their distribution. Provide 4 or more borings of 10 ft for each site south of SR-110. Provide thorough and adequate analyses and assessments of potential fossils and remains to document age and resources. GO18-119

Apdx F-94/2 Quaternary alluvium is expected to be present at **differential** depths within the Project Area. Planned Project excavation is **anticipated to reach up to 10 feet,** except at Dodger Stadium Station where the maximum depth would be 42 feet, and piles would be drilled to a max depth of 125 feet; therefore, Project construction **may encounter paleontological deposits**.

Replace "differential" with different and "up to" with down to.

Provide four borehole drilling/analyses to depths of 10ft and assessment for potential historic archaeological remains at each Project construction sites, and especially those from Alameda – Broadway sites. Provide at least two boreholes for sites north of Broadway.

Provide a thorough construction mitigation program for archaeological and paleontological remains with specific contractual requirements for assessment, encountering, and recovery of all paleontological and archaeological remains. Include in a thoroughly and adequately revised DEIR for public review and additional comments.

A Paleontological Resources Monitoring and Mitigation Plan (**PRMMP**) **shall be developed** by a qualified paleontologist meeting the criteria established by the Society for Vertebrate Paleontology. The **plan shall apply to paleontologically sensitive deposits**, including **older Quaternary** alluvium and Puente formation deposits, that may be impacted by the proposed Project, as determined by a qualified paleontologist in consultation with the construction team and guided by geotechnical coring.

Provide a consistent approach throughout the DEIR regarding the use of conditional and declaratory verbs which herein reflects the direct copying of texts from other, unreferenced sources into this DEIR. Provide consistent approach to all remains encountered during excavation.

Provide a thorough construction mitigation program for archaeological and paleontological remains with specific contractual requirements for assessment, encountering, and recovery of all paleontological and archaeological remains. Include in a thoroughly and adequately revised DEIR for public review and additional comments. GO18-120

The qualified paleontologist **shall supervise the paleontological monitor** who **shall be present** during construction excavations into **older Quaternary** alluvial deposits and **Miocene Puente** formation deposits. **Monitoring shall** consist of visually inspecting fresh exposures of rock for **larger fossil remains**, and where appropriate, collecting wet or dry screened sediment samples of **promising horizons for smaller fossil remains**.

Provide a consistent approach throughout the DEIR regarding the use of conditional and declaratory verbs which herein reflects the direct copying of texts from other, unreferenced sources into this DEIR.

Provide consistent approach to all remains encountered during excavation.

Provide a thorough construction mitigation program for archaeological and paleontological remains with specific contractual requirements for assessment, encountering, and recovery of all paleontological and archaeological remains. Include in a thoroughly and adequately revised DEIR for public review and additional comments.

The frequency of monitoring inspections **shall be determined** by the paleontologist and **shall be based** on the rate of ground-disturbing activities, the material being excavated, and the depth of excavation, and if found, the abundance and type of paleontological materials found.

Provide a thorough construction mitigation program for archaeological and paleontological remains with specific contractual requirements for assessment, encountering, and recovery of all paleontological and archaeological remains. Include in a thoroughly and adequately revised DEIR for public review and additional comments.

cont'd
GO18-120

95/2 The areas of paleontological sensitivity include all locations where **undisturbed Older Quaternary alluvium** or the **Monterey/Puente Formation** may be impacted by the Project. The identification of exact locations to be monitored would be guided in part by **geotechnical boring for the Project**.

Define "undisturbed" and require all fossils, even in disturbed deposits be recovered and assessed.

Provide a thorough construction mitigation program for archaeological and paleontological remains with specific contractual requirements for assessment, encountering, and recovery of all paleontological and archaeological remains. Include in a thoroughly and adequately revised DEIR for public review and additional comments.

LOS ANGELES AREA
CHAMBER OF COMMERCE

January 11, 2023

The Honorable Ara Najarian
Chair, Los Angeles County Metropolitan Transportation Authority
Board of Directors
Board Administration
1 Gateway Plaza, Mail Stop 99-3-1
Los Angeles, CA 90012

SUBJECT: Support Los Angeles Aerial Rapid Transit (LA ART)

Dear Chair Najarian,

On behalf of the Los Angeles Area Chamber of Commerce representing more than 1,400 companies and small business owners in Los Angeles, I write to express our support for the proposed Los Angles Aerial Rapid Transit (LA ART) project. As you know, aerial gondolas are used across the world to connect key districts in cities to improve mobility, reduce greenhouse gas emissions, reduce congestion, and provide entertainment district patrons efficient alternatives to existing travel options. GO19-1

The LA ART also has the historic potential to connect El Pueblo, Union Station, Chinatown, Mission Junction, and Solano Canyon, while also providing access to the Los Angeles State Historic Park, the Los Angeles River, and Elysian Park. These are important centers of the Los Angeles culture, history, green space, entertainment, and underserved populations that would see immense mobility benefits should LA ART progress. GO19-2

Further, these neighborhoods and areas would see measurable benefits for local small businesses and entrepreneurs who thrive on greater numbers of pedestrians, transit riders, and tourists. With a speedy approval of this project it will be built in time for the 2028 Olympic Games and will be a necessary piece of regional mobility for the influx of tourists. GO19-3

Importantly, the LA ART proposal includes a "Community Access Program" that would allow residents and employees of businesses close to the project to ride the gondola using their LA Metro fare, at no additional cost. LA Art proposes a comprehensive vision that considers neighborhood needs, pedestrian improvements, business growth, and mobility enhancements.

For these reasons I strongly support advancing LA ART. If you have any questions, please contact Senior Public Policy Manager Cameron Gil at CGIL@LAChamber.com. GO19-4

Sincerely,

Maria S. Salinas

RE: Los Angeles Aerial Rapid Transit Project (LA ART)
SCH 2020100007
Draft EIR - Comments

Dear Mr. Zelmer:

Below are comments for the Los Angeles Aerial Rapid Transit Project DEIR.

Arts District Community Council LA (ADCCLA) is a 501c3 nonprofit focused on creating and preserving public green space. We further address government infrastructure and sustainability decisions that could negatively impact the Arts District Community.

ADCCLA became aware of the Project in 2018. In reviewing the scant material provided by LA ART, ADCCLA engaged its board and community members in researching the impacts of the Project.

GO20-1

Description

LA ART intends to build a private aerial tramway on behalf of Frank McCourt to go 1.2 miles from Union Station to near the gold line stop and then over the **LA State Historic** Park and residential communities to Dodger Stadium. The Project has been billed as a sustainable project that will take 3,000 cars off the road. It purports to be a "privately" funded project created to move people to a single private for-profit enterprise and is being billed as a PUBLIC transportation project. Various non-committal mitigations have been offered in the future that continue to be moving targets for stakeholders to try and unwind.

GO20-2

Comments:

1. The entirety of the NOP and DEIR is a farce.

a. The purpose of CEQA is to lay out in detail all aspects of the Project in order for the public and the communities impacted to have a clear and complete understanding of the Project.

GO20-3

b. To date, the Project has been driven by non-disclosure agreements (NDA) signed by both Metro (the agency overseeing the Project?) and State Parks. The NDA's gave and has continued to give LA ART and Metro cover to hide the full intent and scope of the Project. cont'd GO20-3

c. Early "public meetings" and requests for support by LA ART were based only on PR comments that have consistently been debunked, along with a host of confused and moving "options" for "mitigation."

d. LA ART's claims of extensive outreach were also debunked, when only 40 people were allowed into those same meetings, and no one was allowed to ask questions except in the chat, most of which went ignored. GO20-4

e. LA ART failed to provide reasonable alternatives to the Project. Only two alternatives were produced and discussed with the public. When the community screamed the loudest over one alternative, it was removed, leaving only one flawed alternative to be publically discussed. GO20-5

f. The entirety of the DEIR claims zero environmental impacts on the community and state park. That means:

(1) No noise
(2) No vibrations
(3) No construction impacts
(4) No visual blight
(5) No impact on traffic
(6) No impact on parking
(7) No impact on residential stakeholders
(8) No impact…anywhere. None, nothing. GO20-6

g. Visual elements have been egregiously misrepresented in the DEIR, including the park viewshed. Perspective drawings appear to be deliberately skewed. Heights and distances are increased and stretched to create a "nice view." Even the incorrect number of cables has been used to skew and reduce the visual blight the Project would bring. GO20-7

2. Metro is the wrong agency for this Project

As will be opined on by legal experts, Metro is the wrong agency to take the lead on this Project. While it's convenient to place this Project with an agency that has little accountability, it is not a governing agency, meaning that the lead agency must have the governing capacity and natural decision-making powers. Metro has no jurisdictional authority to be the lead. GO20-8

3. The Project has been improperly placed on Federal funding bundle lists

This would imply that this Project is a done deal which many of us have been told repeatedly by staff members in the former Mayor's Office. This suggests backroom discussions and agreements, pushed through at an all-cost mentality. GO20-9

4. LA ART relies on Vague, Unenforceable, or Deferred Mitigation Measures.

The PR voice of Mitigation has not been taken seriously in this DEIR as the document fails to lay out in detail, nor does it incorporate any of the mitigations publicly spoken about into the overall design of the Project. GO20-10

5. Metro awarded a sole source contract to an unqualified, untested entity.

Frank McCourt, nor LA ART, nor Climate Resolve, nor any other entity formed around the same people are qualified to engineer or construct a private gondola, let alone one claiming to be public transit. GO20-11

6. The "privately funded" Project appears to no longer be "privately funded"

Since efforts to add the Gondola to a federal transportation improvement bundle and improperly pass ownership to another entity that is untested and unqualified again change the playing field. GO20-12

The right for communities not to be assaulted by backroom deals should override tainted officials. cont'd GO20-12

7. This Project is an assault on communities of color.
The sordid history of the Dodgers and Chavez Ravine in addition to the aberrant treatment of Chinese migrants, seems to have alluded LA ART and McCourt. The idea of "we know what's best for you" is tone-deaf, to say the least. GO20-13

8. Politics are winning over what is best for our communities
At a recent metro Meeting, former Mayor Garcetti likened his colleague representing the impacted community to Mitch McConnell's treatment of SCOTUS because she was doing what her constituents asked her to do. These kinds of comments speak to backroom deals (NDAs), corruption, and an astounding lack of sound judgment. GO20-14

9. Over 75 mature-growth trees ranging between 15 and 50' are slated to be removed
to accommodate thousands of pounds of concrete GO20-15

30 / 30 California Initiative (CA climate change report) is being entirely ignored by LA ART, Climate Resolve, the City, and Metro. GO20-16

30 / 30 calls for the preservation/conservation of ALL HABITAT in red zones. Los Angeles County is officially a red zone.

10. Gondolas are not, in any way, shape, or form, new technology.
New for LA is not new and innovative to anyone but LA ART. GO20-17

11. This Gondola is NOT public transportation.
This is a private project, benefitting a private entity. Period. Public Transportation moves people to and from more than one environment. A stop at the Chinatown station is duplicative and is not needed. Additionally, the Dodger express represents non-invasive buses (soon to be fully electric) already routed and funded. GO20-18

12. LA LART continues to offer no evidence that communities will benefit from increased foot traffic in their neighborhoods.
Indeed, the reverse seems to be true in that the hike to reach Broadway would be unreasonable and time prohibitive in both directions. GO20-19

13. Climate Resolve is not included in the DEIR as the managing/contracting entity.
Despite press releases and conferences, Climate Resolve, the latest entity to have become embroiled in this sham of a Project, is actually not included in the DEIR as there is no agreement in place, making the claims appear to be more about taking the heat off of McCourt and moving it to yet another unqualified entity. The legality of doing this midstream CEQA is also questionable at best. GO20-20

14. Digging into severely toxic soil
While significant remediation was done in the park to make sure that it was safe for all, deeper levels of soil, both at the park and surrounding areas, have a long, dark history of toxic and deadly soil contamination. No study was presented or addressed that would show that the public would be safe stirring up and unearthing severely toxic soil. GO20-21

15. Project Alternatives

Both the no-project alternative and the Dodger Express were left out of all public communication of available alternatives offered during all aspects of the process. The existing Dodger Express has been consistently cited as the preferred method of transport by community stakeholders.

The infrastructure already exists, and the Dodger Express team has committed to electrifying all the buses as a response to climate change. This alternative is preferred by our community and stakeholders at large as it does not pour thousands of pounds of concrete into an already stressed community and **DOES NOT REMOVE ANY EXISTING HABITAT.**

GO20-22

Conclusion

It is our observation and assumption that this Project is yet another lousy idea being rammed down the throats of our communities to satisfy a check box for the Olympics. The Olympics has traditionally created unwarranted hardships on communities, and this Project is no exception.

The manner in which electeds and Metro have conducted this process is utterly shameful and displays a flagrant disregard for the residents and communities being impacted, not to mention the law. Simply reframing the argument to make it look awesome doesn't change the fact that the premise is based on a lie with a complete and appalling disregard for CEQA and the law in general.

We ask that this Project be summarily "wished back into the cornfields." As of this letter **3,501 signatures have been collected from the surrounding neighborhoods** vehemently opposing this Gondola.

GO20-23

It is not wanted. It is not needed. It will exacerbate the climate crisis within LA City by pouring thousands of pounds of concrete into a community already registering at a 2% or lower tree canopy.

GO20-24

This Project is riddled with violations of process, violation of the law, willful disregard of the public's right to know, and a willful disregard for communities of color.

This Project should be immediately terminated, and Mr. McCourt be told, "thanks, but no thanks."

GO20-25

Sincerely,

Todd Terrazas

Re: Los Angeles Aerial Rapid Transit Project DEIR

Dear Mr. Zelmer,

I write to express our deep concerns with the proposed Los Angeles Aerial Rapid Transit Project (LA ART). I represent the Los Angeles River State Park Partners (LARSPP), the nonprofit support organization (and State Parks Cooperating Association) for the three state parks along the Los Angeles River - Los Angeles State Historic Park, Río de Los Angeles State Park, and the Bowtie Parcel. These three urban state parks serve historically underserved, park-poor communities and represent an intentional investment by the taxpayers of the State of California to re-dress historic inequities and preserve key historic elements of Los Angeles. GO21-1

As Executive Director of LARSPP, I have extensive on-the-ground experience with the day-to-day operations of these three parks, as well as knowledge of their creation, development, and ongoing needs. Our focus is on the considerable impacts of this project to Los Angeles State Historic Park (LASHP), a publicly funded green space that residents fought for decades to establish. The proposed gondola tramway route would cross one end of the 32-acre park with cables carrying gondola cars just 26 feet overhead, and a station building with a 98-foot-tall tower. The project would require the taking of park land for the footprint of the station, replacing 81 mature trees with hardscape, and would permanently alter the carefully designed vistas of the park, key features identified in the park's 2005 General Plan. GO21-2 GO21-3

Despite these major impacts, the DEIR states that "*The proposed Project would not result in any significant and unavoidable operational impacts,"* and concludes that "*no mitigation measures required"* (ES 10 p. 29 and ES 12 p. 31). We strongly disagree with this conclusion. GO21-4

This unsubstantiated finding is further complicated by the fact that the DEIR does identify as a "Significant Impact" the conflict with the LASHP General Plan. The DEIR describes as a "mitigation measure" the need to: "Obtain a Los Angeles State Historic Park General Plan Amendment (page 58, DEIR Executive Summary, Land Use and Planning element, LUP-2). The project asserts that "Pursuant to Public Resources Code 5002.2, the proposed Project shall obtain an amendment to the Los Angeles State Historic Park General Plan to allow transit uses within the Los Angeles State Historic Park General Plan." The current general plan for this park does not allow for transit uses within the state park because it is a ***park,*** a vital public green space in a historically underserved community. Putting a transit use within the park was never envisioned during the park development process and it will significantly impact the park user experience. Yet the DEIR simply claims that as long as the general plan document is amended to allow for transit, that mitigates the impact. *In no way does an amendment in a document mitigate the on-the-ground impacts of an aerial highway through a park, or the project's usurpation of public property.* GO21-5

This notion that the impacts to the park will disappear with a General Plan amendment is absurd on its face. Amending the General Plan of a State Park to make way for a private transit station represents a terrible precedent. Beyond these fundamental objections, we identify the following specific areas where the DEIR analysis has either been insufficient or where impacts are incorrectly dismissed as not significant.

1. Use of Park Land

The DEIR describes the Chinatown/State Park station location in section 2.5.1.3. It notes that the southern portion of the station would be on a City of Los Angeles ROW, while the northern portion of the station *would be integrated into the southern boundary of the Los Angeles State Historic Park.* This statement is highly misleading. Integration into a boundary implies something welcome and beneficial. This, rather, is a very tall, obtrusive building encroaching on state park land. Our **public** park has only 32 acres and cannot afford to lose acreage to a **private** project that benefits a private owner and individuals choosing to attend private events at a private stadium. The DEIR states that the station would take 2,195 square feet of state park property and an additional 9,320 square feet over the park from the station canopy. This would transform the park's entrance from one that feels pastoral and peaceful to a shaded, dense, built space. It shrinks the size of the park and takes parkland away from a community who fought hard to create it. GO21-6

On pages 2-61, the DEIR also outlines various approvals the applicant would need to obtain from the CA Department of Parks and Recreation (DPR). It notes the need for a lease or an easement to allow for the construction and operation of the project.

We wish to point out that the application could not obtain an easement because easements are governed by PRC 5003.5 and require the department to specify conditions to allow *minimum* alteration to the physical features of the park and *minimum* interference with the use of the park by the public (emphasis added). Taking parkland permanently for a large station is a substantial alteration of the physical features of the park. This station would interfere with the uses of the park currently enjoyed by the public who paid for its creation. Furthermore, PRC 5012 restricts easements to public agencies for public purposes. The gondola is a *private* project. GO21-7

We further note that this project could not proceed using a lease from DPR. The PRC 5003.17 specifies that the department may lease any parcel only if the director finds that the use would be compatible with the use of the real property as a unit or part of a unit, and with the sound management and conservation of resources within the unit. A new private gondola station is not compatible with the uses of the park, and is certainly not in furtherance of sound management and conservation of the resources of LASHP. GO21-8

2. Tree Removal

The DEIR states the project for the Chinatown/State Park Station would require the removal of 30 trees, and the aerial rights across the park would remove an additional 51 trees. The DEIR states that in place of the lost trees would be hardscape and replacement trees elsewhere in the park. Mitigating the loss of mature trees, particularly protected native trees, with new trees is insufficient; mature trees have established complex and interconnected ecologies not easily replicated, and they sequester much more carbon than do young trees.

The DEIR also does not indicate where the replacement trees would be sited, and does not provide sufficient information to demonstrate that the alternative locations of new trees would maintain the current park experience and ecosystems. The park was thoughtfully designed by landscape architects with specific outcomes in mind to accommodate a variety of human and wildlife activities. The park is a careful balance of open space and tree canopy that allows for flexible uses, including special events such as music festivals. The landscape plan was developed based on an extensive public planning and visioning process, and further refined to accommodate large-scale special events. GO21-9

It is not possible to simply plant 81 trees on the remaining property without potentially altering the use patterns of the park. In addition, the ratio of tree replacement should not be a 1:1 ratio, but rather, a mitigation ratio such as 5:1. In GO21-10

the case of native cottonwoods, for example, mature trees are not available for purchase, so it could be a matter of planting 5 immature trees for every mature tree removed (at 6-7 years old, the park trees would be considered mature). Replacement at this rate in other areas of the park may not be feasible as it would reduce the amount of overall open space and diminish the capacity for flexible use. Thus the public ends up losing open space in the rest of the park with this proposed mitigation scheme.

cont'd GO21-10

Trees also require proper space and maintenance, especially in the early years. This project is setting back a decade of tree growth, and shifting the burden of maintaining new trees on to the DPR staff. There is no guarantee that the same level of carbon sequestration could be replicated (we believe it would not), thus negating the 'zero emission' claim currently used by LA ART. The destruction of 81 mature trees is not "insignificant" as the DEIR claims.

GO21-11

3. Impact on Historic Resources: the Zanja Madre and Roundhouse

The Zanja Madre, or "mother ditch," is the original water conveyance pipeline that brought water from the LA River to El Pueblo de Los Angeles. During excavations in the late 1990's, Metro unearthed a portion of the original brick pipeline on the site that is now the park. This was one of the key factors of historic significance that led the State Park Commission to classify this new park as a State Historic Park. This exposed section of the Zanja Madre near the Metro track is currently a major historical attraction of the park, the views of which would be significantly impacted by the overhead gondola route.

GO21-12

There has also been a long standing interest in looking for other elements of the original Zanja Madre in El Pueblo Historic Monument. This archeology has not yet been conducted. It is possible that the construction of the proposed Alameda Station could unearth and damage this resource, yet the EIR is silent on the potential of this finding.

GO21-13

As an organization committed to preserving the history of Los Angeles as embedded in the elements of LASHP, we would also like to note that the Alameda Station would significantly alter the historic and cultural setting of El Pueblo Historic Monument, particularly Olvera Street. It is important to remember that as recently as 2015, the American Planning Association named Olivera Street as one of the 15 Great Places in America. El Pueblo is listed on the National Register of Historic Places. These designations look at both the buildings and setting. The DEIR dismisses the impacts of its large Alameda station on this historic resource without confirming that the project would not jeopardize these national designations. El Pueblo is also an essential stop along two national historic trails: the Juan Bautista de Anza National Historic Trail and the Old Spanish National Historic Trail.

GO21-14

Another key historic element of LA State Historic Park is its history as the Southern terminus of the Transcontinental Railroad and home of Southern Pacific Railroad's

GO21-15

River Station, built in 1875. Often referred to as "LA's Ellis Island, the Station was where many 19th- and early 20th-newcomers first arrived to the city. The original roundhouse footings have been carefully excavated and this sensitive area is protected by department staff whenever staged events are considered (this point will be further discussed in section 6).

cont'd GO21-15

4. Impact on Viewsheds

The park's 2005 General Plan identifies and emphasizes the view of downtown LA from this park, "*… the Park site is a large open space that is in stark contrast to the dramatic skyline of downtown Los Angeles. Sometimes referred to as the "front porch" of the City, there are no other sites that capture this welcoming view of downtown Los Angeles (p. 38).* The park design was created to optimize the opportunities for visitors to experience this view - a major park element accessible from most vantage points.

GO21-16

The station and gondola lines with their constant movement will degrade that viewshed, blocking the view from some vantage points. The DEIR images are inadequate to fully capture the impact of the station on the view of downtown from numerous places in the park. Putting a large-scale station at the end of the park will affect the park experience from multiple vantage points, especially from the bridge. What is currently a spectacular vista will now be marred by a new large building that encroaches on state park land, with constant movement emanating out of that building. This is a fundamental change in the park experience and is inconsistent with the original vision outlined in the General Plan.

We are also concerned that views of Elysian Park and the Historic Broadway Viaduct will also be severely impacted from certain vantage points within the park.

GO21-17

5. Impact on Park Users

One of the key elements that came out of the numerous public meetings during the park's design was the desire for quiet and tranquility. This gondola's continuous movement a mere 26 feet overhead will fundamentally alter the sense of peace and quiet in the park, a rare place of respite in a very dense, park-poor area of Downtown LA. The DEIR illustrations are highly misleading and show gondola cars, cables, and towers from a far distance, not from the vantage point of being directly overhead park users. The renderings are purposely not to scale and fail to demonstrate how the project would impact an individual sitting on a knoll right under the gondola line.

GO21-18

The DEIR dismisses the <u>importance of open space</u> to provide a respite from urban life when it states "Los Angeles State Historic Park is in a highly urbanized area north of downtown Los Angeles. Recreationalists that may reside in the area are assumed to be accustomed to the urban edge of the park, of which the proposed Project would become a part."(p. 74). In other words, LA ART claims it is acceptable

GO21-19

to eliminate a portion of a public park simply because urban residents who live in an urban area are used to urban edges.

cont'd GO21-19

The entire point of the considerable investment of state taxpayer dollars to acquire and develop LASHP was to create an anecdote to urban life, bringing a major open green space, with all the associated health and wellness benefits, to those who had no such amenity. The DEIR is highly misleading to suggest that taking scarce park land and 81 mature trees, replacing them with hardscape, bathrooms and a new concessions building, and running an aerial highway across the park with gondola cars passing every 30 seconds is somehow making the project a "part of the park." It is, in fact, destroying the park's southern end, not enhancing it or providing contributing elements.

GO21-20

State Parks, LARSPP, and one of our key community partners, Clockshop, stage an annual Kite Festival at LASHP. Kite flying is an identified use in the park's General Plan, and the park's design ensured kites would have adequate space. The Kite Festival has grown year over year and now attracts thousands of visitors. The south lawn is an important part of this event and the gondola would preclude that use, thus moving more people into a smaller space. This represents an additional project impact that the DEIR dismisses as insignificant.

GO21-21

The DEIR asserts that the project is consistent with a goal of the Cornfield Arroyo Seco Specific Plan (CASP) to increase access to open space. It claims that the gondola would provide greater access to the park. However, the existing Metro L (Gold) Line already provides convenient public transit access to the park. We would argue that eliminating open space through the taking of park land is not consistent with increasing access to open space, especially when this "increase" is merely duplicative of an already existing transit service.

GO21-22

6. Impact on Park Operations & Revenue

The proposed project alignment cuts across areas that are frequently used as concert venues, a carefully planned designated use in the park's planning process. These evening concerts are an essential part of the financial viability of the park and provide necessary revenues that directly fund ongoing park maintenance and preservation, habitat creation, and a rich array of free community programs - from arts and culture events, school programs, and our new Farmers' Market, to food distributions for seniors and wellness classes of all kinds. Since concert events restrict the public's use of the park, State Parks limits the number of large events so as to maximize revenues while minimizing park access restrictions.

GO21-23

During the design phase of LASHP, the staff of State Parks met with concert promoters, cultural resource experts, and natural resource specialists. This process resulted in the identification of two preferred concert areas that minimize noise, protect the cultural resources such as the roundhouse, and protect wildlife, especially birds that are now populating the wetland portion of the park's north end.

The main stage is on the main lawn in the middle of the park, and the second stage is *directly underneath the proposed flyway of the gondola*, rendering it unusable in the future.

cont'd GO21-23

Every major concert that books an event at LASHP currently uses *both stages*. Eliminating the southern stage would cause promoters to seek other venues and result in lost revenues. As noted in section 3 of this letter, the roundhouse is a significant archeological site. The second stage therefore cannot be relocated to the roundhouse area, contrary to the claims of the DEIR in Figure 5-3. This graphic suggests that the second stage could be moved directly OVER the roundhouse area. The department has never allowed a large stage with loud music to be placed over the round house. The vibrations from the music could potentially damage the excavated archeological site that lies below ground level here. The second stage cannot be moved closer to the northern part of the park either because that would disturb wildlife that has taken up residence as the park's native habitat matures.

GO21-24

Thus, the gondola path effectively eliminates the second stage, thereby reducing the size of events and hence would reduce revenues. State Parks could not maintain the revenue stream by substituting more frequent, smaller events without having a major impact on park users. Every event requires partial closure so increasing the frequency to make up for the loss of the major events is not compatible with a public park. These indirect impacts of the gondola cables over the southern part of the park are not disclosed in the DEIR and represent a significant impact to the operations and financial viability of the park, as well as the ability of the state to staff and maintain the park.

We are also concerned that the parking lot at the park will fill up during game days with people heading up to Dodger Stadium, thereby restricting access to those who wish to visit the park. The DEIR identifies numerous parking opportunities in the Chinatown area, including the State Park. Given that the park's lot will be the most convenient for gondola riders, we would expect our lot to fill first.

GO21-25

7. Meaningless Offer of 'New' Facilities

The addition of a concession building and a restroom as noted in Section 2.5.1.3 does not improve the park. There already exists a viable concession at the park, Cargo cafe, which would be negatively impacted by this project. The bathrooms outlined in section 2.5.1.3 serve the needs of the private gondola station, not the public State Park. If State Parks had additional funds for bathrooms, this is not the likely location they would site them.

GO21-26

The bridge over Broadway, identified as Design Option E (p. 21 Exec Summary), is a red herring. This bridge has already been identified as a key missing element, has been designed by State Parks, and has been targeted as a long range goal to be funded by State Parks.

GO21-27

LA ART makes no promises of funding this bridge so including it in the DEIR merely confuses and misleads the public into thinking these two projects are somehow linked. They are not. Eventually the Broadway bridge will be funded and built, if not now then from a future bond measure.

State parks typically take decades to be fully realized and we recognize that LASHP still has missing elements. However, the inclusion of Design Option E in the DEIR suggests a quid pro quo: destroy the southern part of the park in exchange for a bridge up to Broadway that would be funded by taxpayers. It is a cynical attempt to confuse the public into thinking the gondola project would be the reason a bridge would be built, when in fact, this bridge will become a reality anyway in the future with public funds.

GO21-28

In Conclusion

We find this project highly objectionable from an environmental justice perspective. LA State Historic Park was born from an outpouring of community activism from those who had historically been ignored. Community members joined with a coalition of 35 neighborhood, urban environmental, and social justice organizations to form the Chinatown Yard Alliance to fight a proposed warehouse development in favor of a new park. Recognizing the site's significance to the history of Los Angeles, as well as the need for neighborhood green space, the State of California purchased the parcel in 2001. In 2003, the Cornfield Advisory Committee was established to mirror the complexity and diversity of the original Alliance and lead a community-driven planning process that established an overall vision for the new park design.

GO21-29

After this long-fought struggle to transform a railyard brownfield into a lush, green oasis, park users deserve to have their original uses and designs for the park respected, and their public land protected. A project such as this would never be proposed over New York's Central Park, so why should the residents of Northeast LA be treated any differently?

This infrastructure project now threatening LASHP joins a long history of other projects once considered vital and worthy of sacrificing a State Park. In the early 21st century, high voltage power lines through Anza Borrego Desert State Park to bring solar energy to urban areas, and a toll road through San Onofre State Park to reduce congestion, both raised this question: when, if ever, is it acceptable to sacrifice a state park for a new proposed use? In both of the above instances, alternatives were found that saved the parks AND met the goals of the proposed projects.

GO21-30

Today, we note that there is indeed another way to meet the goals of reducing emissions and vehicle miles traveled (VMT) for Dodger Games: the Dodger Stadium Express. Electrifying the buses used for the Dodger Express and expanding their number would both meet the goals of this gondola and provide additional opportunities to reduce VMT and emissions elsewhere in the city on non-game days. We therefore

GO21-31

support the Transportation Systems Management Alternative, also identified as the Environmentally Superior Alternative, described in the Executive Summary on page 19.

Today LA State Historic Park is well used by residents, neighbors, and visitors from throughout the city, and has also become a vital, climate resilient native landscape supporting local wildlife. We thus urge you to reconsider the DEIR's claim of "not significant" park impacts from the gondola project.

RE: Los Angeles Aerial Rapid Transit (LA ART) DEIR Comments
SCH 2020100007

Dear Mr. Zelmer:

This letter is submitted on behalf of Latino Outdoors (LO) -- a national organization of 200+ volunteers currently operating in over 30 regional locations across the United States. Our mission is to inspire, connect, and engage Latino communities in the outdoors and embrace our *cultura y familia* as part of the outdoor narrative, ensuring our history, heritage, and leadership are valued and represented.

As an organization, we value our relationship with our community and serve as a voice in promoting diversity, inclusion, access, equity and social justice in the outdoors. For the last 10 years, we have grown a strong and trusting relationship with California State Parks, and we continue to enjoy a mutual commitment and partnership for expanding access and equity for all Californians to our State's most treasured beaches, parks and historic monuments.

GO22-1

In recent years, Los Angeles State Historic Park (LASHP) and its staff have hosted many LO events including a national NOLS Outdoor Wilderness Training Session and campout, evening campfire programs and several State Parks/Latino Outdoors interpretive hikes, Cradle LA events and community programs. As it is currently proposed, we believe that the LA ART project poses a serious threat to the LASHP, especially if the project's developer and supporters impose their political will to require California State Parks to amend the park's General Plan.

GO22-2

On June 10, 2005, the California State Park and Recreation Commission approved and adopted the General Plan and Environmental Impact Report for LASHP. In the plan's opening statement, park planners and commissioners shared a vision for LASHP. They described it as having a unique "Sense of Place". Their statement begins with the words…

> "Who are Angelenos? What is Los Angeles? As noted historian Dr. Leonard Pitt stated, "No other available 32 acres holds as much opportunity to enlighten us about the history and culture of Los Angeles and this region…" The Park site and its surroundings have a sense of place rooted in a long history of settlement. There are opportunities for discovery and revelation based on the untold stories, some contained in the remnant material culture of the site. The tangible resources today appear to be few, but we can still hear the whispers of the past resonating in the voices of the present, proclaiming the future of the area."

Key elements of the LASHP's General Plan include a Declaration of Purpose and Vision created by the California State Parks General Plan team.

Declaration of Purpose

> "The purpose of Los Angeles State Historic Park is to provide the public with a place to learn and to celebrate the ethnically diverse history and cultural heritage of Los Angeles, with an emphasis on its evolution to an economic and industrial metropolis of the 21st Century with extraordinary influence throughout the world. The Park will contribute to the emerging Los Angeles River Greenway, stretching from the San Gabriel Mountains to the Pacific Ocean. The Park will bring a wide range of visitors together to examine and experience the complete story of Los Angeles. It will be a sanctuary from the dense, urban environment that surrounds it. The Park will connect abstract historical and social patterns to the personal experiences of Angelenos and visitors from the city, the state, the nation, and the world." (LASHP General Plan, page 82, section 4.1)

cont'd
GO22-2

Vision

> "Visitors to Los Angeles State Historic Park will enjoy a rejuvenating respite from the surrounding urban landscape in an expansive open space. The Park will be a desirable destination and important point of interest. Visitors will experience the environment through interpretive media and landscape features that recall the historical events of the region. Educational programs and activities will appeal to the interests of many visitors, from the local to the global community, will be varied in media, scope and diversity, and will emphasize the City of Los Angeles' cultural, historic, and commercial heritage." (LASHP General Plan, page 83, section 4.2)

If not for the collective vision of the Cornfield Advisory Group, the California State Parks planning team and local community supporters, our LO volunteers would not be able to bring local area youth and families to LASHP to enjoy the park's unencumbered open-space, its shaded paths, informal picnic areas, and the amazing views of downtown Los Angeles, with the backdrop of the San Gabriel Mountains.

It is our belief that the LA ART project would permanently alter the core values of the Park's General Plan, including its Declaration of Purpose and Vision. Yet the Draft EIR (DEIR) fails to describe this impact. In particular, on page 58 of the DEIR Executive Summary, Land Use and Planning element, LUP-2, the report asserts that the preferred project (ES2 Proposed Project) Environmental Impacts shall create "Significant Impact" on LASHP and the project is in conflict with the current LASHP General Plan. Yet the DEIR suggests that the only "mitigation measure" needed to reduce the project's impact to the park under the category of Potential Environmental Impacts – LAND USE AND PLANNING would be to (LUP-A) "Obtain a Los Angeles State Historic Park General Plan Amendment. Pursuant to Public Resources Code 5002.2, the proposed Project shall obtain an amendment to the Los Angeles State Historic Park General Plan to allow transit uses within the Los Angeles State Historic Park General Plan." The DEIR goes on to assert that by doing so, the project proponents will reduce the project's significant impact to a "Less Than Significant Impact with Mitigation".

cont'd GO22-2

So rather than identifying potential detailed and specific impacts on the park (archeological/cultural, environmental, historic, viewshed, visual, etc.) and suggesting mitigations, the DEIR merely notes that the process of a granting a general plan amendment would reduce impacts from significant to less than significant 'with mitigation.' This tactic shifts the burden of identifying all potentially significant impacts (visual, noise, visitor access, pedestrian and parking, acceptable transit options, use of public airspace and others) from the project applicant onto the shoulders of California State Parks staff, the California State Parks and Recreation Commission, and to the public. This is unacceptable and incompatible with California Environmental Quality Act (CEQA) project review process and mitigation, and it sets an indefensible precedent for granting a private developer access and use of State resources entrusted to the State by its residents.

GO22-3

As currently proposed, the LA ART project is viewed by our community as just another environmental justice veiled attempt to degrade land that was hard fought and promised to be "The Central Park of LA" for seven generations of Californians and beyond. Recognizing the need for greenspace in LA's urban area, three great environmental warriors dedicated their lives to finding a way to create an open-space oasis in the industrial/commercial wasteland of northeast Los Angeles. The work of the late Robert Garcia (The City Project), Theodore "Ted" Jackson (CA State Parks Deputy Director for Operations) and Ron Shaffer (CA State Parks LA District Superintendent), now all diseased, must not be forgotten – but cherished, protected and preserved.

GO22-4

We urge you to reject the DEIR's faulty premise that California State Parks should be expected to mitigate the many obvious significant project impacts by hastily adopting a revised General Plan Amendment that ignores and papers over clear conflicts between the project and park's current General Plan. On behalf of our LO community and current and future park users, we urge you to instruct the project proponent to properly identify, analyze, and mitigate all park impacts as required by law, and not usurp their legal responsibility to provide a clear, thoroughly complete and defendable project DEIR.

GO22-5

A failure to do so, only reinforces our belief (as well as the majority of local community members) that a privately financed and constructed aerial tram tourist attraction should never be built inside and over Los Angeles State Historic Park.

GO22-6

Respectfully,

Richard A. Rojas, Immediate Past-Chairperson
Latino Outdoors – Advisory Board

Re: Metro Aerial Rapid Transit Project

Dear Mr. Zelmer:

As the President of the Old Spanish Trail Association (OSTA), I am voicing our concerns about the proposed Gondola project also known as the Metro Aerial Rapid Transit Project. OSTA is an organization dedicated to preserving the Old Spanish Trail (OST), and its historic legacy for present and future generations. The Old Spanish Trail, spanning more than 2,700 miles, crosses over the 6 states of California, Nevada, New Mexico, Arizona, Colorado and Utah. Los Angeles was the end destination for most of the trappers that left New Mexico in search for economic opportunity starting in 1829. The Old Spanish Trail was designated a National Historic Trail in 2002 after unanimously passing both the Senate and the House and was signed into law by President George W. Bush. GO23-1

The area now known as El Pueblo de Los Angeles National Monument has been the historic heart, soul and birthplace of Los Angeles since the early traders arrived over the Trail and eventually brought their families to settle in California. A certified site of the Old Spanish National Historic Trail (OSNHT), this area is crucial to telling the story of early Los Angeles. It has many important historic buildings such as the Avila Adobe, the oldest building in Los Angeles, built in 1818. The Plaza Church, La Iglesia Nuestra Senora La Reina de Los Angeles Roman Catholic Church, built in 1822, was the center of life in the Plaza. El Pueblo de los Angeles National Monument is an important historical gem, critical to Los Angeles history.

And now a group wants to use Disneyland-style gondolas which are wrong for this area. The gondola project threatens to destroy the historic importance of this district. The gondolas will arrive at its last stop at the proposed "Alameda Street" terminal which would be located adjacent to Olvera Street and Union Station. I have included the artist's illustration, which shows how the Gondola project's proposed "Alameda Station" would be detrimental to the integrity and view from the courtyard of the historic Avila Adobe, which in and of itself is a "high potential historic site" of the OSNHT. That proposed Station would be immediately east of the Avila Adobe and its courtyard. The proposed station's enormous bulk and height would overwhelm the view and experience in the Adobe's courtyard, compromising visitors' ability to feel back in the Trail's era and diminishing the historic value of the site. The DEIR fails to adequately convey how this project would affect the experience of the visitor to El Pueblo. For example, it doesn't show the perspective of the project from the vantage point of someone standing in the courtyard of the Avila Adobe. GO23-2

In addition, the large, modernistic terminal would be totally different from the Spanish style architecture of the area and could be very disruptive to world-famous and charming Olvera Street that is visited by over 2 million people every year. Why would Los Angeles want to risk this important business and tourist area for a visually intrusive, potentially dangerous gondola system in earthquake prone Los Angeles? The severe freeway overpass earthquake damage in Sylmar in the 1960's illustrates what earthquake damage can occur in Los Angeles. GO23-3

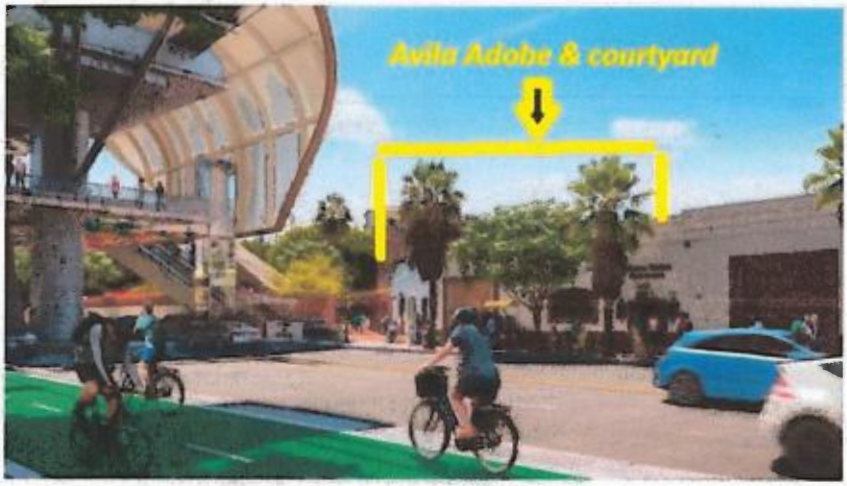

Figure 2-9: Proposed Pedestrian Plaza at El Pueblo

Figure 2-10: Proposed Alameda Station Location

There are also potentially many undiscovered archeological and historical sites, including the Zanja Madre, that could be ruined by the excavation for the gondola stations along the route from Dodger Stadium but particularly in the El Pueblo area. Once these artifacts are destroyed, they cannot be brought back and would be an historical loss for Los Angeles. GO23-4

As I said in the opening of this letter, the Old Spanish Trail Association is dedicated to preserving the OST wherever there are threats to its historic and cultural legacy and we are very concerned that the gondola project could cause irreversible harm to the OST in downtown Los Angeles, El Pueblo de Los Angeles National Monument, Olvera Street and the surrounding area. GO23-5

Re: Los Angeles Aerial Rapid Transit project DEIR

Dear Mr. Zelmer:

I'm writing to express my grave concern about the inadequacy of the Draft Environmental Impact Report for the Los Angeles Aerial Rapid Transit project. I teach and do research at UCLA on environmental equity and access, green gentrification, and equitable community development strategies to prevent displacement and enable communities to thrive in place with new investments in green infrastructure and parks. GO24-1

My concerns about the DEIR arise from the lack of adequate analysis in four crucial areas:

1) The piecemealing of the whole project:

There is documented evidence that Frank McCourt has plans to develop an entertainment/hotel/retail complex on the parking lots at Dodger Stadium if he can build another form of transportation to bring fans to games. The DEIR only considers the new form of transportation — an aerial gondola. It does not consider the foreseeable end result: the ensuing development on the parking lots. Thus, it does not analyze the whole project. This is a fundamental violation of CEQA. While the McCourt group and its representatives have denied that they have such plans, the plans are documented in a court settlement that they have attempted to keep shielded from public view. I am attaching an investigative research report that I wrote with a student researcher that documents McCourt's plans for developing the parking lots at Dodger Stadium. This report should be considered part of my comments. GO24-2

2) The inadequate analysis of the aerial gondola's impact on traffic, pollution, and greenhouse gas emissions, and alternative transportation solutions:

The McCourt group and its representatives have made numerous and varying claims about the project's impact on traffic, pollution, and greenhouse gas emissions. The DEIR's analysis of these claims is woefully inadequate. The ridership assumptions found in Appendix N are deeply flawed. The modeling and conclusions on travel data were gathered from cell phone for only two zip codes. One zip code is very near Dodger Stadium. The other is located approximately 90 minutes via public transit from the stadium. This sample cannot be considered representative of the population that would or would not use the GO24-3

This document was created by an application that isn't licensed to use novaPDF.
Purchase a license to generate PDF files without this notice.

proposed gondola and the sample size is too small to be statistically significant. Thus, the DEIR analysis is incomplete and inaccurate. cont. GO24-3

A simulation done by the UCLA Mobility Lab, attached here, uses actual data of current behavior of people using various forms of transit in the Los Angeles region, and uses "discrete choice" theory (which won a Nobel Prize) to simulate the choices and behaviors of those people when the proposed gondola project is added to the network of available transportation choices to get to Dodger Stadium for baseball games. This simulation is far more statistically representative because it is based on actual transportation choice data and provides a far more realistic assessment of projected ridership. The report on this simulation should be considered part of my comments. It shows that traffic and therefore greenhouse gas emissions would not change significantly with the aerial gondola in service. The EIR should include a much more robust analysis of traffic and greenhouse gas emissions, including effects from the foreseeable development described above. GO24-4

In the DEIR, LA ART ridership is assumed to ride the gondola both to and from games and events. But there is no proof, nor is there any discussion within the DEIR, that this assumption is correct. As the UCLA study shows, and consistent with Los Angeles County Transportation Commission's 1990 analysis of an aerial tram system, many people would be required to wait from 1 to 2 hours following games and events to return via the proposed gondola. Rather than waiting, many would instead either return via the Dodger Stadium Express or via Lyft or Uber, options that didn't even exist in 1990 when LACTC studied the idea. The assumption that all gondola riders would use it in both directions is entirely speculative and unsupported, and therefore throws off not only the DEIR's ridership conclusions, but also its conclusions regarding energy usage and greenhouse gas emissions. The DEIR therefore fails as an informational document for being inaccurate and incomplete. GO24-5

Finally, I am attaching an analysis that I conducted of the energy efficiency of the proposed aerial gondola compared to alternatives, the Dodger Stadium Express and individual electric vehicles, that shows that the aerial gondola is far less energy efficient per passenger trip than these alternatives. The DEIR fails to adequately consider feasible alternatives and conduct such a comparison and is therefore incomplete. GO24-6

3) The inadequate and inaccurate analysis of the project's impact on Los Angeles State Historic Park:

The DEIR claims that the proposed gondola will not have a significant impact on the park. This is preposterous. Anyone who looks at the plans for the proposed station at the entrance to the park and the path of the gondola over the park can plainly see that it will fundamentally change the character of the historic park and the experiences of park visitors. The station will loom over and dominate the southwestern portion of the park and dramatically change the views of the park from the southwest as well as the views inside the park looking west, both protected by the park's 2005 general plan and EIR. While the DEIR documents some of these views, it does not adequately consider the impact on other views of the park from other locations, such as from Chinatown, Radio Hill Gardens, Elysian Park and other places with iconic views of the park. GO24-7

The gondola cars will pass over a substantial portion of the park as they travel through the northwest quadrant of the park, passing just 26 feet over the ground as they traverse a popular knoll in the park, in other words just 20 feet over the head of someone who is GO24-8

This document was created by an application that isn't licensed to use novaPDF.

6-feet tall. The DEIR does not adequately analyze these impacts and is therefore incomplete and inaccurate. It also does not adequately analyze the impacts of the taking of land and air space from this public park, which would be required for the gondola to be built. cont. GO24-8

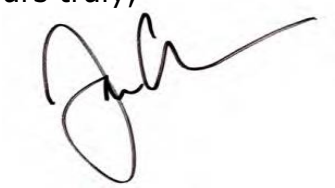
Furthermore, the DEIR shifts the burden of analyzing these impacts to the California State Park and Recreation Commission, which must complete a general plan amendment should it decide to allow the proposed gondola to take land and air space from the park. This is a fundamental violation of CEQA. The California State Park and Recreation Commission should not have to perform their own environmental analysis of the impact of the proposed gondola. It should be included in this DEIR. GO24-9

4) The failure to analyze the impact of the project on gentrification and displacement in the surrounding neighborhoods:

It is well-known that gentrification and displacement can result from green infrastructure projects, including transportation projects. The UCLA Urban Displacement Project has documented these effects around other Metro projects in Los Angeles. This is a well-recognized environmental justice issue at the local, state, and national level. It is inappropriate and unconscionable for a DEIR to fail to analyze these foreseeable impacts in 2022, especially in the disadvantaged communities where the aerial gondola stations are proposed to be located. This DEIR is incomplete and inaccurate in this regard as well. GO24-10

Given these fundamental flaws, this DEIR should not proceed to the final EIR stage but should instead be sent back to the drawing board so that the public has an accurate and complete understanding of the impacts of the project. Absent that, the public has been deprived of the right to understand and comment on the whole project. Metro would also be justified in scrapping this ill-advised project entirely.

Yours truly,



Jon Christensen

Frank McCourt's Past and Future Schemes for Chavez Ravine

Frank McCourt shows then-L.A. Mayor Antonio Villaraigosa a model of proposed developments in the parking lots surrounding Dodger Stadium at a press conference in 2008. Newly uncovered court documents reveal that McCourt still has permission from the current owners of the Dodgers and plans to develop a massive retail, entertainment, and hotel complex at Chavez Ravine. And a gondola he has proposed from Union Station to the stadium would pave the way for the development Brian Vander Brug, *Los Angeles Times*, April 25, 2008, via Getty Images.

GO24-11

By Leo Hecht and Jon Christensen, August 9, 2022[1]

LOS ANGELES — Former Dodgers owner Frank McCourt is proposing to build a gondola from Union Station to Dodger Stadium, where he still owns a 50% share in 260 acres of land surrounding the stadium. That land, known as Chavez Ravine, represents a

[1] Leo Hecht is an independent, investigative researcher and environmental policy analysis and planning student at UC Davis. Jon Christensen is an adjunct assistant professor in the Institute of the Environment and Sustainability at UCLA.

huge financial opportunity for the owners of the property if development ever occurs there.[2] Currently, it is used for surface parking, and the McCourt Global company proposing the gondola — Los Angeles Aerial Rapid Transit — makes no mention of future development plans. But McCourt has long had plans for an ambitious retail and entertainment complex around the stadium. Those plans are evident in McCourt's "Next 50" plan, which was unveiled when he owned the Dodgers, and in court documents that he tried to hide from public scrutiny during the bankruptcy proceedings that forced him to sell the team. McCourt failed to secure funding for "Next 50," but the agreements revealed in the bankruptcy proceeding are still in force and tell a very different story about the relationship between the proposed gondola, McCourt's plans to develop the parking lots around Dodger Stadium, and the future of Chavez Ravine.

This report examines McCourt's history with the Dodgers, the stadium, and his documented intentions to develop the parking lots in light of his current proposal to build a gondola from Union Station to Dodger Stadium. McCourt Global's denial of any current intention to develop the parking lots are belied by McCourt's previous plans, his 50% ownership of the land, and the fact that the gondola makes little or no sense without a major development at Dodger Stadium, which a gondola could facilitate through provisions in the court document that McCourt tried to keep secret. There are only 81 home games in the regular baseball season. And even adding a maximum of 12 post-season games, a couple of exhibition games, a maximum of four special events a month permitted under the Conditional Use Permit issued by the City of Los Angeles for the stadium, and the Los Angeles Marathon, at most the gondola is likely to be used at

or near capacity on only 144 days per year.[3] Unless, that is, the Dodger Stadium parking lots are developed as an entertainment, retail, and hospitality district like L.A. Live as Frank McCourt has long envisioned.

In 2004, McCourt bought the Los Angeles Dodgers from Newscorp for $430 million. The purchase was financed primarily with loans, with over a third of the purchase price lent directly from Newscorp.[4] At the time of McCourt's purchase, no specific plans for development of the parking lots surrounding the stadium were made public. However, on April 25, 2008, McCourt unveiled a sprawling development plan for the stadium itself and the surrounding lots. Marketed as the "Next 50" plan, the proposed development was slated to include a Dodger museum, a Dodger retail store, office space, and two new parking structures. In addition, the project was advertised as a green initiative, including the addition of 2,000 trees in the area around the stadium.[5] The development was expected to cost $500 million, more than McCourt's purchase price for the team.

cont'd
GO24-11

The "Next 50" plan would have turned the stadium into a retail and entertainment venue to attract customers outside of game times, expanding the use of Dodger Stadium beyond baseball.[6] The William Morris Agency, a Los Angeles talent agency, partnered with the Dodgers to obtain branding deals with companies in an attempt to fund the project by naming parts of the new development after corporate

[3] The McCourt Global subsidiary proposing the gondola, Los Angeles Aerial Rapid Transit (LA ART), claims that it will transport up to 5,000 passengers per hour in each direction and remove 3,000 car trips from neighborhood streets before and after Dodger ga https://www.laart.la/benefits/, accessed on 17 July 2022.

sponsors.[7] Photographs of McCourt presenting a scale model of development plans at a press conference beside then Mayor of Los Angeles Antonio Villaraigosa show the proposed changes, including large, terraced plazas lined with trees and new buildings outside of the stadium. McCourt's planned development was designed to make use of the parking lots surrounding the stadium to increase the economic productivity of the land and turn Chavez Ravine into a year-round destination.

As part of his plans for the "Next 50" development, McCourt discussed a desire to connect Dodger Stadium to public transit, saying he "hoped local leaders would 'tweak and adjust subway lines' to add a Dodger Stadium stop and provide 'bus access in the interim.'" Then city council member Ed Reyes further endorsed connecting the development to new public transit lines, saying that the "renovation 'hopefully can stimulate a whole new transit system that gets us in and out of this great place.'"[8] In developing plans for his additions to Dodger Stadium and the surrounding land, McCourt clearly identified expanded public transit options as increasing potential visitors as well as revenue in new retail and entertainment destinations.

cont'd
GO24-11

Under McCourt's ownership the Dodgers fell deep into debt, ultimately filing for bankruptcy on June 27, 2011. In addition to bankruptcy court conflicts with Major League Baseball, McCourt was ordered to pay $150 million in a divorce settlement, and defended a suit by a San Francisco Giants fan who was badly beaten in the Dodger Stadium parking lot.[9] The "Next 50" development never materialized, as McCourt failed to secure funding.

McCourt was very resistant to selling the Dodgers, and only agreed to a sale in November 2011 after a series of long court battles. After several rounds of negotiations, a group led by Magic Johnson and financed by Guggenheim Partners won the bid to purchase the Dodgers for $2 billion. As part of the deal, Guggenheim Partners entered into a venture with a McCourt entity to jointly own the stadium parking lots.[10]

The terms of the parking lot sale and any potential future development of the land around the stadium was filed under court seal as part of the supplement to the Dodger's chapter 11 bankruptcy plan on April 6, 2012. Of nine sections totaling 139 pages, the exhibit titled the "Declaration of Covenants, Conditions, Restrictions, and Easements for Chavez Ravine," consisting of 93 pages of terms and agreements relating to the current usage and future development of Chavez Ravine, is the only piece of the document not available in public court records.[11] After objecting to the Dodger's attempt to block public viewing of the land use plans, the Los Angeles Times was able to obtain the document in 2012.[12] The exhibit was subsequently recorded by the Los Angeles County Recorder's Office, which is where it was obtained for this report.

cont'd
GO24-11

The exhibit shows that Guggenheim Partners pays $14 million a year to the McCourt entity Blue Landco LLC to rent the stadium parking lots. The document also details possible future developments that "may include, but are not limited to (i) office buildings, (ii) hotel and exhibition facilities, (iii) residential buildings, (iv) medical buildings, (v) academic buildings, (vi) parking structures, and/or (vii) retail, dining, and

entertainment facilities."[13] The document includes a provision stating that Guggenheim Partners agrees "to cooperate with Landco, and to take all steps reasonably requested by Landco, in connection with the general plan of improvement and development of the Landco Parcels," and "not to oppose, or to interfere in any fashion (including, without limitation, by speaking out at public hearings) with any efforts by Landco to complete development of the Landco Parcels."[14] This provision effectively grants Landco the sole discretion to develop the stadium parking lot lands.

Although McCourt and Guggenheim Partners claimed at the time of the sale that they did not have plans for development in the immediate future, McCourt's attorney said that the document outlining potential plans was created to keep possibilities for development open. The document includes an agreement with Guggenheim Partners for a 99-year lease of the land with the Landco LLC half-owned by McCourt. The agreement states that the parking lots contain 19,000 parking spaces, and that any reduction of the number of parking spaces below 16,500 must be approved by Major League Baseball and the City of Los Angeles.[15]

cont'd
GO24-11

An additional section of the exhibit, however, provides a workaround for this provision that is especially significant in light of McCourt's proposed gondola. It states that "in connection to any Mass Transportation…Landco shall have the right to provide less than the 16,500 Required Parking Spaces."[16] This would allow for developments in

the parking lots that could significantly reduce the number of parking spaces if the developments were completed after or concurrent with the addition of a mass transit connection to Dodger Stadium. Under this agreement, construction of a gondola to the stadium from Union Station could enable McCourt's vision for additional development in Chavez Ravine to be realized.

McCourt Global's website trumpeted its ownership interest in the 260-acre Chavez Ravine land as a "current real estate project" through at least October 2021, though that statement appears to have been removed from the website once the company began facing significant opposition to its proposed gondola project.[17] McCourt's proposal for a gondola from Union Station to land he co-owns at Dodger Stadium could be a necessary first step to allow development there.

cont'd
GO24-11

On April 26, 2018, Aerial Rapid Transit Technologies LLC submitted an unsolicited proposal to Los Angeles County Metropolitan Transportation Authority ("Metro") for an aerial gondola from Union Station to Dodger Stadium that it calls Los Angeles Aerial Rapid Transit or "LA ART." LA ART was founded by Drew McCourt, Frank McCourt's son. The company claims that the estimated $125 million project will be privately funded by Frank McCourt's investment firm and others.

According to LA ART, each gondola cabin will hold 30 to 40 people and the system will be able to move up to 5,000 people per hour to or from the stadium. LA ART claims the gondola will take 3,000 cars off of neighborhood streets and reduce traffic on the 110 freeway before and after Dodger games. Current plans show gondola cars suspended from cables 150 to 175 feet above the ground from Union Station to Dodger

Stadium with an intermediate station at Los Angeles State Historic Park adjacent to Chinatown.[18]

The Los Angeles Times noted that even though the project director Martha Welborne claimed no future development is planned in 2018, "lenders might be more receptive to finance a gondola that goes to Dodger Stadium 365 days a year — rather than just on 81 home-game dates."[19] At that time McCourt Global still listed the parking lots as a "current real estate project."[20]

Despite LA ART's insistence that the gondola is not a precursor to future development, the gondola project would generate significantly more revenue for McCourt if it could deliver consumers to a commercial development with restaurants, retail, entertainment, and hospitality venues on the approximately 220 days of the year when the stadium does not host home games, exhibition games, post-season games, or special events. And McCourt's share of profit from the real estate development would vastly exceed any profit from a gondola.

The "Declaration of Covenants, Conditions, Restrictions, and Easements for Chavez Ravine" that McCourt secured and tried to hide from the public in the Dodgers' bankruptcy case shows the proposed gondola is not the end game at Dodger Stadium, but a means to yet another end.

UCLA Mobility Lab

Study Finds Proposed Aerial Gondola to Dodger Stadium Will Do Little to Reduce Traffic and Emissions

October 24, 2022
University of California Los Angeles

GO24-12

Executive Summary

Los Angeles Aerial Rapid Transit (LA ART), a subsidiary of former Dodgers owner Frank McCourt's company McCourt Global, wants to build an aerial gondola to take people from Union Station to Dodger Stadium. Promoters of the gondola claim that it will take 3,000 polluting cars off neighborhood streets and the 110 freeway before and after Dodger games, leading to a net reduction in greenhouse gas emissions.

Transportation researchers from the University of California, Los Angeles (UCLA) examined these claims using a state-of-the-art transportation simulation model and found that the gondola could reduce traffic on major roads around Dodger Stadium on the night of a sold-out game, but the impact would likely be very limited. They found that the gondola likely would take only around 608 cars off the road. The gondola is thus unlikely to significantly reduce greenhouse gas emissions and traffic overall.

Methodology

GO24-13

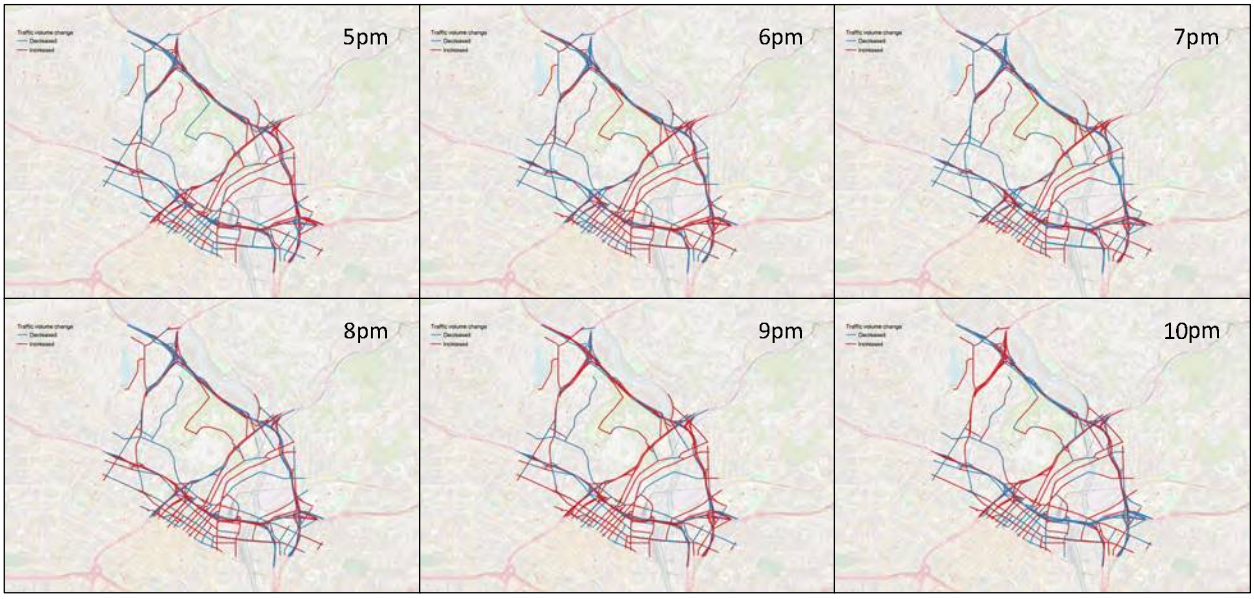
The UCLA researchers — led by Dr. Brian Yueshuai He and Dr. Jiaqi Ma in the UCLA Mobility Lab at the UCLA Samueli School of Engineering — used the "LA Sim" model they created based on activity-based travel demand and agent-based simulation

This document was created by an application that isn't licensed to use novaPDF.
Purchase a license to generate PDF files without this notice.

models. The model is grounded in the theory of "discrete choice," for which Daniel F. McFadden won a Nobel Prize in economics in 2000. Based on real data about road network, traffic, public transportation, and other modes of moving around the city, including walking and bicycling, LA Sim simulates the individual choices that millions of travelers will make when something changes, such as adding another form of transportation, like a gondola to the Los Angeles transportation network.

cont'd
GO24-13

The researchers caution that this simulation only models the probable use of the gondola for a sold-out night game and further research could reveal different scenarios for a day game or double-header, for example. But the research does model the most likely scenario for fans to choose the gondola — when traffic around the stadium is likely to be most heavy. Around 85% of baseball games played at Dodger Stadium are night games, starting at 7:10pm.



GO24-14

Figure 1: Traffic simulation results by the hour

Findings

- **Contrary to claims from LA ART, researchers found that the gondola would not significantly reduce traffic around Dodger Stadium.** Results showed the gondola would likely slightly reduce traffic on some roads around the stadium for a sold-out night game and increase traffic on others, leading to little

This document was created by an application that isn't licensed to use novaPDF.
Purchase a license to generate PDF files without this notice.

reduction in greenhouse gas emissions. The red lines in Figure 1 above indicate road segments that have a higher traffic volume after the proposed gondola is added to the traffic simulation. The blue lines indicate a decrease in traffic volume. According to the simulation, the total traffic volume would likely be reduced by around 0.9% (less than 1%) on the roads surrounding the stadium if the proposed gondola is built.

cont'd GO24-14

- **It's unlikely the gondola would contribute to a significant net decrease in greenhouse gas emissions.** Approximately 608 cars would be taken off the road, not nearly close to the 3,000 LA ART claims. Most of the people who choose the gondola in the simulation — 4,470 —board the gondola at Union Station, with another 220 passengers boarding at a station proposed to be located at Los Angeles State Historic Park near Chinatown. With only 4,690 people taking the gondola in total and of those 2,500 estimated to be regular users of the Dodger Stadium Express clean energy buses there would only be 2,190 new people taking public transportation to the game using the gondola. The average car parking at the stadium carries 3.6 people, which means that the approximate number of cars taken off the road would be around 608. The simulation only models the number of passengers connecting to the gondola via public transportation, on foot or by bike. It does not model people who would drive to Union Station or Chinatown to take the gondola. However, people who drive to those stations to take the gondola would not contribute to a net reduction in traffic or greenhouse gas emissions.

GO24-15

- **The gondola would carry fewer passengers than LA ART has claimed.** LA ART originally claimed that the gondola could carry up to 5,000 passengers per hour on game days. Researchers found that the gondola is likely to carry fewer than a total of 5,000 passengers to Dodger Stadium — 4,690 according to the simulation — even when the service is provided free with a game ticket for a sold-out night game like the playoffs. In a recent parking study, LA ART revised their claim, estimating that 6,000 would ride the gondola to games by 2026, with

GO24-16

This document was created by an application that isn't licensed to use novaPDF.
Purchase a license to generate PDF files without this notice.

4,350 arriving to the gondola via public transportation. The project's Draft Environmental Impact Report contains the same estimate, which corroborates the UCLA estimate of ridership if the gondola were in operation today.

cont'd GO24-16

- **Fewer people would take the gondola after the game – resulting in more traffic and emissions.** In the simulation, some fans — around 2,500 — seem to switch from the free Dodger Stadium Express buses to the gondola on the way from Union Station to a sold-out game, reducing the use of that service by close to half of the passengers it has carried to playoff games in the past. But about half of those passengers — more than 1,000 — seem to switch back to the Dodger Stadium Express on the way home, perhaps to avoid having to wait for a gondola car. Only 1,380 fans take the gondola on the way home in the simulation. This suggests that fans are unlikely to wait in line for the gondola after the game, instead taking the Dodger Stadium Express or perhaps opting for a ride-share, which would increase traffic and greenhouse gas emissions after the game.

GO24-17

- **Few people would use the gondola as a form of transportation other than to get to or from games.** The simulated use of the gondola during the daytime before the game suggests that very few people would use it as a form of transportation outside of getting to and from games: in the simulation, only 60 people — around one gondola carload — traveled to Dodger Stadium during the day, and only 140 passengers traveled from the stadium to Chinatown or Union Station during the day.

GO24-18

- **The model produced very similar results at different costs for a gondola trip.** LA ART previously announced that a gondola trip would cost $15. Later, they announced that game ticket holders could ride the gondola for free. They have also said that local rides could be purchased for a standard Metro fare. The researchers modeled two scenarios: 1) $10 for residents and free for game ticket holders, and 2) free to the public, and found very little difference in the results, indicating that residents are more likely sensitive to travel time rather

GO24-19

This document was created by an application that isn't licensed to use novaPDF.
Purchase a license to generate PDF files without this notice.

than cost. One key factor is that the service area of the gondola is limited and may not attract residents to choose it for daily travel.

cont'd GO24-19

About the Researchers

Dr. He is an Assistant Research Scientist at the UCLA Mobility Lab. He has extensive experience in big data analytics, transportation system analysis, and transportation policy evaluations. In the scope of cyber-physical systems, his research enables interactions between the physical infrastructure and virtual cyber systems by adopting data-driven techniques to support long-term urban system planning, management, and decision-making.

Dr. Ma is an Associate Professor in the UCLA Samueli School of Engineering and Associate Director of UCLA Institute of Transportation Studies. He has led and managed many research projects funded by U.S. DOT, NSF, state DOTs, and other federal/state/local programs covering areas of smart transportation systems, such as vehicle-highway automation, Intelligent Transportation Systems (ITS), connected vehicles, shared mobility, and large-scale smart system modeling and simulation, and artificial intelligence and advanced computing applications in transportation. He is an Associate Editor of the IEEE Transactions on Intelligent Vehicles and IEEE Open Journal of Intelligent Transportation Systems and Journal of Intelligent Transportation Systems. He is Member of the Transportation Research Board (TRB) Standing Committee on Vehicle-Highway Automation, Member of TRB Standing Committee on Artificial Intelligence and Advanced Computing Applications, Member of American Society of Civil Engineers (ASCE) Connected & Autonomous Vehicles Impacts Committee, Co-Chair of the IEEE ITS Society Technical Committee on Smart Mobility and Transportation 5.0.

LA ART Gondola Energy Use Analysis

The UCLA Mobility Lab's traffic study estimates that 4,690 passengers would ride the gondola to a sold-out night game at Dodger Stadium and 1,380 would ride the gondola on their way home. These figures are very close to the figures in the DEIR and LA ART parking study. That's 6,084 passenger miles since the gondola is 1.2 miles long.

The DEIR states that the gondola running at full capacity uses 2.5 mega-watts per hour. If we conservatively estimate that the gondola has to run at full power for one hour before the game to get passengers to the stadium and one hour to get them back, that's 5 mega-watt hours (MWh). Divided by 6,084 passenger miles that is 0.822 kilowatt hours (kWh) per passenger mile, and 1.184 kWh per passenger trip. If the gondola has to run longer than two hours to move the same number of projected passengers, those energy use figures will go up and the gondola's energy efficiency per passenger mile will go down proportionally. LA ART estimates the gondola will run daily from 6am to 12am. GO24-21

Each Dodger Stadium Express bus can carry 55 passengers. The average electric bus uses 2.1 kWh per mile. That is 0.038 kWh per passenger mile and 0.061 per passenger trip on the 1.6-mile trip. The Dodger Stadium Express is approximately 19 times more efficient than the gondola.

The average EV uses 0.346 kWh per mile, and the average vehicle carries 3.6 people to Dodger Stadium, that is 0.096 kWH per passenger mile, and 0.154 per passenger trip, assuming a 1.6-mile trip, like the bus. An EV is approximately 8 times more efficient than the gondola.

Comment Letter - GO25

January 17, 2023

Mr. Cory Zelmer
Deputy Executive Officer, Metro
One Gateway Plaza, Mail Stop 99-22-6
Los Angeles, CA 90012
VIA EMAIL: LAART@metro.net

RE: Los Angeles Aerial Rapid Transit Project
SCH 2020100007

Dear Mr. Zelmer:

This letter is submitted on behalf of The Coalition for a Beautiful Los Angeles (CBLA) in response to the Draft Environmental Impact Report (DEIR) released by Metro for the Los Angeles Aerial Rapid Transit Project (LA ART), proposed by LA Aerial Rapid Transit Technologies LLC. The Project, which is proposed to connect Los Angeles Union Station to the Dodger Stadium property with an intermediate station at the Los Angeles State Historic Park via an aerial gondola system, is one of great concern to CBLA.

Our CBLA organization (formerly Coalition to Ban Billboard Blight), is a non-profit organization dedicated to protecting and enhancing the City's visual environment through education and political action on behalf of many important issues, including: reducing visual blight from billboards and other forms of commercial signage to promote traffic safety and improve public health; preserving urban forest and open space; establishing federally-recognized Scenic Byways; undergrounding utility lines; treating our scenic resources as treasures to be passed on to future generations; promoting equitable public policies to accomplish those goals.

GO25-1

With the LA Art Project, our main concern is the lack of specificity and vaguely referenced advertising program within the gondola stations, on gondola towers, at the junction, and on the gondolas themselves and the potential significant impacts. We are also concerned about light glare and aesthetic impacts to the LA State Historic Park over which gondolas will travel at varying heights. In addition, we question whether the visual impact analysis in the DEIR appropriately uses the LA City CEQA threshold guide for analysis of park impacts, because it is a very minimal standard and should not apply.

GO25-2

GO25-3

Neither the DEIR document nor its appendices adequately describe the Project's proposed signage program. The vague description contained in the DEIR that the "proposed Project would include signage" that "may include identification and other static signs, electronic digital displays and/or changeable message light-emitting diode (LED) boards that include both transit information and other content, which may include off-site advertising" does not provide adequate information to assess impacts and attempt to identify mitigations (if possible to mitigate the impacts). The DEIR goes further to state that "Signage would be architecturally integrated into the design of the ART system including its stations, the junction, towers, and cabins." (DEIR p. 2-45)

GO25-4

CBLA

The Project Description Section 2.7.3 Signage states: “Such signage may include identification and other static signs, electronic digital displays and/or changeable message light-emitting diode (LED) boards that include both transit information and other content, which may include off-site advertising that generates proceeds to support transit system costs and operations.” Thus, we know that the operators of the Program seek to raise advertising revenues to help support the operation of the Project. This stated reliance upon advertising revenues to help finance the Project tells us only one thing for certain. That is the potential for the addition of more and more advertising faces, structures and/or panels associated with this program should operating revenues fail to provide the revenues anticipated and/or desired.

There is clearly not sufficient information provided for the public or those responsible for evaluating the Program to assess impacts when we are not provided with any specific descriptions of what lies within the realm of possible signage programs. We request a full analysis of every type, size, and manner of sign and whether static or digital, projection, or video, single or two-faced, lighting source and intensity of lighting, changing messaging, rotation rates, proximity to traffic, whether they will project ambient glare into the Historic Park, nearby residences, and other sensitive uses, etc. A chart that identifies types and numbers of signs must be provided. Will there be inward or outward facing signs on the cabins? Will there be analytics and/or data gathering capabilities on any of the signs which will trigger the need to address privacy issues? Please explain and provide a complete detailed analysis.

cont'd GO25-4

The provision of wayfinding signage should not present significant negative impacts if done in a consistent, tasteful manner and with signage respectful of its setting. Examples should be provided. Such signage, particularly if seen by passing drivers, should not incorporate changing messaging.

Transit information signage is provided in many cities on singular solar-powered poles with small LED text displays. Metro and LA ART do not need and should not seek to construct massive structures or advertising structures under the guise of providing transit riders with wayfaring information. The reference to “other content” is extremely troubling and opens the door to untold commercial signage.

GO25-5

Section 2.7.4 of the Project Description introduces many sources of lighting that are not sufficiently defined or described. The very presence of the LA ART project creates the need for lighting in numerous locations, including but not limited to its stations, junction, and towers. Additional lighting is to be placed underneath stations and along pedestrian access routes. The lighting is an issue not only pertaining to aesthetics, but it carries impacts to biological resources, wildlife, night sky pollution and may negatively impact those individuals who live in the area. There are many studies that document the impacts of lighting on wildlife, including this study done in conjunction with USC for the National Park Service, which is relevant to this Project because of its impacts on parkland: Longcore, T., and Rich, C., 2016. Artificial night lighting and protected lands: ecological effects and management approaches (revised August 2017). Natural Resource Report NPS/NRSS/NSNS/NRR — 2017/1493. National Park Service, Fort Collins, Colorado.

GO25-6

Coalition for a Beautiful Los Angeles
200 S. Barrington Ave., Box 49583, Los Angeles, CA 90049
losangelesbeautiful@gmail.com

CBLA

Those who live, work, or travel in the vicinity of this Project, those who visit the Historic Park, those who look upon Union Station and El Pueblo de Los Angeles as landmark and architectural icons for our City may be negatively impacted by a barrage of electronic advertising beamed via electronic displays (digital or otherwise) from stations, gondola towers, junctions, and gondola cabins.

cont'd GO25-6

We do not accept the language in the DEIR that states that "signage would be in conformance with all applicable requirements of the Los Angeles Municipal Code (LAMC)" as adequate assurance that the negative impacts of the Project's sign program will be acceptable or adequately mitigated. Given that the LAMC is subject to change and that the adoption of sign regulations in Los Angeles has proven to be highly politicized, such language provides no long-term assurance to those who value the visual landscape and seek to reduce sign blight and halt its proliferation in the City. The introduction of (digital) signage on moving gondolas in the sky presents an entirely new form of sign blight with the only comparable image being one of the singular Goodyear blimp that travels across the LA Basin with a very irregular presence in any one given location or community. The blimp travels at much higher elevations than the proposed gondolas and is seen only incidentally while the gondolas would have a fixed route and presence, leading not only to the impacts experienced as viewed, but contributing to harmful cumulative impacts as well.

GO25-7

It is vital to consider the impacts of the advertising program on the Los Angeles State Historic Park. Should lighted advertisements appear on the outside of the moving gondola cabins there will be significant visual and aesthetic impacts at visually sensitive locations along the gondola alignment. The DEIR acknowledges the impact of the gondolas and their towers on views from the Historic Park toward the downtown skyline, a protected aesthetic resource, which will "be partially interrupted due to the Project" and this does not even take into account the impacts that would occur should outside mounted advertisements be placed on the cabins. With the advent and advancements seen in LED lighting technology, it is possible that each gondola cabin could have changing ad panels with messages that rotate within seconds. There are no descriptions as to the types, hours of operation, message rotation schedules, etc. included in the DEIR. There are no limits as to what might be installed or operated. It is therefore impossible to assess the light and glare impacts of unknown displays. The project description is faulty, analyses is deferred until later as are proposed mitigations. This makes it impossible to conclude in the DEIR that the impacts will be less than significant.

GO25-8

Please add our comments to the record in this case and keep us informed of any upcoming meetings and/or hearings related to this Project.

Sincerely,

Barbara Broide

Subject: Support for LA ART and Comments on DEIR

Dear Mr. Cory Zelmer,
The Chinese American Museum of Los Angeles is in support of LA ART. Our museum is located in the El Pueblo Historical Monument and is adjacent to Los Angeles Chinatown, both are significant locations for LA ART. GO26-1

While CAM's mission is to tell and educate the general public about the history and the contributions of the Chinese in America, it also takes on the advocacy role of protecting and promoting for the betterment of our Chinatown community. From the information shared with the residents of our community, LA ART represents a new innovative mode of transportation that will support our climate goals in communities that have far too long been burdened by poor air quality. We've been pleased to follow the progress of its partnership with zero emissions programs. GO26-2

The Chinese American Museum recognizes the importance that an infrastructure of this scale represents, and it will be important to leverage such a large investment for the benefit of our community members. We applaud the willingness of LA ART to include us in conversations regarding community benefits to the neighborhoods it aims to serve. We look forward to the ongoing conversations this project is willing to have with us and other stakeholders to ensure that this project reflects the entire community and a true landmark for El Pueblo and Chinatown. GO26-3

Since the DEIR does not discuss community benefits, we would like you to elaborate on how any additional conversations with stakeholders will be included as an official document. I or other representatives of the Chinese American Museum would be willing to participate in further discussions and conversations in addressing Community benefits. GO26-4

In addition, the Chinese American Museum is an educational resource for the diverse communities of Los Angeles through our exhibits and educational programming, aiming to ensure that our programs are reflective of our entire community. To that end, we would like to know how will the project's Alameda Station adjacent to El Pueblo de Los Angeles Historical Monument reflect the community that it is located in, including the diversity of Los Angeles? GO26-5

One of the Chinese American Museum's objectives is to curate contemporary art that is reflective of Chinese American artists. How will the project provide opportunities for local contemporary Chinese American artists to showcase their works? GO26-6

We appreciate the open dialogue LA ART has had with CAM from the beginning stages of this project and how the leaders of the project has made concerted efforts to communicate with us at every stage of development. We are looking forward to continuous dialogue that will benefit Chinatown and the El Pueblo communities. GO26-7

Thank you,Dr. Gay Yuen

Mr. Cory Zelmer
Deputy Executive Officer
Los Angeles County Metropolitan Transportation Authority
One Gateway Plaza Mail Shop 99-22-6
Los Angeles, CA 90012

Dear Mr. Zelmer,

I am writing to express my deep concern regarding the proposed alignment of the Los Angeles Aerial Tramway (LA ART). As you may know, this private project, being shepherded by the Los Angeles County Metropolitan Transit Authority (Metro), would connect Union Station to Dodger Stadium via an aerial tram. The DEIR states that "The proposed Project would not result in any significant and unavoidable operational impacts," and concludes that "no mitigation measures required" (ES 10 p. 29 and ES 12 p. 31). Trust for Public Land disagrees with this conclusion. GO27-1

Trust for Public Land works nationally to protect the places people care about and to create close-to-home parks – particularly in and near cities, where 80 percent of Americans live – ensuring livable communities for generations to come. Since 1972, Trust for Public Land has protected more than 4 million acres and completed more than 5,400 park and conservation projects including the LA State Historic Park. GO27-2

The finding in the DEIR is further complicated by the fact that the DEIR does identify as a "Significant Impact" the conflict with the LASHP General Plan. The DEIR describes as a "mitigation measure" the need to: "Obtain a Los Angeles State Historic Park General Plan Amendment (page 58, DEIR Executive Summary, Land Use and Planning element, LUP-2). The project asserts that "Pursuant to Public Resources Code 5002.2, the proposed Project shall obtain an amendment to the Los Angeles State Historic Park General Plan to allow transit uses within the Los Angeles State Historic Park General Plan." The current general plan for this park does not allow for transit uses within the state park because it is a park, a vital public green space in a historically underserved community. Putting a transit use within the park was never envisioned during the park development process and it will significantly impact the park user experience. Yet the DEIR simply claims that as long as the general plan document is amended to allow for transit, that mitigates the impact. In no way does an amendment in a document mitigate the on-the-ground impacts of an aerial highway through a park, or the project's usurpation of public property GO27-3A GO27-3B GO27-3C

Below is a list of additional areas where the DEIR falls short:

1. Tree Removal

The DEIR states the project for the Chinatown/State Park Station would require the removal of 30 trees, and the aerial rights across the park would remove an additional 51 trees. The DEIR states that in place of the lost trees would be hardscape and replacement trees elsewhere in the park. Mitigating the loss of mature trees, particularly protected native trees, with new trees is insufficient; mature trees have established complex and interconnected ecologies not easily replicated, and they sequester much more carbon than do young trees.

The DEIR also does not indicate where the replacement trees would be sited, and does not provide sufficient information to demonstrate that the alternative locations of new trees would maintain the current park experience and ecosystems. The park was thoughtfully designed by landscape architects with specific outcomes in mind to accommodate a variety of human and wildlife activities. The park is a careful balance of open space and tree canopy that allows for flexible uses, including special events such as music festivals. The landscape plan was developed based on an extensive public planning and visioning process, and further refined to accommodate large-scale special events.

GO27-4

2. Impact on Historic Resources: the Zanja Madre and Roundhouse

The Zanja Madre, or "mother ditch," is the original water conveyance pipeline that brought water from the LA River to El Pueblo de Los Angeles. During excavations in the late 1990's, Metro unearthed a portion of the original brick pipeline on the site that is now the park. This was one of the key factors of historic significance that led the State Park Commission to classify this new park as a State Historic Park. This exposed section of the Zanja Madre near the Metro track is currently a major historical attraction of the park, the views of which would be significantly impacted by the overhead gondola route.

GO27-5

3. Impact on Viewsheds

The park's 2005 General Plan identifies and emphasizes the view of downtown LA from this park, "... the Park site is a large open space that is in stark contrast to the dramatic skyline of downtown Los Angeles. Sometimes referred to as the "front porch" of the City, there are no other sites that capture this welcoming view of downtown Los Angeles (p. 38). The park design was created to optimize the opportunities for visitors to experience this view - a major park element accessible from most vantage points.

The station and gondola lines with their constant movement will degrade that viewshed, blocking the view from some vantage points. The DEIR images are inadequate to fully capture the impact of the station on the view of downtown from numerous places in the park. Putting a large-scale station at the end of the park will affect the park experience from multiple vantage points, especially from the bridge. What is currently a spectacular vista will now be marred by a new large building that encroaches on state park land, with constant movement emanating out of that building. This is a fundamental change in the park experience and is inconsistent with the original vision outlined in the General Plan.

GO27-6

4. Impact on Park Users

One of the key elements that came out of the numerous public meetings during the park's design was the desire for quiet and tranquility. This gondola's continuous movement a mere

GO27-7

26 feet overhead will fundamentally alter the sense of peace and quiet in the park, a rare place of respite in a very dense, park-poor area of Downtown LA. The DEIR illustrations are highly misleading and show gondola cars, cables, and towers from a far distance, not from the vantage point of being directly overhead park users. The renderings are purposely not to scale and fail to demonstrate how the project would impact an individual sitting on a knoll right under the gondola line.

cont'd GO27-7

The DEIR dismisses the importance of open space to provide a respite from urban life when it states "Los Angeles State Historic Park is in a highly urbanized area north of downtown Los Angeles. Recreationalists that may reside in the area are assumed to be accustomed to the urban edge of the park, of which the proposed Project would become a part."(p. 74). In other words, LA ART claims it is acceptable to eliminate a portion of a public park simply because urban residents who live in an urban area are used to urban edges.

GO27-8

The entire point of the considerable investment of state taxpayer dollars to acquire and develop LASHP was to create an anecdote to urban life, bringing a major open green space, with all the associated health and wellness benefits, to those who had no such amenity. The DEIR is highly misleading to suggest that taking scarce park land and 81 mature trees, replacing them with hardscape, bathrooms and a new concessions building, and running an aerial highway across the park with gondola cars passing every 30 seconds is somehow making the project a "part of the park." It is, in fact, destroying the park's southern end, not enhancing it or providing contributing elements.

GO27-9

Lastly, I would like to call out the unavoidable impact LA Art will have on the Chinatown residents that will live beneath it. There is no scenario where residents are not impacted by the noise, sight, and regular maintenance the LA ART will cause. It is also no coincidence that this community most at risk of impacts from the LA ART is a low-income community of color. Please consider the people who will be negatively impacted everyday by the gondola, not the private entity that stands to benefit from its proceeds.

GO27-10

With sincere regards,

Robin Mark

Dear Mr. Zelmer,
The comment letter attached with this email is regarding the Los Angeles Aerial Rapid Transit (LAART) Project DEIR, and is provided by the California State Park Rangers Association (CSPRA), an organization of active and retired State Park professionals dedicated to advancement of the highest principles of public service, established to support and preserve California State Parks for present and future generations. Our focus is on the impacts of this project to Los Angeles State Historic Park, (LASHP) as the proposed gondola tramway route would cross one end of the 32-acre park, including cables carrying gondola cars just 26 feet overhead, and a station building with a 98-foot-tall tower. To permit a "transportation corridor" across the park would require an amended LASHP General Plan. That amendment process should never begin. This project has no relationship to LASHP's historic purposes, is not consistent with the mission of a state historic park, and would be an abuse of public land designated to be preserved for its historic and open space values. The DEIR claims, without documentation, that the gondola could remove 3,000 cars from the streets and provide clean energy transportation benefits. Those claims do not hold up to expert analysis in transportation and energy research reports from the University of California, Los Angeles (UCLA).* Instead, little traffic reduction will result, according to the UCLA transportation analysis, while electric busses would be 19 times more energy efficient than a gondola.

LASHP was created more than two decades ago, in a successful effort by a coalition of far-sighted community members and organizations that pushed for the creation of a unique State Historic Park in the urban core of Los Angeles. The land was set aside to save it from development, to address a critical lack of open space in Los Angeles, and to preserve an area that played important historic roles in the development of the city. Re: Los Angeles Aerial Rapid Transit Project DEIR

These comments regarding the Los Angeles Aerial Rapid Transit (LAART) Project DEIR, are provided by the California State Park Rangers Association (CSPRA), an organization of active and retired State Park professionals dedicated to advancement of the highest principles of public service, established to support and preserve California State Parks for present and future generations. Our focus is on the impacts of this project to Los Angeles State Historic Park, (LASHP) as the proposed gondola tramway route would cross one end of the 32-acre park, including cables carrying gondola cars just 26 feet overhead, and a station building with a 98-foot-tall tower. To permit a "transportation corridor" across the park would require an amended LASHP General Plan. That amendment process should never begin. This project has no relationship to LASHP's historic purposes, is not consistent with the mission of a state historic park, and would be an abuse of public land designated to be preserved for its historic and open space values. The DEIR claims, without documentation, that the gondola could remove 3,000 cars from the streets and provide clean energy transportation benefits. Those claims do not hold up to expert analysis in transportation and energy research reports from the University of California, Los Angeles (UCLA).* Instead, little traffic reduction will result, according to the UCLA transportation analysis, while electric busses would be 19 times more energy efficient than a gondola.

GO28-1

GO28-2

GO28-3

LASHP was created more than two decades ago, in a successful effort by a coalition of far-sighted community members and organizations that pushed for the creation of a unique State Historic Park in the urban core of Los Angeles. The land was set aside to save it from development, to address a critical lack of open space in Los Angeles, and to preserve an area that played important historic roles in the development of the city. After years of public meetings and planning, the California State Parks Commission assigned this parkland the stringent protections that go along with a State Historic Park classification. There is a societal responsibility to preserve, and not diminish that accomplishment. Every state park, including LASHP, is protected as a unique and special place. It is wrong for developers to target parks as relatively inexpensive routes across what they perceive as "open public land." This park, and all state park units, are held in public trust for the benefit of the people.

GO28-4

Comments follow about specific concerns in the DEIR.

David Carle
CSPRA President dave@cspra.com 760 709-1181

Specific comments by CSPRA to LAART DEIR**:**

Page 58 of the DEIR Executive Summary, Land Use and Planning element, LUP-2, identifies as a "Significant Impact" the conflict with the LASHP General Plan, and describes, as a "mitigation measure" the need to: "*Obtain a Los Angeles State Historic Park General Plan Amendment*. Pursuant to Public Resources Code 5002.2, the proposed Project shall obtain an amendment to the Los Angeles State Historic Park General Plan to allow transit uses within the Los Angeles State Historic Park General Plan." This approach pushes analysis of the impacts to the park and its visitors out of the DEIR and onto the shoulders of the California State Parks Commission. However, the appropriate place for that analysis is within the project DEIR, where concerns listed below should have been addressed. GO28-5

Appendix C, Visual Elements, includes Table 3-1 on pages 16 and 17, "Los Angeles General Plan Goals and Guidelines." However, the visual analysis that follows draws conclusions that are inconsistent with those goals and guidelines. Specifically, the General Plan "Natural Resources" topic calls for establishing "the Park as *an important natural open space* in the Los Angeles Urban area" (emphasis added) and protecting "and enhancing scenic viewsheds and features…by minimizing adverse impacts to aesthetic resources." An example of the philosophical approach to state historic park management is provided where the Plan calls for "providing visitors with positive natural fragrances and sounds, such as the scent of landscape plantings and sounds of birds and water." GO28-6

Appendix C, KOP 16-20, pages 71-74, provide analysis of visual impacts to LASHP, with specific reference to photos 5-18 through 5-22 (comparing existing and simulation views), on pages A18 – A22 of Appendix A. It is challenging to evaluate the text when it references imagery provided later in the document. The focus of the discussion is primarily on distant skyline views and never adequately addresses or effectively illustrates more immediate visual and experiential impacts to park visitors. No consideration is made here of visual awareness or feelings about the invasive presence of cables carrying large gondolas to transport up to 5,000 people per hour in each direction just 26 feet overhead (20 feet for a six-foot-tall person), The photo simulations in Figures F-18, 19, and 20 come closest to depictions of overhead presence. Image 5020a includes groups of park visitors spread out across the area, but adding a simulation to include the cables and cars cannot reveal any reactions from those people to that invasive presence. Still photos cannot portray the attention-grabbing movement of the gondola cars. The DEIR, limited by focusing mostly on distant views, concludes that impacts are insignificant because cables are just part of a busy scene that includes other existing lines, and gondola cabins would be constantly moving in and out of view. That very movement -- one gondola cabin after another in rapid motion -- is instead a convincing argument for a significant impact. GO28-7

We find these sentences on page 74 to be telling examples of a blindness in this analysis to traditional park values and the unique purpose of LASHP to address a critical lack of open space in Los Angeles: "*Los Angeles State Historic Park is in a highly urbanized area north of downtown Los Angeles. Recreationalist that may reside in the area are assumed to be accustomed to the urban edge of the park, of which the proposed Project would become a part.*" (Emphasis added). Transforming part of the park into an "urban edge" is unacceptable and inconsistent with the General Plan. The discussion becomes argumentative when addressing iconic distant views towards the downtown skyline: *"Existing views of downtown from other areas in the park are already interrupted under existing conditions by trees and intervening development."* The existence of current spots where the views are interrupted does not justify adding more. "*A visual benefit of the Project near Los Angeles State Historic Park would also be the Park amenities, potential mobility hub, pedestrian improvements, and* GO28-8 GO28-9

installation of hardscaping and landscaping at the southern entrance to Los Angeles State Historic Park, which currently only includes hardscaping." The text then lists these so-called visually beneficial amenities as 740 square feet of concessions, 770 square feet of restrooms, and a 220 square-foot covered breezeway. It seems exceedingly odd to suggest that this list, plus the associated 98-foot-tall tower (unmentioned here) provides any *visual* benefit to a State Historic Park. Rather, they are new and significant changes. Unmentioned here is how many currently growing park trees would be removed nearby to accomplish this installation.

cont'd GO28-9

GO28-10

Design option E, page 21 of the Executive Summary) addresses the pedestrian bridge from the park over rails toward Chinatown. While that project has been identified as a goal for State Parks, this gondola project, with its many environmental impacts for the park, is not required to accomplish bridge access and inclusion within this flawed proposal is not necessary.

GO28-11

Regarding the alignment alternatives described in the Executive Summary on page 19, the Transportation Systems Management Alternative, also identified as the Environmentally Superior Alternative, or the No Project Alternative, are preferred by CSPRA, as having no direct impacts on LASHP. To repeat a point made earlier in our letter, this project has no relationship to LASHP's historic purposes, is not consistent with the mission of a state historic park, and would be an abuse of public land designated to be preserved for its historic and open space values.

GO28-12

David Carle
CSPRA President

GO28-13

*John Christensen. "LA Art Gondola Energy Use Analysis." Institute of the Environment and Sustainability, Luskin Center for Innovation. October 24, 2022
"Dr. Brian Yueshuai He and Dr. Jiaqi Ma. "Study Finds Proposed Aerial Gondola to Dodger Stadium Will Do Little to Reduce Traffic and Emissions." UCLA Mobility Lab at the UCLA Samueli School of Engineering, October 24, 2022.

Commission assigned this parkland the stringent protections that go along with a State Historic Park classification. There is a societal responsibility to preserve, and not diminish that accomplishment. Every state park, including LASHP, is protected as a unique and special place. It is wrong for developers to target parks as relatively inexpensive routes across what they perceive as "open public land." This park, and all state park units, are held in public trust for the benefit of the people.

Formal comments are attached with a cover letter followed by specific concerns within the DEIR.
Thank you for hearing our voice.
Sincerely,

RE: Los Angeles Aerial Rapid Transit Project (LA ART)

SCH 2020100007 Draft EIR - Comments

Dear Mr. Zelmer:

Below are comments for the Los Angeles Aerial Rapid Transit Project DEIR from Clockshop.

Clockshop is a 501c3 nonprofit that has worked in partnership with California State Parks for nearly a decade to provide free community arts and cultural events in public green spaces. Some of our key programs include an annual Kite Festival in LA State Historic Park, a Reading and Listening by Moonrise concert series, youth arts workshops, and temporary public art installations by some of LA's most rigorous BIPOC visual artists. Over 10,000 community members yearly take advantage of our free cultural offerings. We often work in partnership with environmental justice advocates, because we see our work in the arts as a key pathway for community members to form emotional connections to public land and advocate to preserve it. As part of that work, we speak out against private developments and government infrastructure projects that negatively affect the communities around the public park spaces that we work within, and advocate for those that provide better access and sustainability for those communities. Clockshop became aware of this project in 2018, and has researched and engaged with partners in assessing the impact of this project on the park and the surrounding communities.

"The Project" we reference is the private aerial tramway that LA ART intends to build on behalf of Frank McCourt to go 1.2 miles from Union Station to near the gold line stop and then over the LA State Historic Park and residential communities to Dodger Stadium. The Project has been billed as a sustainable project that will take 3,000 cars off the road. It purports to be a "privately" funded project created to move people to a single private for-profit enterprise and is being billed as a public transportation project. We believe that this is a gross misrepresentation of what this project actually is, which is a private development that will steal public land, negatively impact communities of color, and pre-mitigate shady profit-driven future developments that have not been transparently presented to the public.

Clockshop is strongly opposed to this project, as it would deeply impact our operations as a non-profit, and would incredibly negatively impact LA State Historic Park, which is the key site for most of our arts and cultural activities. Here are some further details:

1. The aerial tramway will eliminate a beloved annual Kite Festival.

Nearly 5,000 people, 70% of whom were people of color from Chinatown, Lincoln Heights, and Solano Canyon (neighborhoods surrounding LA State Historic Park) attended our last Kite Festival in 2022. The tramway will make this annual, free, and beloved community event impossible to produce, as its pathway travels directly over the park.

1. The tramway will interrupt community arts and cultural programming at the LA State Historic Park.

Free public programming at the park, including readings, conversations, and experimental music, will be negatively impacted by the interrupted viewsheds and noise of the aerial tramway.

1. The aerial tramway is an injustice to the communities that fought for LA State Historic Park.

This park was fought for by the community for decades, and now a private developer billionaire will take part of the park away from them. This is a huge injustice, to take their viewsheds and their park for no reasonable purpose.

4. Over 75 mature-growth trees ranging between 15' and 50' are slated to be removed.

The State's 30 / 30 plan (CA climate change report) is being entirely ignored by LA ART, Climate Resolve, the City, and Metro. 30 / 30 calls for the preservation/conservation of ALL HABITAT in red zones. Los Angeles County is officially a red zone, and the aerial tramway will destroy important habitat.

5. The aerial tramway WILL have a negative environmental impact.

Contrary to LA ART's claims, the pouring of thousands of pounds of concrete and the

construction of this station will have a very negative environmental impact on the land and surrounding communities.

6. The aerial tramway is not needed, and is not a public infrastructure project.

This is a private project, benefitting a private entity. A stop at the Chinatown station is duplicative and is not needed. The Dodger express represents non-invasive buses (soon to be fully electric) already routed and funded. The existing Dodger Express has been consistently cited as the preferred method of transport by community stakeholders.

The infrastructure already exists, and the Dodger Express team has committed to electrifying all the buses as a response to climate change. This alternative is preferred by Clockshop, and our community and stakeholders at large as it does not pour thousands of pounds of concrete into an already stressed community, does not remove precious park space, and does not remove important natural habitat.

Conclusion

Clockshop strongly opposes this project, which would layer unnecessary negative environmental impact, remove free public park space and viewsheds, and interrupt or remove free community cultural programs that serve primarily surrounding communities of color. It is not fair, and it is not right to do this to the generations of community members that fought for this public green space with blood, sweat, tears. There is no public benefit to this project that does not already exist in another already funded, already public, free form (i.e. the Dodger Express).

The manner in which electeds and Metro have conducted this process is utterly shameful and displays a flagrant disregard for the residents and communities being impacted, not to mention the law.

Clockshop's staff, board, and diverse community of parkgoers agree that this project should be immediately terminated.

Sincerely,

[https://lh3.googleusercontent.com/6kFlDjhN_whuLGWryz8mLTuTaxgJVoV88UFB3Pl1xgKRupElpi4yb2gyDsYOrYjC5x

Deputy Executive Officer
Los Angeles County Metropolitan Transportation Authority
1 Gateway Plaza, Mail Stop 99-22-6
Los Angeles, CA 90012

Ref: Amended and Revised Comments Opposing LAART's "Gondola" Draft EIR

Dear Mr. Zelmer,

The Board of Directors (The Board) of the Los Angeles Union Station Historical Society (LAUSHS), a non-profit, Section 106 designated historic preservation consultant for Los Angeles Union Station (Union Station), a world recognized National Historic Landmark owned by Los Angeles County Metropolitan Transit Authority (Metro), has voted to formally ***comment against*** **Los Angeles Aerial Rapid Transit's (LA ART)** private, for-profit cable car line **(aka "Frank McCourt's Gondola")** and its public land and air rights development scheme that proposes to link Union Station and Metro's related "Esplanade-Forecourt" project with Dodger Stadium that The Board believes is contrary to Metro's public participation policy and **illegal (pending a Superior Court decision**) **"accommodation" for LA ART.** The Board believes that LA ART's proposed **"futuristic-Carnaval" Union Station Terminal** on Alameda Street and Metro's supporting "Esplanade-Forecourt" project **will blight the viewscape** of the historic and architecturally significant west facade of Union Station, and that Union Station, its trains and patrons could be **physically harmed** if aircraft from the nearby Los Angeles Police Department's "Hooper Memorial Heliport" airport become entangled in LAART's overhead cables, gondolas and 13-story towers. Furthermore, **The Board opposes Metro's planned removal of all "Disabled Parking"** spaces from the "Esplanade-Forecourt" area, without public hearings and reasonable alternatives, to accommodate a new so-called "water feature" (aka a fogging-type water fountain) which will cool LAART patrons cued-up for their rides to New Chinatown and Dodger Stadium. Moreover, the water feature would be **contrary to the state's water conservation policy.** (Even if the water feature recirculates, at least 10% of its water will be lost to evaporation day after day, year after year.)

GO30-1

Until now, The Board has steadfastly refused to take sides in the above major, billionaire development scheme. However, in The Board's opinion, **Metro and its staff have obviously taken a pro-active role supporting LAART, a potential competitor of Metro's efficient "Dodger Stadium Express"** bus service, as well as planning to **"gild the lily" of Union Station** with its Esplanade-Forecourt Project, all **"backstage,"** using public land, resources and airspace but **without public participation** as required by Metro policy and the law, before METRO agreed to be "engaged" by LAART.

Among the reasons for The Board's opposition are, but not limited to:

A) Metro Board member, the former **Mayor of Los Angele Eric Garcetti, who originally introduced the motion for Metro to assist LAART without public** participation and to enlist Metro staff to **"carry LAART's water"** as it were, did receive, according to public records, **millions of dollars** in both "behest payments" and political cash contributions **from Billionaire real estate and LAART developer Frank McCourt** and/or his family and various entities and associates, which in The Board's opinion, is an apparent conflict of interest. **Consequently, Metro is being sued** by the non-profit California Endowment for willfully preventing public participation in Metro's decision to partner with LAART. (Ironically, Metro is using public resources to defend itself before Superior Court.) GO30-2

B) In The Board's opinion, **Metro Deputy Executive Officer Cory Zelmer and/or subordinates falsified an official environmental document--**LAART's Draft Environmental Impact Report (DEIR)--by checking-off the DEIR box that states there is **no airport within 2 miles [3520 yards]** of LA ART's proposed Union Station Terminal, when he had been informed repeatedly to the contrary by The Board. Moreover, The Board presented proof to Zelmer and his superior, Metro CEO Stephanie Wiggins, that the Los Angeles Police Department's "Hooper Memorial Heliport" (variously described as the country's or the world's busiest airport for rotary-winged aircraft aka helicopters) **is only 1/2 mile (880 yards)** from LA ART's proposed Union Station Terminal. Furthermore, The Board reminded Zelmer and Wiggins that **according to the Los Angeles Police Department, the California Department of Transportation, the California Public Utilities Commission, the Federal Aviation Administration, and the 8th U.S. Circuit Court of Appeals, all heliports are airports** officially defined as a location where any flying machine is serviced. The fact that some airports serve only rotary-winged aircraft (helicopters) while others serve fixed-wing aircraft (conventional-winged aircraft) does not change the fact that: **all heliports are airports in the eyes of all governing agencies and the Federal Courts.** Furthermore, the argument presented by Metro that Hooper Memorial is a police facility, not a civilian facility, and therefore not subject to the LAART DEIR, is **illogical and fallacious**. A helicopter that becomes entangled in LAART's cables, gondolas and 13-story towers and consequently crashes into Union Station, its trains and patrons, could cause catastrophic harm regardless had that aircraft launched from a police facility or a public facility. Simply put, **LAART's proposed location is not safe** for the Union Station community and helicopters from Hooper Memorial Heliport airport. Please note, the *Rules and Regulations of Los Angeles Union Passenger Terminal* has for decades stated: **"General Notice A. Safety is of the first importance in the discharge of duty."** Or did Metro abolish this paramount railroad safety rule when it bought Union Station? GO30-3

C) Contrary to the promises made to The Board by Stephanie Wiggins, Cory Zelmer and LAART, **no meeting has ever been organized between them and The Board to discuss the difference of opinions concerning the nature of LAPD's Hooper Memorial Heliport airport and the proposed location for LAART's Union Station Terminal.** In fact **Metro forbade The Board's examination of the only known 3-D scale model of Union Station's location** because, in The Board's opinion, of a **deliberate subterfuge** that the model dating from former Union Station owner--the Santa Fe Railway--is too old to be accurate today, and furthermore the sharing of the model with The Board would **somehow be a "conflict of interest"(?)** even though The Board previously had access to the model. However, The Board's use of the model did not depend on the model's age, but only the juxtaposition of Union Station with Alameda Street which has not changed appreciably since the station was opened in 1939. Consequently, at a loss for options, The Board asked LAART to produce a 3-D scale model given its apparent resources, but **LAART has never responded. This "shadow play,"** in The Board's opinion, was being **performed by LA Metro and LAART to obfuscate** the **issues and delay public criticism** of LAART contrary to the public weal which Metro is obliged to serve. Furthermore, since the model is public property, The Board's use should have been permitted so it could be compared to LAART's distorted artist's rendering of its Futuristic-Carnaval Alameda Street Terminal with Union Station's Hispanic-Cathedral style. Finally, after wasting The Board's time and resources for over a year, in December 2022 Metro provided to the general public an aerial diagram of LAART's Alameda Terminal that is in the **worst possible viewscape location--directly in front of Union Station!** Cable car rides have their place but **not in front of Los Angeles' world famous "Cathedral of Transportation."** GO30-4

D) In The Board's opinion, LAART is designed to compete with Metro's "Dodger Stadium Express," a highly efficient road service that could be further improved **if Metro switched to modern**, **environmentally friendly motor coaches** that it might fund by the savings from not building its Esplanade-Forecourt project. GO30-5

E) Given the seasonal nature of baseball, it is also The Board's opinion that **LAART is a "Trojan** Horse" scheme to facilitate year-around, for-profit real estate development in Dodger Stadium's vicinity **at the expense of public land and airspace as well as the viewscape of magnificent Union Station.** GO30-6

F) Metro's proposed Esplanade-Forecourt project, according to Metro employees--who wish to remain anonymous for the sake of their careers--will be funded by so-called **"overlap money"** that was **"peeled-off" from Metro's defunct LINK-US project** that itself was rejected because of The Board's and the public's opposition. Moreover, Metro has stated to The Board's Executive Director via telephone that ultimately the Esplanade-Forecourt project will come to fruition by a two-step process eliminating all public parking including **"disabled parking"** from in front of Union Station **without public discussion or participation** in violation of the Americans with Disabilities Act (ADA). **(A disabled motorist has already filed a formal complaint with the ADA authorities against Metro's Esplanade-Forecourt project.)** Step one would be the **"temporary" elimination** of all Union Station west front parking for the construction vehicles needed to build the Esplanade-Forecourt project followed by step two—well there really isn't a **step two—when the project is completed there won't be any parking spaces left permanently**. Not only will this **negatively impact the "disabled Parking" but also the parking for Metro's tenants** the Homebound Restaurant and Brewery, TRAXX restaurant and the numerous social and artistic events that take place in the great **"Ticketing Hall"** which has fallen from use given computerized ticketing. Furthermore, according to a retired Metro staff person, the Esplanade's so-called "water feature" (a fogging-type water fountain) will **likely attract more "homeless" citizens seeking "showers"** contrary to Metro's stated policy--according to former Metro Union Station supervisor the late Ken Pratt--of not catering to the needs of the "homeless." In The Board's opinion, Metro's Esplanade Project is designed to cool future LAART and Olvera Street tourist attraction visitors as they saunter between Union Station, LAART and Olvera Street. (While Olvera Street's right-of-way and some of its structures and art works are historic, the **"Olvera Street tourist attraction" per se was invented in 1930** by a husband-and-wife real estate development team who went on to develop Los Angeles' **"New Chinatown tourist attraction."** (Ironically, Old Chinatown was demolished in a racist bid to rid Los Angeles of the Chinese who settled after building the railroad to Los Angeles, **then Union Station was then built on top of Old Chinatown's rubble.)** GO30-7

G) Finally, building the Esplanade-Forecourt project's water-feature while semi-desert Los Angeles is **experiencing one of its worst droughts in history** flies in the face of the State of California's policy to conserve dwindling natural resources. One only needs to recall the classic Los Angeles-based movie **"Chinatown"** to understand what The Board believes is driving LAART and Esplanade-Forecourt schemes**—the greed of land developers, the greed of Metro careerists and ultimately the greed of politicians!** Or, to paraphrase the immortal Yogi Berra: **"It's 'Chinatown' (*the movie*) all over again."**

For the above reasons, but not necessarily only because of them, the Board of Directors of the Los Angeles Union Station Historical Society **opposes construction of LAART and LA Metro's related Esplanade-Forecourt Projects in the interests of honest government, Los Angeles Union Station preservation, the environment and safety.** GO30-8

Respectfully,

/s/

Thomas R. Savio
Executive Director
Los Angeles Union Station Historical Society

Subject: Extension of Draft Environmental Impact Report Comment Period – Los Angeles Aerial Rapid Transit Project

October 13, 2022

Ms. Holly Rockwell,
Senior Executive Officer – Community Mobility Planning
Los Angeles Metropolitan Transportation Authority
One Gateway Plaza, Mail Stop 99-3-1
Los Angeles, CA 90012-2952
RockwellH@metro.net

Re: Extension of Draft Environmental Impact Report Comment Period – Los Angeles Aerial Rapid Transit Project

Dear Ms. Rockwell,

On behalf of Clockshop, I'm writing to request that the public comment period for the Los Angeles Aerial Rapid Transit Draft Environmental Impact Report (DEIR) be no less than 90-days. GO32-1

From METRO's communication shared on September 28, 2022, there is no clarity on how long the public comment period will last or how community members are expected to participate. The two meetings scheduled after the DEIR is released clearly state that no public comment will be taken. It is imperative that the community be given an opportunity to meaningfully participate in the CEQA process by providing a total of 90-days to comment and a clear pathway to engage. GO32-2 GO32-3

To date, our communities have been shut out of this process, with little to no details being shared. The few details provided by LA ART are wholly insufficient to understand the complexities of a project that will greatly impact surrounding communities. GO32-4

Frankly, we deserve better. We must be heard and provided with a chance to meaningfully participate in the CEQA process. From our experience, we know that DEIR's like this one are lengthy, complex documents with technical information that will require significant time to review and analyze. It is our understanding that similar environmental review processes such as the South Los Angeles and Southeast Los Angeles Community Plan and the LA Zoo Vision Plan have also been extended beyond 45-days. GO32-5

The DEIR has been delayed numerous times, and if you proceed with a 45-day comment period, what message does that send to our communities? You can delay the release of the DEIR but not extend a public comment period that will be held during the holiday season when it is challenging for community members to participate. There is no need to rush through this process at this stage. GO32-6

Finally, extending the public comment period is critical for transparency and fairness. Councilmember-elect Eunisses Hernandez, who has voiced concerns and will represent the communities most impacted by this project, deserves the chance to review and analyze the DEIR. GO32-7

Please do the right thing by extending the comment period to a total of 90-days.

Sincerely,

Sue Bell Yank

Re: Extension of Draft Environmental Impact Report Comment Period – Los Angeles Aerial Rapid Transit Project

Dear Ms. Rockwell,

On behalf of Clockshop, I'm writing to request that the public comment period for the Los Angeles Aerial Rapid Transit Draft Environmental Impact Report (DEIR) be no less than 90-days. GO33-1

From METRO's communication shared on September 28, 2022, there is no clarity on how long the public comment period will last or how community members are expected to participate. GO33-2 The two meetings scheduled after the DEIR is released clearly state that no public comment will be taken. GO33-3 It is imperative that the community be given an opportunity to meaningfully participate in the CEQA process by providing a total of 90-days to comment and a clear pathway to engage.

To date, our communities have been shut out of this process, with little to no details being shared. The few details provided by LA ART are wholly insufficient to understand the complexities of a project that will greatly impact surrounding communities. GO33-4

Frankly, we deserve better. We must be heard and provided with a chance to meaningfully participate in the CEQA process. From our experience, we know that DEIR's like this one are lengthy, complex documents with technical information that will require significant time to review and analyze. It is our understanding that similar environmental review processes such as the South Los Angeles and Southeast Los Angeles Community Plan and the LA Zoo Vision Plan have also been extended beyond 45-days. GO33-5

The DEIR has been delayed numerous times, and if you proceed with a 45-day comment period, what message does that send to our communities? You can delay the release of the DEIR but not extend a public comment period that will be held during the holiday season when it is challenging for community members to participate. There is no need to rush through this process at this stage. GO33-6

Finally, extending the public comment period is critical for transparency and fairness. Councilmember-elect Eunisses Hernandez, who has voiced concerns and will represent the communities most impacted by this project, deserves the chance to review and analyze the DEIR. GO33-7

Please do the right thing by extending the comment period to a total of 90-days.

cont.'d
GO33-7

Sincerely,

Sue Bell Yank

Subject: RE: Comments From LAUSHS on Metro Esplanade Project & LA ART Cable Car

Dear Tom,

Caltrans is not a lead agency for the projects you mention below, i.e., Los Angeles Aerial Rapid Transit (LA ART), nor the Alameda Esplanade. Caltrans is the federal lead agency for Metro's LAUS Alameda Esplanade and Los Angeles Streets Improvements Projects at L.A. Union Station. The project area for those two projects is on Alameda and Los Angeles Streets only. The fountain is not a part of the projects under Caltrans' authority. Your comments do not raise any issues related to the Environmentally Sensitive Area/Archaeological Monitoring Area (ESA/AMA) Action Plan for Metro's Alameda and Los Angeles Streets Improvements Project. Therefore, I recommend that you direct your comments to Metro, FRA, and/or the City of Los Angeles.

Regards,

Kip

Subject: Comments From LAUSHS on Metro Esplanade Project & LA ART Cable Car

EXTERNAL EMAIL. Links/attachments may not be safe.

October 10, 2022

Ms. Kip Harper
Associate Environmental Planner
CalTrans

Dear Ms. Harper,

This letter is to inform you that the Los Angeles Union Station Historical Society (LAUSHS) Board of Directors, a non-profit, Section 106 historic preservation consultant for Los Angeles Union Station, a National Historic Landmark, has voted to campaign against Los Angeles Aerial Rapid Transit (LA ART), a for-profit cable car development, aka "Frank McCourt's Gondola," that plans to link LA Metro's Los Angeles Union Station with Dodger Stadium where Mr. McCourt owns one-half of the parking lot and leases the other half from the Los Angeles Dodgers, and LA Metro's "Esplanade Project" that our Board believes to be an "accommodation" for LA ART and the Olvera Street Merchants Association. Our Board believes that the proposed LA ART "futuristic" Union Station Terminal on Alameda Street and LA Metro's adjacent "Esplanade Project" will blight the very historic, architecturally significant facade of Union Station which itself could be endangered Union Station and its patrons if helicopters from the nearby Los Angeles Police Department's Hooper Memorial Heliport airport become entangled in LA ART's overhead cables. Furthermore, our Board opposes LA Metro's planned removal of all "Disabled Parking", without public hearings, from the same location to accommodate it's "Esplanade Project's" so-called "water feature" (aka a water fountain) which itself would be contrary to water conservation policy. Even if the water feature recalculates its water at least 10% will be lost to evaporation day after day.

GO34-1
GO34-2
GO34-3
GO34-4
GO34-5

Consequently, it is only right that our Board present the reasons why it has taken these positions. Until now, our Board has steadfastly refused to take sides in these major multi-million-dollar schemes. However, LA Metro and its staff, in our Board's opinion, have obviously taken a supportive role for LA ART, a potential competitor of LA Metro's efficient "Dodger Express" service, as well planning to "gilt the lily" with its Esplanade Project

GO34-6

Among the reasons for our Board's actions are, but not limited to:

A) The LA Metro Board member, Eric Garcetti, who introduced a motion to assist LA ART, without public discussion, and enlist LA Metro staff to "carry LA Art's water" did receive, according to public records, millions of dollars in both political and "behest payments" from Frank McCourt and his various entities and associates, which in our Board's opinion, has the serious appearance of a conflict of interest. Consequently, LA Metro is being sued by the non-profit California Endowment for preventing public participation prior to deciding to "partner" with LA Art.

cont.'d GO34-6

B) LA Metro Deputy Supervisor, Cory Zelmer, in our Board's opinion, may have falsified an official document--LA ART's Draft Environmental Impact Report--by checking off the box that states there is: "no airport within two miles" of its proposed Union Station Terminal, when he had been informed repeatedly to the contrary by our Board. Moreover, our Board produced evidence that the Los Angeles Police Department's Hooper Memorial Heliport"--variously described as the country's or the world's busiest airport for rotary-winged aircraft (aka helicopters)--is about one-third of a mile from proposed LA ART's proposed Union Station Terminal. Moreover, our Board reminded LA Metro CEO Stephanie Wiggins and her Deputy Zelmer that according to the Los Angeles Police Department, CalTrans, the California Public Utilities Commission, the Federal Aviation Administration and the 8th U.S. Court of Appeals all "heliports" are "airports." The fact that some airports are restricted to helicopters and others open to both helicopter aircraft and fixed-wing aircraft (passenger airplanes) doe not change the simple fact that all "heliports" are "airports."

GO34-7

C) Contrary to the assurances made to our Board, by CEO Stephanie Wiggins, Deputy Zelmer and LA ART, no meeting has been organized between them and our Board to explain the difference of opinions concerning the nature of LAPD's Hooper Memorial Heliport airport.

D) LA Metro has forbidden our Board's examination of the only known scale model of Los Angeles Union Station's vicinity, because of, in our Board's opinion, a subterfuge that the model, dating from the former Union Station owner--the Santa Fe Railway--is now dated by simply by age and thus unacceptable, and furthermore the sharing of the model with our Board would be somehow "a conflict of interest" even though our Board previously had access to the model in years past. However, our Board's use of the model does not depend on the date of the model buildings per se but only the juxtaposition of Alameda Street and Union Station which has not changed at all since the station was opened in 1939. Consequently, at a loss for options, our Board asked LA ART to produce model given its great resources, but LA ART never responded. This "shadow play," in our Board's opinion, is being performed by LA Metro and LA ART to obfuscate the issues and delay public crittism in favor of LA ART and contrary to the public weal. Furthermore, since the model is public property its use should be continued by our Board and the public so it can be compared it to LA ART's distorted wide-angle artist's renderings of its proposed "futuristic-style" Union Station Terminal with Los Angeles Union Station's monumental "Hispanic-Art Deco style." Cable car rides belong in San Francisco and Disneyland, not in front of our beautiful "Cathedral Of Transportation.

GO34-8

E) In our Board's opinion LA ART is designed to compete with LA Metro's "Dodger Express," a low-fare, highly efficient service that could be even better if Metro switched to modern natural gas and/or battery-powered motor coaches funded by the savings from not building its Esplanade Project.

GO34-9

F) LA Metro's proposed Esplanade Project, according to LA Metro persons--who remain anonymous for the sake of their careers--will be funded by so-called "overlap money" that was "peeled-off" LA Metro's defunct "LINK-US" project that was rejected because of our Board and the public's opposition. According to a former LA Metro professional, the Esplanade fountain will likely attack more disadvantaged "street denizens" seeking showers," contrary to LA Metro policy. The Esplanade's "water feature" (aka "fogging" water fountain) in the opinion of our Board is designed to cool-off future LA ART and "Olvera Street" customers as they walk

GO34-10

between Union Station, LA ART's Terminal and the circa 1930's “Hispanic” Olvera tourist attraction. (While Olvera Street's right-of-way and some of its structures are historic, the "Olvera Street" attraction was developed by a wife and husband real estate team that went on to develop Los Angeles' current “Chinatown” tourist attraction. (Alas, historic Chinatown was demolished in a racist bid to rid Los Angeles of the Chinese who settled here, in part, after building the railroad to Los Angeles. Los Angeles Union Station was then built on top of old Chinatown's rubble.) This explains why Union Station is about a mile from downtown when railway stations were traditionally located in the heart of downtown. Furthermore, erecting the Esplanade water fountain while semi-desert Los Angeles is experiencing its worst drought in recorded history, flies in the face of the State of California's policy to lessen climate change. One only needs to recall the classic Los Angeles-based movie “Chinatown” to understand what our Board believe's drives LA ART and the Esplanade Project. Or to paraphrase the immortal Yogi Berra, “It’s ‘Chinatown’ (the movie) all over again.”

cont.'d GO34-10

For the above reasons, but not necessarily only because of them, The LAUSHS Board of Directors has reluctantly voted to oppose construction of LA ART and LA Metro’s “Esplanade Project.”

GO34-11

Respectfully submitted,

Thomas R. Savio

Executive Director

Los Angeles Union Station Historical Society

Subject: Request for Extension of DEIR Comment Period for the Gondola Project
Attachments: 2022 10 07 - To Rockwell Holly RE Extension of DEIR Comment Period.pdf

Dear Holly, Stephanie, and Metro Colleagues,

Attached please find our request for a 45 day extension of the minimum statutory DEIR comment period for the Gondola Project. For the reasons indicated, we believe such an extension is both justified and necessary to ensure that the public will have a meaningful opportunity to review, assess, and respond to what we expect will be extensive and voluminous reports related to the construction, operation, maintenance, financing and myriad environmental and community impacts of the proposed Gondola Project.

We appreciate your kind consideration and attention to this request.
Best regards,
Martha

Subject: Extend Public Comment Period for LA ART project Draft Environmental Impact Report

Dear Ms. Rockwell,

I'm writing on behalf of the California State Park Rangers Association (CSPRA) to request a 45-day extension of the public comment period for the Los Angeles Aerial Rapid Transit Draft Environmental Impact Report so that the total comment period would be 90 days. GO36-1

As this project will impact the Los Angeles State Historic Park, the public deserves to be heard and provided the opportunity to meaningfully participate in the CEQA process. We know that draft environmental impact reports like this one will likely be long and complex, requiring time to review and analyze the full details of this project. GO36-2

We have not received information on important details of the project and will need sufficient time to review and understand it. GO36-3

A 45-day extension to ensure proper community engagement is necessary for a public comment period that would fall squarely during the holiday season when COVID-19 is likely to spike, thereby limiting the ability for proper outreach and education efforts.

Please extend the comment period by 45-days to give our organization and other interested parties an opportunity to review and participate after the holiday season.

Sincerely, GO36-4

Hello Metro folks!

Longtime Metro-rider / enthusiast and downtown property owner here. As someone who lives within blocks of Union Station, I am your prime target for being a regular gondola-rider. I almost always take the Dodger Express to the games. The shiny renderings of the gondola are fun and futuristic, but I am shocked at how this project seems to be moving forward without any consideration at all to **cheaper, more effective, longer-lasting, simpler, easier-to-maintain solutions**. P1-1

The extremely-obvious Occams Razor solution to anyone who isn't just a politician hoping for a photo op that you have been ignoring is **a simple sidewalk**. Certainly not a perfect solution, or an elegant one, but the fact that a gondola is being discussed AT ALL before the simplest, more pure, cheapest transportation solution exists to the stadium is a joke. The current sidewalks to the stadium are deathtraps, ending abruptly, or going comically so far out of the way that it feels like the city is intentionally punishing anyone who decides to walk. **To go from downtown to Dodgers Stadium on foot is currently a cruel experience**. How is there not even just a single set of stairs from **Lookout Drive** to the stadium that is barely a few feet away up a hill? Instead you're forced to go nearly a mile out of your way on an extremely dangerous route (especially if traveling with children). P1-2

Don't even get me started on the lack of **protected bike lanes**. It would be a golden opportunity to get new riders to experience the electric bikes of the **Metro bike** fleet if there were docks at the stadium and convenient & safe protected bike lanes from downtown or at least to Sunset Blvd. (Plus in combination with protected lanes down Sunset Blvd would also help cut down on traffic to/from the stadium, especially for locals) P1-3

Look at the baseball stadiums that have stood the test of time in our country, like **Wrigley and Fenway**. These are supremely walkable stadiums, with bars, restaurants, & housing a mere stones throw away. Los Angeles has MUCH better weather for walking around all year, so we deserve a stadium that embraces what makes this city so great. Allowing people to safely and conveniently walk & bike to the stadium would **help local businesses thrive**, as people get to experience the neighborhood instead of just flying over it in a cramped box after stressfully waiting in long lines. People could get to the stadium earlier, and hang out later, rather than trying to rush in & out because they feel like they have to. P1-4

Metro struggles with funding all the time; a quick glance at our shadeless bus stops, or our dismally infrequent & filthy subway (I say this as a daily rider, metrobike annual pass holder, and huge supporter for the potential our system has), and it is insane to think Metro will be able to keep up the necessary maintenance for a gondola, when a simple sidewalk and a flight of stairs would get so many people up to Dodgers Stadium so much more efficiently (in terms of nearly every metric, like energy, cost, time, labor, etc). P1-5

Properly accessible sidewalks (and protected bike lanes with Metro bike docks) are the first step towards making Dodgers Stadium the world class experience that LA deserves, at a fraction of the cost of the gondola, and comparatively require little-to-no-maintenance. I'm not saying a flat-out no to the P1-6

gondola, but come on. Do the easy obvious stuff first that has been proven to work and then go from there. Lets focus on REAL solutions that will last before we get to the gimmicks.

Thanks,

cont'd

Hello,

I am reaching out as a concerned citizen, and I do not support the Gondola.
First and foremost, this is not the most efficient and rapid solution. We either need a tram system that connects directly or nearby the Union Station or establish a dedicated BRT to bring folks to the stadium. P3-1

There are several real-world solutions that can benefit the community and local businesses.

Thank you.

Subject: DEIR re Gondola

Dodger's Stadium and ostensibly the parking lot owners have done little to nothing to improve access to the stadium for people who do not wish to drive. Every time I bike to the Stadium I am met with fewer and fewer places to park my bike. The pedestrian infrastructure around the stadium is poorly maintained and intersects with huge volumes of vehicular traffic once you get on site. If the City effectively enforced the bus only lanes on Sunset then the buses would work. P7-1

It would be pretty easy and cost effective to make it safer to get to Dodger's Stadium without driving. Improving walking access and upgrading the parking lots to accommodate pedestrians and bikes and buses over private passenger cars is inexpensive. But instead of doing any of these things, the proposal is to build a gondola. This is not "Field of Dreams". If you build it, the multimodals / carbon neutral folks won't come. P7-2

Not only is this proposal incredibly expensive and highly engineered, but the long term maintenance costs apparently are irrelevant. And this is all before you consider the impact this will have on one of the best greenspaces near DTLA and the surrounding community in Solano Canyon. P7-3

At bottom, the City should use its resources (and so should the Dodger's and McCourts) to improve the existing infrastructure before it disrupts everything on this quagmire. P7-4

Hi all:

If this is to be ZERO EMISSIONS and running EVERY DAY, what is the power source?

If the power source is ELECTRICITY, then it can not be zero emissions. We already are short of power in the LA area (rolling brown/black-outs) so our electricity still comes from burning coal and other fossil fuels even if outside of California.

P8-1

If the point is to reduce parking congestion, where will the 5,000 people (per hour) park at the "origin" of their trips. Are you not just moving the congestion from dodger stadium to outlying areas (which will create their own problems?).

P8-2

I'm not sure what problem this solves, and am NOT in favor of it at the moment.

Since it was an UNSOLICITED bid request, I would like to "follow the $" to see who stands to benefit from this.

P8-3

Thanks.

LAART: Notice of Availability Draft EIR

LA Aerial Rapid Transit Technologies LLC is proposing the Los Angeles Aerial Rapid Transit Project, which would connect Los Angeles Union Station to the Dodger Stadium property with an intermediate station at the Los Angeles State Historic Park via a zero emission aerial rapid transit gondola system in downtown Los Angeles. Los Angeles County Metropolitan Transportation Authority (Metro) is the lead agency under the California Environmental Quality Act (CEQA) and has prepared a Draft Environmental Impact Report (DEIR) to evaluate the potential for environmental impacts resulting from the proposed Project.

A Draft Environmental Impact Report (EIR) was released today, October 17, 2022 for public review and comment. This milestone document evaluates the proposed Project, including its potential impacts and mitigation measures, as well as Alternatives to the proposed Project.

Hi,

I don't believe this project is necessary although it would be cool if it was built. P9-1

Gondolas don't carry nearly as many passengers per hour as buses do and I think the best option is to have exclusive bus lanes for the Dodger Stadium Express for home games or better yet, relocate Dodger Stadium to somewhere more transit accessible. P9-2

Dear Metro Representative,

I'm writing in support of the proposed gondola to Dodger Stadium. I think this would be a wonderful way to reduce carbon emissions and give fans another car-free option to get to games. Traffic congestion before and after games is a big problem, and I think the góndola would give fans a great incentive to get out of their cars! I also think it would be a fun addition to the neighborhood, for both tourists and locals.

P11-1

I really hope this project moves forward quickly. I look forward to riding it someday soon!

Sincerely,
Rachel Orfila

Subject: Public Comment on LA ART

Hi,

I have some concerns with the project that I wanted to share.

- The Draft EIR states that the system would have capacity to transport 5,000 people per direction per hour, but is this realistic in LA, especially with its principal purpose transporting people to baseball games (families with small children, people drinking, etc,) and with what seems to be comparatively slow boarding on the Metro Rail system relative to other cities already? P15-1
- Would capacity be sufficient to get people to Dodger's games without severe overcrowding, especially after games? How would it manage crowds over an extended wait time? Also, how would concerts and other events be managed? P15-2
-Is there firm evidence that the project would reduce VMTs? Is Metro studying the potential that people drive to ride it as a tourist attraction given the views from it? P15-3
-How is the project addressing concerns it will drive gentrification in Chinatown? Will a station in the community actually have any net benefit for residents, given the L line (soon to be A line) has a nearly identical route already in service with better connection to more destinations? P15-4 P15-5
-It seems more engagement with the Chinatown community is necessary and the community should have more of a say. P15-6
-Why has Metro not considered non aerial tram alternatives, like a future extension of WSAB light rail or improving the existing shuttle system, to meet the needs of the community? Its construction should not preclude a more efficient, effective, and lower-cost transit option for riders to Dodger stadium. P15-7
-No public money should be spent on the project. The project seems to have nearly no benefits for regular transit riders in LA County and that money would be better spent on other transit improvements, and Metro should consider an option that takes equitability better into account. P15-8

Thank you,

Tanner Vandenbosch

Subject: Comments Related to Aerial Gondola

The success of the aerial Gondola would be an incredible milestone, I truly wish for the reduction of red tape which leads to the obstruction of the success of this aerial gondola. I believe this will benefit the local fan, the last minute planner, the LA fan visiting from outside of town. This would be an incredible addition to the city and reduce carbon emissions from the dodger express that the busses produce. Traffic reduction as well.

This is key. I hope this happens and I hope we can make more marvels to downtown Los Angeles.

Let's get a WS next year! Thank you for your time, I hope we can make this work, cheers

Subject: Public Comment on Gondolas to Dodger Stadium

Good morning,

I would like to submit these comments on the proposed gondolas to Dodger Stadium. This project is not needed in any way shape or form. There is a very limited to no need or use of this gondola system from October to March of each year when there are no home games. Remember there are only 81 home games from April to September. There are only 3 stations, which serve no one other than Dodger Stadium guests. This doesn't solve any transit issue or transit need in any functional or convenience manner. One thing this project does prove is that the next subway or light rail line should go by Dodger Stadium the northward under or on Sunset Blvd. As the red and purple lines service Hollywood and Wilshire Blvds, this new subway or light rail could travel westward along Santa Monica or Melrose. P19-1 P19-2

In the end this gondola project is a NO for me. I am a Dodger fan and have no need to use it to attend a game. P19-3

Subject: Aerial Gondola To Dodger Stadium

To Whom It may Concern,

I am a resident of Los Angeles County, and a life long Dodgers fan. Unfortunately, due to excessive traffic and congestion at and around Dodgers stadium, I have not attended as many home games as I would have liked to within the past few years. P25-1

I am in support of the proposed gondola system, as it offers a more convenient (and presumably enjoyable) means of traveling to a game. P25-2

I understand that not all local residents in the surrounding neighborhoods are in support of the proposed gondola; however, there are only 81 homes games during the baseball season and I'm sure certain measures could be put in place to minimize the impact/concerns by local residents. P25-3

The gondola systems is a win all around in my eyes. It will alleviate the traffic problems to Dodger stadium, enhance the experience, and be something the next generation of fans can enjoy.

I support the project and hope that it will be approved. P25-4

Thank you,

Neil Larsen

Subject: Dodger Stadium Gondola

Hello!

I am a resident of the Mozaic apartments at union station and I support the Dodger stadium gondola. P32-1

I see no way that the 3 stations at union station, Chinatown gold line station, and Dodger stadium could gentrify the small area in between; two of them are already rail stations and the other will be in the stadium parking lot! And as much as I love Chinatown, that neighborhood needs some investment, and the gondola could actually boost tourism to the area. And tbh, I wouldn't mind seeing more of the new higher density mixed use buildings that have been built there recently (and they even have tasteful design honoring Chinatown's traditional aesthetic), as long as long-time independent businesses are not pushed out. P32-2

If we've learned anything from the wild opening of the new 6th street viaduct, it's that Angelenos are starved for for inspiring new public infrastructure. The bulk of that should absolutely be in the form of parks and other green spaces (the gondola will actully add to the experience at LA historic park, one of our best), but just as the 6th st bridge has already become an iconic part of the city, I think the gondola will be that and more. P32-3

The gondola can be something aspirational, inspirational, and yet also practical. I love the dodger express. But it took an hour in line just to board last time I rode and another 15 mins or so to drive up. The gondola can help relieve congestion in the buses and in traffic while making for a memorable experience unmatched by any sports stadium, and befitting a crown jewel like Dodger Stadium. And it's zero emissions to boot! P32-4

Short of some major safety, environmental, or ethical concern, I see no reason why the gondola should not be built to help make this great city just that much greater. P32-5

Cheers,

Kyle Martin

Subject: Gondola to Dodger Stadium

Hello-
I am very much in favor of a gondola to Dodger Stadium. I tried to go to Dodger Stadium for the first time in over 10 years for the Fluffy show this summer. It took 90 minutes to arrive and park (which was $40) from when I left Hollywood, and even though we left before the show ended, it was still a nightmare to get out. I vowed never to return. Going there should be one of LA's best experiences, not one of its worst. The bus is not helpful, because it's stuck in the same automotive traffic but takes away your control of when you want to leave. If I could take the Metro Red Line to Union Station and the the gondola, the process would be lengthy but low cost and hopefully relatively painless. I can't believe the residents around the stadium who currently endure hours and hours of epic traffic and the loss of all available parking find the status quo acceptable.
Thank you,

P36-2

From: Grant Blakeman <grant.blakeman@gmail.com>
Sent: Thursday, October 27, 2022 8:27 PM
To: LAART@metro.net
Subject: absolutely not

I truly do not understand why Metro is allowing itself to be distracted by this project. A gondola itself is not a bad idea in some situations, but for a sports arena it will never be able to serve at the capacity/volume necessary within a game-day timeframe to put a meaningful dent in traffic reduction, carbon emissions, or access that a public transportation project should consider. P37-1

Gondola projects that are actually successful connect population centers where demand and volume can be spread over hours and service can equitably be provided to all members of a community. P37-2

While I like the idea of non-game-day park access, for this aspect of the project to be even remotely considered a win for the entire community of LA, it would need a commitment of no fare or a low-fare commiserate with riding a train/bus (with free transfers). This fare should not fluctuate or change depending on who is trying to access the park. In LA we should provide transit options for all (including visitors). P37-3

Ultimately, this is a vanity project for the owner of some Dodger Stadium parking lots and the Dodgers organization itself, at best. At worst it is an abuse of public funds (and a public park, no less) to fund a private tourist attraction. P37-4

Other projects Metro should implement long before considering this gondola project:

* Protected bike lanes from Dodger Stadium all the way to the ball field
* Increasing Metro Bike's e-bike fleet and making them available on game-day
* Closing most (all?) roads throughout the park to cars at all times
* Stairs (maybe even escalators) for better pedestrian access to both the park and the stadium
* Putting in a permanent bus lane (separate and in addition to the protected bike lane) between both Union Station and the stadium
* Free, frequent bus shuttle service into and around Elysian Park to serve both Dodger games and, more broadly, the park itself at all times

Subject: Comment re: LA Art gondola plan

Dear Metro,

I am a Los Angeles resident who opposes the LA Art gondola plan to Dodger Stadium.

While I support innovative alternatives to private automobiles and road traffic in the city, this sounds like the worst kind of boondoggle and grift disguised as public-private partnership.

First of all, being one of the most rapacious and miserly private landowners in the city, Frank McCourt is not a reputable figure. He should not get to influence and impact public spaces for communities of color like Chinatown in ways that would most benefit his private business interests.

P40-1

Drew McCourt and Aerial Rapid Transit Technologies LLC may have the benefit of the elder McCourt's funding, but I believe that other firms should get to propose better, more sustainable alternatives that actually meet the needs of city residents (particularly those who are most vulnerable to displacement and dispossession by development projects like the gondola).

The gondola is a short-sighted Mickey Mouse solution that will benefit tourists, the Olympics, and most of all the McCourt family -- NOT the daily lives of everyday Angelos. Please do not let this project happen.

Re: Support for Los Angeles Aerial Rapid Transit Project

Dear Mr. Zelmer:

We are writing to express our support for the proposed aerial gondola system connecting Union Station and Dodger Stadium. This project represents an opportunity for Los Angeles to become a leader in urban ropeway transit in the United States, and provide an example to other cities of new types of technologies that can be deployed to help reduce emissions and encourage transit ridership.

Doppelmayr reviewed the Alameda Station to Dodgers Stadium alignment early in the planning process to verify both feasibility of the project and the qualifications of the current project team. We are confident that not only is LA ARTT's proposed gondola system realistic, it is the best possible solution for the transportation challenge to Dodger Stadium. Aerial ropeway systems were originally designed to operate in harsh mountain environments but now have successfully proven their application as urban transit worldwide. A recent installation in Mexico City is testimony to this as well as our "soon to be constructed" gondola in Paris. Other examples around the world demonstrate the successful use of gondola systems in the urban environment. P43-1

Doppelmayr is the leader in aerial transport technology and our USA subsidiary is located in Salt Lake City, Utah. We employ more than 200 people in various disciplines including sales, engineering, technical support, fabrication, construction, and logistics. Our SLC team is an integral part of the Doppelmayr / Garaventa group with more than 3,000 employees worldwide. To date, Doppelmayr / Garaventa has built more than 15,100 installations for customers in 96 countries. We are committed to providing the best transport solutions now and for the future and would gladly share data from our extensive portfolio of projects as a reference.

Among Doppelmayr's proudest associations is our partnership with the Olympic Games. Los Angeles' future is bright with the reality of hosting another Summer Olympic Games in 2028. While we have provided many aerial systems for the Olympic Games (chairlifts, trams, gondolas, etc), in particular we wish to point out a unique 3S gondola system which was installed for the Sochi Olympics. The organizers faced a challenge in the requirement for

providing constant access to competition sites. Much like the Dodgers Stadium, the venues in Sochi lie in an elevated location with a congested access road. The organizers looked to Doppelmayr to provide an innovative means of transport. The 3S system was selected to solve this complex issue, and the system was designed to move people quickly and efficiently. A similar gondola from Union Station to Dodgers Stadium with an intermediary station, would complement and strengthen the transit requirements for Los Angeles Olympic traffic plan.

Finally, and most importantly, the public will benefit most from the gondola solution. When it comes to passenger experience, neither buses, trains, nor automobiles can compare with that of a modern 3S gondola. Continuous cabin movement eliminates the frustrations associated with conventional mass transit waiting lines. After an easy boarding process, the passengers will enjoy a spacious and comfortable gondola cabin with access for all. The smooth flight over the streetscape allows for taking in the breathtaking views through floor to ceiling panoramic windows. Additionally, and perhaps most significant, the gondola system is extremely environmentally friendly. Within the lifecycle of the system, the operational phase is practically "zero" carbon neutral. A study demonstrating the operational efficiencies of a gondola system can be made available upon request.

cont'd
P43-1

In closing, we at Doppelmayr look forward to collaborating with LA ART on this exciting project. We remain available and ready to support.

Sincerely,

Katharina Schmitz
Doppelmayr USA, Inc.

Subject: Grand Opening Celebration

Hi,

I am in full support of the Aerial Rapid Transit Project. We need creative, clean energy transportation solutions like this. I will attend one of the meetings and show my support.

I also wanted to help support the project by performing at the Grand Opening Celebration when it happens. Please put my name and contact information in your files for when you need it. This will be one less thing you need to plan/worry about.

P44-1

My LA-based band, Acoustic Generation, performs a unique, one of a kind immersive musical experience - "Captain Flashback's Laurel Canyon Love! - Celebrating the '60s/'70s Roots of Classic Rock." It's the best bands and songs from our own legendary music scene, go-go dancers, incredible 3 & 4 part harmonies, a fun peace & love vibe with clean lyrics - crowds of all ages sing and dance along to our show.

Classic Rock appeals to the widest demographic and the good feeling, peace & love vibe will be the perfect LA energy for your Grand Opening event.

Acoustic Generation performs in Hollywood and many other venues including the LA Zoo's "Lights Event," the Green Oasis Private Event at Coachella 2016, the HopCourage Beerfest at the LA Coliseum, "Breakfast with the Beatles" on 95.5 KLOS, "Earthfest Los Angeles" sponsored by California Greenworks, the Lexus Ventura Marathon, the Whisky, Roxy, Viper Room, Boardner's, House of Blues Anaheim and many more.

P44-2

Here are 2 reviews -

"I had Acoustic Generation perform live on my show and they were FAB! Book "Laurel Canyon Love" as we all need more peace & love."
~ Chris Carter, host 95.5 KLOS "Breakfast with the Beatles"

"A MUST SEE SHOW! I loved the crowd engagement, beautiful harmonies and great set list. The peace & love vibe blew my mind!"
~ Mimi Chen, dj 88.5 KCSN "Peace, Love & Sundays"

Attached is our show logo and reference letters from large corporate events with thousands of guests.

We also organized, hosted and performed the LA Climate Change Concert at the Whisky in 2016. This sold-out event was a huge success and LA Mayor Eric Garcetti gave us a Certificate of Appreciation for our service to the city.

We would like to continue our service by performing at the launch celebration party for your great project.

Best wishes,

Darren Howell

Dear Darren,

I wanted to say thanks again for performing at the Lexus Ventura Marathon. I asked Acoustic Generation back again this year because you guys are great to work with. You show up on time with great attitudes, and you put on a great show for our audiences. Plus you are great about being flexible as something always seems to come up at these large events.

Our events are all ages and require professional entertainment with wide appeal. Acoustic Generation has great original songs, a fun Classic Rock show, and everyone loved the steel drums - there is really something for everyone.

cont'd
P44-2

I highly recommend Acoustic Generation to any event coordinator/Corporate planner, and I look forward to having you perform at more of our events in the future.

Thanks again.

RE: Acoustic Generation and the Musicians Roster

To Whom It May Concern,

I am writing to strongly recommend that Acoustic Generation be added to the Musicians Roster of the LA County Arts Commission.

I organize the EarthFest LA Festival, an annual event that includes booths for green companies and organizations, food booths, speeches, entertainment, etc. I met Darren Howell and Acoustic Generation through one of his other concert events, and I immediately knew that I needed their band and Darren to be a part of my 2015 EarthFest LA Event. The 2015 event was held in the downtown area of Culver City.

Being a supporter of green initiatives, Darren jumped right in and helped me organize the 2015 event. He attended meetings, brought together like minded people to add to the effort, provided important ideas and even got a few new speakers and vendors to exhibit at the event. His band played an excellent set of Classic Rock originals and covers that was well received by the crowd. Acoustic Generation showed up on time, ready to rock with a great attitude. They added some musical energy to the event that was much appreciated.

cont'd
P44-2

Because of logistical issues beyond our control, we had to move the event's location in the month before the event, but Acoustic Generation was flexible and adapted to our needs.

I highly recommend Acoustic Generation for any LA County Arts events, Summer Concert Series, etc. - both you, the event organizers and especially the crowds will love the Generation. Darren likes to say, "once you hear the Generation you are part of the Generation" and it is true.

Sincerely,

M. Meador

Subject: LA Aerial Rapid Transit Proposal

I am writing to comment on the LA Aerial Rapid Transit proposal.

As an architect living in Southern California, and having undertaken complex, large-scale urban projects both across the country and around the world, I am thrilled by this innovative, world-class proposal for LA. The project deftly increases accessibility and connectivity between numerous LA communities while creating a new, unique LA experience that will be sought after by residents and visitors alike. And it does all of this while reducing transportation related pollution and congestion!

P45-1

I fully support his project and look forward to its completion.

LAART: Metro Extends Public Comment Period and Adds an Additional Public Hearing

LA Aerial Rapid Transit Technologies LLC is proposing the Los Angeles Aerial Rapid Transit Project, which would connect Los Angeles Union Station to the Dodger Stadium property with an intermediate station at the Los Angeles State Historic Park via a zero-emission aerial rapid transit gondola system in downtown Los Angeles. Los Angeles County Metropolitan Transportation Authority (Metro) is the lead agency under the California Environmental Quality Act (CEQA) and has prepared a Draft Environmental Impact Report (DEIR) to evaluate the potential for environmental impacts resulting from the proposed Project.

A Draft Environmental Impact Report (EIR) was released on October 17, 2022 for public review and comment.<http://click.sfmc.metro.net/?qs=12512808b3501a9dc7074bd3cb271ab5b39d6c55f8ca5bab08bed78243ebc0
This milestone document evaluates the proposed Project, including its potential impacts and mitigation measures, as well as Alternatives to the proposed Project.

Today, Metro extended the public comment period on the Draft EIR an additional 30 days for a 90-day public comment period ending on January 17, 2023. Metro also announced an additional public hearing.

RE: PUBLIC COMMENT ON DRAFT EIR FOR THE PROPOSED LAART PROJECT cont'd P47-1

Dear Mr. Zelmer,

As a LA Historic business, within the boundaries of the proposed project zone, which will be greatly impacted by the LAART project, we wish to submit our opposition to the Draft EIR presented in October 2022. Much like our neighbors, the California Endowment and Homeboy Industries, that joined in a response opposing the LAART, dated November 16, 2022 (attached), we share many of the same opinions for opposing the project.

Due to limited resources, we are currently unable to provide the same detailed response, but with our immediate proximity to both the CA Endowment and Homeboy we wish to join in support with their opposition letter.

Areas of concern:

People not using public transport to arrive in LA P47-2
Parking- the study does not reflect accurate information P47-3
Displacing the traffic to a new area less than 1 mile away P47-4
Street closures and loss of business during construction P47-5
Overall feasibility of the project P47-6

There seems to be a need for further development and discussion that we would like to be a part of to come to the best possible ways to reduce the impact of vehicles to the City of Los Angeles and be an equitable partner with the community. P47-7

Best Regards,

Julia Tauscher

Subject: Public Comment: Los Angeles Aerial Rapid Transit (LA ART) Project DEIR

Deputy Executive Officer Cory Zelmer,

I am writing to voice my opposition to the Los Angeles Aerial Rapid Transit Project ("The Gondola" at Dodger Stadium). P48-1

Metro went forward with this project without an open public process and without competitive bidding. Details about the ownership or operation of the project have been hidden from the community. The financial commitments are unclear, and I am worried that public funding will be required to cover and maintenance and construction cost overruns. P48-2

The Chinatown communities is one of the poorest areas of Los Angeles. Community members were not consulted about this project, and did not ask for it. Public employees' time and energy would be better spent consulting with residents to identify the real needs of the community, not facilitating the pet project of a wealthy developer at the expense of the entire community. P48-3

Subject: LA Metro ART - Draft EIR Public Comment - Faraz

Hello. My name is Faraz Aqil, and I'm a resident of Downey,who one day hopes to visit my first in-person Dodgers game by using this newtransportation system from Union Station to Dodger Stadium. The concern I have with the ART project is regarding its highcapacity (how many riders can fit into a gondola [cabin size]), and the fastaccess (how many trips can the system quickly get all riders through [especially during High Dayevents]).

According to the Draft, it states that each gondola cabinhas a capacity of 30-40 riders each (pg: 2-18). The travel time for onedirection is approximately 7 minutes (pg: 2-42). The system has an approximatemax capacity of 5,000 riders for 1-way (10,000 riders if both ways are used atmax capacity) (pg: 4-59). And it takes about 23 seconds for a cabin toarrive/departure at a station (pg: 2-42), which means I estimate 36.52 gondola cabins will be needed to have a 14-minute round trip (for that 23 seconds average to happen). P49-1

However in practically, I doubt that the Gondola Systemcan drop off and take in passengers around 23 seconds. Unless the ART groupcan show a computer demonstration (or a live video) of 5,0000 different ridersusing the system during a High Day, I'm seriously worried that the 23 secondsclaim is an over estimation. Not to mention if there's something that comes up (like a wheel chairpassenger, a baby stroller, bike rider.. etc.) the gondola system will takelonger. This is coming from experience using LA Metro's trains, where trains usuallytake around 1 minute to drop off & pick up passengers. Even in this report, itstates that, "a cabin could be stopped to accommodate passenger boarding" (pg2-18), which I suspect will happen quite often. And as a result of the Gondola pausingto accommodate passengers, the rest of the cabins in the system will be stoppedtoo by being idle (which will cause delays and less transported passengers peran hour).

I estimate that each gondola cabin will take around 1 minute on average. And if that's correct, thenthe Gondola system will only be able to transport an average of 2000 riders 1-way(4,000 riders if both ways are used at max capacity). This would be unfortunatebecause many riders will see that this transportation system is extremely slowand result in riders not relying on it to reach the Dodgers stadium (especiallyif this system gets a reputation for very long lines/wait times).

My recommendation would be to instead use an aerial train/monorailsystem to transport riders to/from Union Station to the Dodgers stadium. Rail is a morereliable and a faster mode of transportation then a Gondola system. Trains canhold hundreds of passengers per a trip. And it would rely on less staff then the 20staff needed to run the Gondola system. I'm honestly surprise that of the 3alternatives mentioned in the report, no Rail option was mentioned. We should bebuilding a transportation system not just for the riders of now, but for future riders as well (especially since this report estimates that ridershipdemand will only grow larger by year 2042, up to 13,030 daily riders in a HighDay) (3.17-35). P49-2

Thank you for taking the time in reading this comment.

To: LAART@metro.net
Subject: Stop the Gondola

I'm writing with concern about LA ART and Metro's recently released Draft Environmental Impact Report on the potential environmental impacts resulting from the McCourt Gondola. P50-1

This report reflects the fact that there has been no considerable input from the communities who will be most affected by this gondola. It is clearly the pet project of a billionaire with too many unanswered questions about safety, cost, maintenance, and even the actual purpose of the gondola. P50-2

The gondola is a waste of time and money—a stunning $300 million price tag—that could be better spent on any number of initiatives that would actually benefit local residents. Since nearly every Metro project has historically gone significantly over budget, the risk for taxpayers to be held financially responsible for expenses beyond the initial construction costs is enormously significant. At the same time, there is already a free shuttle available that serves the same exact function as a costly gondola ride. P50-3

The recent election of Los Angeles' new mayor proves that the people do not want billionaires running or ruining our city. We must stop this wasteful, tacky, bloated, and completely unnecessary gondola from being built. It will be an expensive eyesore from an out-of-touch oligarch that scars the landscape of LA.

Stop the gondola project now! P50-4

Thank you,

Greg C.

Subject: do not build gondola

Please do not build a gondola. If you look at the London cable car over the Thames it's either slower or comparable to existing transit modes, except it has a much, much lower capacity and wait times are longer due to this low capacity.

P52-1

Instead use the money to help fund a northern extension of the WSAB to Dodger's stadium.

Subject: Los Angeles Aerial Rapid Transit project is disproportionate to the need.

Metro,

This project seems laughable. The proposal's "...maximum capacity of approximately 5,000 people per hour per direction" is dwarfed by the needs of Dodger stadium which has a capacity of 56,000 people. It would take over 11 hours to fill the stadium at that rate and another 11 hours to empty it. Even if the system was extended to the other side of Chavez Ravine (Echo Park or Silver Lake or Elysian Valley) so that there are two boarding points to double the capacity the system would be overwhelmed by the needs of the stadium. This project uses a mode of transportation that can not cope with the needs of the stadium. Although I applaud the motivation this project should be sent back to the drawing board. It suffers from a fundamental misunderstanding of the transportation needs. Build a system based on a higher capacity mode of transit (e.g. rail, or Bus Rapid Transit with dedicated right of way) that can handle the departing crowds of more than 30,000 people per hour.

As a Native ~~Angelo~~ Angelino, with roots and history in this town, we already see that many mistakes have been made by our past. The amount of pollution in our city has caused massive disease to our people. Lack of green space negatively impacts our mental health. This gondola seems to be "killing two birds with one stone" in the sense it'll be making air quality worse in already under served communities AND taking away green space by building on the park. Please, for the sake of our communities and our future DO NOT BUILD THE GONDOLA

I have lived in Chinatown at the Senior Metro LOFTS FOR 10 years #. I walk in Chinatown, I use public transportation in Chinatown, I support the community of chinatown. The Gondola Project will create havoc in a senior centric neighborhood. The trasmission of disease is possible due to the increased traffic, The pollution impact of the cars that will take OUR Parking Spaces. The Yankie loos, the tourists & the enthusiastic Dodger FANS will mow us/seniors ; chinatown Residents over. The Historic Park will be irreversably destroyed by the traffic. The gondola

As a resident of Chinatown, I am writing to express my concerns and objection to the LA ART gondola project. This Draft environmental impact report does not address serious issues with how the gondola's construction and operation would negatively affect the working class and aging population of Chinatown. One of the worst problems unaddressed is how this will cause more traffic and traffic safety issues in Chinatown as one of the gondola stations is in Chinatown. P61-1

There is a moral issue at stake again, where the community of Chinatown is again getting the short end o the stick. There ~~xxxx~~ are many inequalities faced by thi community but today non is as damaging as the LA ART. project that is now at a stage where is waiting for approval wit out the process ever considering the local community and impacts to its residents and many stakeholders like myse This lack of a community benefit project and dream of a single individual is quite selfish. Have you all ever been in Chinatown during a Dodger game, a gondola will not solve the issue, the gondola intact is not local community friendly. Lastly as a long time resident of northeast los Angeles and curren resident of Lincoln height, and one of the youth pictured with the governor Gray davis when he announced the purchase of what is tod LA state historic Park I am appalled by the possibility that this commun resource will be impacted. How can public agencies that will take part of saying yes! or no to this project in the approv process, ever consider saying yes. An approval of this project is n go against the benefits that they are task with upholdi to local constituents. Additional can we please independent traffic and other studies that are being used to approve this project? It is unfair that the more resource get to draft their o docun

P65 Translation

The failing project does not have a reason to exist because the city does not need it, it is illogical. The community needs other alternatives that do benefit us and lead us to progress, not backwards. No gondolas.

Alternatives need to be sought to improve access to the stadium without affecting the neighbors in the area. We have too much pollution in every sense, it is harming not only the area but also a big part of Los Angeles.

I do not agree with the Gondola Project because it would slow down movement in the community regardless.

Subject: Oppose LA ART

Hello,

As a resident of LA's Chinatown neighborhood, I OPPOSE the LA ART Gondola to Dodger Stadium for the following reasons:

THE McCOURT GONDOLA WOULD ALTER THE CHARACTER AND USE OF LOS ANGELES STATE
HISTORIC PARK. The Gondola would undo years of community advocacy for a tranquil green space. The view from the park to the LA Skyline will be littered with cables and gondola cabins, and chase away wildlife, especially birds. P79-1

THE McCOURT GONDOLA WOULD USE PUBLIC RESOURCES FOR PRIVATE PROFIT. This project requires the use of public rights of way, public air rights, and public lands and serves only to benefit Frank McCourt. P79-2

THE McCOURT GONDOLA WOULD HARM OUR NEIGHBORHOODS. The enormous gondola cabins would travel over the rooftops of family housing. Neighborhoods located near the gondola stations would experience increased traffic and parking problems, endangering pedestrians, especially seniors and children. P79-3

THE GONDOLA (LARTT LLC) AND METRO ARE, SEEKING APPROVALS WITHOUT MEANINGFUL

COMMUNITY ENGAGEMENT OR TRANSPARENCY. A project that would permanently alter our neighborhoods and the Los Angeles State Historic Park requires a full public review. Basic information has been withheld including the location of the towers, and the height and scale of the stations. The two potential routes were chosen without public input. P79-4

TAXPAYERS WILL LIKELY END UP PAYING FOR THIS PROJECT. How will McCourt pay for it? What will it cost to operate and maintain the system? What happens with cost overruns? Who pays for it? P79-5

THIS IS A TOURIST ATTRACTION, NOT REAL TRANSIT. At up to $30 per ticket for a 1.5-mile ride, this project is not transit that community members would use to access essential services. P79-6

REAL PUBLIC TRANSIT TO DODGER STADIUM EXISTS AND IS OPERATING. The Dodger Stadium Express which has committed to zero emissions is a wildly popular bus program utilized by many happy Dodger fans. P79-7

STOP THE CORPORATE WELFARE for billionaires and the privatization of our public spaces.

Help us protect our neighborhoods and the Los Angeles State Historic Park. P79-8

Sincerely,
Cayla McCrae

Subject: Public Comment: Los Angeles Aerial Rapid Transit (LA ART) Project DEIR

Deputy Executive Officer Cory Zelmer,

I am writing to voice my opposition to the Los Angeles Aerial Rapid Transit Project ("The Gondola" at Dodger Stadium). This project does nothing for the surrounding neighborhoods and literally makes them irrelevant by placing this eye sore for all to see every day. This is something that would only be utilized part of the year. There are already buses to Dodger Stadium and if more access is needed, maybe they should work on improving access without impacting a neighborhood with a huge eyesore that would be a waste of money. Take the money to be spent on this project and work on making the current system better. Don't build something that won't be used by anyone except on game days.

Deputy Executive Officer Cory Zelmer,

I am writing to voice my opposition to the Los Angeles Aerial Rapid Transit Project ("The Gondola" at Dodger Stadium).

There are many public transportation projects that need to be funded, and this gondola project is duplicative (there is already a bus) rather than expanding access where it currently is absent or underfunded. In general, there needs to be more of a transparent process with community input and feedback to determine priorities. P81-1

Deputy Executive Officer Cory Zelmer,

I am writing to voice my opposition to the Los Angeles Aerial Rapid Transit Project ("The Gondola" at Dodger Stadium). P82-1

This project will be dangerous for the community. I do a lot of work in the area as an organizer, and I can tell you that people are not truly informed about the impacts of this project. Chinatown has the second lowest AMI in the City after Skid Row. This is a community that needs investment in housing, grocery stores, and healthcare facilities!! A construction project in the neighborhood will have negative impacts, P82-2 especially in air quality for a community of majority-elderly residents. That's crazy! The meetings have also not been conducted in Cantonese, which is the main language spoken in the neighborhood. P82-3 Vietnamese is also spoken a lot in the area.

We all know that McCourt plans on developing the Dodgers parking lot so, will this really reduce traffic? P82-4 Or just displace it to another neighborhood? Chinatown cannot become a parking lot!! This will be devastating to the community. Do better! We need AFFORDABLE HOUSING, GROCERY STORES, AND HEALTHCARE FACILITIES for an aging community. Not this ridiculous project that will destroy the community and poison elderly residents!

PLEASE DON'T BUILD THIS! P82-5

Deputy Executive Officer Cory Zelmer,

I am writing to voice my opposition to the Los Angeles Aerial Rapid Transit Project ("The Gondola" at Dodger Stadium).

We have known how harmful Frank McCourt has been to this city for quite some time. Why are we allowing Metro to be the vehicle to move this gondola forward, and then turning around and calling this a "private" matter?

Frank McCourt's nonsense should not be allowed to be subsidized by this city. Even to just talk about the details of the project, you have to sign an NDA! This is unacceptable and a complete lack of transparency. END THIS PROJECT NOW.

Subject: Public Comment: Los Angeles Aerial Rapid Transit (LA ART) Project DEIR

Deputy Executive Officer Cory Zelmer,

I am writing to STRONGLY OPPOSE the Gondola to Dodger Stadium. We need actual transit infrastructure, not a vanity project for a sports team. This project would shift the burden of traffic and parking to the vulnerable community of Chinatown, and also lead to gentrification and displacement in that neighborhood. P85-1

To go forward with a project like this without a public proposal process or competitive bidding is an insult to the city. At a time that we're already struggling with corruption in city hall, to conceal details from the people shows that this is going to be a naked cash grab by developers. P85-2

Subject: Public Comment: Los Angeles Aerial Rapid Transit (LA ART) Project DEIR

Deputy Executive Officer Cory Zelmer,

I am writing to voice my opposition to the Los Angeles Aerial Rapid Transit Project ("The Gondola" at Dodger Stadium). Metro has a history of making important decisions behind a veil of privacy. This lack of transparency is again on display with this absurd proposal. From financing to ownership and operation nothing has been made clear to the public. What makes this is even more infuriating is that the public will probably be left holding the bag by a series of decisions they never got to interrogate or vote on. The gondola is a weird vanity project that neither the city nor the neighborhood needs. P86-1

Subject: Public Comment: Los Angeles Aerial Rapid Transit (LA ART) Project DEIR

Deputy Executive Officer Cory Zelmer,

I am writing to voice my opposition to the Los Angeles Aerial Rapid Transit Project ("The Gondola" at Dodger Stadium).

I am deeply concerned at the lack of transparency around what is being touted as a transit project but appears, functionally, to be a vehicle designed to serve and enhance the value of private lands owned by the McCourt family. It is unclear why any public funds whatsoever should be devoted to this project when they could be devoted to a long list of projects with genuine public benefits that would benefit me and many other Angelinos: fare-free transit; increased bus service; more frequent rail service; increased cleaning and repairs for all transit vehicles; and much more. This will have a direct impact upon me and my family as transit users whose transit system may well be weakened and impoverished by this project. P87-1

Perhaps even more troubling to me is the apparent constant demands from the chief organizers of this private gondola project to demand that everyone who interacts with them — including government agencies — sign Non-Disclosure Agreements, likely a violation of law, and undeniably a slap in the face to any sense of public trust. How are we know even basic information about this project? How much it will cost? How much of that cost will be borne by the public? Who will be responsible for cost overruns? Where will the support pillars go? Which communities will they disrupt, which people displace? As a resident of Los Angeles and a taxpayer, I am deeply concerned about how this will affect the finances and economy of my city, as well as my fellow residents. P87-2

Metro is moving forward with this project despite the lack of public interest or desire, beyond the McCourt family real estate empire, without competitive bidding, without community consultation or input.

This project has been embarked upon without proper due diligence. It is not a project that anybody, save the McCourts and their friends, wants. It should be stopped in its tracks and buried, never to be revived. P87-3

Sincerely,
Tony Weiss

Deputy Executive Officer Cory Zelmer,

I am writing to voice my opposition to the Los Angeles Aerial Rapid Transit Project ("The Gondola" at Dodger Stadium). P88-1

Metro went forward with this project without an open public process and without competitive bidding. I don't understand the ownership or operation of the project because the details have been hidden from the community. Who is paying for this project? Will taxpayers be left holding the bag? There has been 0 transparency. P88-2

The community has been neglected and our voices have not been heard. No one asked us our vision for our community.

We never asked for this project, this project is not need and has adds no benefit to the community. P88-3

Deputy Executive Officer Cory Zelmer,

I am in absolute opposition to the Los Angeles Aerial Rapid Transit Project ("The Gondola" at Dodger Stadium). This is a project that would destroy a community of people of color in the Chinatown area of Los Angeles. This is a project that is geared towards tourists and no one in the community asked for or wants this project. It is not needed and will do harm to poor communities and will displace the surrounding community that lives where this project would be constructed. This is another Chavez Ravine and if put forth will live in the same infamy of displacement, increasing number of homelessness, and mistreatment of people of color. Chinatown is a beautiful part of our city that should be respected and preserved, not bastardized with a facade of a metro project that will also eat into their budget when we need metro improvements that Angelinos HAVE asked for.

Deputy Executive Officer Cory Zelmer,

I am writing to voice my opposition to the Los Angeles Aerial Rapid Transit Project ("The Gondola" at Dodger Stadium). I don't believe that it will provide any additional benefits to the community. There is already a problem with housing and buying out properties to install the gondola would not be a good use of our resources. Additionally, there is already a free shuttle that is in use with a designated bus lane that goes through Sunset. As a resident that lives near Dodger Stadium, I understand that traffic congestion can get crowded but a research study done by UCLA acknowledges that the gondola would only limit traffic by 1%. The benefits do not weigh out the consequences. Please stop the construction of the gondola. P90-1

Deputy Executive Officer Cory Zelmer,

I am writing to voice my opposition to the Los Angeles Aerial Rapid Transit Project ("The Gondola" at Dodger Stadium). As a lifelong resident of the city of Los Angeles, I have seen many instances of the displacement of residents. This project would be another instance of this and increase the cost of living in this area. I also do not believe the gondola is necessary for the city, as free transportation already exists to Dodger Stadium. The funds would be better used elsewhere to help the people of Los Angeles. Deputy Executive Officer Cory Zelmer,

I am writing to voice my opposition to the Los Angeles Aerial Rapid Transit Project ("The Gondola" at Dodger Stadium). It will negatively affect so many communities, and there is so little research that justifies the funding and execution of this project. There has been a complete lack of transparency, and as a lifelong LA resident and Dodgers fan, I find this project to be a waste of taxpayer dollars. There has been little to no community input, and we?re heading into a recession; LA residents, especially those in affected communities, don?t want to spend money on a useless gondola. Put the money into improving the public transportation system in LA, and improving the lives of residents who rely on public transportation to support the local economy instead of trying to increase profit. It?s a scummy plan, and everyone so know vehemently opposes it. So who actually wants this? Because it doesn?t seem like local residents do.

Deputy Executive Officer Cory Zelmer,

I am writing to voice my opposition to the Los Angeles Aerial Rapid Transit Project ("The Gondola" at Dodger Stadium).

This is ultimately a money making project for the Dodgers and I am alarmed by the prospect that public money would be pulled from Metro's limited budget to fund it. As a resident of Los Angeles, I do not want my tax dollars used for private gain.

P96-1

The Dodgers already regularly violate the agreement they have with local residents about how many events happen each year and when. Now they want a city-funded project to enable them to do even more.

P96-2

This project was effectively fought by the local community in the past. Now it's just moved to another venue with new branding. It needs to be stopped now.

Supervisor Hilda Solis

Metro Board Chair

500 West Temple

Los Angeles, Ca 90012

RE: Los Angeles Arial Rapid Transit Project (LA ART)

Dear Ms. Wiggins and Honorable Metro Board Chair, Supervisor Solis:

I am writing to ask for your support for the Los Angeles Aerial Rapid Transit Project. LA ART.

I was raised and lived in Chinatown since 1963 in my local family business which continues to serve and support the Chinatown community.

Unfortunately, I can't say that for many of my neighbors. Many "mom and pop" businesses that were just getting by before the pandemic have now closed. We are slowly losing the fabric of Chinatown that once was the center of local Chinese American Culture. Our amazing restaurants, fabulous gift shops and Chinese Herb store, that always had a Chinese Doctor practicing acupuncture and herbal medicine, are now slowly going away.

Like many other areas of Los Angeles, Chinatown has had gentrification forced upon it. Families that once had a thriving business now face the reality that their business will never recover. These families are sitting on properties where the land value is worth more than the buildings. Having no choice but to sell, new projects are coming online from developers with no connection to the Chinatown community.

Many outside developers all know that Chinatown is the last bastion of affordable land that they can piece together to develop high end residential over commercial retail. I don't think this will ever stop, it's an unfortunate evolution of older neighborhoods having to change to survive. However, it need not be an inevitable one.

P97-2

I believe that the Gondola project will inject economic stimulus for the remaining businesses. Hopefully others will see those businesses thrive and incentivize previous business owners, as well as other local and community interests, to re-invest in Chinatown.

P97-3

This project has reached out to local people such as myself, to find out what we would like to see from them. There are many companies that never reach out to Chinatown and only reach out to us as an after thought.

I just finished a meeting with the Los Angeles Street Car project. They presented a plan to have the street cars run between 11st street to 1st street. On Hill and Broadway. I asked them why they didn't run the street cars to Little Tokyo, Olvera Street and Chinatown. If the plan was to encourage people to shop, eat and not drive cars. Then why weren't any of these three districts included? Why, because everyone forgets about us.

It is up to people like myself that have a passion for saving our communities to speak out, so that we can teach others about the history, beauty and contributions of Los Angeles Chinatown's culture and community. Hopefully this will have a positive affect in fighting discrimination and promote the survival, understanding and peaceful co-habitation of all the diverse cultures in the great city of Los Angeles.

P97-4

Thank you for taking the time to read my letter. Please feel free to contact me if I can be of further assistance regarding this project or future developments in Chinatown or surrounding areas.

Best Regards,

Peter Kwong

Dear Mr. Cory Zelmer,

I support the proposed zero-emission Los Angeles Aerial Rapid Transit Project (LA ART), connecting Union Station to Dodger Stadium. P99-1

The gondola would benefit visitors to Dodger Stadium and the community by taking cars off the road, increasing access to public transit, and reducing greenhouse gas pollution. Projects like these are important in addressing climate change and improving the quality of life for Angelenos.

And don’t add any of those redflex red light cameras scams. Not sure who took payola for the ones in canoga park down canoga ave. What a shame. Someone got bribed. P99-2

Sincerely,

Ray Melendez

Subject: Comment on Gondola aerial transit project

Mr. Zelmer and staff,

I would like to make comment on the proposed gondola project between Union Station and Dodger Station. This is not a viable project to serve the greater community of Los Angeles residents. Specifically: P107-1

1. It is a for-profit company requesting the project, to be subsidized with taxpayer dollars and will benefit a relatively small percentage of the population. It will cost users considerable money to use the service, unless they hold Dodger tickets. This does not make the service accessible to those on limited incomes, rather only those who can afford Dodger tickets or the fare. P107-2

2. It serves a very limited community of people, specifically Dodger baseball fans and some communities along the route. They have other options such as the free Dodger buses during baseball season, and other Metro buses and trains. P107-3

3. Metro dollars would better serve ALL the communities within Los Angeles by making improvements in current Metro bus and train lines. Adding more frequent service, doing a better job at providing safe stations and vehicles, expanding the Metro Micro project, and improving overall cleanliness. P107-4

4. This would not necessarily reduce traffic and emissions. If it becomes a tourist or local novelty attraction, people will drive to the stations on the gondola route, impacting congestion and parking in surrounding neighborhoods, and not really reduce emissions overall. The sorry state of cleanliness and safety on bus and train lines discourages many people who might consider using current public transit to connect to a gondola station. The gondola will not attract more regular transit riders. We should invest in making our current transit work for those who have no options and must take public transit to their jobs, schools, medical appointments, and more. P107-5

5. It would be unsightly, looming over the State Historic Park, and the light, noise and mechanisms would impact wildlife, especially bird life. These elements would also impact the experience of park users and residents of adjacent communities. P107-6

Again, please don't invest taxpayer dollars into a project with limited benefit to the overall Los Angeles community. P107-7

Thank you for your consideration.

Subject: Comments on LA ART Gondola

Please do not approve the LA ART Gondola.

This project would bring negative consequences to the neighborhoods it would be built in, from noise pollution, disruptive land use and displacement of residents and businesses, to the gentrification of the communities. Furthermore, all that disruption is unnecessary: A far better solution to improve public transit to Dodger Stadium would be to increase the scale and reach of the Dodger Express bus shuttle routes. This solution can be made sustainable with an all-electric bus fleet, an investment that would cost far less, and be a much easier and more effective solution, in every way, than the LA ART Gondola.

Subject: Draft LAART EIR comment

Hi Cory,

Hope you're doing well. Quick two cents on the Dodger gondola from somebody who's business it absolutely isn't:

Cool project, but 100 event days out of 365 calendar days seems like a low ratio. Would be a shame to have such a great piece of infrastructure with such frequent service to a site that certainly has some high peaks, but also has a lot of valleys. With that in mind is it possible to adjust the project to attain higher and more consistent ridership? P112-1

1- Is there a way to implement a condition that the Dodgers redevelop at least some of the parking with a mix of housing (potentially affordable) and other uses? This would potentially reduce the peak event parking and traffic load (addressing some of the air quality and congestion concerns) and provide a more consistent source of ridership on the 265 non-event days each year. P112-2

2- Is there a way to extend the alignment westward to serve Echo Lake? Possibly this involves second or third phases, but critically, locating and designing the stadium gondola terminal in a way that allows for future extension seems like it would be prudent, as one never knows, and it could allow for better service to Echo Lake (which is a bit off the transit track otherwise) and a potential link to the red and purple lines at MacArthur park, making access to Dodger Stadium more convenient from that direction. Pictured below (X is deleted stadium terminal, O is new stadium terminal location; think the lines mostly stick to public right-of-way): P112-3

[image: image.png]

Hope you're enjoying the project and have a good holiday season ahead.

Subject: I support zero-emissions transportation in Los Angeles

Dear Mr. Cory Zelmer,

I support the proposed zero-emission Los Angeles Aerial Rapid Transit Project (LA ART), connecting Union Station to Dodger Stadium.

The gondola would benefit visitors to Dodger Stadium and the community by taking cars off the road, increasing access to public transit, and reducing greenhouse gas pollution. Projects like these are important in addressing climate change and improving the quality of life for Angelenos.

P116-1

In addition, the goals of 35% for local, small, diverse, dvbe and lgbtq is a goal that Metro is also moving towards with their 48x28. They help with economic recovery and that is what we want for our communities.

P116-2

Sincerely,
[name]

Subject: Dodger Stadium Gondola Project - Public Comment

Hello,

My name is Casa Wilson, and I live at 419 Solano Avenue near Broadway. I'm writing to provide public comment on the proposed Dodger Stadium Gondola Project.

As a resident of this neighborhood, I am vehemently opposed to this project and very concerned that it's being pushed through with a private company that has links to Dodger Stadium and the McCourt family.

Although there seem to be very few details about the project, these ones concern me:

P120-1

1. The project would require the construction of those stations, a junction and a few towers, which Metro's EIR states "would result in significant and unavoidable impacts related to noise and vibration." Where? For how long?

P120-2

2. The project serves ONLY Dodger Stadium and, for the most part, baseball fans which already have a free transit option (the buses that run from Union Station). As the California Endowment has pointed out, this is a tourist stunt, not an actual, viable transit option that will widely serve the community. I imagine it will also go empty for half the year when there are no Dodgers games!

P120-3

3. The apparent conflict of interest between Drew McCourt's company and his family's ties to the Dodgers and the stadium

P120-4

4. The invasion of privacy for the residents of Chinatown and Solano Canyon. We're already facing a possible high rise apartment building development at the end of our street on Broadway (funded by another wealthy, connected L.A. family that owns the San Antonio Winery) that will bring more traffic and people to our quiet neighborhood. A gondola will mean that even the skies around our homes are taken up by money-grabbing developers, their projects, and their pollution.

P120-5

5. No details about what will happen to Radio Hill and the unhoused population that live there and if it will still be accessible to the residents of this neighborhood who hike there.

P120-6

6. The fact that, once again, this neighborhood is being destroyed and sidelined in service to a baseball team, of all things. It seems like an especially audacious move, considering the history of how Dodger Stadium was built and the people who lost their homes for its construction.

P120-7

7. I've lived on both the Echo Park side and the Chinatown side of Dodger Stadium. The difference is stark and runs along class lines. When I lived on the Echo Park side, there were times I had to show my drivers license to even be allowed to enter the street I lived on on game days. On the Chinatown side, there are traffic cops that wave Dodger fans onto our tiny residential streets, despite the fact that there are signs all over the place that say "No Dodger Traffic Allowed" and "Local Access Only." To me it's clear that this gondola project is just another example of the disregard Dodger Stadium and the city of Los Angeles has for working class neighborhoods of non-native English speakers. There is no chance that a project like this (basically running buses over our heads on a daily basis for hours at a time) would be allowed or even considered in a wealthy,

P120-8

gentrified neighborhood like Echo Park, and yet, it's being pushed through on our side with almost no public comment.

cont'd P120-8

8. I'm also concerned about more Dodgers Fans flocking to our neighborhood to ride the gondola. My apartment is next to an alley and the Cordoba Corporation parking lot. Every single game day, we deal with Dodgers fans getting out of their cars to urinate on our house and in the alley. Now they'll be over our heads, too.

P120-9

9. What kind of light pollution should we expect from this project? If the gondolas are running after games or other events, does that mean we can expect a lit up transit system shining into our homes all day and night? Will it be lit 24-hours a day?

P120-10

Please consider that there are so many downsides for the people who live here and all in service of taking some baseball fans up a hill.

Please end this project. I'm cc'ing Eunisses Hernandez's website on this, as well, with the hope that she'll receive it as our new city council representative.

P120-11

Thank you,

Casa Wilson

One Gateway Plaza, Mail Stop 99-22-6
Los Angeles, CA 90012

Re: Los Angeles Aerial Rapid Transit Project

We would like to express our enthusiastic support for the proposed LA ART gondola system connecting Los Angeles Union Station and Dodger Stadium.

Leitner Poma has extensive experience as a manufacturer, as an operator, and investor in the cable-hauled mass transit sector (both for mountainous and urban environments). We feel confident that the Los Angeles Aerial Rapid Transit (LA ART) project would substantially enhance the safety and the reliability of public transit throughout the area, while enhancing the sustainability of public mass transit and featuring among the lowest cost per mile metrics.

To achieve the benefits of the technology, a capable and dedicated team is required. Our group has been able to work alongside the LA ART team during their planning process and can confirm that LA ART has assembled a highly competent team that has put forward a thoughtful plan that is feasible and buildable.

Furthermore, a gondola system is the ***safest*** and ***most reliable*** public transportation system for the route.

Safety is the most prominent feature of an aerial gondola. Indeed, a 2022 report of PWC (https://www.pwc.de/de/branchen-und-markte/oeffentlicher-sektor/pwc-studie-urbane-seilbahnen-im-oepnv.pdf) highlights the following: P123-1

- Aerial ropeways feature 1 accident occurring every 10,563,000 miles travelled
- In comparison, street cars display 1 accident every 139,808 miles, and buses have 1 accident every 382,764 miles.

Amongst our approx. 80 urban ropeways built worldwide, we have never experienced any major accidents nor vertical evacuations.

Gondola systems are extremely reliable, as the closed-loop system guarantees delay-free transportation on a uniform schedule with minimal wait times. Moreover, 3S (tricable) ropeways are designed for high passenger capacities allowing for hassle-free peak day / hour transportation, even during busy game days or events at the Stadium. Additionally, aerial gondolas have the capability to operate during windy days and at wind speeds of up to 62 MPH (dynamic wind pressure of 400 Pa), dramatically increasing the reliability of public transportation between Union Station and Dodgers Stadium. Leitner Poma has more than a century of experience in the cable transportation field, with more than 11,000 ropeways manufactured and installed

LEITNER POMA

(970) 241-4442 • FAX (855) 835-0073 • www.leitner-poma.com

We Move People

worldwide, in ski resorts, entertainment, and urban settings. We have pioneered gondolas to be used for public transportation, with approximately 80 systems built across the world, including:

- Roosevelt Island Tramway in NYC
- Teleo 3S in Toulouse
- Cablebùs 2 in Mexico City
- Metrocable lines in Medellin

All of our ropeways have an availability rate of 99.9%. Some relevant examples include, but are not limited to:

- Zermatt 3S gondola on 12,700ft alt. in Switzerland, featuring a rope span of 1.7 miles between two towers, enduring wind speeds of up to 62 MPH on a daily basis https://www.youtube.com/watch?v=wPkAcAMgYoc.

- Cablebus 2 gondola in Mexico City, which is the longest urban ropeway project on the planet, built on an earthquake-prone area without experiencing any disruption to the transit service (recently, an earthquake of the magnitude of 6.8 struck the area, without any disruption to the system besides a brief safety stop).

- Toulouse 3S gondola which resembles the environment and use of the LA ART project, where our Group installed a tricable gondola to transport passengers from the Sabatier University (intermodal transit hub, connected to the local subway line) to the hospital (middle terminal) and the cancer research center Oncopole (end terminal) https://www.youtube.com/watch?v=EaDMDXp6df0.

cont'd P123-1

In closing, we think the justifications for the gondola are many, and would expand as this new mode of transit gains traction and acceptance in the community. This is a positive change to typical American transit modes, and Los Angeles is poised to lead this shift toward a more efficient and sustainable zero emissions future.

Sincerely,

Daren Cole
President

Subject: Proposed Aerial Gondola Project

Dear Mr. Cory Zelmer,

I am writing to express my support for the proposed aerial gondola project, as it carries significant benefits in terms of reducing traffic. The aerial gondola is a great alternative to driving and will provide a reliable alternative to clogged highways and congested streets in Los Angeles. By taking cars off of the roads, we can significantly reduce air and noise pollution, as well as improve the flow of traffic in our city.

By switching to renewable resources, we can help slow the effects of climate change and contribute to a healthier, cleaner, and more sustainable Los Angeles. I enthusiastically support the Los Angeles aerial gondola project and hope that you will give it due consideration.

Sincerely,
Lauren

Subject: Public Comment Re: LA ART Gondola

Hello,

I was in attendance for tonight's Zoom hearing regarding the LA ART proposed gondola. I believe the Cantonese interpreter padded one of the Chinese comments in his English translation.

This comment was given around the *6:49pm mark*. As a Cantonese speaker, I heard the caller say simply "I support the gondola. It is good for Chinatown." The interpreter then translates this to English saying she said "I support the gondola. It is good for local business." Which is not what the woman said and not the point she made.

I request you review all the Chinese verbal comments for this kind of inaccuracy. This is the second time I've experienced unfair treatment through the Chinese interpreters from LA Metro.

P133-1

On Dec 10 at the Union Station hearing, I was in attendance with Cantonese seniors who submitted written public comment. The Cantonese interpreter at the front desk read one of these comments, came up to me afterwards, and said, in Chinese, that the comment was ineligible. That the senior "misunderstood" the project because her concern regarding affordability in the neighborhood did not apply. I asked him if he would still accept it, and he said yes, as he should have without question to begin with. I still do not understand why he did that as I find this unethical — to give this "feedback" knowing others around us could not understand him — but it did give me insight into what LA Metro considers "eligible" concern.

I hope you will look into all of this, and realize how misguided this project is, from its very idea as a transportation solution, to the very conduct of the people who are supposed to provide accessibility.

P133-2

Thanks,

Juniper

Subject: Comment on Gondola Project

Dear Metro,

I support the Gondola project, and I appreciate the goal of 35%, it's unprecedented for local, small, diverse, and DVBE businesses. We need economic recovery and this project can help. P135-1

Ultimately though, I'm not sure the path is the best path considering all the opposition to the project - especially from residents in the proposed area. I should be considered that the best path is not always a straight line. Additionally, the start and end location should be optimal locations. The path should be designed in a way that does not impede on residential peace, and the natural landscape, but will still add value to the City of Los Angeles. P135-2

I propose that we include an analysis study for optimal path in the EIR.

My firm is ready and able to perform and deliver on this analysis to be included in the EIR.

Please don't hesitate to contact me for further discussion.

Subject: STOP THE GONDOLA!

For heaven's sake!
Again, a billionaire wants a new ridiculous toy in his name and the city swallows all the green-washing hook, line & sinker and gets excited for another over-blown project which will NOT do what it promises to! P136-1

Frank McCourt is selling you a lie. You really think a veeery slow-moving gondola is going to solve traffic problems to the Dodger games? When people have to drive and park at the stations? After the first game, when the over-priced novelty wears off, no one is going to take the extra time to stand in a gondola line possibly for over an hour, especially when they have to do the same thing in reverse when they're ready to just get home after the game. It will not be used! You will waste our precious open space, tax-payer money and invaluable environment for nothing if you go through with this horror! P136-2

Here the most important fact you should think of every time you have a stupid development plan in front of you:
In the last 50 years, the world has lost two-thirds, (2/3, or 60%) of our wildlife due to development and ruination of habitat. (https://www.worldwildlife.org/press-releases/69-average-decline-in-wildlife-populations-since-1970-says-new-wwf-report <https://www.worldwildlife.org/press-releases/69-average-decline-in-wildlife-populations-since-1970-says-new-wwf-report>)

We cannot afford frivolous, wasteful, vanity developments like this stupid gondola! At some point, we HAVE to stop being so greedy and short-sighted. This thing will disrupt wildlife all around this development, halting mating seasons, causing more undue stress on animals, causing the permanent loss of local wildlife. It will become a giant eyesore, destroying countless vistas from all over LA, including from some of our most beloved jewels of the city. P136-3

We have to learn to treat our city with grace. This kind of ego-driven monster is a God-awful idea, presented by highly-skilled shysters who want you to believe their gold-digging is for your own good.

PLEASE STOP THE @#$%& GONDOLA. P136-4

Re: Comment Letter on the Draft EIR for the Los Angeles Aerial Rapid Transit Project

Dear Mr. Zelmer:

DLA Piper LLP (US) represents Chinatown Station Owner LLC ("CSO"), and is submitting this comment letter on CSO's behalf. CSO owns the properties located at 129-135 West College Street and 924 North Spring Street, Los Angeles, California (collectively, the "Property"). The Property is a 4.9-acre site located immediately adjacent to the proposed Chinatown/State Park Station for the proposed Los Angeles Aerial Rapid Transit Project ("Project") sponsored by LA Aerial Rapid Transit Technologies LLC ("Project Sponsor"). In March of 2019, the City of Los Angeles ("City") approved the Property for development of a seven-story building containing a maximum of 725 multifamily residential units and 51,600 square feet of commercial uses. All litigation challenging that approval has either been settled or finally concluded in the City's and CSO's favor, and development of the Property is proceeding. P140-1

The Draft Environmental Impact Report dated October 17, 2022 ("Draft EIR"), prepared on behalf of the Los Angeles County Metropolitan Transportation Authority ("Metro") as lead agency for the Project, is defective under the California Environmental Quality Act ("CEQA," Pub. Res. Code, §§ 21000 et seq.) and its companion regulations ("CEQA Guidelines," Title 14, Cal. Code Regs., §§ 15000 et seq.) for the following reasons. P140-2

Metro's Draft EIR fails to fulfill its statutory purpose as an informational CEQA document. It does not adequately describe the Project, leaving key elements unspecified and consequently unexamined. It P140-3

improperly engages in a piecemeal review rather than analyzing the impacts of the entirety of the true Project, and fails to consider how the Project reviewed in the Draft EIR is a part of, or precursor to, a future environmentally impactful project planned by the Project Sponsor including, without limitation, the redevelopment of the area on and surrounding the Dodger Stadium parking lot. The Draft EIR also unlawfully fails to address, much less analyze, the cumulative impacts of the Project together with this future project, and their potential growth-inducing impacts.

cont'd
P140-3

The Draft EIR not only fails to adequately describe and analyze the whole of the Project, its Project Description is also inadequate, unstable and missing material information. As more fully set forth below, the Draft EIR fails to adequately analyze impacts related to Air Quality, Historic and Archeological Resources, Noise, Transportation, and Aesthetics, and its mitigation measures are legally invalid under CEQA, for the reasons described below.

P140-4

Metro is obligated by law to revise the Draft EIR to consider the impacts of the entirety of the true Project, and recirculate the Draft EIR, before considering its approval.

I. THE DRAFT EIR INCLUDES AN INADEQUATE PROJECT DESCRIPTION

The definition of the project analyzed in an EIR is critical to the sufficiency of that EIR under CEQA. "An accurate, stable and finite project description is the *sine qua non* of an informative and legally sufficient EIR." (*County of Inyo v. City of Los Angeles* (1977) 71 Cal.App.3d 185, 193 ("*County of Inyo*") (italics in original).) "'Project' means the whole of an action, which has a potential for resulting in either a direct physical change in the environment or a reasonably foreseeable indirect physical change in the environment…." (CEQA Guidelines, § 15378.) The definition of the project must include not only the activities to be undertaken immediately, but also all "'reasonably foreseeable' future activities related to the proposed project." (*Vineyard Area Citizens for Responsible Growth, Inc. v. City of Rancho Cordova* (2007) 40 Cal.4th 412, 428 ("*Vineyard*"); *Laurel Heights Improvement Assn. v. Regents of University of California* (1988) 47 Cal.3d 376, 396.

P140-5

An EIR is prepared under CEQA to describe and analyze the significant environmental effects of a project and discusses ways to mitigate or avoid the effects. (Id., § 15362.) The EIR's analyses must encompass all facilities and components necessary to the project. (*Santiago County Water Dist. V. County of Orange* (1982) 118 Cal.App.3d 818, 829-831 ("*SCWD*").) The EIR's project description cannot include a broad list of project purposes, some of which are never analyzed in the EIR. (*County of Inyo v. City of Los Angeles* (1981) 124 Cal.App.3d 1, 6 ("*County of Inyo II*").) If an EIR contains a project description that is unstable, or that fails to include components, facilities or actions integral to the project, or if the EIR fails to assess the potential impacts of purposes or components of the project included in the project description, the EIR's analyses and conclusions are undermined and the EIR is rendered invalid under CEQA. (See, e.g., *Vineyard*, supra, at p. 429; *Santiago County Water Dist.,* supra*,* 118 Cal.App.3d at 829-831; *County of Inyo II*, supra.)

P140-6

A. THE PROJECT DESCRIPTION IS UNSTABLE

As described in the Draft EIR's Section 2.0, *Project Description*, the Project has two overall purposes: (1) to provide an aerial rapid transit option for people traveling from Union Station to events at Dodger Stadium (p. 2-42), estimated at only approximately 100 events per year (Section 2, *Project Description*, p. 2-10), and (2) to provide transit access for visitors to the Los Angeles State Historic State Park, and for commuters and residents in neighborhoods along the Union Station/Dodger Stadium route, including Elysian Park, Solano Canyon, Echo Park, Mission Junction, Chinatown and El Pueblo (Section 2, *Project Description*, pp. 2-13, 2-42). The Draft EIR explains that the Project is needed to reduce traffic congestion and associated pollution in and around Dodger Stadium and in the communities along the Project's alignment, which are "disproportionately burdened with multiple sources of pollution." (Id., p. 2-10.) To serve these two purposes, the Project would operate daily from 6:00 a.m. to 12:00 a.m. (Id., p. 2-42)

P140-7

However, both logic and the statements and analyses in the Draft EIR demonstrate that the actual Project intended by the Project Sponsor is narrow – simply and only limited to the first purpose of replacing

P140-8

vehicle trips to Dodger Stadium with the Project for the 100 events per year. To the extent that the Draft EIR's analyses broaden to analyzing the Project's purported second goal of expanding transit service to the surrounding communities, the Draft EIR is defective for failing to provide a consistent and accurate Project Description. As the *County of Inyo* court noted, "[a] curtailed, enigmatic or unstable project description draws a red herring across the path of public input." (*County of Inyo*, supra, 71 Cal.App.3d at 197-198.)

cont'd P140-8

Turning to logic first, the Project is not needed either to transport people to 100 events per year at Dodger Stadium, or to travel a route that currently is generally traveled by the Gold Line. The Gold Line already provides a transit option to alleviate traffic congestion and associated pollution for persons living in Chinatown and Mission Junction; similarly, transit options available at Union Station already serve the El Pueblo neighborhood. Nor could the Project provide a transit option at Dodger Stadium for persons living in the Elysian Park and Solano Canyon neighborhoods, despite the Project Description's representation (p. 2-10); to the contrary, as disclosed at page 2-39 and in Section 3.17, *Transportation*, at page 3.17-26, the Project and its Dodger Stadium Station cannot provide connectivity to the Elysian Park and Solano Canyon neighborhoods because there is no assurance that the Project Sponsor would be able to negotiate the necessary "potential mobility hub" in the future at Dodger Stadium. Without that mobility hub, there is certainly no need for the Project to operate daily from 6:00 a.m. to 12:00 a.m. to serve a non-existent transit option for the neighborhoods near Dodger Stadium. Similarly, the Project would not serve Echo Park or Mission Junction as there are no proposed stops in those neighborhoods.

P140-9

P140-10

Therefore, logically, the Project is only needed to transport people to Dodger Stadium, as a transit option that can "overcome grade and elevation issues" (Section 2.0, *Project Description*, p. 2-12). As such, there is no need for the Project to operate daily from 6:00 a.m. to 12:00 a.m. and to build a Chinatown/Los Angeles State Historic Park station and associated "amenities" in the park ("Chinatown Station").

P140-11

Although the scope of the Draft EIR's analyses varies from broad to narrow, much of the Draft EIR's content is limited to assessing the impacts of the narrow Project, focused only on the impacts of a Project

P140-12

that would eliminate vehicle trips to Dodger Stadium. The majority of the Purpose and Need section of the Project Description discusses the history of Dodger Stadium, its configuration, and its traffic congestion, with only one paragraph devoted to purported unserved neighborhood transit needs. (Section 2.0, *Project Description*, pp. 2-10, 2-12.) The Project Description lists 13 Project Objectives, seven of which explicitly address reducing vehicle trips to and congestion at and around Dodger Stadium; the majority of the remainder address the benefits of the sustainability and route of the gondola, itself. (Id., pp. 2-12 – 2-13.)

cont'd P140-12

Many of the critical impact analyses in the Draft EIR are similarly limited assessing the effects of the Project at Dodger Stadium, without regard to the effects of providing transit to and reducing congestion and pollution in the communities along the Project's route. For example, the analysis of the Project's operational air quality impacts in Section 3.3, *Air Quality*, uses mobile source baseline information consisting of the 2019 "vehicular emissions associated with games and special events associated with Dodger Stadium resulting from passengers and vehicles traveling to the game along with employees" (p. 3.3-22). Similarly, the greenhouse gas ("GHG") emissions reduction analysis in Section 3.8, *Greenhouse Gas Emissions*, also focuses exclusively on Dodger Stadium (pp. 3.8-17 - 3.8-18). The technical reports supporting both sections clearly state that the operations scenarios assume, for mobile source emissions:

P140-13

> "the availability and use of the gondola system would decrease the number of people traveling to Dodger Stadium (and surrounding areas) in passenger vehicles and increase the number of people using transit. This shift in transportation mode would reduce total VMT and vehicle idling time in and around Dodger Stadium, associated with passenger vehicles."

(Appendix D, *Air Quality/Health Risk Assessment*, p. 23; Appendix J, *GHG*, p. 25.) The GHG Section uses the same 2019 mobile source baseline information from Dodger Stadium and future mobile source estimates that the Air Quality Section used. (See Section 3.8, p. 3.8-x; Appendix D, AQ-J, p. 25.)

By contrast, in Section 3.17, *Transportation*, the Draft EIR's analyses broaden to include the Project's purported second purpose by, among other things, estimating future ridership from the neighborhoods along the Project's alignment and from tourists (pp. 3.17-25 – 3.17-26).

P140-14

The Draft EIR's shifts between analyzing different project descriptions proves that the Draft EIR's Project Description is unstable and, therefore, that the Draft EIR fails under CEQA "as a vehicle for intelligent public participation." (*County of Inyo*, supra, 71 Cal.3d at pp. 197-198.) P140-15

B. THE PROJECT DESCRIPTION IS MISSING KEY INFORMATION

The Project Description also omits and fails to adequately describe key elements of the Project, the omission of which leads to a failure to assess the Project's full impacts. For example, there is no depiction of the Project's profile in Project Description – no information regarding how the Project's stations and towers will appear, how high the stations and towers will be, how high the gondolas would run, and the ascending and descending heights of the gondolas as they depart from and approach the stations. The only depiction of this critical information is buried in an appendix, Appendix Q, *Proposed Alignment Plan and Profile*. The profile is included as the final page of this appendix and provides critical information regarding the height from which the gondolas would be descending into the Chinatown Station and the height to which the gondolas would be ascending from the Chinatown Station. This information, in turn, directly affects the level of impact on the future residents of the Property, particularly the noise and aesthetics impacts. On "game days," when the gondolas would be running every 23 seconds, these impacts would be significant; however, the Draft EIR fails even to consider them. P140-16

As another example, the Project Description mentions in passing that the gondolas would "be equipped with privacy glass that can become opaque while adjacent to sensitive views." (Section 2.0, *Project Description*, p. 2-18.) "Privacy glass" and "sensitive views" are not defined and nothing further is said. However, this statement tacitly acknowledges that the Project would significantly adversely affect sensitive land uses and receptors – including the future residents of the Property. Also buried in an appendix, Appendix M, *Noise and Vibration Report*, again as the final page of that appendix, is the information that the gondolas would run just 35 feet from the windows of the Property's residents. Gondolas filled with up to 40 persons running by the windows of the Property's residents every 23 seconds on "game days" would create a P140-17

significant environmental impact on those residents (as well as an invasion of privacy) that is not analyzed in the Draft EIR. The omitted information regarding the privacy glass, how and when it would become opaque while adjacent to sensitive views, and what would be considered to be sensitive views is critical to both a legally sufficient Project Description and a comprehensive analysis of the Project's impacts under CEQA, even under the limited scope of the Project addressed in many of the Draft EIR's sections. P140-18

Additionally, the Project Description fails to disclose that the Project is relying heavily on what the Draft EIR admits are uncertain ridership projections for tourists to justify the planned 6:00 a.m. to 12:00 a.m. schedule. While the Project Description does list tourists among the list of expected ridership sectors (Section 2.0, *Project Description*, p. 2-42), the Draft EIR discloses fundamental uncertainties regarding this sector. The existence of this ridership sector would depend on the Project "capturing a share of the existing tourism in Los Angeles;" and the size of this sector "would not be consistent on a daily basis and would be variable depending on the seasonality of tourism in Downtown Los Angeles" and further, on game days, game day riders with pre-paid timed tickets on the gondola would have priority boarding over tourists. (Section 3.17, *Transportation*, p. 3.17-25.) Even so, Table 3.17-4 in Section 3.17, *Transportation*, discloses that the Project is relying on *substantial* projected tourism-generated ridership to support it: P140-19

- 2,575 tourism-generated riders to the Dodger Stadium station on a low weekday in both 2026 and 2042, as compared to
  - 1,225 neighborhood riders to *all* destinations in 2026 and
  - 1,625 neighborhood riders to *all* destinations in 2042;
- 3,570 tourism-generated riders to the Dodger Stadium station on a low weekend day in both 2026 and 2042, as compared to
  - 720 neighborhood riders to *all* destinations in 2026 and
  - 920 neighborhood riders to *all* destinations in 2042

The tourism-generated ridership numbers are ostensibly supported by Appendix N, *Transportation*, but a reader searching for that support must look farther to an attached four-page report prepared by HR&A Advisors, Inc. ("HR&A"). HR&A's report purports to estimate the likely number of tourists who would utilize the gondola per year; while this report lists a number of gondolas and trams currently operating worldwide and purports to separate the commuter ridership from the tourist ridership for each and to identify the characteristics that attract tourists, at the end, the report's estimate that 915,000 tourists would use the Project per year is based on an undisclosed calculation. (Appendix N, HR&A Analysis, p. 4.) As such, this estimate constitutes mere speculation and unsubstantiated opinion and narrative. Moreover, the Draft EIR cannot rely on information "buried in an appendix" to carry out its obligation under CEQA to inform the public. (*Santa Clarita Organization for Planning the Environment v. County of Los Angeles* (2003) 106 Cal.App.4th 715, 722-723 (holding that an EIR is inadequate where information "is scattered here and there in EIR appendices.").) P140-20

The Project cannot justify its 18-hour schedule and Chinatown Station, much less its significant and unmitigated impacts as discussed below, with ridership figures that are inflated with uncertain and speculative tourism-generated numbers. Further, as discussed above, the neighborhood ridership numbers are also speculative, particularly since the Project does not contain a mobility hub at the Dodger Stadium station on which the currently unserved neighborhoods would depend. Moreover, even if the tourism-generated ridership numbers were considered valid, those riders are expected to travel to the Dodger Stadium station, only, which assumption again demonstrates that the Project has only a single purpose – the development of a gondola between Union Station and Dodger Stadium to eliminate vehicle trips to Dodger Stadium. P140-21

As discussed further below, the Project Description also omits a critical portion of the Project that is planned as a later phase, the impacts of which must be analyzed as part of the Project or otherwise in conjunction with the Project's impacts. (*Citizens Assn. for Sensible Dev. of Bishop Area v. Cty. of Inyo* (1985) 172 Cal.App.3d 151, 165-166.) The Project Description also refers to, but omits, Figures 2-30 through 2-32. P140-22

The omissions from the Project Description carry through into each of the environmental impact discussions in the Draft EIR, rendering the analysis of each topic addressed invalid in the absence of sufficient information about the Project. Without these critical facts about the Project itself, the Draft EIR fails as an informational document. It fails to conduct a valid CEQA analysis of the potential environmental impacts caused by the Project, and likely fails to identify potentially significant impacts. The description of the Project is the foundation of the Draft EIR. The fact that the Project Description here is fatally inadequate is sufficient to invalidate the entire Draft EIR. (*See San Joaquin Raptor/Wildlife Rescue Center v. County of Stanislaus* (1994) 27 Cal.App.4th 713, 729-730 (EIR set aside for failure to analyze the whole project).)

P140-23

II. THE DRAFT EIR'S PROJECT DESCRIPTION ENGAGES IN IMPROPER PIECEMEALING AND FAILS TO CONSIDER CUMULATIVE AND GROWTH-INDUCING IMPACTS

The requirements of CEQA cannot be avoided by piecemeal review that results from "chopping a large project into many little ones-each with a minimal potential impact on the environment-which cumulatively may have disastrous consequences." (*Bozung v. Local Agency Formation Com*. (1975) 13 Cal.3d 263, 283–284.) Such segmented, or "piecemealed," environmental reviews also "eliminate the opportunity to mitigate interactive impacts effectively." (*Tuolumne County Citizens for Responsible Growth v. City of Sonora* (2007) 155 Cal.App.4th 1214, 1230-1231.) A CEQA document must define the scope of a project to include future phases or expansions where: (1) they are reasonably foreseeable consequences of the initial project; and (2) the future phase or expansion will be significant in that it will change the scope or nature of the initial project or its environmental impacts. (*Laurel Heights Improvement Assoc. v. Regents*, supra, 47 Cal.3d at p. 396.) Courts have also established that an activity falls within the scope of a project if it is among "various steps which taken together obtain an objective" (*Tuolumne County Citizens*, supra, at p. 1226), or if the activity is a crucial functional element of the larger project such that, without it, the larger project could not proceed (*San Joaquin Raptor/Wildlife Rescue Ctr. v. County of Stanislaus* (1994) 27 Cal.App.4th 713, 731,-732).

P140-24

Additionally, CEQA requires an analysis of the "cumulative impacts" from interconnected or related projects. (CEQA Guidelines § 15355; *Las Virgenes Homeowners Federation, Inc. v. County of LA* (1986) 177 Cal.App.3d 300, 306.) "The cumulative impact from several projects is the change in the environment which results from the incremental impact of the project *when added to other closely related past, present, and reasonably foreseeable probable future projects*. Cumulative impacts can result from individually minor but collectively significant projects taking place over a period of time." (*Los Angeles Unified School Dist. v. City of Los Angeles* (1997) 58 Cal.App.4th 1019, 1024-1025 (emphasis added).) CEQA also requires an analysis of "growth-inducing impacts," which assesses the ways in which a project could foster economic or population growth, or future residential or commercial, either directly or indirectly, in the surrounding environment. (CEQA § 21100(b)(5).) P140-24

The Draft EIR fails to recognize that the Project is, in reality, a component of a larger plan to redevelop the current parking lot at Dodger Stadium into a different use and to assess the potential impacts of the whole of that Project. The Draft EIR's Project (whether narrowly or more broadly defined in the Draft EIR) is simply the first step in the true Project – eliminating the parking lot to make way for the redevelopment. Evidence of this plan has been in the public domain for more than a decade. P140-25

The Project Description generally describes the Project as an aerial gondola system, spanning only approximately 1.2 miles, consisting of cables, three passenger stations, a non-passenger junction, towers, and gondola cabins. (See, e.g., Section 2.0, Project Description, pp. 2-1.) However, the DEIR fails to disclose that the owner of the Dodger Stadium parking lot has plans to build a significantly larger project to redevelop the area on and around the parking lot with a museum, shops and parking garages. (See Exhibit 1, *Dodgers remains fans of football & real estate development,* The Eastsider, dated February 25, 2022.) [According to published reports, a court filing reveals that the Dodgers have a $500 million redevelopment plan that would be serviced by the Project, and even the long-term lease agreement for the parking lot includes provisions for future plans for Dodger Stadium, including the development of offices, shops and entertainment uses. P140-26

(*See* Exhibit 2, *Tear Up the Dodger Stadium Parking Lot*, Legal Planet, dated November 2, 2018.) A prominent architecture firm even describes and advertises on its website the Dodgers plans to build a new urban plaza, office building and interactive museum. The development plan boasts a new eight level, 900 car parking structure and a series of food service/retail concession clusters. (*See* Exhibit 3, available at: https://johnsonfain.com/projects/architecture/commercial/la-dodgers-stadium-next-50/.) Here, the Draft EIR fails to analyze, much less even mention, the anticipated future uses at the Dodger Stadium parking lot and the likely effects of those uses, that the Project would make possible. P140-27

Further, while the Draft EIR addresses growth-inducing impacts, its discussion is narrowly focused on whether the Project would induce population growth or residential development, and completely ignores the language in Section 15126, subdivision (e) instructing that "the characteristics of some projects which may encourage and facilitate other activities that could significantly affect the environment, either individually or cumulatively" should also be discussed. (CEQA Guidelines, § 15126(e).) The Project would clearly "encourage and facilitate" the future plans to redevelop the Dodger Stadium parking lot with commercial uses, and the potential impacts of that future component of the Project should have been assessed. P140-28

The failure of the Draft EIR to address and analyze the impacts of the Project together with this foreseeable future project as either being part of the Project, or as "closely related past, present, and reasonably foreseeable probable future projects" creating cumulative impacts, or under the Project's growth-inducing impacts, is a fundamental violation of CEQA that infects each of the Draft EIR's impact analyses and renders the Draft EIR void as an informational document. (See *Los Angeles Unified School Dist.,* supra, 58 Cal.App.4th at pp. 1024-1025.) P140-29

III. THE DRAFT EIR'S ANALYSES OF THE PROJECT'S AIR QUALITY AND GREENHOUSE GAS EMISSION IMPACTS ARE LEGALLY DEFICIENT

As discussed above, the Draft EIR's analyses of the Project's operational impacts on Air Quality and GHG emissions are defective because they fail to assess the potential impacts of the entire Project not only P140-30

with respect to future plans for the Dodger Stadium parking lot, but even as described in the Project Description.

cont'd P140-30

As stated above, the analysis of the Project's operational air quality impacts in Section 3.3, *Air Quality*, uses for its mobile source baseline information the 2019 "vehicular emissions associated with games and special events associated with Dodger Stadium resulting from passengers and vehicles traveling to the game along with employees" (p. 3.3-22; see also 3.3-16). Similarly, the greenhouse gas ("GHG") emissions reduction analysis in Section 3.8, *Greenhouse Gas Emissions*, also focuses exclusively on Dodger Stadium (pp. 3.8-17 - 3.8-18). The technical reports supporting both sections clearly state that the operations scenarios assume, for mobile source emissions:

P140-31

> "the availability and use of the gondola system would decrease the number of people traveling to Dodger Stadium (and surrounding areas) in passenger vehicles and increase the number of people using transit. This shift in transportation mode would reduce total VMT and vehicle idling time in and around Dodger Stadium, associated with passenger vehicles."

(Appendix D, *Air Quality/Health Risk Assessment*, p. 23; Appendix J, *GHG*, p. 25.) The GHG Section uses the same 2019 mobile source baseline information from Dodger Stadium and future mobile source estimates that the Air Quality Section used. (See Section 3.8, p. 3.8-x; Appendix D, AQ-J, p. 25.)

P140-32

The Air Quality section is further deficient by failing to set forth basic construction assumptions upon which its construction emissions calculations were based, including for example, whether all construction equipment was assumed to be operating simultaneously. To the extent that basic information, which is disclosed in virtually every Draft EIR Air Quality section when discussing construction emissions, may be included in Appendix B, *Construction Assumptions*, it is buried not only in that appendix, but in that appendix's many tables. An EIR that buries basic information such as construction impact assumptions in appendices does not suffice under CEQA as an informational document. (*Santa Clarita Organization for Planning the Environment v. County of Los Angeles, supra,* 106 Cal.App.4th at pp. 722-23; *see also Vineyard Area*

P140-33

Citizens for Responsible Growth v. City of Rancho Cordova (2007) 40 Cal.4th 412, 442 ("[I]nformation 'scattered here and there in EIR appendices,' or a report 'buried in an appendix,' is not a substitute for 'a good faith reasoned analysis.'").) cont'd P140-33

Likewise, analysis critical to the GHG Section is missing and/or improperly buried in the appendix. Specifically, the GHG section fails to provide an analysis related to a purported net decrease in GHG emissions, which is only discussed in the Appendix. The GHG Section also lacks analysis as to how the Project would purportedly decrease the number of people traveling to Dodger Stadium or the general area in passenger vehicles. Moreover, the reports buried within the appendix rely on unsupported assumptions, including, but not limited to, conclusions related to the reduction of emissions and trips, flawed data related to ticket sales, and outdated data from 2011 to 2015 related to ridership. P140-34

IV. THE DRAFT EIR IMPROPERLY FAILS TO IDENTIFY AND ANALYZE IMPACTS TO HISTORIC/ARCHEOLOGICAL RESOURCES WITHIN ITS PURPORTED ANALYSIS OF IMPACTS TO CULTURAL RESOURCES

CEQA requires a lead agency to evaluate whether a project would result in substantial adverse impacts affecting the significance of historical resources. (CEQA § 21084.1; CEQA Guidelines § 15064.5(a) and (b).) These resources include resources *eligible* for listing in the California Register of Historical Resources, and those listed in local historic resource registers. *See Citizens for Responsible Development in West Hollywood v. City of West Hollywood*, 39 Cal.App.4th 490, 503-504 (1995). Additionally, special standards apply under CEQA regarding the mitigation of impacts to historic resources. (*See, e.g.*, Pub. Res. Code § 21084.1; CEQA Guidelines §§ 15064.5, 15126.4; *Citizens for Responsible Development in West Hollywood*, supra, 39 Cal.App.4th at 500-501.) P140-35

Regarding the construction of the proposed Chinatown Station, the Draft EIR ignores the fact that remnants of the Zanja Madre have been found in many areas near the area of direct impacts depicted in Figure 3.5-2. These finds have been documented in studies now public that attached to EIRs prepared for P140-36

nearby developments. (See, e.g., Exhibit 4, Appendix L to the Draft EIR for the College Station project, esp. the discussions of the Zanja Madre at pp. 12-16, 30-31.) The Draft EIR acknowledges that the Zanja Madre is a unique archeological resource (see CEQA Section 21083.2) in its discussion of the Zanja Madre in connection with the proposed Alameda Station. (Section 3.5, Cultural Resources, p. 3.5-37.) Even so, the Draft EIR fails to acknowledge the likelihood that remnants of the Zanja Madre may be encountered.

cont'd P140-36

The Draft EIR's failure to acknowledge the possibility of encountering these CEQA-defined unique archeological resources and to assess the Project's potential impacts on them, and as discussed below, to mitigate any potentially significant impacts on these resources properly as CEQA requires constitute clear violations of CEQA and yet another defect in the Draft EIR.

P140-37

V. THE DRAFT EIR'S NOISE ANALYSES ARE INCOMPLETE

As discussed above, the Draft EIR's Noise Section fails to assess the Project's potential operational noise impacts resulting from the gondolas passing close by occupied buildings, particularly sensitive uses. That the gondolas will pass close by such uses is tacitly acknowledged by the fact that the gondolas will ostensibly be fitted with glass that can become opaque when the gondolas pass by "sensitive views," which are not defined. (Section 2.0, Project Description, p. 2-18.) As stated above, the gondolas will pass particularly close to the windows of the Property's multifamily units as frequently as every 23 seconds on game days. Yet, the Draft EIR provides no information regarding the noise levels that would be generated by one gondola running so close to the Property's windows, much less an unbroken line of gondolas every 23 seconds. The potential noise impacts the gondolas would create as a continuous source of noise are not analyzed.

P140-38

The cumulative operational noise impact analysis is also incomplete. At pages 5-33 and 5-34 of Section 5.2, Cumulative Impacts, the Draft EIR acknowledges that related projects include, inter alia, transportation projects, but fails to identify or assess the noise generated by any transportation project. An obvious related transportation project that would contribute to cumulative noise levels along with the Project

P140-39

is the Gold Line's Chinatown Station, which is located adjacent to the Project's planned Chinatown Station. Particularly on game days, the noise generated by passengers of the Gold Line's Chinatown Station could well substantially contribute to the cumulative noise levels in the area, and should have been added to the cumulative noise levels assessed. P140-40

VI. THE DRAFT EIR'S TRANSPORTATION ANALYSIS IS FLAWED

As discussed above, the Draft EIR's Transportation Section relies on speculation to inflate the Project's projected ridership numbers. The Project cannot justify its 18-hour schedule and Chinatown Station when a substantial number of the future riders are assumed to be tourists based on projections that are abstruse and ultimately speculative. Further, as discussed above, the neighborhood ridership numbers are also speculative, whether or not they were validly projected, since the Project does not contain a mobility hub at the Dodger Stadium station on which the currently unserved neighborhoods would depend. Moreover, even if the tourism-generated ridership numbers were valid, those riders are expected to travel to the Dodger Stadium station, only, which assumption again demonstrates that the Project has only a single purpose – the development of a gondola between Union Station and Dodger Stadium to eliminate vehicle trips to Dodger Stadium. P140-41

Similar to other sections of the Draft EIR, the Transportation Section relies on reports and models that are either impermissibly buried within or only referenced without being included in the appendix. P140-42

VII. THE DRAFT EIR'S FAILS TO ASSESS OTHER CRITICAL PROJECT EFFECTS

As discussed above, the Project Description states that the gondola cabins would be fitted with privacy glass that can become opaque while adjacent to sensitive views." (Section 2.0, *Project Description*, p. 2-18.) "Privacy glass" and "sensitive views" are not defined and nothing further is said. However, this statement tacitly acknowledges that the Project would significantly adversely affect sensitive land uses and receptors – including the future residents of the Property. It is also disclosed that, on game days, the gondolas would run every 23 seconds. (Id.) P140-43

The need to fit the gondolas with "privacy glass" to protect "sensitive views" is a tacitly acknowledgment that otherwise the Project would significantly adversely affect sensitive land uses and receptors – including the future residents of the Property. Other information not readily available in the Draft EIR explains why. Although the information is buried in Appendix M, *Noise and Vibration Report*, the Draft EIR "discloses" that the gondolas would run just 35 feet from the windows of the Property's residents. Gondolas filled with up to 40 persons running by the windows of the Property's residents every 23 seconds on "game days" would create a significant environmental impact on those residents (as well as an invasion of privacy) that is not analyzed in the Draft EIR. (See id., p. 2-18.) This impact is not assessed in the Draft EIR.

cont'd P140-43

P140-44

The Draft EIR attempts to pass any such impact as an aesthetic impact, as a potential effect on a private view that CEQA does not recognize. (Section 3.1, Aesthetics, p. 3.1-13.) However, there can be no argument that gondolas running every 23 seconds just 35 feet from a residential window for hours 100 days per year, and at longer intervals daily from 6:00 a.m. to 12:00 a.m. is a serious impact on the environment that must be assessed. As the preface to Appendix G states, Appendix G "is a sample form that may be tailored to satisfy individual agencies' needs and project circumstances. … Substantial evidence of potential impacts that are not listed on this form must also be considered." Further, Section 5.5, *Other Additional Evaluations*, of the Draft EIR contains an assessment of the Project's potential impact on kite flying, an impact not customarily recognized under CEQA, and on the use of the Los Angeles State Historic Park for special events and for routine activities such as personal reflection. (Section p. 5-60 – 5.63.) The Project's effect on a multifamily residential building would be experienced over an 18-hour period every day, and would be a more serious and intrusive effect than that experienced by recreational users of the Park that must be analyzed in the EIR.

P140-45

P140-46

VIII. THE DRAFT EIR'S MITIGATION MEASURES ARE INVALID UNDER CEQA

An EIR must identify feasible mitigation measures "which could minimize significant impacts" of the project. (CEQA Guidelines § 15126.4(a)(1).) Improper deferral of feasible mitigation occurs where an agency defers the formulation of mitigation measures to some future time, concluding based on "loose or open ended" measures that impacts can be reduced to a less than significant level. (*Rialto Citizens for Responsible Growth v. City of Rialto* (2012) 208 Cal.App.4th 899, 945.) Reliance on unspecified programs and practices as mitigation to be adopted in the future without any mandatory commitments or performance standards is insufficient under CEQA. (*See Endangered Habitats League v. County of Orange* (2005) 131 Cal.App.4th 777, 793-794.) P140-47

As stated above, the Draft EIR fails to describe key elements of the Project and omits technical data in a manner that frustrates any valid impacts analysis of the Project as described in Section 2.0, *Project Description*, in addition to impacts from omitted components of the Project such as the future redevelopment of the areas on and surrounding the Dodger Stadium parking lot with commercial uses, which, in conjunction with the Project, could have additional and/or cumulative and/or growth-inducing environmental impacts. The Draft EIR's failure to assess the significance of such impacts eliminates its ability to determine whether the mitigation measures it identifies would in fact reduce the Project's potentially significant impacts below applicable thresholds of significance. P140-48

Furthermore, as set forth above, certain of the mitigation measures identified in the Draft EIR are legally invalid either because they violate CEQA's standards for the particular type of mitigation, or because they lack substance or rely on unspecified and unformulated future measures, practices and plans that provide no substantial evidence supporting the Draft EIR's assertion that they would actually reduce potentially significant impacts to less than significant levels. (See *Endangered Habitats League*, supra, 131 Cal.App.4th at pp. 793-794; *Sundstrom v. County of Mendocino* (1988) 202 Cal.App.3d 296, 309.) P140-49

For example, Mitigation Measure CUL-A, addressed to unexpected archeological finds, violates the terms of CEQA Guidelines Section 15126.4(b)(3) and improperly defers mitigation. (Section 3.5, Cultural Resources, pp. 3.5-68-3.5-69.) It calls only for the preparation of an as-yet unformulated "Cultural Resources Monitoring and Mitigation Plan" ("CRMMP") that is merely generally and insufficiently described. Among the major defects in the future CRMMP is that it violates CEQA Guidelines Section 15126.4, subsection (b)(3). That subsection mandates that certain factors "shall be considered and discussed in an EIR for a project involving such an archaeological site." The first such factor, listed at Section 15126.4, subsections (b)(3)(A) and (B), states that *preservation in place* is the preferred manner of mitigating impacts and may be accomplished by at least four means. The future CRMMP breezes by preservation in place: treatment may involve data recovery or preservation in place. (Section 3.5, Cultural Resources, p. 3.5-69.) The Draft EIR neither considers nor discusses any alternatives for preservation in place of any unexpected archeological finds. Yet, such finds are highly likely along the Project's alignment, given the long history of settlement in the area and the numerous built historic resources near and surrounding the proposed Alameda Station. Moreover, preservation in place for archeological finds near El Pueblo, for example, may be the only mitigation measure that would truly reduce the Project's impacts to less than significant, since an unexpected find in that area may well be associated with a larger as-yet undiscovered cohesive archeological find such as the remains of a village, home, or other structure.

P140-50

Mitigation Measure CUL-A and its CRMMP also violate CEQA by deferring to the future the details of the measures that would actually mitigate the impacts. No information is provided as to when preservation in place would be required over recovery, or vice versa; in fact, again, it appears that recovery is the preferred measure. (See Section 3.5, Cultural Resources, p. 3.5-69, 3.5-57; see also, 3.5-61.) They also violate CEQA by allowing Metro, a non-expert, to determine whether a discovered resource is potentially eligible for the California Register of Historic Resources or may potentially qualify as a unique archeological resource under CEQA. (Section 3.5, Cultural Resources, p. 3.5-69.)

P140-51

Mitigation Measures CUL-C, CUL-D and CUL-E suffer from the same defects as does Mitigation Measure CUL-A, but are even more focused on data recovery as the only mitigation solution, without any consideration or discussion of preservation in place, even though the Draft EIR *recognizes* the archeological sensitivity of the area. (Section 3.5, Cultural Resources, p. 3.5-70.) These measures also improperly defer mitigation and are impermissibly vague by providing that "criteria thresholds that would require data recovery" (p. 3.5-70), an undisclosed "data recovery plan shall be implemented" (id.) P140-52

Given these defects in these mitigation measures, the Draft EIR contains no substantial evidence supporting its conclusion that impacts on archeological resources would be less than significant. P140-53

IX. ALTERNATIVES

The Draft EIR improperly rejects Use Option D for failing to meet "a majority of the Project's objectives" because this Option would not include passenger facilities, but would only be a junction. (Section 6.5, *Use Option D*, p. 6-38.) These Project objectives, according to the Draft EIR, include enhancing community connectivity and providing accessible fare opportunities (a subject not addressed in the Draft EIR). (Id.) The discussion further explains that a junction in place of a station with passenger facilities would not provide transit options for the Chinatown and Mission Junction neighborhoods or for the Park. P140-54

However, as discussed above, the Gold Line's Chinatown Station already serves these neighborhoods and is already just one mile from the Park. The Project really only serves Dodger Stadium and therefore a Station at Chinatown would not only be more impactful but also unnecessary. There is no question that a junction, rather than the larger station proposed, would have a lesser impact on the area, particularly since the Gold Line's Chinatown Station already exists. P140-55

X. CONCLUSION

Based on the foregoing, the Draft EIR fails to suffice under CEQA as an informational document. It fails to assess critical impacts and fails to provide the requisite substantial evidence supporting its conclusions that the majority of the Project's impacts would be less than significant. To the contrary, as noted above, P140-56

there is ample evidence suggesting that the Project, both individually and cumulatively, would have significant effects on the environment that are not identified, assessed or mitigated in the Draft EIR. The Draft EIR must be revised and recirculated to address its fundamental defects before the Project can be considered for approval.

Dodgers remain fans of football & real estate development

The Eastsider
Feb 19, 2010

The messy divorce between Dodgers owner Frank McCourt and his wife, Jamie, has revealed some ambitious real estate plans the team has for the stadium property east of Echo Park. The Los Angeles Times reports (h/t to Curbed LA) that court documents unsealed Thursday indicate the team not only wants to ring the stadium with shops and restaurants but perhaps bring in a football stadium as well:

"The Dodgers remain interested in building an NFL stadium adjacent to Dodger Stadium, and in persuading City Hall to lift zoning restrictions and allow "over a million square feet of mixed-use developments" in the

stadium parking area, according to the filing."

It's been nearly two years since the Dodgers announced a $500 million plan to add a museum, shops and parking garages. But team officials never made mention of an interest in adding a stadium, a proposal which has in years past triggered enormous neighborhood resistance. In addition to the possible development of the Dodger parking lots, Barlow Hospital, which is located next door to the stadium, is proposing its own 888-unit housing project.

DANIEL MELLING NOVEMBER 2, 2018

CALIFORNIA GENERAL LAND USE

Tear Up the Dodger Stadium Parking Lot

It's not just the Dodgers' bullpen that needs revision

The Los Angeles Dodgers' second consecutive World Series flameout has management considering a number of important off-season questions. What is Clayton Kershaw's future at the club? Will Manny Machado, who reportedly left the stadium after Game 4 wearing a "Villains" backwards cap, get the boot?

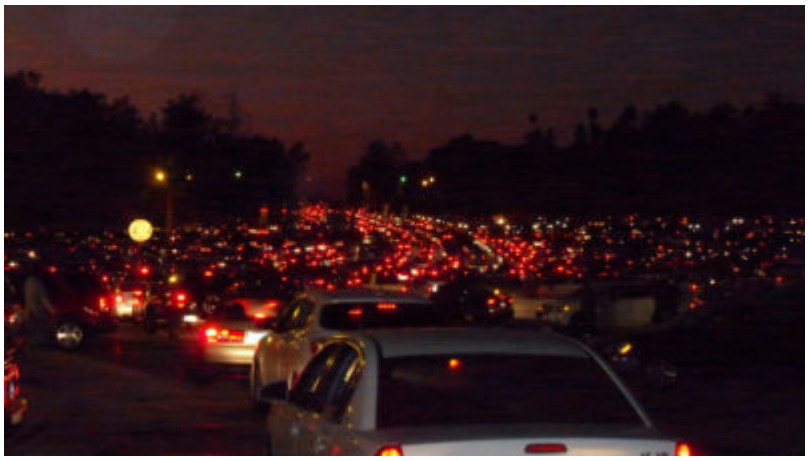
Is Dodger Stadium part of – or distinct from – the neighborhoods that surround it?
Photo by Ron Reiring, Flickr

Here at the Emmett Institute, we have been pondering another question: is there any better use for the massive Dodger Stadium parking lot than storing 16,000 empty vehicles for 2.7 percent of the total time in a year (three hours/game for 80 regular season home games, compared to 8760 hours in a year)?

Los Angeles Mayor Eric Garcetti has made serious commitments to eliminating fossil fuels and pedestrian deaths on city streets. What better place to imagine safe, clean, 21st century transport across Los Angeles than in journeys to our Major League acropolis. Entrepreneurs sparked ideas this year, with the financially incoherent "Dugout Loop" proposal and aerial tramway project capturing headlines. Meanwhile, local thought leaders detailed cheaper options that merit consideration, like cutting a hole in a fence for fans on foot or expanding the LA Metro shuttle service from its current stops in Union Station and the South Bay to other hubs, à la the Hollywood Bowl.

In time, it's possible Dodger fans brimming with nostalgia will recount inching up the hill to pay for parking. Children will ponder the origins of the glowing orange 76 ball behind

centerfield.



So close, yet so far. Photo by Jonathan Tardif, Flickr

There's another reason to tear up Dodger Stadium's asphalt.

As Jonathan Zasloff noted in his post last week, when the city of Los Angeles began eminent domain purchases in 1950 to clear a Mexican-American community of more than 1,000 families in Chavez Ravine, it wasn't to make way for Dodger Stadium but for a 3,600-unit public housing project, Elysian Park Heights, designed by architects Robert E. Alexander and Richard Neutra. The affordable housing proposal was squashed after a fierce political battle toppled Mayor Fletcher Bowron in 1953 amid accusations that spending money on "socialist" housing was un-American. A 1957 City Council ordinance transferred the publicly-owned land to Dodgers owner Walter O'Malley. Sheriffs forced out the last remaining families from the property two years later and the stadium opened in 1962, surrounded by a sea-like surface lot.

The parking is by no means permanent. In 2008, then-owner Frank McCourt released architectural plans including a museum and administrative offices beyond center field. McCourt's full vision was never realized as a divorce enmeshed franchise finances. In 2012, *The Los Angeles Times* reported that new owners Guggenheim Baseball Management still pay an entity half-owned by McCourt $14 million a year to rent the parking lots. The 99-year lease includes provisions for future property uses such as homes, offices, shops, entertainment and more. In recent years, Janet Marie Smith, the Dodgers' senior vice president of planning and development, has led renovations focused mostly on the stadium itself, but the executive also has experience integrating ballparks with cities in Boston and Baltimore. The ownership group includes partners like Stan Kasten, a former president of the Washington Nationals, whose stadium drove growth in D.C.'s Navy Yard neighborhood,

and Magic Johnson and Peter Guber, who as co-owners of LAFC, will likely have some involvement in developing Exposition Park's new master plan.

Not all fans drive to Dodger Stadium. Photo by Metro Library and Archive, Flickr

As Angelenos look to the county's fringes for new homes, it's worth considering the available space in our core. There are many ways further development could go wrong, especially if it excludes affordable housing that city residents desperately need and is an important part of Chavez Ravine's past. Any project plan would do well to include viewpoints of nearby communities that have expressed misgivings about the shape of future land use at the stadium, or even relatives of the displaced Chavez Ravine community, Los Desterrados, who still gather every year in Elysian Park to remember their families' presence in this corner of the city.

LA Dodgers Stadium Next 50

Location: Los Angeles, California

Client: The McCourt Company

Johnson Fain designed a multi-faceted stadium improvement plan that will bring the most modern amenities to Dodger fans, while preserving the tradition of the historic venue, first opened in 1962. The improvements will solidify Dodger Stadium's place as the home of Los Angeles baseball for the next 50 years. The new facilities were designed to LEED Silver sustainability standards.

The Dodger Stadium "Next 50" plan features Dodger Way, a ceremonial new "front door" and urban plaza surrounded by an administrative office building for the Dodgers organization; the Dodger Experience an interactive museum showcasing the history

of the Dodgers and baseball in Los Angeles; a 20,000 square foot flagship Dodger Store; and the Dodger Cafe. Connecting all the elements of the project is The Green Necklace – a ring of gardens, open plazas, and amenities around the stadium, which moves the fan experience outside the walls of the stadium so they have activities which can extend their time at the ballpark beyond the game. The Top of Park plaza located at the highest elevation on site will feature breathtaking 360 degree views spanning the

Downtown skyline and Santa Monica Bay, the Santa Monica and San Gabriel Mountains, and the Dodger Stadium diamond. Other features within the Green Necklace are two, 8-level, 900-car parking structures and a series of food service /retail concession clusters.

Project Facts

- Multi-faceted stadium improvement plan would include:
- Urban plaza surrounded by administrative office buildings
- Dodger Experience museum
- 20,000 square foot Dodger Store
- Dodger Café
- The Green Necklace – gardens, open plazas and amenities
- Top of Park plaza with 360 degree views
- Two 8-level, 900-car parking structures
- Designed to LEED Silver sustainability standards

College Station Project

Cultural Resources Record Search and Tribal Consultation Summary

Introduction

Environmental Science Associates (ESA) has been requested by the City of Los Angeles (City) to conduct a cultural resources record search and Assessment for the College Station Project (Project) in support of an Environmental Impact Report (EIR). In addition, ESA is providing a summary of the Native American consultation conducted by the City in connection with its AB 52 outreach for the Project. Chinatown Station Owner, LLC (the Applicant) proposes to construct a mixed-use transit-oriented development (TOD) containing up to 770 residential apartment units and commercial space (Project) on an approximately 4.92-acre urban infill parcel at 129–135 W. College Street and 924 N. Spring Street, in the Central City North community of the City (Project Site). The Project Site is located immediately east of the Metro Gold Line Chinatown Station (located at N. Spring Street and W. College Street) and the Los Angeles State Historic Park. The Project Site is currently vacant and is periodically used for parking by nearby industrial and commercial businesses. The Project Site occupies an irregularly-shaped parcel extending from West College Street on the south to Llewellyn Street on the north. To the southeast, it is bordered by two parcels housing wholesale commercial/light industrial uses, storage, and surface parking. The Project Site is separated from these adjacent uses by a short alley connecting College Street and (unimproved) Rondout Street. The Project Site is bordered on the east/northeast by Rondout Street and on the west by N. Spring Street. The City is the lead agency pursuant to the California Environmental Quality Act (CEQA).

ESA personnel involved in the preparation of this report are as follows: Monica Strauss, M.A., R.P.A., program director and Principal Investigator; and report authors, Fatima Clark B.A., and Sara Dietler B.A. Resumes of key personnel are included in **Appendix A**.

Project Description

Chinatown Station Owner, LLC (the Applicant) proposes to construct a mixed-use transit-oriented development containing up to 770 residential apartment units and commercial space. The Project Site is located in the Central City North community of the City of Los Angeles (the City), just north of downtown Los Angeles (**Figure 1,** *Regional Map*). The Project Site is depicted on the United States Geological Survey ("USGS") 1966 (photo-revised 1981) 7.5' Los Angeles, California topographic quadrangle map in an un-sectioned portion of Township 1 South, Range 13 West (**Figure 2**, *Vicinity Map*). Specifically, the Project Site is bounded by North Spring

ENV-2012-2055 -- 02965

AR004335

Street on the north and west, West Rondout Street and two buildings on the east, and by West College Street on the south (**Figure 3**, *Aerial Photograph*).

The Project would provide commercial floor area programmed for a market, two restaurants, open space and amenities, and vehicle and bicycle parking. At buildout, the Project would be developed with approximately 590,849 square feet (sf) of residential floor area and 51,390 sf of commercial floor area. Project design comprises a two-story podium structure containing ground-level residential and retail uses and underground parking, below six five-story residential buildings arranged around a series of central garden courtyards atop the podium deck.

Cultural Setting

Prehistoric Overview

The earliest evidence of occupation in the Los Angeles area dates to at least 9,000 years before present (B.P.) and is associated with a period known as the Millingstone Cultural Horizon (Wallace 1955; Warren 1968). Departing from the subsistence strategies of their nomadic big-game hunting predecessors, Millingstone populations established more permanent settlements. These settlements were located primarily on the coast and in the vicinity of estuaries, lagoons, lakes, streams, and marshes where a variety of resources including seeds, fish, shellfish, small mammals, and birds were exploited. Early Millingstone occupations are typically identified by the presence of handstones (manos) and millingstones (metates), while those Millingstone occupations dating later than 5,000 years B.P. contain a mortar and pestle complex as well, signifying the exploitation of acorns in the region.

Although many aspects of Millingstone culture persisted, by 3,500 years B.P., a number of socioeconomic changes occurred (Erlandson 1994; Wallace 1955; Warren 1968). These changes are associated with the period known as the Intermediate Horizon (Wallace 1955). Increased populations in the region necessitated intensified exploitation of existing terrestrial and marine resources (Erlandson 1994). This was accomplished in part through the use of the circular shell fishhook on the coast, and more abundant and diverse hunting equipment. Evidence for shifts in settlement patterns has been noted at a variety of locations at this time and is seen by many researchers as reflecting increasingly territorial and sedentary populations. The Intermediate Horizon marks a period in which specialization in labor emerged, trading networks became an increasingly important means by which both utilitarian and non-utilitarian materials were acquired, and travel routes were extended. Archaeological evidence suggests that the margins of numerous rivers, marshes, and swamps within the Los Angeles River Drainage served as ideal locations for prehistoric settlement during this period. These well-watered areas contained a rich collection of resources and are likely to have been among the more heavily trafficked travel routes.

The Late Prehistoric period, spanning from approximately 1,500 years B.P. to the mission era, is the period associated with the florescence of the contemporary Native American group known as the *Gabrielino* (Wallace 1955). Coming ashore near Malibu Lagoon or Mugu Lagoon in October of 1542, *Juan Rodriguez Cabrillo* was the first European to make contact with the *Gabrielino* Indians. Occupying the southern Channel Islands and adjacent mainland areas of Los Angeles and Orange Counties, the *Gabrielino* are reported to have been second only to their Chumash neighbors in terms of population size, regional influence, and degree of sedentism (Bean and Smith 1978). The *Gabrielino* are estimated to have numbered around 5,000 in the pre-contact period (Kroeber 1925) and maps produced by early explorers indicate that at least 26 *Gabrielino* villages were within proximity to known Los Angeles River courses, while an additional 18 villages were reasonably close to the river (Gumprecht 1999). Subsistence consisted of hunting, fishing, and gathering. Small terrestrial game was hunted with deadfalls, rabbit drives, and by burning undergrowth, while larger game such as deer were hunted using bows and arrows. Fish were taken by hook and line, nets, traps, spears, and poison (Bean and Smith 1978; Reid 1939

ENV-2012-2055 -- 02970

AR004340

[1852]). The primary plant resources were the acorn, gathered in the fall and processed with mortars and pestles, and various seeds that were harvested in late spring and summer and ground with manos and metates. The seeds included chia and other sages, various grasses, and islay or holly leafed-cherry (Reid 1939 [1852]).

Ethnographic Setting

Gabrielino-Tongva

The Project Site is located in a region traditionally occupied by the Takic-speaking Gabrielino-Tongva Indians. The term "Gabrielino" is a general term that refers to those Native Americans who were administered by the Spanish at the Mission San Gabriel Arcángel. Many contemporary Gabrielino identify themselves by the name "Tongva." Prior to European colonization, the Gabrielino-Tongva occupied a diverse area that included: the watersheds of the Los Angeles, San Gabriel, and Santa Ana rivers; the Los Angeles basin; and the islands of San Clemente, San Nicolas, and Santa Catalina (Kroeber, 1925). Their neighbors included the Chumash to the north, the Juañeno to the south, and the Serrano and Cahuilla to the east. The Gabrielino-Tongva are reported to have been second only to the Chumash in terms of population size and regional influence (Bean and Smith, 1978). The Gabrielino language, like the Tataviam language, was part of the Takic branch of the Uto-Aztecan language family.

The Gabrielino-Tongva Indians were hunter-gatherers and lived in permanent communities located near the presence of a stable food supply. Subsistence consisted of hunting, fishing, and gathering. Small terrestrial game was hunted with deadfalls, rabbit drives, and by burning undergrowth, while larger game such as deer were hunted using bows and arrows. Fish were taken by hook and line, nets, traps, spears, and poison (Bean and Smith, 1978). The primary plant resources were the acorn, gathered in the fall and processed in mortars and pestles, and various seeds that were harvested in late spring and summer and ground with manos and metates. The seeds included chia and other sages, various grasses, and islay or holly-leafed cherry.

Community populations generally ranged from 50 to 100 inhabitants, although larger settlements may have existed. The Gabrielino-Tongva are estimated to have had a population numbering around 5,000 in the pre-contact period (Kroeber, 1925). Villages are reported to have been the most abundant in the San Fernando Valley, the Glendale Narrows area north of downtown, and around the Los Angeles River's coastal outlets (Gumprecht, 2001). Gabrielino villages are reported by early explorers to have been most abundant near the Los Angeles River, in the area north of downtown, known as the Glendale Narrows, and those areas along the river's various outlets into the sea. Among those villages north of downtown are *Maawnga* in the Glendale Narrows; *Totongna* and *Kawengna,* in the San Fernando Valley; *Hahamongna,* northeast of Glendale; and the village of *Yangna*, in the vicinity of present-day downtown Los Angeles.

The exact location of *Yangna*, within downtown Los Angeles continues to be debated, although some believe it to have been located at the present-day location of the Civic Center (McCawley 1996). Other proposed locations are near the present day Union Station (Chartkoff and Chartkoff 1972:64), to the south of the old Spanish Plaza, and near the original site of the Bella Union Hotel located on the 300 Block of North Main Street (Robinson 1963:83, as cited in Dillon 1994:30).

ENV-2012-2055 -- 02971

AR004341

Dillon (1994:30) hypothesizes that the Union Station location is an unlikely spot for a large village or habitation, as it lies within the annual Los Angeles River flood zone. Local sources such as the Echo Park Historical Society, report that when Gaspar de Portola and Father Juan Crespi camped on the river bank opposite the North Broadway Bridge entrance to Elysian Park, they were served refreshments by *Yangna* Indian villagers from the current location of the Los Angeles Police Academy (Echo Park Historical Society 2008). The Los Angeles Police Academy is located in the northern portion of Elysian Park, which appears an unlikely location for the Native American Village of *Yangna* because this location is more consistent with the location of the village of *Maawnga*, which was reported to have been originally located within the *Rancho de los Felis*. This rancho originally encompassed Griffith Park and extended south to the northern portion of Elysian Park. The village of *Maawnga*, also recorded as *Maungna*, is believed to have been located "high on a bluff overlooking Glendale Narrows in the hills now occupied by Elysian Park" (Gumprecht 1999:31).

A third community or village, named *Geveronga*, may have been located in the vicinity of the current downtown Los Angeles' city center, reported in the San Gabriel baptismal records as located "in the racheria adjoining the Pueblo of Los Angeles" (McCawley 1996:57).

Historic Setting

The *Gabrielino* were virtually ignored between the time of Cabrillo's visit and the Spanish Period, which began in 1769 when Gaspar de Portola and a small Spanish contingent began their exploratory journey along the California coast from San Diego to Monterey. Passing through the Los Angeles area, they reached the San Gabriel Valley on August 2 and traveled west through a pass between two hills where they encountered the Los Angeles River and camped on its east bank near the present-day North Broadway Bridge and the entrance to Elysian Park. This location has been designated California Historic Landmark Number 655, the Portola Trail Campsite. Father Crespi (a member of Portola's party) indicated in his diaries that on that day they "entered a spacious valley, well grown with cottonwoods and alders, among which ran a beautiful river. This plain where the river runs is very extensive and…is the most suitable site for a large settlement" (The River Project 2001). He goes on to describe this "green, lush valley"; its "very full flowing, wide river"; the "riot of color" in the hills; and the abundance of native grapevines, wild roses, grizzly, antelope, quail and steelhead trout. Crespi observed that the soil was rich and "capable of supporting every kind of grain and fruit which may be planted." The river was named *El Rio y Valle de Nuestra Senora la Reina de Los Angeles de la Porciuncula*.

Missions were established in the years that followed the Portola expedition, the fourth being the Mission San Gabriel Archangel founded in 1771 near the present-day City of Montebello, approximately 7.5 miles east of the Project Site. By the early 1800s, the majority of the surviving *Gabrielino* population had entered the mission system. The Gabrielino inhabiting Los Angeles County were under the jurisdiction of either Mission San Gabriel or Mission San Fernando. Mission life offered the Indians security in a time when their traditional trade and political alliances were failing and epidemics and subsistence instabilities were increasing (Jackson 1999).

On September 4, 1781, which was 12 years after Crespi's initial visit, the *Pueblo de la Reina de los Angeles* was established not far from the site where Portola and his men camped. Watered by

ENV-2012-2055 -- 02972

AR004342

the river's ample flow and the area's rich soils, the original pueblo occupied 28 square miles and consisted of a central square, surrounded by 12 houses, and a series of 36 agricultural fields occupying 250 acres, plotted to the east between the town and the river (Gumprecht 1999).

An irrigation system that would carry water from the river to the fields and the pueblo was the communities' first priority and was constructed almost immediately. The main irrigation ditch, or *Zanja Madre*, was completed by the end of October 1781. It was constructed in the area of present-day Elysian Park, and carried water south (and located directly across Broadway Street from the current Project Site) to the agricultural lands situated just east of the pueblo (Gumprecht 1999).

By 1786, the flourishing pueblo attained self-sufficiency and funding by the Spanish government ceased (Gumprecht 1999). Fed by a steady supply of water and an expanding irrigation system, agriculture and ranching grew, and by the early 1800s the pueblo produced 47 cultigens. Among the most popular were grapes used for the production of wine (Gumprecht 1999). Vineyards blanketed the landscape between present-day San Pedro Street and the Los Angeles River. By 1830 an estimated 100,000 vines were being cultivated at 26 Los Angeles vineyards. Over 8,300 acres of land were being irrigated by the *zanjas* during the 1880s (Gumprecht 1999).

The authority of the California missions gradually declined, culminating with their secularization in 1834. Although the Mexican government directed that each mission's lands, livestock, and equipment be divided among its converts, the majority of these holdings quickly fell into non-Indigenous hands. Mission buildings were abandoned and quickly fell into decay. If mission life was difficult for Native Americans, secularization was typically worse. After two generations of dependence on the missions, they were suddenly disenfranchised. After secularization, "nearly all of the Gabrielinos went north while those of San Diego, San Luis, and San Juan overran this county, filling the Angeles and surrounding ranchos with more servants than were required" (Reid 1977 [1851]:104). Upon his 1852 visit to Los Angeles, John Russel Barlett wrote,

> *I saw more Indians about this place than in any part of California I had yet visited. They were chiefly mission Indians, i.e., those who had been connected with the missions and had derived their support from them until the suppression of those establishments. They are a miserable, squalid-looking set, squatting or lying about the corners of the streets with no occupation. They have no means of obtaining a living, as their lands are taken from them, and the missions for which they labored and which provided after a sort for many thousands of them, are abolished (as cited in Sugranes 1909:77).*

The first party of U.S. immigrants arrived in Los Angeles in 1841, although surreptitious commerce had previously been conducted between Mexican California and residents of the United States and its territories. Included in this first wave of immigrants were William Workman and John Rowland, who soon became influential landowners. As the possibility of a takeover of California by the United States loomed large, the Mexican government increased the number of land grants in an effort to keep the land in the hands of upper-class *Californios* like the Domínguez, Lugo, and Sepúlveda families (Wilkman and Wilkman 2006:14–17). Governor Pío Pico and his predecessors made more than 600 rancho grants between 1833 and 1846, putting

ENV-2012-2055 -- 02973

AR004343

most of the state's lands into private ownership for the first time (Gumprecht 1999). Having been established as a pueblo, property within Los Angeles could not be dispersed by the governor, and this task instead fell under the city council's jurisdiction (Robinson 1979).

A constant struggle to bring water to the residents of the pueblo necessitated the construction of Echo Park Reservoir, the Silverlake Reservoir, and the further expansion of the *zanja* irrigation ditches. When these measures proved insufficient, a more permanent solution to Los Angeles' water shortage was sought. Under the direction of City engineer William Mulholland, the Los Angeles Bureau of Water Works and Supply constructed the 238-mile-long Los Angeles Aqueduct. This 5-year project, completed in 1913, employed the labor of more than 5,000 men and brought millions of gallons of water into the San Fernando (now Van Norman) Reservoir (Gumprecht 1999). Now able to offer water and sewer service at a grand scale, many smaller cities were voluntarily incorporated by Los Angeles (Robinson 1979:244).

When Los Angeles was connected to the transcontinental railroad via San Francisco on September 5, 1876, it experienced a significant boost in population. The City would experience its greatest growth in the 1880s when two more direct rail connections to the East Coast were constructed. The Southern Pacific completed its second transcontinental railway, the Sunset Route from Los Angeles to New Orleans, in 1883 (Orsi, 2005). In 1885, the Santa Fe Railroad completed a competing transcontinental railway to San Diego, with connecting service to Los Angeles (Mullaly and Petty, 2002). The resulting fare wars led to an unprecedented real estate boom, as well as affordable cross-country fares for immigrants. Despite a subsequent collapse of the real estate market, the population of Los Angeles increased 350 percent in the decade between 1880 and 1890 (Dinkelspiel, 2008).

The population boom of the 1880s drove the demand for real estate in Los Angeles. Farmland south and east of the City began to be replaced by residential and commercial development. Large tracts of agricultural land, now far more valuable for residential development, were subdivided and sold (Gumprecht, 1999).

From 1890 to 1900, the City continued to grow, and many infrastructure projects were completed during this decade (McWilliams, 1946). E.L. Doheny discovered oil in 1892, adding fuel to the flame. From 1900 to 1920, Los Angeles became a tourist mecca (McWilliams, 1946). The Los Angeles Aqueduct was constructed and a large portion of the San Fernando Valley annexed to the City during the first decade of the 20th century. From 1920 to 1930, Los Angeles experienced another population explosion, along with the rise of automobile transportation and the development of the entertainment industry. All told, between 1890 and 1930, the population of Los Angeles increased from 50,000 to 1.2 million people (Wild, 2005).

History of the Project Site

Water Systems

The earliest depiction of the Project Site is a map produced by U.S. Army Lieutenant E.O.C. Ord in 1849 (Ord, 1857). The map indicates that at that time the area east of Main Street and west of

ENV-2012-2055 -- 02974

AR004344

the Los Angeles River, including the Project Site, was entirely devoted to agriculture, primarily vineyards (Baugh, 1942).

Water—too much, or too little—has shaped much of California's history. Rain falls unevenly and seasonally over the length of the state, and all too often California faces prolonged drought or flood cycles. The state has a generally Mediterranean climate, with little rain falling through the summer months. Although the amount of available water varies enormously from northern redwood regions of heavy rainfall to dry southern deserts, California as a whole is considered semiarid, and much of the state relies on winter snow in the mountains to provide spring and summer runoff to water the valleys below.

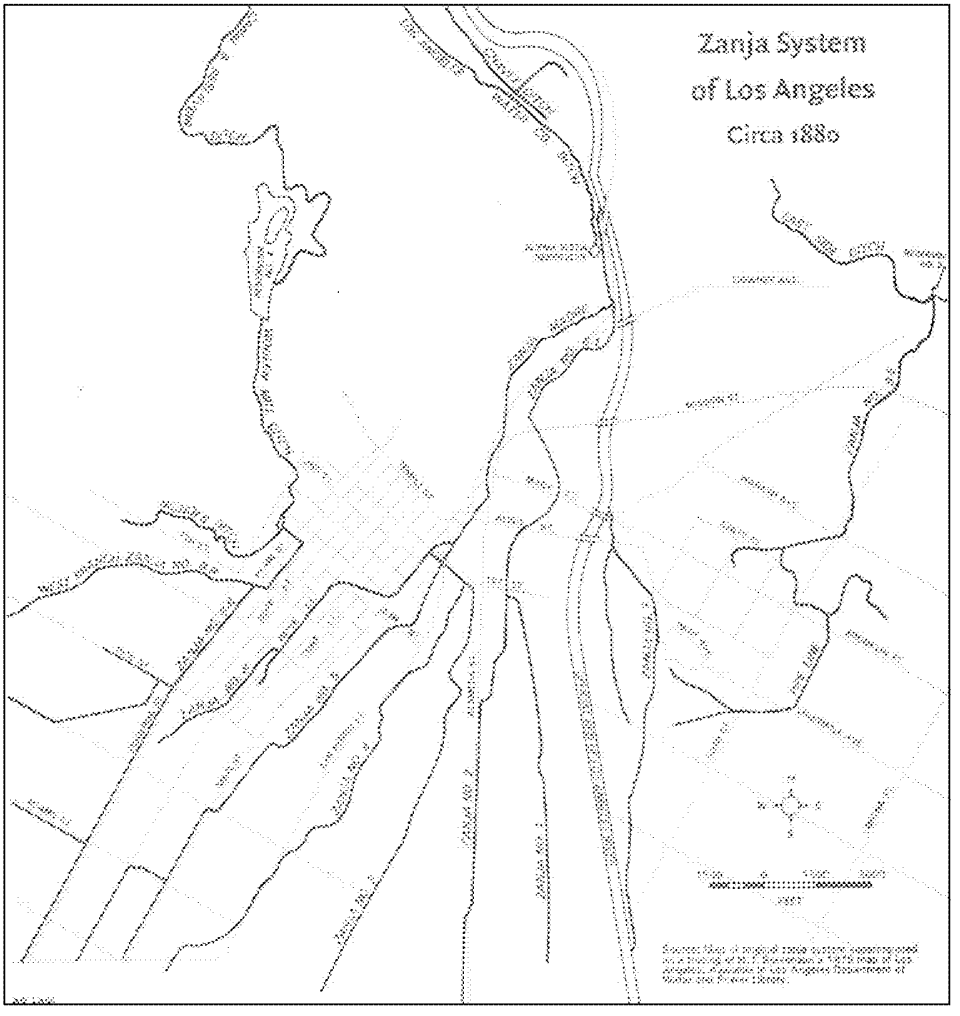
For the Pueblo of Los Angeles, the *zanjas*, or publicly owned irrigation ditches, sustained the area for many years and enabled ranching and cultivation of the fertile floodplains. The *zanjas* were established by the residents' Mexican predecessors, and consisted of gravity systems, which resulted in the irrigation of lands that lay to the south of the source. Lands at a higher elevation could not be irrigated by the *zanjas*. The *Zanja Madre* (Mother Ditch) had been constructed, branching off of the river and carrying the water south to the agricultural lands surrounding the pueblo (**Figure 4. *Los Angeles Zanja System in 1880***). As the pueblo grew and more water was diverted from the river, the supply began to dwindle. Initially, however, there was little worry about the future water needs of the City, and no regulation of the water distribution itself. Typically, farmers would dig their own ditches from the main ditches or from the river. Private water carriers hauled and sold water to households for domestic use (Gumprecht 1999). As depicted on Figure 4, the *Zanja Madre* is mapped as running north/south parallel to the Project Site, approximately 250 feet to the west. *Zanja 6-1* is mapped as also running north/south adjacent to the eastern side of the Project Site.

By the mid-19th century, City officials established a system of water use fees and rules to govern the *zanjas*. They created the official City position of *zanjero*, the highest paid of any public official in Los Angeles. The duties of the *zanjero* varied including issuance of permits for water usages, maintenance of the ditches, maintenance of the City dam, and even the early coordination of flood control work on the Los Angeles River (Gumprecht 1999). While the *zanjas* worked well for irrigation, the water was frequently unsuitable for domestic purposes. The City had no sewer system or other outlet for its liquid waste, and the *zanjas* were being used for laundry and bathing, as well as trash and sewage disposal. Several efforts to pipe domestic water directly to homes were tried as early as 1864. As the pueblo development and population expanded, an effort was made to develop a residential water system in Los Angeles with projects designed to distribute water by directly piping water into homes from local springs and the river. In what seemed to be a laborious process, a former county judge named William G. Dryden was eventually awarded a franchise to distribute water from a series of springs located within present day Chinatown at the intersection of College and Alameda, which is adjacent and likely within the current Project Site. These springs were located on low lying ground and known as the Abila Springs and were formed by the underground flow of the Los Angeles River. Dryden created a system of distribution by forming the Los Angeles Water Works Company in 1858, and building a forty-foot water wheel in the *Zanja Madre*, as well as other components of the system. This system provided running water to the homes of the City's elite residing near the plaza. Eventually

ENV-2012-2055 -- 02975

AR004345

the system failed due to seasonal flooding and the plaza's residents were once again reduced to relying on water carted in for their use (Gumprecht 2001:63-64).



SOURCE: Gumprecht 1999

Figure 4
Los Angeles Zanja System in 1880

After several more attempts by the City, (which had decided to develop its own water system), John Luis Sainsevain, who had been integral in development of the system, owned a lease to the domestic supply system and he erected a water wheel at the dam that he had built on the river. In addition to the wheel, he built a small reservoir with a capacity of the 700,000 gallons near the Catholic Cemetery, located at the intersection of North Broadway Street and Bishops Road (**Figure 5.** ***Project Site in 1868***).

To keep up with demand, the City allowed several private companies to be formed in order to provide domestic supplies of water. The City continued to oversee the irrigation system, eventually enclosing several of the *zanjas* or creating ornamental *zanjas* in several areas (Gumprecht 1999).

ENV-2012-2055 -- 02976

AR004346

As Southern California grew, the Los Angeles River became an inadequate supply of water for the residential and industrial development that gradually displaced agricultural uses. With the arrival of the Southern Pacific Railroad, the demand became so great that the Los Angeles City Water Company began tapping the river's water supply before it even reached the surface. Water supply reservoirs began to be used and the *zanja* system was gradually abandoned and, in some cases, dismantled (Gumprecht 1999). By 1902, the Los Angeles municipal government took back jurisdiction of its own water needs and purchased the existing water system, which consisted of seven reservoirs and 337 miles of pipe.

River Station

Historically, of the area now known as Los Angeles State Historic Park (located to the north of the Project Site and across Alameda Street) was developed for agricultural use in the Spanish and Mexican periods. Beginning in 1804, Francisco Avila established vineyards in this location (California State Parks, n.d.). The area was served by the *Zanja Madre*, and a waterwheel was built just west of the current park land to divert water from the *zanja*.

In the latter portion of the 19th century, River Station, a Southern Pacific Railroad facility also known as Los Angeles Junction, was opened in this location (Mullaly and Petty 2002) (**Figure 7. *Bird's Eye View of Los Angeles by B.W. Pierce, 1894, Showing the Project Site and River Station***). This facility opened in 1875 and served as an important transportation hub, with Southern Pacific opening a freight house and depot in this location. River Station expanded as the volume of railroad traffic grew, and a turntable, freight house, blacksmith shop, machine shop, car shop, and other facilities were added (Mullaly and Petty 2002; California State Parks n.d.).

In 1889, Southern Pacific built Arcade Depot a few miles to the south on Alameda Street, and passenger service was moved to this location (Mullaly and Petty 2002: 33). River Station continued to grow and served as the headquarters for Southern Pacific operations in Southern California. By the 1880s, Southern Pacific was the largest employer in Los Angeles (California State Parks n.d.).

Between 1902 and 1904, Southern Pacific built a new, more modern facility in the Lincoln Heights area of Los Angeles. Southern Pacific continued to use the land within the present day Los Angeles State Historic Park as a freight operations facility after 1904 (**Figure 8. *1921 Baist Real Estate Survey, Los Angeles***). Southern Pacific's use of the facility continued until 1992. In 2001, California State Parks took possession of the 32-acre parcel where the Southern Pacific facility had stood. In 2005, the former site of River Station was designated a State Historic Park.

The River Station area was colloquially known as "the Cornfield" because of the crops that grew there before the railroads arrival (Rasmussen 2003). In 2005, a public art installation on the property entitled "Not a Cornfield," involved the planting of 32 acres of corn for one agricultural cycle, a commentary on the City's early agricultural roots and the need to reclaim abandoned industrial-era complexes (Not a Cornfield 2012).

Los Angeles' exponential growth during the inter-war period, more specifically the 1920s, is well documented. However, it was a population boom 40 years earlier that saw Los Angeles become a

ENV-2012-2055 -- 02977

AR004347

major American city (SurveyLA 2012). While the state and City experienced steady expansion through the mid-nineteenth century, the 1880s were a period of unprecedented population growth, leading up to The Great Boom of 1886-87. "Rail communication with the North was opened in 1877, but the boom did not really begin until 1881, when the Southern Pacific, which had gone on building east, met the Santa Fe at Deming" (Los Angeles County 1889). The new line produced a direct route between Los Angeles and eastern markets through New Orleans. To sell land adjacent to their new rail lines, the railroads promoted California real estate. In 1876, the Southern Pacific constructed the River Station, welcoming thousands of visitors to Los Angeles. Driven by railroad development, Los Angeles' population grew from just over 5,000 residents in 1870 to 15,000 in 1882 and 25,000 by 1883. In addition to population growth, land values more than doubled during the 1880s. At the end of the decade, Los Angeles' population was over 75,000 and a plot of land that once sold for $1,000 was being sold for $2,500.

Construction and Occupancy

The Project Site was developed at least as far back as 1888 and historically used as a rail yard, including storage of wood, coal and petroleum products. Prior to these uses, the Project Site was used for agricultural purposes. The Project Site was vacant as of 1970 and was acquired by the Los Angeles Metropolitan Transit Authority (MTA) for support of the expansion of the MTA Gold Line to Pasadena; it had been previously owned by the Union Pacific Railroad. The Project Site is currently an undeveloped lot. Numerous ground-disturbing activities have been completed at the Project Site since the removal of on-site structures in 1970.

Sanborn Fire Insurance Maps and historical aerials were reviewed to determine the history of construction and alterations for the Project Site. Review of the 1888 Sanborn map indicated that prior to later uses as a rail yard, the entire Project Site was subdivided and labeled as "Beaudry's Proposed Sub Division" with Exchange Street running through the eastern half of the Project Site and North Alameda and College Streets in their current configuration with one set of tracks running down Alameda Street. The southwestern portion of the Project Site was developed with several scattered stores and dwellings (some are depicted as "Tent" and "Cotton"). The eastern central portion of the Project Site is depicted as occupied by several buildings including a furniture auction establishment, a restaurant, dwellings and stores. The northern portion of the Project Site was occupied by the Whittier, Fuller & Co. Oil Warehouse.

The 1894 Sanborn map showed that the Project Site was still subdivided but the majority of previous buildings depicted in 1888 are no longer present. The subdivision name is not indicated on this version and only the northern tip of the Project Site was developed with a "Wood and Coal Yard" that included a few buildings as well within that parcel.one small building is depicted just north of Exchange Street. Two sets of tracks are indicated on North Alameda Street as well as an iron viaduct elevated for cable cars. San Fernando Street ran along the northeastern side of the Project Site with at least one set of rail tracks indicated.

AR004349

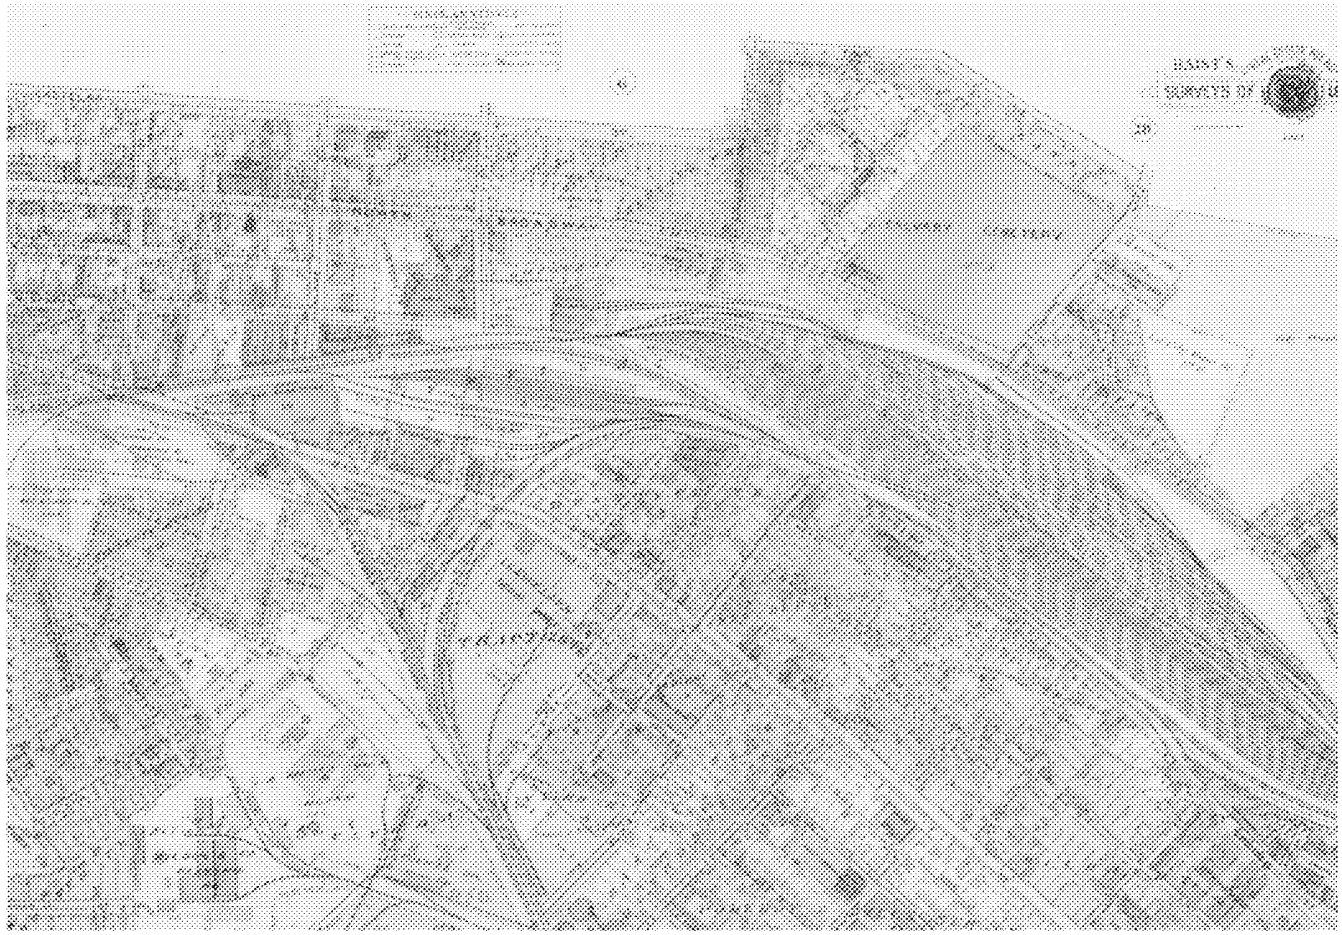

Figure 6
1921 Baist Real Estate Survey, Los Angeles

ENV-2012-2055 -- 02980

AR004350

The 1906 Sanborn map indicated that all building development was removed and replaced with approximately 17 rail spurs running roughly north/south were located on the Project Site and that Prudent still ran parallel to the rail lines in the southeastern part of the Project Site. The spurs appear to have fed out toward Cornfields with the exception of those on the eastern side, which fed out onto the former San Fernando Street, named Redondo Avenue on the 1906 version. A Southern Pacific Freight House was also present along the westernmost portion of the Project Site. North Alameda Street shows three sets of Southern Pacific Tracks and the Iron Viaduct which is noted as "not used" in 1906.

In 1950 the Sanborn map indicates that a second Southern Pacific Freight House was constructed on the eastern portion of the Project Site between the tracks and Prudent which was still present in 1950. Prudent Street, with the same configuration of the Southern Pacific Freight House on the western portion of the Project Site was also still present. The trackage between the two Freight Houses are shown as heading north toward Alameda Street and W. Redondo Avenue and the trackage on either side of Prudent headed northwest onto Redondo Avenue. On the 1953-1954, 1957, 1960, 1964, and 1970 Sanborn maps there is little to no change indicated through that period as compared to the depiction on the 1950 Sanborn map.

Aerial photos (historicaerials.com) indicate that the site remained developed with the Southern Pacific facilities and trackage. The Freight House on the western side of the Project Site was removed by 1980, and by 1994 the entire property was cleared and has remained vacant ever since.

Subsurface Disturbances

In 1989, four Underground Storage Tanks (USTs) and approximately 30 yards of impacted soil were removed from the Project Site. The USTs included one 8,500-gallon gasoline UST, one 900-gallon Diesel UST, one 6,500-gallon oil UST and a 700-gallon gasoline UST. The removal of the USTs was conducted for the Southern Pacific Transportation Company, previous owners of the Project Site at that time (Cousineau 2013).

In 2001 a Remedial Action Plan (RAP) was planned at the Project Site. The RAP detected the existence of constituents of concern (COCs) in five areas within the Project Site. In 2002, the RAP was implemented and a total of 12,200 tons of impacted material was excavated/removed from the Project Site. A total of 238 tons were disposed of as hazardous waste (Cousineau 2013). Most of the impacted material was excavated from the northernmost and westernmost areas of the Project Site.

Regulatory Setting

State

California Environmental Quality Act (CEQA)

CEQA is the principal statute governing environmental review of projects occurring in the State. CEQA requires lead agencies to determine if a proposed project would have a significant effect on

ENV-2012-2055 -- 02981

AR004351

the environment, including significant effects on historical, archaeological and tribal cultural resources.

Under CEQA, a project that may cause a substantial adverse change in the significance of an historical resource is a project that may have a significant effect on the environment. The CEQA Guidelines recognize that an historical resource includes: (1) a resource listed in, or determined to be eligible by the State Historical Resources Commission, for listing in the California Register of Historical Resources (California Register); (2) a resource included in a local register of historical resources, as defined in PRC Section 5020.1(k) or identified as significant in a historical resource survey meeting the requirements of PRC Section 5024.1(g); and (3) any object, building, structure, site, area, place, record, or manuscript which a lead agency determines to be historically significant or significant in the architectural, engineering, scientific, economic, agricultural, educational, social, political, military, or cultural annals of California by the lead agency, provided the lead agency's determination is supported by substantial evidence in light of the whole record.

The fact that a resource does not meet the three criteria outlined above does not preclude the lead agency from determining that the resource may be an historical resource as defined in PRC Sections 5020.1(j) or 5024.1.

If a lead agency determines that an archaeological site is a historical resource, the provisions of Section 21084.1 of CEQA and Section 15064.5 of the CEQA Guidelines apply. If a project may cause a substantial adverse change (defined as physical demolition, destruction, relocation, or alteration of the resource or its immediate surroundings such that the significance of an historical resource would be materially impaired) in the significance of an historical resource, the lead agency must identify potentially feasible measures to mitigate these effects.

If an archaeological site does not meet the criteria for a historical resource contained in the CEQA Guidelines, then the site may be treated in accordance with the provisions of Section 21083, which is a unique archaeological resource. As defined in Section 21083.2 of CEQA a "unique" archaeological resource is an archaeological artifact, object, or site, about which it can be clearly demonstrated that without merely adding to the current body of knowledge, there is a high probability that it meets any of the following criteria:

- Contains information needed to answer important scientific research questions and there is a demonstrable public interest in that information;
- Has a special and particular quality such as being the oldest of its type or the best available example of its type; or
- Is directly associated with a scientifically recognized important prehistoric or historic event or person.

If an archaeological site meets the criteria for a unique archaeological resource as defined in PRC Section 21083.2, then the site is to be treated in accordance with the provisions of PRC Section 21083.2, which state that if the lead agency determines that a project would have a significant effect on unique archaeological resources, the lead agency may require reasonable efforts be made to

ENV-2012-2055 -- 02982

AR004352

permit any or all of these resources to be preserved in place. If preservation in place is not feasible, mitigation measures shall be required.

The CEQA Guidelines note that if an archaeological resource is neither a unique archaeological nor a historical resource, the effects of the project on those resources shall not be considered a significant effect on the environment (CEQA Guidelines Section 15064.5(c)(4)).

California Register of Historical Resources

The California Register of Historical Resources (California Register) is "an authoritative listing and guide to be used by State and local agencies, private groups, and citizens in identifying the existing historical resources of the State and to indicate which resources deserve to be protected, to the extent prudent and feasible, from substantial adverse change" (PRC Section 5024.1[a]). The criteria for eligibility for the California Register are based upon National Register criteria (PRC Section 5024.1[b]). Certain resources are determined by the statute to be automatically included in the California Register, including California properties formally determined eligible for, or listed in, the National Register.

To be eligible for the California Register, a prehistoric or historical-period property must be significant at the local, State, and/or federal level under one or more of the following four criteria:

1. Is associated with events that have made a significant contribution to the broad patterns of California's history and cultural heritage;

2. Is associated with the lives of persons important in our past;

3. Embodies the distinctive characteristics of a type, period, region, or method of construction, or represents the work of an important creative individual, or possesses high artistic values; or

4. Has yielded, or may be likely to yield, information important in prehistory or history.

A resource eligible for the California Register must meet one of the criteria of significance described above, and retain enough of its historic character or appearance (integrity) to be recognizable as a historical resource and to convey the reason for its significance. It is possible that a historic resource may not retain sufficient integrity to meet the criteria for listing in the National Register, but it may still be eligible for listing in the California Register.

Additionally, the California Register consists of resources that are listed automatically and those that must be nominated through an application and public hearing process. The California Register automatically includes the following:

- California properties listed on the National Register and those formally determined eligible for the National Register;

- California Registered Historical Landmarks from No. 770 onward; and

ENV-2012-2055 -- 02983

AR004353

- Those California Points of Historical Interest that have been evaluated by the OHP and have been recommended to the State Historical Commission for inclusion on the California Register.

Other resources that may be nominated to the California Register include:

- Historical resources with a significance rating of Category 3 through 5 (those properties identified as eligible for listing in the National Register, the California Register, and/or a local jurisdiction register);
- Individual historical resources;
- Historical resources contributing to historic districts; and,
- Historical resources designated or listed as local landmarks, or designated under any local ordinance, such as an historic preservation overlay zone.

Tribal Cultural Resources and Assembly Bill 52

Assembly Bill (AB) 52 was approved by California State Governor Edmund Gerry "Jerry" Brown, Jr. on September 25, 2014. The act amended PRC Section 5097.94, and added PRC Sections 21073, 21074, 21080.3.2, 21082.3, 21083.09, 21084.2, and 21084.3. AB 52 applies specifically to projects for which a Notice of Preparation (NOP) or a Notice of Intent to Adopt a Negative Declaration or Mitigated Negative Declaration (MND) will be filed on or after July 1, 2015. The primary intent of AB 52 is to include California Native American Tribes early in the environmental review process and to establish a new category of resources related to Native Americans that require consideration under CEQA, known as tribal cultural resources. PRC Section 21074(a)(1) and (2) defines tribal cultural resources as "sites, features, places, cultural landscapes, sacred places, and objects with cultural value to a California Native American Tribe" that are either included or determined to be eligible for inclusion in the California Register or included in a local register of historical resources, or a resource that is determined to be a tribal cultural resource by a lead agency, in its discretion and supported by substantial evidence. On July 30, 2016, the California Natural Resources Agency adopted the final text for tribal cultural resources update to Appendix G of the CEQA Guidelines, which was approved by the Office of Administrative Law on September 27, 2016.

PRC Section 21080.3.1 requires that within 14 days of a lead agency determining that an application for a project is complete, or a decision by a public agency to undertake a project, the lead agency provide formal notification to the designated contact, or a tribal representative, of California Native American Tribes that are traditionally and culturally affiliated with the geographic area of the project (as defined in PRC Section 21073) and who have requested in writing to be informed by the lead agency (PRC Section 21080.3.1(b)). Tribes interested in consultation must respond in writing within 30 days from receipt of the lead agency's formal notification and the lead agency must begin consultation within 30 days of receiving the Tribe's request for consultation (PRC Sections 21080.3.1(d) and 21080.3.1(e)).

ENV-2012-2055 -- 02984

AR004354

PRC Section 21080.3.2(a) identifies the following as potential consultation discussion topics: the type of environmental review necessary; the significance of tribal cultural resources; the significance of the project's impacts on the tribal cultural resources; project alternatives or appropriate measures for preservation; and mitigation measures. Consultation is considered concluded when either: (1) the parties agree to measures to mitigate or avoid a significant effect, if a significant effect exists, on a tribal cultural resource; or (2) a party, acting in good faith and after reasonable effort, concludes that mutual agreement cannot be reached (PRC Section 21080.3.2(b)).

If a California Native American Tribe has requested consultation pursuant to PRC Section 21080.3.1 and has failed to provide comments to the lead agency, or otherwise failed to engage in the consultation process, or if the lead agency has complied with PRC Section 21080.3.1(d) and the California Native American Tribe has failed to request consultation within 30 days, the lead agency may certify an EIR or adopt an MND (PRC Section 21082.3(d)(2) and (3)). PRC Section 21082.3(c)(1) states that any information, including, but not limited to, the location, description, and use of the tribal cultural resources, that is submitted by a California Native American Tribe during the environmental review process shall not be included in the environmental document or otherwise disclosed by the lead agency or any other public agency to the public without the prior consent of the Tribe that provided the information. If the lead agency publishes any information submitted by a California Native American Tribe during the consultation or environmental review process, that information shall be published in a confidential appendix to the environmental document unless the Tribe that provided the information consents, in writing, to the disclosure of some or all of the information to the public.

California Health and Safety Code Section 7050.5

California Health and Safety Code Section 7050.5 requires that in the event human remains are discovered, the County Coroner be contacted to determine the nature of the remains. In the event the remains are determined to be Native American in origin, the Coroner is required to contact the NAHC within 24 hours to relinquish jurisdiction.

California Public Resources Code Section 5097.98

California PRC Section 5097.98, as amended by Assembly Bill 2641, provides procedures in the event human remains of Native American origin are discovered during Project implementation. PRC Section 5097.98 requires that no further disturbances occur in the immediate vicinity of the discovery, that the discovery is adequately protected according to generally accepted cultural and archaeological standards, and that further activities take into account the possibility of multiple burials. PRC Section 5097.98 further requires the NAHC, upon notification by a County Coroner, designate and notify a Most Likely Descendant (MLD) regarding the discovery of Native American human remains. Once the MLD has been granted access to the site by the landowner and inspected the discovery, the MLD then has 48 hours to provide recommendations to the landowner for the treatment of the human remains and any associated grave goods.

In the event that no descendant is identified, or the descendant fails to make a recommendation for disposition, or if the land owner rejects the recommendation of the descendant, the landowner

ENV-2012-2055 -- 02985

AR004355

may, with appropriate dignity, reinter the remains and burial items on the property in a location that will not be subject to further disturbance.

Archaeological Resources

As part of the determination made pursuant to PRC Section 21080.1, the lead agency shall determine whether the project may have a significant effect on archaeological resources (PRC Section. 21083.2). PRC Section 21083.2(b) provides the following guidance on how to mitigate or avoid the significant effects that a project may have on unique archaeological resources. PRC Section 21083.2(b) states that, "If it can be demonstrated that a project will cause damage to a unique archaeological resource, the lead agency may require reasonable efforts to be made to permit any or all of these resources to be preserved in place or left in an undisturbed state. Examples of that treatment, in no order of preference, may include, but are not limited to, any of the following:

- Planning construction to avoid archaeological sites.
- Deeding archaeological sites into permanent conservation easements.
- Capping or covering archaeological sites with a layer of soil before building on the sites.
- Planning parks, greenspace, or other open space to incorporate archaeological sites.

As defined within PRC Section 21083.2(g), "unique archaeological resource" means an archaeological artifact, object, or site about which it can be clearly demonstrated that, without merely adding to the current body of knowledge, there is a high probability that it meets any of the following criteria: 1) Contains information needed to answer important scientific research questions and that there is a demonstrable public interest in that information, 2) Has a special and particular quality such as being the oldest of its type or the best available example of its type, or 3) Is directly associated with a scientifically recognized important prehistoric or historic event or person.

As defined in PRC Section 21083.2(h), "nonunique archaeological resource" means an archaeological artifact, object, or site that does not meet the criteria in subdivision (g). A nonunique archaeological resource need be given no further consideration, other than the simple recording of its existence by the lead agency if it so elects.

Pursuant to PRC Section 21083.2(i), as part of conditions imposed for mitigation, a lead agency may make provisions for archaeological sites accidentally discovered during construction. These provisions may include an immediate evaluation of the find. If the find is determined to be a unique archaeological resource, contingency funding and a time allotment sufficient to allow recovering an archaeological sample or to employ one of the avoidance measures may be required under the provisions set forth in this section. Construction work may continue on other parts of the building site while archaeological mitigation takes place.

ENV-2012-2055 -- 02986

AR004356

Local

City of Los Angeles

General Plan Conservation Element

The City of Los Angeles's General Plan Conservation Element (Conservation Element), Chapter II, Section 5, states that the city has primary responsibility for identifying and protecting its cultural and historical heritage. The Element identifies five types of historic protection designations that apply within the City, including Historic-Cultural Monument designation, placement on the California Register or the National Register of Historic Places (National Register), designation by the Community Redevelopment Agency (CRA) as being of cultural or historical significance within a designated redevelopment area, and classification by City Council as an Historic Preservation Overlay Zone. The Conservation Element also cites the protections within CEQA for significant cultural and historic resources.

The Conservation Element lists the following objective and policy for cultural and historical resources:

- **Objective**: Protect important cultural and historical sites and resources for historical, cultural, research, and community educational purposes.

- **Policy**: Continue to protect historic and cultural sites and/or resources potentially affected by proposed land development, demolition or property modification activities.

Archaeological Resources

The City of Los Angeles's General Plan Conservation Element (Conservation Element), Chapter II, Section 3, defers to the State CEQA Guidelines in regard to the identification, evaluation, and mitigation of impacts to archaeological resources. The Conservation Element states that the City has primary responsibility for protecting significant archaeological resources. Furthermore, if it is determined that a development project may disrupt or damage an archaeological site, the project is required to provide mitigation measures to protect the site or enable study and documentation of the site, including funding of the study by the Applicant. The City's environmental guidelines require the Applicant to secure services of a qualified archaeologist to monitor excavations or other subsurface activities associated with a development project in which all or a portion is deemed to be of archaeological significance. Discovery of archaeological materials may temporarily halt the project until the site has been assessed, potential impacts evaluated and, if deemed appropriate, the resources protected, documented, and/or removed.[1]

The Conservation Element lists the following objective and policy for archaeological and paleontological resources:

- **Objective**: Protect the City's archaeological and paleontological resources for historical, cultural, research, and/or educational purposes.

---

[1] City of Los Angeles General Plan Conservation Element, Chapter II, Section 3, adopted September 2001.

ENV-2012-2055 -- 02987

AR004357

- **Policy**: Continue to identify and protect significant archaeological and paleontological sites and/or resources known to exist or that are identified during land development, demolition or property modification activities.

Los Angeles Cultural Heritage Ordinance

The Los Angeles City Council adopted the Cultural Heritage Ordinance in 1967 and amended it in 2007 (Los Angeles Administrative Code, Chapter 9, Division 22, Article 1, Section 22.171.7). The Cultural Heritage Ordinance establishes criteria for designating a local historical resource as an Historic Cultural Monument (HCM). An HCM is any site (including significant trees or other plant life located on the site), building or structure of particular historic or cultural significance to the City, including historic structures or sites:

- In which the broad cultural, economic or social history of the nation, state or community is reflected or exemplified;
- Which are identified with historic personages or with important events in the main currents of national, state or local history;
- Which embody the distinguishing characteristics of an architectural type specimen, inherently valuable for a study of a period, style or method of construction; or
- Which are a notable work of a master builder, designer, or architect whose individual genius influenced his or her age.

A proposed resource may be eligible for designation if it meets at least one of the criteria above. With regard to integrity, the seven aspects of integrity of the National Register and California Register are the same and the threshold of integrity for individual eligibility is similar (City of Los Angeles Office of Historic Resources 2017).

In addition, the Los Angeles Municipal Code (LAMC) Section 91.106.4.5 states that the Building Department "shall not issue a permit to demolish, alter or remove a building or structure of historical, archaeological or architectural consequence if such building or structure has been officially designated" by a federal, state, or local authority.

Methods

This section focuses on archaeological resources, which can be defined as prehistoric (or pre-European contact) archaeological resources or historic (post-European contact) archaeological resources. Historical resources are further classified by the California Office of Historic Preservation as "the location of a significant event, a prehistoric or historic occupation or activity, or a building or structure, whether standing, ruined, or vanished, where the location itself possesses historic, cultural, or archaeological value regardless of the value of any existing structure" and can include battlefields, campsites, cemeteries, ceremonial sites, habitation sites, rock carvings, rock shelters, ruins of a building or structure, shipwrecks, trails, and village sites (City of Los Angeles Office of Historic Resources 2017). The analysis of archaeological resources is based on 1) a cultural resource records search conducted at the SCCIC at California State University, Fullerton to review recorded archaeological resources within a one-half mile radius of Project Site, as well

ENV-2012-2055 -- 02988

AR004358

as a review of cultural resource reports and historic topographic maps on file, 2) a review of the California Points of Historical Interest (CPHI), the California Historical Landmarks (CHL), the California Register, the National Register, and the California State Historic Resources Inventory (HRI) listings, 3) a SLF search commissioned through the NAHC, and 4) a review of available Sanborn Maps, historic aerial imagery; and other technical studies (Phase I ESA report) to understand the land use history of the Project Site.

The potential for the Project Site to contain buried archaeological resources was assessed based on the findings of the cultural resource records search (i.e., presence and proximity of known resources) and SLF search, land use history research, subsurface geological conditions, and the proposed excavation parameters for the Project.

Archival Research

Records Search

On May 24, 2017, a cultural resources records search was conducted at the California Historical Resources Information System – South Central Coastal Information Center (SCCIC), housed at the Division of Anthropology at California State University, Fullerton. The records search included a review of all previous surveys conducted and previously recorded archaeological resources within a 0.25-mile radius of the Project Site, and all previously recorded historic resources adjacent to the Project Site as well as a review of historic topographic maps on file. In addition, the California Points of Historical Interest, the California Historical Landmarks, the California Register, and the National Register were reviewed. The purpose of the record search was to determine whether there are previously recorded archaeological and/or historic architectural resources located within the Project Site and 0.25-radius that require evaluation and treatment. The results also provide a basis for assessing the sensitivity of the Project Site for buried prehistoric and historic archaeological resources.

Other Archival Research

Other archival research conducted for the Project included reviewing Sanborn Fire Insurance (Sanborn) maps acquired through Los Angeles Public Library (LAPL).

Project Environmental Document Review

The Environmental Impacts Report prepared for the Project was also reviewed in order to provide information on the previous ground disturbance and to aid in assessing both the prehistoric and historic archaeological sensitivity of the Project Site.

Sacred Lands File Search

On May 19, 2017, a Sacred Lands File (SLF) search was requested through the Native American Heritage Commission (NAHC). The request letter included information such as Project Site location and a brief description of the proposed Project. The purpose of the search was to obtain information regarding the nature and location of additional prehistoric or Native American resources whose records may not be available at the SCCIC.

ENV-2012-2055 -- 02989

AR004359

Results

Records Search

Previous Cultural Resources Investigations

Results of the records search conducted at the SCCIC indicated that a total of 31 cultural resource studies have been previously conducted within a 0.25-mile radius of the Project Site. Approximately 75 percent of the 0.25-mile records search radius outside of the Project Site has been covered by previous cultural resources surveys. Of the 31 previous studies, none was conducted within or overlapping the Project Site. However, 11studies have been conducted adjacent and within close proximity (approximately 100 feet) to the Project Site. These studies consisted of a Phase I Archaeological Survey Report and Cultural Resource Studies for the Pacific Pipeline Project (LA-02892; LA-02950), Draft and Final Environmental Impact reports for the Pasadena-Los Angeles Light Rail Transit Project (LA-03497; LA-03498), two cultural resources inventory reports for the Williams Communications-Fiber Optic Cable Installation Project (LA-04834; LA-04835), a Cultural Resources Overview for the Los Angeles Light Rail Transit Project (LA-04386), an archaeological excavation report within the River Station Yard (known as the Los Angeles Cultural Landmark #82) for the MTA's Gold Line Property (LA-08512), an archaeological monitoring report for the Emergency Sewer Repair between Elmyra and Mesnager Streets (LA-08531), a General Plan and Final Environmental Impact Report for the Los Angeles State Historic Park (LA-10773), and an archaeological monitoring report for the Blossom Plaza Project (LA-13146). The report for the Blossom Plaza Project indicated that a segment of the Madre Conduit (brick conduit along alignment of *Zanja Madre*) and associated historic artifacts were recovered during the monitoring efforts.

Previously Recorded Cultural Resources

As stated above, the records search results indicate that no archaeological or historic architectural resources have been previously recorded within the Project Site. However, nine archaeological resources have been previously recorded within a 0.25-mile radius of the Project Site. Of the nine archaeological resources, eight (P-19-003103, -003120, -003181, -004183, -004200 through -004202, and -004601) are historic-period archaeological sites, and one (-003650) is a historic-period isolate.[2] Four of the nine resources (-003103, -003120, 004183 and -004601) are located adjacent or within close proximity (approximately 100 to 300 feet) to the Project Site. A detailed description of these resources is provided below.

P-19-003103/CA-LAN-3103

Resource CA-LAN-3103 includes several sections of the *Zanja* system all of which were encountered during construction projects. The *Zanja Madre* Capitol Milling Company to College Street Segment was recorded in 2014 as a result of archaeological construction monitoring for the Blossom Plaza Project. This portion of resource is located approximately 300 feet west of the Project Site and consists of a 141-foot-long segment of a brick conduit that formed part of the *Zanja Madre* (translated as the "mother ditch") water system in Los Angeles. The segment was

[2] An isolate is one or two distinct artifacts that are more than 50 meters away from other artifacts or features to be considered part of a site.

ENV-2012-2055 -- 02990

AR004360

built "in the late 1880s, channeled into and out of the Capitol Milling complex" (Furnis 2014). A builder's trench was also identified along each side of the conduit for the majority of its length. The trench yielded large mammal bones, glass and ceramic bottles, ceramic dishes, wash basins and pitchers (Furnis 2014). The depth of the resource in this location was documented as occurring at approximately 15 feet below surface. The resource was recommended as eligible for listing as part of a larger district, the "*Zanja* Conduit System" under criterion C of the National Register.

P-19-003120/CA-LAN-3120

Resource CA-LAN-3120 was recorded in 2003 by Peter Messick during soil remediation and data recovery and updated in 2010 by Michael Sampson and Mary Garrett as part of testing for the development of the LASHP. This resource has been described as the "buried remains of the 19th century River Station, a railroad maintenance facility, freight and passenger depot, and rail yard operated by Southern Pacific". The resource is commonly known as the Cornfield/River Station and is 32 acres in size and encompasses most of the LASHP's boundaries. This resource is located approximately 150 feet north of the Project Site. The resource has been interpreted as having played a significant role in the commercial and demographic growth of Los Angeles and the greater Los Angeles region where Los Angeles became a "financial power in the state of California and the West". At the same time, the population of Los Angeles increased during the operation of the River Station. The River Station also became the center for shipment from the citrus industry in Southern California to other parts of the country. The resource is eligible for inclusion of the National Register (Messick 2003; Sampson and Garrett 2010). The resource is listed as the City of Los Angeles Historic Cultural Monument #82 and State Landmark 655.

P-19-004183/CA-LAN-4183H

Resource CA-LAN-4183H is located immediately south and along W. College Street. The resource was recorded in 2011 and has been described as "historical paving stones… [that are] irregularly sized and hand chiseled, made of granite", which once formed part of the original College Street pavement. The portion of College Street, where the resource is located, is now paved with modern asphalt (Foster 2011). The resource was not evaluated for eligibility in the California Register or National Register.

P-19-004601/CA-LAN-4601H

Resource CA-LAN-4601H is located approximately 150 feet west of the Project Site and was recorded beginning in 2013 through 2014. The resource was described as consisting of 24 historic-age features and associated artifacts. The archaeology of the site is believed to represent the intensive urban use from the past 145 years from at least 1870 through the 1970s (Furnis et al. 2014). The resource was not evaluated for eligibility in the California Register or National Register.

Project Environmental Document Review

The Environmental Impact Report (EIR) for the Project Site reports that in 1989, four Underground Storage Tanks (USTs) and approximately 30 yards of impacted soil were removed from the Project Site. The USTs included one 8,500-gallon gasoline UST, one 900-gallon Diesel

ENV-2012-2055 -- 02991

AR004361

UST, one 6,500-gallon oil UST and a 700-gallon gasoline UST. The removal of the USTs was conducted for the Southern Pacific Transportation Company, previous owners of the Project Site at that time (Cousineau 2013).

The EIR also reports that in 2001, a Remedial Action Plan (RAP) was planned at the Project Site. The RAP detected the existence of constituents of concern (COCs) in five areas within the Project Site. Review of Figure 2, *Site Plan Showing Five Areas of Concern* (found attached to the EIR in Appendix E), indicates that the five COCs were located along the northernmost and southeastern most portions of the Project Site. The COCs included hydrocarbons and metals such as arsenic, lead and copper. In 2001, an updated RAP was conducted in order to define the lateral extent of the arsenic, copper and lead. In 2002, the RAP was implemented and a total of 12,200 tons of impacted material was excavated/removed from the Project Site. A total of 238 tons were disposed of as hazardous waste (Cousineau 2013). Based on a review of Figure 3, *Final Excavation Boundaries* and Figure 4, *Final Confirmation Soil Sample Locations* (found attached to the EIR in Appendix E), most of the impacted material was excavated from the northernmost and westernmost areas of the Project Site.

Sacred Lands File Search

The NAHC maintains a confidential Sacred Lands File (SLF) which contains sites of traditional, cultural, or religious value to the Native American community. The NAHC was contacted on May 19, 2017 to request a search of the SLF. The NAHC responded to the request in a letter dated May 22, 2017 which stated that "Sites have been located within the APEs [Area of Potential Effect] you provided that may be impacted by the Project" (**Appendix B**). The letter did not provide details on the resources identified within the Project Site, but recommended that the Gabrieleno Band of Mission Indians-Kizh Nation be consulted.

Additional Research

Additional research included a review of Sanborn maps which are also included as Appendix C to this report. The results of this research are provided in the following section by year.

Sanborn Maps

1888

Review of the 1888 Sanborn map revealed that the entire area surrounding the Project Site was subdivided and labeled as "Beaudry's Proposed Sub Division" with Exchange Street running through the eastern half of the Project Site and North Alameda and College Streets in their current configuration with one set of tracks running down Alameda Street. Capitol Mills is depicted in its current location to the north of the Project Site. The southwestern portion of the Project Site was developed with several scattered stores and dwellings (some are depicted as "Tent" and "Cotton"). The eastern central portion of the Project Site is depicted as occupied by several buildings including a furniture auction establishment, a restaurant, dwellings and stores. The northern portion of the Project Site was occupied by the Whittier, Fuller & Co. Oil Warehouse.

ENV-2012-2055 -- 02992

AR004362

1894

Review of the 1894 Sanborn map revealed that the Project Site was still subdivided but that the majority of previous buildings depicted in 1888 were no longer present. The subdivision name is not indicated on this version and only the northern tip of the Project Site was developed with a "Wood and Coal Yard" that included a few buildings as well within the project site. One small building is depicted just north of Exchange Street. Two sets of tracks are indicated on North Alameda Street as well as an iron viaduct elevated for cable cars. San Fernando Street ran along the north eastern side of the Project Site with at least one set of rail tracks indicated. Prudent Street ran parallel to the rail lines in the southeastern part of the Project Site.

1906

Review of the 1906 Sanborn map revealed that all building development had been removed and replaced with approximately 17 rail spurs running roughly north/south on the Project Site, and that Prudent Street still ran parallel to the rail lines in the southeastern part of the Project Site. The spurs appear to have fed out toward Cornfields with the exception of those on the eastern side, which fed out onto the former San Fernando Street (as shown on the 1894 Sanborn map), named Redondo Avenue on the 1906 version. A Southern Pacific Freight House was also present along the westernmost portion of the Project Site. North Alameda Street shows three sets of Southern Pacific Tracks and the Iron Viaduct which is noted as "not used" in 1906.

1950

Review of the 1950 Sanborn map revealed that a second Southern Pacific Freight House had been constructed on the eastern portion of the Project Site between the tracks and Prudent Street which was still present in 1950. Prudent Street, with the same configuration of the Southern Pacific Freight House on the western portion of the Project Site was also still present. The trackage between the two Freight Houses are shown as heading north toward Alameda Street and W. Redondo Avenue, and the trackage on either side of Prudent Street are shown as headed northwest onto Redondo Avenue.

1953-1954, 1957, 1960 and 1964

Review of the 1953-1954, 1957, 1960, 1964, and 1970 Sanborn maps revealed little to no change through that period from the depiction on the 1950 Sanborn map.

Historic Aerials

A review of available aerial photos on www.historicaerials.com revealed that the Project Site remained developed with the Southern Pacific facilities and trackage until approximately 1994. The Freight House on the western side of the Project Site had been removed by 1980, and then by 1994 the entire Project Site had been cleared and has remained vacant ever since.

ENV-2012-2055 -- 02993

AR004363

Tribal Cultural Resources

As discussed above, Assembly Bill 52 (AB 52), signed into law on September 25, 2014, requires lead agencies to evaluate a Project's potential to impact Tribal Cultural Resources (TCR) and establishes a formal consultation process for California Native American Tribes as part of CEQA. TCR includes sites, features, places, cultural landscapes, sacred places, and objects with cultural value to a California Native American Tribe that are eligible for inclusion in the California Register or included in a local register of historical resources (PCR21074 (a)(1)). AB 52 also gives lead agencies the discretion to determine, supported by substantial evidence, whether a resource qualifies as a TCR. As explained above, (PCR21074 (a)(1)) notification of a project is required upon request by a California Native American tribe that has previously requested that the City provide it with notice of such projects, and that is traditionally and culturally affiliated with the geographic area of a proposed project.

Summary of Consultation

The City commenced tribal notification for the Project in accordance with AB 52 on June 7, 2016, via a mailing to all of the surrounding tribes that had requested to be included on the AB 52 notification list. The AB 52 consultation logs for the Project are provided as Appendix C of this document. Three tribes responded and requested consultation including Gabrieleno Band of Mission Indians - Kizh Nation (Andrew Salas, Tribal Chair), Fernandeno Tataviam Band of Mission Indians (Caitlin B. Gulley), and Gabrielino Tongva Indians of California Tribal Council (Robert Dorame, Tribal Chair). During the process of consultation, on June 1, 2017, the Fernandeno Tataviam Band of Mission Indians stated that they no longer wished to engage in consultation. All consultation materials provided by the tribes are considered confidential and are retained in the City's administrative record for the Project.

Mr. Salas of the Gabrieleno Band of Mission Indians - Kizh Nation provided the City with information regarding potential tribal resources during phone consultation. In response to the City's request to provide substantial evidence of the cultural sensitivity that he described, in April of 2017, Mr. Salas provided a document listing the maps he referenced during the consultation as well as digital images of the maps themselves. Mr. Salas also provided in this document a summary of each map and explained the high sensitivity for potential Native American resources in the vicinity. Mr. Salas also provided a mitigation measure template with suggested mitigation measures regarding Tribal Cultural Resources and Human Remains and associated funerary objects within Kizh Gabrieleno Tribal Territory. The mitigation measures call for tribal monitoring for all planned excavation.

Mr. Dorame of the Gabrielino Tongva Indians of California Tribal Council provided the City with information in the form of annotated historic maps covering the Project Site, and a letter detailing his knowledge of potential TCR in the vicinity of the Project Site along with recommendations for including Native American monitoring of all planned soil disturbance. In summary, Mr. Dorame described the Avila Springs, the location of the Zanja Madre in proximity to the Project Site, shell middens and other archaeological sites in the Project Site vicinity, the location of the village of Yangna, and stated that his third grandmother removed had lived in

ENV-2012-2055 -- 02994

AR004364

close proximity to the Project which explained his determination of a high sensitivity for encountering evidence of historic or prehistoric native habitation.

The historic documentation provided by the tribes has been considered as part of this study and supplements the determination that the general Project Site vicinity maintains a high sensitivity for having the potential to encounter resources of prehistoric and historic origin. Although a substantial amount of contaminated soils were removed during earlier remediation on the Project Site, there are still areas of the Project Site that likely are comprised of native soils that have been subject only to surficial disturbance so that they retain the potential to preserve prehistoric and historic archaeological resources.

Conclusions and Recommendations

Archaeological Resources

The Project Site's location relative to the Los Angeles River would have provided access to important resources during all periods of prehistory. As described in the prehistoric context section of this report, the location of the prehistoric villages of *Yangna* and *Maawnga* have long been rumored and documented as being located near the Project Site. Ethnographic evidence seems to indicate that the village of *Maawnga* was more likely the village located within the nearby Elysian Park and may have been the home of the villagers that served refreshments to Gaspar de Portola and Father Juan Crespi when they were camped on the river bank opposite the North Broadway Bridge entrance to Elysian Park. Sources say that the village site of *Yangna* encountered by the Portola expedition in 1769 was situated in close proximity to the north of the current Los Angeles Plaza Church (Morris et. al. 2016:97). Although the Project Site is located just over a half of a mile to the southwest of the California Historic Landmark Number 655, the Portola Trail Campsite, it is unlikely that *Yangna* was located at the trail campsite or overlapping with the Project Site, based on known information about the location of the village at contact.

Nonetheless, due to the Project Site's proximity to the Los Angeles River, which was which was heavily exploited by prehistoric peoples over time and seasonally, there is a potential for encountering prehistoric archaeological resources. The Project Site was likely within the flood zone of the Los Angeles River, a location where deposition could have buried both prehistoric and early historic archaeological resources. Avila Springs was located within or adjacent to the Project Site. Information provided during AB 52 consultation also noted the presence of this spring, which would have been a source of fresh water and therefore would have been a sensitive area for Native American habitation. Although the Project Site has been subjected to nearly a century of agricultural, urban and transportation development, for the most part this was surficial disturbance. Areas of older historic development are less likely to have disturbed archaeological sites at depths in this area. Although a substantial amount of contaminated soils was removed during earlier remediation on the Project Site, there are still areas of the Project Site that likely are comprised of native soils that were subject only to surficial disturbance so that they could still retain the potential to preserve prehistoric and historic archaeological resources.
The Los Angeles *zanja madre* has been mapped extensively on historic maps running roughly parallel to the west side of the Project Site. *Zanja 6-1* has also been documented on the east side

ENV-2012-2055 -- 02995

AR004365

of the Project Site running roughly along Main Street. The historic development on the Project Site may not have disturbed segments of the *zanja* or associated components of the system if they extended into the Project Site.

As described in the historic context above, Avila Springs was located directly adjacent to or within the Project Site. In the historic era, the springs was used to pipe in water to the pueblo. There is a potential for encountering historic water conveyance features related to the reservoir and ancillary pipelines, as well as related to ancillary portions of the *zanja* system which may have overlapped with the Project Site. Building materials for the *zanja* system included earthen ditches, wooden troughs, and brick or cement conduits. Building materials for ancillary pipelines to the reservoir included metal and wooden conduits. Some portions of the *zanja* system that have been identified archaeologically have revealed a complex sequence of construction and modification related to maintenance over a long period of use.

The documentation provided by the tribes as a result of AB 52 consultation described places, known archaeological and historic resources, as well as a high sensitivity for buried prehistoric or historic archaeological resources. These are described as being in the vicinity of the Project Site, and any might be considered sacred lands or tribal cultural resources by the tribes. The documentation did not reveal that any known sacred lands or tribal cultural resources overlap with or occur within the Project Site, or that would be affected by the Project. Review of the documentation did, however, support the conclusion reached in this EIR that the Project Site has potentially high sensitivity for buried archaeological resources that, once encountered, could potentially be considered a tribal cultural resource.

Archaeological Recommendations

Research has revealed that the Project Site may have a high prehistoric and historic archaeological sensitivity due to the former development of the Site as well as historic transportation and infrastructure which may have overlapped with the Project Site. In particular, there is a potential for encountering historic remnants of the rail yard, historic water conveyance features, the evidence of Avila Spring and any activates associated with the exploitation and use of the spring during the historic and prehistoric periods.

Based on the results of the archival research, it is possible that prehistoric and historic resources may be present within the Project Site. Such resources may lie beneath the surface obscured by development and pavement. Because the potential to encounter prehistoric and historic archaeological resources exists for the proposed Project, it is recommended that the construction contractor shall use a qualified archaeological monitor, working under the supervision of a qualified archaeological Principal Investigator during ground disturbing activities including, but not limited to, asphalt removal, demolition and removal of foundations and footings, trenching, grading, and over excavation within the Project Site. Ancillary construction which may occur within East College, North Main, Rondout, and North Spring Streets to change the curb and gutter as well as any utilities work for the Project will be monitored. The monitor will conduct worker training prior to the initiation for ground-disturbing activities in order to inform workers of the types of resources that may be encountered and advise them of the proper handling of such resources. If any prehistoric archaeological sites or historic archaeological sites that may be

ENV-2012-2055 -- 02996

AR004366

important to Native American Tribes, or human remains are encountered within the Project Site, consultation with interested Native American parties shall be conducted to apprise them of any such findings and solicit any comments they may have regarding appropriate treatment and disposition of the resources. The archaeological monitor shall have the authority to redirect construction equipment in the event potential archaeological resources are encountered. In the event archaeological resources are encountered, the client shall be notified immediately and work in the vicinity of the discovery will halt until appropriate treatment of the resource, is determined by the qualified archaeological Principal Investigator in accordance with the provisions of CEQA.

Sara Dietler

Archaeologist

EDUCATION

B.A., Anthropology, San Diego State University, 1997

19 YEARS EXPERIENCE

CERTIFICATIONS/ REGISTRATION

California BLM Permit, Principal Investigator, Statewide

Nevada BLM Permit, Paleontology, Field Agent, Statewide

PROFESSIONAL AFFILIATIONS

Society for American Archaeology (SAA)

Society for California Archaeology (SCA)

Sara is a senior archaeologist and paleontology lead with 19 years of experience in cultural resource management in Southern California. As a senior project manager, she manages technical studies including paleontological and archaeological assessments and surveys, monitoring and fossil salvage for many clients including public agencies and private developers. She is a cross-trained paleontological monitor and supervisor, familiar with regulations and guidelines implementing the National Historic Preservation Act (NHPA), National Environmental Policy Act (NEPA), California Environmental Quality Act (CEQA), and the Society of Vertebrate Paleontology guidelines. She has extensive experience providing oversight for long-term monitoring projects throughout the Los Angeles Basin for both archaeological, Native American, and paleontological monitoring compliance projects and provides streamlined management for both disciplines.

Relevant Experience

Los Angeles Unified School District (LAUSD) Central Los Angeles High School #9; Los Angeles, CA. *Senior Project Archaeologist & Project Manager*. Sara conducted on-site monitoring and investigation of archaeological sites exposed as a result of construction activities. During data recovery phase in connection with a 19th century cemetery located on-site, participated in locating of features, feature excavation, mapping and client coordination. Organized background research on cemetery including; genealogical, local libraries, city and county archives, other local cemetery records, internet and local fraternal organizations. Advised in lab methodology and set up, and served as project manager, contributing author and editor for the published monograph, which was published as part of a technical series. Not Dead but Gone Before: The Archaeology of Los Angeles City Cemetery".

Los Angeles Department of Water and Power, Scattergood Olympic Transmission Line, Los Angeles, CA. *Report Author.* LADWP is currently installing approximately 11.4 miles of new 230 kilovolt underground transmission line that will connect the Scattergood Generating Station and the Olympic Receiving Station, providing more power to West Los Angeles. Ms. Dietler is providing final reporting for the long term monitoring and QA/QC of the field data.

Veterans Administration Long Beach, Long Beach California, Veterans Administration. *Senior Project Manager.* Sara managed a long term monitoring project which also includes implementation of a Memorandum of Agreement, a Plan of Action, and Historic Properties Treatment plan for the mitigation of disturbance to a prehistoric site on the campus.

Long Beach Courthouse Project; Long Beach, California; Clark Construction. *Senior Project Archaeologist* and *Project Manager.* Sara directed the paleontological and archaeological monitoring for the construction of the New Long Beach

Courthouse. She supervised monitors inspecting excavations up to 25 feet in depth. Nine archaeological features were recovered. Sara completed an assessment of the artifacts and fossil localities in a technical report at the completion of the project.

Hellman Ranch Project, Orange County, California; John Laing Homes. *Lab Director.* Sara served as the lab director for the final monitoring phase of the project, cataloging and analyzing artifacts recovered from salvage monitoring and test units placed in relation to recovered intact burials. She conducted microscopic analysis of small items such as bone tools and shell and stone beads, directed lab assistants and oversaw special studies including the photo-documentation of the entire collection. Sara completed a section reporting on the results of the bead and ornament analysis in the final report, which was published as part of a technical series.

Hansen Dam Golf Course Water Recycling Project, Los Angeles, California, LADWP. *Senior Archaeologist* and *Project Manager.* Sara directed a Phase I historical assessment for the Hansen Dam Golf Course Water Recycling Project located in the San Fernando Valley, City of Los Angeles, California. The Project included the construction of an outdoor pumping station adjacent to the existing Hansen Tank located at the LADWP's VGS. In addition, a pipeline or distribution line was planned to be installed from the pumping station to the Hansen Dam Golf Course, along the Tujunga Wash. The Phase I study of this project included mitigation for the effects of the project on the portion of the golf course falling within the APE which was potentially sensitive for buried cultural resources as the result of a complex of world war II housing units place on the site between the 1940s and the 1960s.Conducted consultation with the USACOE regarding the project.

Elysian/USC Water Recycling Project IS/EA, Los Angeles, California; LADWP. *Project Manager.* Sara worked on the an Initial study/mitigated negative declaration and an environmental assessment/finding of no significant impact to construct recycled water pipelines for irrigation and other industrial uses serving customers in downtown Los Angeles, including Elysian Park. The US Environmental Protection Agency is the federal lead agency. She prepared two technical reports and a treatment plan for archaeological, historic and paleontological resources identified during the Phase I assessment.

San Gabriel Trench Grade Separation Environmental Compliance Services; San Gabriel, California; Alameda Corridor-East Construction Authority (ACE). *Senior Archaeologist* and *Report Manager*. Sara conducted bead analysis, lab supervision and served as contributing author to data recovery report. She oversaw preparation of a published monograph, which includes the analysis of the feature and artifact recovery from the San Gabriel Mission site, as well as a contextual history of the site and findings. Sara provided artifact analysis and co-authored the artifact chapter in the monograph.

Downtown Cesar Chavez Median Project, City of Los Angeles, California; LADPW, Bureau of Engineering. *Project Manager*. The project was a local assistance project requiring consultations with Caltrans cultural resources. Sara was responsible for Caltrans coordination, serving as contributing author and report manager for required ASR, HPSR, and HRER prepared for the project.

Transmission and Gas

Kern County Solar Energy Projects; Kern County, California; Recurrent Energy. Provided cultural resources, paleontological resources, and Native American monitoring services for five separate solar photovoltaic projects. The five projects include a total of 626 acres of previously undeveloped land in the eastern portion of the county. Ms. Dietler served as Project Manager for all five projects and Senior Archaeologist providing client coordination and oversight of paleontological monitoring and reporting.

SCE Master Services Agreement for Natural and Cultural Resources Services; Southern California; Southern California Edison. Provides project management and senior archaeological support for an on-call MSA with SCE for cultural and natural resources consulting services. This contract has included numerous surveys and monitoring projects for pole replacements and small- to mid-size reconductoring projects, substation maintenance, and construction projects. Ms. Dietler has served as Project Manager for more than 25 projects under this contract. She is the go-to person for all water, gas, and power projects occurring in the City of Avalon on Santa Catalina Island. Ms. Dietler is responsible for oversight of archaeological and paleontological monitors, serving as report author and report manager.

Water

Hansen Dam Golf Course Water Recycling Project, Los Angeles, California, LADWP. Served as *Senior Archaeologist* and *Project Manager* directing a Phase I historical assessment for the Hansen Dam Golf Course Water Recycling Project located in the San Fernando Valley, City of Los Angeles, California. The Project included the construction of an outdoor pumping station adjacent to the existing Hansen Tank located at the LADWP's VGS. In addition, a pipeline or distribution line was planned to be installed from the pumping station to the Hansen Dam Golf Course, along the Tujunga Wash. The Phase I study of this project included mitigation for the effects of the project on the portion of the golf course falling within the APE which was potentially sensitive for buried cultural resources as the result of a complex of world war II housing units place on the site between the 1940s and the 1960s.Conducted consultation with the USACOE regarding the project.

Elysian/USC Water Recycling Project IS/EA, Los Angeles, California; LADWP. Ms. Dietler was the *Project Manager* for an Initial study/mitigated negative declaration and an environmental assessment/finding of no significant impact to construct recycled water pipelines for irrigation and other industrial uses serving customers in downtown Los Angeles, including Elysian Park. The US Environmental Protection Agency is the federal lead agency. Prepared two technical reports and a treatment plan for archaeological, historic and paleontological resources identified during the Phase I assessment.

State and Local

Topanga Library Project, Topanga Canyon, California, LACDPW. Served as *Project Manager*, supervising the archaeological monitoring effort and directed data recovery of findings. Construction included the installation waterlines along the roadway outside of the main project area. Monitoring resulted in the discovery

of materials associated with the recorded archaeological site CA-LAN-8. Prepared a Data Recovery Plan and Research Design to mitigate the disturbance to the known site during installation of a water main for the library project. Worked closely with the LACDPW to assist them in mitigating the effects of the project as well as coordinating with Caltrans who had oversight on the project. Resources were identified and evaluated for eligibility to the National Register of Historic Places.

San Gabriel Trench Grade Separation Environmental Compliance Services; San Gabriel, California; Alameda Corridor-East Construction Authority (ACE). *Senior Archaeologist* and *Report Manager*. Conducted bead analysis, lab supervision and served as contributing author to data recovery report. Oversaw preparation of a published monograph, which includes the analysis of the feature and artifact recovery from the San Gabriel Mission site, as well as a contextual history of the site and findings. Provided artifact analysis and co-authored the artifact chapter in the monograph.

Federal

Veterans Administration Long Beach, Long Beach California, Veterans Administration. *Senior Project Manager* for a long term monitoring project which also includes implementation of a Memorandum of Agreement, a Plan of Action, and Historic Properties Treatment plan for the mitigation of disturbance to a prehistoric site on the campus.

Long Beach Courthouse Project; Long Beach, California; Clark Construction. Served as *Senior Project Archaeologist* and *Project Manager* directing the paleontological and archaeological monitoring for the construction of the New Long Beach Courthouse. Supervised monitors inspecting excavations up to 25 feet in depth. Nine archaeological features were recovered Completed an assessment of the artifacts and fossil localities in a technical report at the completion of the project.

Land Development

Hellman Ranch Project, Orange County, California; John Laing Homes. Served as *Lab Director* for the final monitoring phase of the project, cataloging and analyzing artifacts recovered from salvage monitoring and test units placed in relation to recovered intact burials. Conducted microscopic analysis of small items such as bone tools and shell and stone beads. Directed lab assistants and oversaw special studies including the photo-documentation of the entire collection. Completed a section reporting on the results of the bead and ornament analysis in the final report, which was published as part of a technical series.

Sixth and Bixel Project, Los Angeles, California, Holland Partners. Served as *Project Manager* for a monitoring phase of the project for a mixed use development in downtown Los Angeles, which included the recovery of fossils including marine invertebrates, sharks, and a partial whale. Conducting coordination with the Los Angeles Natural History Museum regarding preparation and curation of the whale fossil.

Transportation

I-5 HOV Lanes Project, Orange County, California; Orange County Transportation Authority (OCTA). Cultural Resources Task Manager. Directed the OCTA I-5 HOV Lanes Project which involves improvements to Interstate 5 between SR-55 and SR-57 and included a Phase I study. Orange County Transportation Authority and Caltrans served as the overseeing agencies. Coordinated with planners, other resource managers and Caltrans. Completed analysis of existing conditions, conducted an archaeological survey and produced an Archaeological Survey Report following Caltrans guidelines.

Downtown Cesar Chavez Median Project, City of Los Angeles, California; LADPW, Bureau of Engineering. *Project Manager*. Project was a local assistance project requiring consultations with Caltrans cultural resources. Responsible for Caltrans coordination, serving as contributing author and report manager for required ASR, HPSR, and HRER prepared for the project.

PROFESSIONAL AFFILIATIONS

Society for California Archaeology

Fatima Clark has eight years of hands-on archaeological experience and is practiced in project management and client and agency coordination. Her field experience is complimented by the course study and participation in numerous archaeological excavations in California, Arizona, and Peru. Fatima has written California Environmental Quality Act (CEQA)-level technical reports, Environmental Impact Report (EIR) sections, Initial Study sections, archaeological peer reviews, archaeological monitoring reports, and reports pursuant to Caltrans requirements. She is also experienced in performing archaeological testing, site recordation, laboratory analysis, pedestrian surveys, records searches through several California Historical Resources Information Systems-Information Centers, and monitoring for a wide variety of projects, including mixed-use, residential, and energy, water, and road infrastructure projects. In addition to her archaeology background, Fatima has been cross-trained in conducting paleontological surveys and monitoring and has co-authored and managed associated reports.

Relevant Experience

Archaeology

Uptown Newport Village Project, Newport Beach, CA. *Project Manager.* Fatima served as Project Manager and cross-trained archaeological/ paleontological monitor during construction activities at the project site. The project proposes to redevelop the project site into residential units, park space and underground parking garages. The project is currently ongoing with the identification of fossils, curation and eventually the preparation of a monitoring results report.

San Juan Medical Office Building, San Juan Capistrano, CA. *Archaeologist.* Fatima performed archaeological and paleontological monitoring and was in charge of preparing the final monitoring report. The project consisted of the development of a medical office building in San Juan Capistrano.

Henning Way Residential Subdivision, Anaheim, CA. *Archaeologist.* Fatima prepared Cultural Resources Initial Study Section to support the Mitigated Negative Declaration regarding the three-lot residential project.

Southern California Edison Archaeological Services/ Contingent Employee (2008-2013), Southern California, CA. Fatima worked at SCE as a full-time in-house consulting archaeologist in the Deteriorated Poles Program, GO 131-D Program and for the VSSP. Fatima was in charge of managing work sent to outside consultants for surveys and preparation of archaeological reports and coordinating with consultants and SCE staff. Fatima also conducted over 100 archaeological reviews, conducting records searches, field surveys, project coordination, report writing for projects subject to the rules and regulations of the California Public Utilities Commission (CPUC) and therefore follows CEQA-mandated requirements.

Among the larger projects in which Fatima was involved with was the VSSP. The VSSP had three alternative routes with a total of approximately 25 miles in length. The VSSP was conducted for the purpose of developing a Proponent's Environmental Assessment (PEA) for the CPUC's review. Fatima had the role of Project Manager for the VSSP, and her duties consisted of records searches, creating a Scope of Work, reviewing PEA bidders' proposals, assessing/developing study corridors, developing suitable access roads to avoid/minimize impact to archaeological sites, and project coordination with SCE team members for the entire project and outside consulting archaeologists.

La Costa Chevron Project, Encinitas, CA. *Project Manager.* Fatima is leading the archaeological services for the La Costa Chevron Project in Encinitas, which addressed Chevron-created erosion onto a Caltrans right-of-way. Due to the project site's location within a recognized archaeological site, Caltrans required an Extended Phase I (XPHI). Managing the company's role as a subcontractor to a larger engineering firm, she has coordinated with the prime consultant as well as the Native American groups in the area and served as the primary author of the XPHI. She has also been in charge of conducting archaeological testing at the prehistoric archaeological site and has served as the primary author of the testing report, an Environmentally Sensitive Area Action Plan and the Historic Resources Compliance Report.

I-10 Freeway/Pepper Avenue Interchange Project, Colton, CA. *Project Manager.* Fatima served as Project Manager for the I-10 Freeway/Pepper Avenue Interchange Project. The project involved the preparation of an Archaeological Survey Report in accordance with Caltrans guidelines for a bridge expansion along Pepper Avenue in Colton. In addition to the technical analysis she coordinated with the Prime Consultant, San Bernardino Associated Governments, and Caltrans' Environmental Unit.

Aidlin Property Residential Project, Los Angeles County, CA. *Archaeologist.* Fatima conducted the historical records searches through the California Historical Resources Information System (CHRIS), pedestrian survey, the preparation of the CEQA cultural resources assessment report, the preparation of an Environmental Impact Report (EIR) section, and the preparation of the Section 106 report. The proposed project consists of a residential development on an approximately 230 acres of land in an unincorporated area of Los Angeles County, California.

Shriners Hospital for Children Archaeological and Paleontological Monitoring, Pasadena, CA. *Project Manager.* Fatima served as Project Manager and cross-trained archaeological/paleontological monitor during construction activities at the project site. The project consisted of the construction of three-story medical building and subterranean parking garages for the Shriners Hospital for Children.

Ivy Station Mixed-Use Development Mitigated Negative Declaration (MND), Los Angeles/Culver City, CA. *Archaeologist.* Fatima conducted historical record searches through CHRIS, the field survey, and provided technical information and recommendations for the Initial Study to support an MND to address the proposed development of a stand-alone 5-story office building with ground-level retail. The project also included two interconnected 5 and 6 story buildings, including a 148-room boutique hotel and a 200-unit residential complex with amenities atop a podium.

750 North Edinburgh Avenue Project MND, Los Angeles, CA. *Archaeologist.* Fatima performed historical record searches through CHRIS, the field survey, and provided technical information and recommendations for the Initial Study to support an MND. The proposed project would remove extant uses on the project site, subdivide the parcel into eight lots, and develop on each lot a three-story single-family residence, two covered parking spaces, and private patio/yard areas.

City of Los Angeles, 3240 Wilshire Boulevard Project, Los Angeles, CA. *Archaeologist.* Fatima conducted the historical record searches through CHRIS, the field survey, and provided technical information and recommendations in the form of a letter report and Initial Study Section to support an MND. The proposed project involved the conversion of the I. Magnin department store building (currently known as the Wilshire Galleria) into a hotel and the construction of a mid-rise apartment building, high-rise condominium tower and commercial space, in addition to the existing 138,500-square-foot I. Magnin building.

2nd & Vignes Development, Los Angeles, CA. *Archaeologist.* Fatima conducted through CHRIS, the field survey, and provided technical information and recommendations for the Initial Study to support an MND. The project proposes an adaptive reuse of the existing building to develop approximately 120,000 square feet of private event, retail, commercial office, restaurant, residential, and gym/spa uses. To increase interior floor area and maintain the building's footprint, the project would add four floors to the existing two-story building. The building's exterior walls and architectural features are anticipated to be largely retained and/or rehabilitated to reflect the building's original design. The building's interior would largely be demolished and adaptively redeveloped.

Isla Verde Residential Project, Moreno Valley, CA. *Archaeologist.* Fatima was in charge of conducting records searches, the pedestrian survey and the preparation of the CEQA report. The project proposed the construction of 142 residential units, a clubhouse and community pool in the City of Moreno Valley.

Frontier Chino Borba (17.7-Acre) Project, Chino, CA. *Archaeologist.* Fatima was in charge of conducting records searches, pedestrian survey and preparation of CEQA report, in order to support an addendum to the City of Chino's General Plan.

Frontier Chino (7.15-Acre) Project, Chino, CA. *Archaeologist.* Fatima was in charge of conducting records searches, the pedestrian survey and preparation of CEQA report, in order to support an addendum to the City of Chino's General Plan.

SunEdison Cascade Solar Energy Project, San Bernardino County, CA. *Archaeologist.* Fatima performed the records search, Phase I pedestrian survey, Phase II testing, and monitoring for the SunEdison Cascade Solar Energy Project in the Sunfair Community of unincorporated San Bernardino County. Fatima excavated several Shovel Test Probes within a newly recorded archaeological site. As part of the Phase II field investigation, Fatima has also conducted lab analysis of lithic materials recovered at the archaeological site.

Cucamonga Creek Watershed Regional Water Quality Project, Chino, CA. *Archaeologist.* Fatima performed the Phase II Testing for the Mill Creek Wetlands testing at site Ca-SBR-2845 in Chino.

Burbank Reservoir No. 1 Replacement Project, Burbank, CA. *Archaeologist.* Fatima prepared Cultural Resources Initial Study Section to support the Mitigated Negative Declaration regarding the reservoir project.

Century Woods Residential Project, Los Angeles, CA. *Archaeologist.* Fatima prepared Cultural Resources Initial Study Section to support the Mitigated Negative Declaration regarding the residential project in the Century City community of Los Angeles.

Badlands Landfill Stockpile Project, Riverside County, CA. *Archaeologist.* Fatima conducted the pedestrian survey and wrote the Phase I Archaeological Resources Assessment in compliance with CEQA and the County of Riverside's General Plan. The Riverside County Waste Management Department (RCWMD) proposed to establish a new 48-acre soil stockpiling area (study area) on the Badlands Landfill site, located northeast of the City of Moreno Valley.

Paleontology

Orange County Great Park (Heritage Fields) Project, Irvine, CA. *Paleontological Monitor.* Fatima performed paleontological monitoring for resources in contaminated soils at the project site on the former El Toro Marine Corps Air Station.

Highgrove Community Library Site, Riverside County, CA. *Paleontologist.* Fatima performed a paleontological survey for the 7.5-acre Highgrove community library site in Riverside County.

Stephen S. Wise School Project, Los Angeles, CA. *Paleontological Monitor.* Ms. Clark performed paleontological monitoring and fossil salvage at a proposed school site off of Mulholland that dated back to the Miocene era. As a part of the ESA team, Ms. Clark received hands on training in fossil identification of the Etringus species embedded in shale.

Lytle Creek North Water Quality Basin Relocation, San Bernardino County, CA. *Paleontological Monitor.* Fatima performed construction monitoring for paleontological resources during the grading of three large basins for the installation of storm drains at the Lytle Creek North Water Quality Basin Relocation project site.

Academia

Fatima's knowledge in Cultural Resources Management is further complimented by her own academic research in Archaeology. In 2010, under the direction of Dr. Steven James (Assistant Professor of Archaeology at California State University Fullerton) she excavated a Shell Midden site located on the Rancho Palos Verdes Peninsula. Fatima has also gained valuable experience as a Museum Assistant in Historics while working at the Mission San Juan Capistrano. There she learned how to care for the preservation of historic artifacts by properly wrapping them and labeling them with conservation quality products. As part of her responsibilities, she also took part on the archaeological excavation along the perimeter of the Peregrine Chapel and the restoration of historic murals along the entrance to the Serra Chapel.

In addition to California Archaeology, Fatima has acquired experience in Southwestern Archaeology at the Honanki Pueblo Ruins in Arizona. This project included the excavation to reveal the buried walls of a cliff dwelling. Duties performed as part of this project included excavation, screening, photo taking, mapping and identification of artifacts and ecofacts.

The remainder of her overseas archaeological experience has been in Andean Archaeology. In Peru, she spent two field seasons excavating within the boundaries of a ceremonial plaza and at a cemetery within El Purgatorio Archaeological site in the Casma Valley. There she acquired experience conducting lab work and analyzing organic material and ceramics. Fatima has also worked as a lab assistant with Andean Archaeologist, Carol Mackey. Under Dr. Mackey's direction, Fatima learned how to construct typologies for ceramic vessels from different time periods dating back to the Chimu, Lambayeque and Inca style periods.

Subject: **SLF Search Request for the 924 N. Spring Street College Station Project, Los Angeles, CA**

Dear Ms. Totton:

Environmental Science Associates (ESA) is preparing an Environmental Impact Report (EIR) for the 924 N Spring Street (Project) The Project is located in the City of Los Angeles, within Los Angeles County. The Project would develop up to approximately 642,239 square feet of floor area (approximately 3:1 FAR) within six residential buildings above a two-level podium structure and spatially arranged around a central courtyard. The Project includes 770 dwelling units, including 355 studios, 360 one-bedroom units (including 10 townhomes), and 55 two-bedroom units, and up to approximately 51,390 square feet of retail, restaurant, and other commercial space. The largest of the three retail spaces (37,520 square feet) would front on College Street at the southern end of the Project site and is programmed for use as a market. The remaining two commercial areas would front on N. Spring Street and would be separated by a row of 10 two-story townhomes. The two commercial areas fronting on N. Spring Street are programmed for approximately 5,870 square feet of retail space and 8,000 square feet of restaurant space, and 3,000 square feet of restaurant space. Parking totaling 1,179 stalls would be accommodated within one-and-a-half levels of subterranean parking and two above-ground podium levels. A total of 899 ground-level bicycle spaces would also be provided.

The enclosed map shows the Project area located in an unsectioned area of the Los Angeles USGS 7.5' Quadrangle, Township 1 South, Range 13 West

In an effort to provide an adequate appraisal of all potential impacts to cultural resources that may result from the proposed Project, ESA is requesting that a records search be conducted for sacred lands or traditional cultural properties that may exist within the Project area.

Thank you for your time and cooperation regarding this matter. To expedite the delivery of search results, please fax them to 213.599.4301. Please contact me at 323.246.6289 or vortiz@esassoc.com if you have any questions.

Sincerely,

Vanessa Ortiz, M.A., RPA

RE: Proposed 924 N. Spring Street College Station Project, City of Los Angeles; Los Angeles USGS Quadrangle, Los Angeles County, California

Dear Ms. Ortiz:

Attached is a list of tribes that have cultural and traditional affiliation to the areas of potential project effect (APE) referenced above. I suggest you contact all of those listed, if they cannot supply information, they might recommend others with specific knowledge. The list should provide a starting place to locate areas of potential adverse impact within the APE. By contacting all those on the list, your organization will be better able to respond to claims of failure to consult, as may be required under particular state statutes. If a response has not been received within two weeks of notification, the Native American Heritage Commission (NAHC) requests that you follow-up with a telephone call to ensure that the project information has been received.

A record search of the Native American Heritage Commission (NAHC) *Sacred Lands File* (SLF) was completed for the area of potential project effect (APE) for the above referenced project. Sites have been located within the APEs you provided that may be impacted by the project. Please immediately contact Gabrieleno Band of Mission Indians - Kizh Nation at (626) 926-4131 for more information about these sites.

If you receive notification of change of addresses and phone numbers from any of these individuals or groups, please notify me. With your assistance we are able to assure that our lists contain current information. If you have any questions, please contact me at my email address: gayle.totton@nahc.ca.gov.

Sincerely,

Gayle Totton, M.A., PhD.
Associate Governmental Program Analyst

APPENDIX C
AB 52 Consultation Log

ENV-2012-2055 -- 03017

AR004387

AB 52 Consultation - College Station Project ENV-2012-2055 EIR						
AB 52 Letter Date Issued	Recipient	Tribal Response	Consultation Initiated by City	Notes	Consultation Concluded by City	Resolution
June 7, 2016	Gabrieleno Band of Mission Indians - Kizh Nation, Andrew Salas	July 11, 2016 - letter received by email	March 23, 2017 and April 10, 2017 by phone	On the first call Andy mentioned that the project site is located near the Zanja Madre, and is near commerce routes and is in a highly sensitive cultural area. We discussed that the tribe should provide substantial evidence to the City to support this claim, specifically, the tribe providing maps. See corresponding email consultation verification email. On the second call we let Andy know that the information provided after the original call did not provide substantial evidence that tribal resources are located on the project site. He provided additional maps/images for the record.	Will wait for analysis in Tribal Resources Section and Cultural Resources Report prior to concluding consultation.	City is currently preparing a Cultural Resources Report and will include a Tribal Resources Section in the DEIR
June 7, 2016	Gabriel Band of Mission Indians, Anthony Morales	None				
June 7, 2016	Fernandeno Tataviam Band of Mission Indians, Caitlin B Gulley	June 30, 2017 - letter received by email	After multiple attempts by City staff to schedule phone consultation, tribal representative emailed City on June 1, 2017 stating that the tribe no longer wishes to engage in consultation.		Letter will be mailed out on June 5, 2017.	
June 7, 2016	San Fernando Band of Mission Indians, John Valenzuela	None				

June 7, 2016	Luiseno Indians, Joseph Ontiveros	None				
June 7, 2016	Tribe, Linda Candalaria	None

Subject: Public Comment on LAART

To whom it may concern,

I'm a 90012 resident and have been following this project for the past several months. I attended the event at Union Station and spent over an hour discussing the results of the EIR and project at large with the hosts. After some more research and reflection, I would like to voice some concerns for the project. P142-1

My primary concern is simply about understanding how the project is financed. At the Union Station event I was told that the project will be entirely financed by an external benefactor who will only donate the funds for this project in particular (as opposed to sponsoring other projects). Furthermore that the benefactor would pay for ongoing maintenance and that the cost to users would be the same as the rest of the Metro system.

To me, this seems unlikely to be true (and if true, seems unlikely to work in reality unless there is some kind of endowment created for the ongoing financing of this project), and I'm unable to find confirmation in any legally binding way that this is the case. If you are able to provide authoritative information about this, please include it in your response. P142-2

My second concern is about the choice of gondola over other alternatives. As far as I can tell, no other alternatives have been considered as this was an "unsolicited proposal". I feel as though the due-diligence for this project has not been done. It seems this project is a solution looking for a problem rather than an optimal plan. I am not able to support a project that assumes that the first solution considered is the best solution. P142-3

My final concern is that the ART project doesn't address the largest issue with Dodger Stadium: that the venue itself is disconnected from the surrounding urban fabric by its own parking lots. Great urban ballparks (and venues) are connected to the surrounding neighborhoods in a way that allows patrons to arrive early, enjoy food and drink before the event, walk to the park, enjoy the event, and linger after. I would much prefer this project to omit the gondola (which seems very high-risk for the expected value of moving 5k pp/hr) and instead focus on improving the walkability of Vin Scully Ave. and creating connections to the park from Chinatown. Patrons already park in the surrounding area and walk to the park, so the distance is not too great. The Chinatown L Line stop is geographically very close to the park, and the LA Historic Park regularly hosts events with >10k attendees, even without the direct highway access that Dodger Stadium has. Transit options already exist to get to Chinatown and Echo Park from many places in the city and the last-mile improvements would be much more beneficial to the area than a gondola. P142-4

I appreciate you taking the time to solicit and read these responses. If I am misinformed, please send any relevant information along.

Best,
Justin Carrus P142-5

Dear Mr. Cory Zelmer,

I support the proposed zero-emission Los Angeles Aerial Rapid Transit Project (LA ART), connecting Union Station to Dodger Stadium.

The gondola would benefit visitors to Dodger Stadium and the community by taking cars off the road, increasing access to public transit, and reducing greenhouse gas pollution. Projects like these are important in addressing climate change and improving the quality of life for Angelenos. P143-1

Subject: Public Comment on LAART DEIR

Mr. Cory Zelmer
Deputy Executive Officer
Los Angeles County Metropolitan Transportation Authority
One Gateway Plaza, Mail Stop 99-22-6
Los Angeles, CA 90012

Hello Mr. Cory Zelmer,

I am writing to express my concern about the LAART project and the environmental impacts that it will have on the community and the City.

While the Environmental Impact Report (EIR) brings to light certain impacts of the project on the environment, the simple fact is that the negative impacts of this project go beyond the scope of an EIR and California Environmental Quality Act review (public funding, privacy concerns, etc.). The EIR lays out the potential for significant and unavoidable impacts and relies on questionable mitigation measures to attempt to address significant impacts. P148-1

There is no way that the undefined potential benefits of this program would possibly outweigh the clear and obvious negative environmental and societal impacts associated with the construction and operation of the Project. I urge you to halt this program as soon as possible. P148-2

The Project is not community serving and does nothing to enhance mobility for existing Chinatown residents. Ample public transit service between Union Station and Chinatown already exists in the form of numerous Metro Buses, multiple DASH buses, the Gold / L Line, and it is a very short walk. In no instance will the non-game day head ways be more efficient than many of these other pre-existing transit options. P148-3

There will be negative impacts to the efforts to increase the Union Station Alameda forecourt. Having an obtrusive tram station will detract from the pedestrian realm and is antithetical to the type of street activation that is desired near Olvera Street and along Alameda Street. P148-4

Additional exploration of the Transportation Systems Management Alternative should be further explored. The project objectives were too narrowly defined in a way that doesn't truly serve the needs of the people of the City of Los Angeles, or the residents of Chinatown. P148-5

If the project does somehow moveforward, Design Option E should be required in order to create at least some public benefit in the form of the bridge to the State Historic Park from Broadway. P148-6

Sincerely,
Dylan Sittig
Chinatown Resident

Subject: Stop the Gondola

To Whom It May Concern:

You need to think back to the McCourts' involvement with the L.A. Dodgers and how history will most likely repeat itself. The Dodger fans in all of L.A. County - and there are millions of us - will not contribute one penny to this person's ownership in such a project. Here are a few reasons why . . .

Frank McCourt not only mishandled the finances of the Dodgers, he turned the beloved franchise into the laughing stock of the sports world. Seemingly small things such as parking around the stadium became frustrating once McCourt took over the team.

He drove the once-proud franchise into the ground after years of mismanaging the team's funds, refusing to spend on key player acquisitions through free agency and trades, refusing to invest in international scouting, and tanking the farm system. He did manage to hijack the franchise to make himself filthy rich.

P152-1

So was he a disaster as an owner? Absolutely. But when you consider that he financed 100% of the $430 million he needed to complete the purchase of the team in 2004, plunged the franchise into bankruptcy by 2011, and somehow walked away with almost $1 billion in his pocket, you can't help but admit that McCourt, is as the very least, a savvy businessman who's shrewd tactics made him an extremely wealthy man even if it meant tarnishing the Dodgers iconic brand every step of the way.

Do yourselves a favor and keep this crook out of any money-making venture which will only hurt the people and city and county of Los Angeles.

Regards,

Carolyn Weyant

COMENTARIOS. Quisiera presentar los siguientes comentarios sobre el borrador del informe de impacto ambiental del proyecto de la góndola LA ART:

注释。我想就《LA ART 缆车环境影响报告草案》提出以下意见：

Zhùshì. Wǒ xiǎng jiù LA ART lǎnchē huánjìng yǐngxiǎng bàogào cǎo'àn tíchū yǐxià yìjiàn:

在民居屋顶上建缆车，令居民惊恐，时刻怕有什么意外发生。谁提议建缆车在中国城的？不如把缆车建到他们的屋顶上，看有没有意见。本人强烈反对在中国城建缆车。

P154-1

P154-2

Translation:

Building a gondola over private houses makes residents afraid, always worried that accidents may happen. Who suggested building a gondola in Chinatown?

It would be better to build the gondola above their roofs and see if they have objections. I strongly oppose building a gondola in Chinatown.

I try to use the Gold Line whenever I come into the Downtown of Los Angele

When I come to see a Dodger Game, we have to use the Bus to get to the Stadium. Which may take 30-40mins depending on the Game day & time.

The Gondola Project would lower time to and from the Station to the Stadium.

When I drive into the Stadium it takes approx. 20-30 min to get in and another 10-20 mins to find parking.

Lets Not even talk about 1 hour - 2 hours to just leave the Stadium.

The Gondola Project is a blessing for this 74 yr old man!

Thank you for the opportunity to express my gradcite & appreciation.

Subject: I support zero-emissions transportation in Los Angeles

Dear Mr. Cory Zelmer,

I support the proposed zero-emission Los Angeles Aerial Rapid Transit Project (LA ART), connecting Union Station to Dodger Stadium.

The gondola would benefit visitors to Dodger Stadium and the community by taking cars off the road, increasing access to public transit, and reducing greenhouse gas pollution. Projects like these are important in addressing climate change and improving the quality of life for Angelenos. P195-1

Sincerely,

Taylor Nichols, MD

Subject: Public Comment: Los Angeles Aerial Rapid Transit (LA ART) Project DEIR

Deputy Executive Officer Cory Zelmer,

Mr. Zelmer,
I am writing to voice my opposition to the Los Angeles Aerial Rapid Transit Project ("The Gondola" at Dodger Stadium). I am a resident of CD1, work in the community, and am greatly concerned about the Gondola development that will negatively impact the neighborhood and set a precedent in the wrong direction for future developments, violating civil liberties and privacy. f

P198-1

I am concerned about this project for the following reasons:

Built Environment:

• The Gondola Project's enormous towers will cause aesthetic impacts in my community. I am concerned that the towers will obstruct views, and that the gondola cars will be used for advertising and electronic billboards.

P198-2

Traffic:

• The Gondola Project's displacement of traffic onto the surrounding neighborhoods will worsen air quality impacts from tailpipe emissions in an already overburdened community.

P198-3

The Gondola Project's will increase traffic around Chinatown and Union Station.
• This project is designed to displace traffic from Dodger Stadium and push it onto the surrounding communities. The existing traffic conditions are already difficult because of stadium events, nearby County park competing events, everyday commuters and this project will make it worse.

P198-4

•Historic and Cultural Resources:

The Gondola Project will impact historic and cultural resources such as the Los Angeles State Historic Park, historic Union Station, and the Pueblo de Los Angeles Historic Monument.

P198-5

Environmental Justice:

• This project will increase the impacts of air pollution from vehicle emissions in an area already overburdened by air emissions.

P198-6

Gentrification:

•This project will lead to displacement and increase the cost of rent in the area.

P198-7

Future development:

•This project will lead to future commercial development in Chavez Ravine, without community input and without disclosure to the community.

P198-8

Lack of transparency:

• Metro went forward with this project without an open public process and without competitive bidding. I don't understand the ownership or operation of the project because the details have been hidden from the community. Who is paying for this project? Will taxpayers be left holding the bag?

P198-9

Lack of community consultation:

•The community has been neglected and our voices have not been heard.
•No one asked us our vision for our community.
• We never asked for this project. We don't need or want this project.

P198-10

Respectfully,
Jennifer Cuevas

Hi Veronica,

Thanks for your patience. I needed to get in touch with the project staff to know what the set up is for the hearing and other input opportunities.

The last opportunity to attend a virtual meeting was on December 13, 2022. The next and final public hearing will be held in person on Thursday, January 12, 2023, from 5:00 pm – 7:00 pm, at the Cathedral High School Gymnasium in Chinatown. However, with that said, the other ways in which you can submit a comment on the Draft EIR is as follows:
By email – LAART@metro.net<mailto:LAART@metro.net>
By mail – Cory Zelmer, Deputy Executive Officer
Los Angeles County Metropolitan Transportation Authority
One Gateway Plaza, Mail Stop 99-22-6
Los Angeles, CA 90012
By Phone – (213) 922-6913

All comments must be received no later than 5:00 p.m. on Tuesday, January 17, 2023.
Thank you and please let us know if you have further questions,
Jacob Lieb

Subject: Draft EIR Comments

Hello, this message is in regards to the ART proposal.

This LAART project is severely misguided for several reasons.

First and foremost, this project is providing funding for a private enterprise. Metro already subsidizes trips to Dodger Stadium with the Dodger Stadium Express. While these trips are not necessarily the most efficient, they are a marked improvement over the LAART since they provide multiple infill stations, such as Union Station, the J Line infill station (which also connects to the Green Line), and other local connections.

P207-1

Additionally, this project is much more inefficient than improving local heavy/light rail connections. Guggenheim Baseball Management should be fronting the cost for at a minimum of the construction cost of the station, as they are the only stakeholder to actually profit from this venture. As such, they should be subsidizing more efficient projects, rather than subsidizing a for profit venture that simply seeks to profit off of the taxpayers dime.

Finally, any arial transit system is inherently inferior to any current heavy or light rail alternatives due to a lack of passenger capacity.

P207-2

If there are any questions regarding my statement, please contact me at the following:

Subject: Concern for Chinatown Gondola Project

Hi there,

I have heard that Metro approved for the construction of a Gondola Project to Dodgers Stadium. This is such a bad idea for reducing traffic, especially when there are shuttle bus in place already. Nowhere in the world are gondolas used in a metropolitan area to help reduce traffic. They are generally used for tourists' sightseeing purpose. I urge you to not waste money on this irrelevant project that will obviously be unlikely to resolve any traffic issues to the Dodgers Stadium. Instead, please focus on resources we already have, which are excellent bus fleets that are readily available.

P208-1

Deputy Executive Officer Cory Zelmer,

I am writing to voice my opposition to the Los Angeles Aerial Rapid Transit Project ("The Gondola" at Dodger Stadium).

This is a waste of money and completely irrelevant idea / proposal when there are already shuttle busses. Busses can also take at least 50 cars of the road if they are fully loaded each trip. If they are underutilized, the Metro is responsible for promoting it more like they do for new rail lines. Building a fancy gondola is not going to solve traffic problems.

Deputy Executive Officer Cory Zelmer,

I am writing to voice my opposition to the Los Angeles Aerial Rapid Transit Project ("The Gondola" at Dodger Stadium). P213-1

The Gondola Project's enormous towers will cause aesthetic impacts in my community. We finally have a beautiful natural environment in Chinatown that is safe for our children and the elderly. I am concerned that the towers will obstruct views, and that the gondola cars will be used for advertising and electronic billboards. P213-2

The Gondola Project's will increase traffic around Chinatown and Union Station. This project is designed to displace traffic from Dodger Stadium and push it onto the surrounding communities. The existing traffic conditions are already difficult because of unmanaged traffic during game days in the immediate neighborhood and this project will make it worse. We've had to wait 10-15 minutes to get to our parking lot at Blossom Plaza by the Metro station during game days due to traffic congestion. This is going to make things worse. P213-3

There is also lack of transparency from the Metro. There is a clear lack of community consultation: The community has been neglected and our voices have not been heard. No one asked us our vision for our community. We live AND work in Chinatown. Our voices need to be heard.

Please stop this project and ask us what we want. There is clearly a better way to do this. P213-4

Best,

Manori

Deputy Executive Officer Cory Zelmer,

I am writing to voice my opposition to the Los Angeles Aerial Rapid Transit Project ("The Gondola" at Dodger Stadium). P214-1

These were my comments on Urbanize LA relative to an update on the project. I stand by them 3 months later. The public/City of LA/MTA are being sold a bill of goods.

I am not a homeowner and have no skin in the Chinatown game. I am, however, able to do basic math and do not get distracted by shiny objects. P214-2

1) Proposed Car Capacity is 30 per car (see link below). 5,000/hour means 30 people are loaded and moving every 20 seconds. No way. If one counts two-way traffic, we now have 2,500/hour capacity going one way which is all that matters in this circumstance (and that requires 40 second headways which is likely a gaping stretch too). That's borderline fraudulent advertising since: P214-3

2) People do not go to Dodger Stadium after the game is over and people generally don't leave before it ends (certainly innings 1-6, let's say). That means the real capacity is 2,500/hour which still requires believing 40-second headways, which I do not. P214-4

3) But even if one still has faith in 2,500/hour capacity, to get utility out of that number means 1,250 have to arrive 30 minutes before the game and 1,250 have to leave 30 minutes after the game. That will not sit well with fans over long term. P214-5

That is an ineffective transit solution for an edifice with a capacity of 55,000 holding time sensitive events. And this gondola only gets one to Union Station where riders are still facing painful train/car commutes to get home at 10-11 PM on most nights.
As a measure of comparison, an NYC subway could transport 2,500 people in less than 10 minutes. P214-6

Add it all up and this is a total failure in waiting. But it might have nice views of downtown.

Subject: Public Comment: Los Angeles Aerial Rapid Transit (LA ART) Project DEIR

Deputy Executive Officer Cory Zelmer,

As a resident of the greater community surrounding Dodger Stadium and Echo Park, I wish to express serious concerns about the proposed gondola project between Union Station and Dodger Stadium. P217-1

First, I feel there has been insufficient public input and a real lack of communication with community stakeholders. We will have to live with the daily burdens placed upon neighborhoods if this project is completed. This may include increased traffic, parking problems, and pollution generated by the project; the visual impact of the towers; and possible displacement of residents and/or businesses. Frankly, since this project seems to have been jump-started without sufficient communication with the communities, it is unclear what all of the potential impacts will be. P217-2

Second, as a former municipal employee who has had to follow standard procedures for open bidding for contracts, I don't understand why Metro has not followed this procedure. Did the investors simply negotiate with Metro without due public process or without conforming with typical governmental process for such projects? Does the public know how much this will cost and how much of that burden will be placed upon taxpayers? How much will the developers of this project contribute and how much will they gain in profit? All unanswered questions, which is unacceptable. P217-3

Finally, is this really a necessary project when existing Metro transportation services are not working at the highest level of performance, safety, and cleanliness? More people on a daily basis would choose to use public transportation if it were more reliable, frequent, cleaner, and most importantly, safer. I have transportation options and used to use Metro quite frequently, but now it seems so unsafe and unclean, that I seldom use it. Others, with fewer options, are compelled to use public transportation for work or other activities. I think it's unfair to "indulge" Dodger fans and tourists with an expensive, novelty form of transportation, while others are just trying to live their lives of work, school, shopping, and recreation often on limited incomes. I don't think the majority of Metro users can afford $30 a ride. P217-4

I strongly urge you to reflect on your commitment to provide accessible, affordable, and safe transportation to ALL the residents that Metro serves, not special projects proposed by investors and for the benefit for a relatively small sector of the total metro population. P217-5

Respectfully,
Nancy Hoven

Deputy Executive Officer Cory Zelmer,

I am writing to voice my strong opposition to the Los Angeles Aerial Rapid Transit Project ("The Gondola" at Dodger Stadium). Chavez Ravine is already a much contested site in LA's history. As I'm sure you're aware, the construction of Dodger Stadium displaced many generations of families who were promised affordable housing that never came to be. This is a shameful aspect of LA's past that has never been fully addressed or repaired. Building the Gondola project would only add insult to injury. P220-1

As a resident of Northeast Los Angeles, I have watched Chinatown slowly hollow out in the last decade—and at an alarming rate ever since the pandemic. The once lively, unique, and ethnically diverse neighborhood has more and more empty storefronts and, unfortunately, more and more horror stories of displacement, particularly of senior citizens from their homes. It's hard to see how the Gondola will do anything to redress these sad developments or make the lives of longtime residents better. It stands to only further fracture the neighborhood and increase pollution, gentrification, and traffic while making a historic area of Los Angeles much uglier (which may seem like a shallow complaint, but I assure you, it's not. Everyone deserves to live in a beautiful neighborhood and unsightly infrastructure is often only foisted on the less affluent--see the history of LA's freeways.) Meanwhile, I believe the people who really stand to benefit from the Gondola's construction are the owners of the Dodgers and of Dodger Stadium. P220-2

In this day and age, when the city is in such disarray and homelessness is surging yet again, should we really be acting in favor of the already super-abundantly wealthy? I urge you to put the whole city's well-being at stake and deny this project. We can no longer change the damning history of Chavez Ravine, but you have the choice, and the power, to change its future. P220-3

Best wishes,
Kate Wolf

Deputy Executive Officer Cory Zelmer,

I am writing to voice my opposition to the Los Angeles Aerial Rapid Transit Project ("The Gondola" at Dodger Stadium). I am a 74 year old Los Angeles homeowner who frequents Chinatown and relies on access to the Historic State Park. I have watched the park grow and become more beautiful with each passing season. It provides me with a lovely, safe place to walk, and I see how the workers strive to continually maintain and develop the area. The park has been a perfect place to teach my grandsons, 6 and 8 years old, the wonders of urban nature and provides a great space for them to practice skateboarding and bike riding. The Gondola Project will greatly diminish the entire area, to benefit only a few with all the negatives we already face in much of LA; traffic, pollution, parking, noise and visual ugliness. Chinatown, often ignored by the rest of Los Angeles, is an important historical community that would be horribly affected by the Gondola. The residents and business owners don't deserve this without at least greater community input. The Park and its surrounding neighborhood belong to the people and to history.

Deputy Executive Officer Cory Zelmer,

Dear Deputy Executive Officer Cory Zelmer,

I am writing to voice my opposition to the Los Angeles Aerial Rapid Transit Project ("The Gondola" at Dodger Stadium).

As the daughter of a proud Chinatown business owner of nearly 30 years, I grew up supporting local businesses and hold many past and present community members close to my heart. I strongly oppose “The Gondola” project because it does not serve or represent us: P228-01

(1) The structure will disrupt the skyline and ruin the aesthetic of the Los Angeles State Historic Park. I remember anticipating the opening of this park as a kid, and it would be a shame for “The Gondola” to impact this gem. P228-02

(a) I worry that gondola cars will be plastered with advertising and ruin one of the few green spaces in the community. P228-03

(b) Having gondola cars fly so close overhead is unsettling and dangerous. I am concerned park goers will be deterred by the large, shadowy cars, the increased noise, and the potential debris fallout. This would detract from the tranquility of the park and would make the park appear unsanitary, thereby hurting businesses at the resident farmer’s market. P228-04

(2) This project was pushed forward behind closed doors. Why was there an absence of open public process and competitive bidding? Who is paying for this project? These unanswered questions give the impression of corruption/collusion favoring private interests—public good should be the only goal. The lack of community engagement for this project just adds insult to injury. P228-05

(3) The design of the structure further reinforces community erasure. The generic silver building does not reflect the rich, cultural diversity and history of the community. Instead, the architecture mirrors the “modern” apartment buildings that are already gentrifying the area. We don’t want or need another symbol of gentrification, and this project would only displace more vulnerable residents and hike up rent prices. P228-06

(4) Our community deserves clean air and environmental justice. This project will redirect and increase traffic in the area, which worsens noise and air pollution. Residents already suffer disproportionately from tailpipe emissions; don’t overburden us with even more. P228-07

I urge you to cancel the Los Angeles Aerial Rapid Transit Project. The potential for harm overshadows any benefit. P228-08

Thank you for your time.

Sincerely,
Catherine Wu

I am a visitor and supporter of the community, family member of workers in the community, and an outdoor educator and ecologist.

Subject: Public Comment: Los Angeles Aerial Rapid Transit (LA ART) Project DEIR

Deputy Executive Officer Cory Zelmer,

I am writing to voice my opposition to the Los Angeles Aerial Rapid Transit Project ("The Gondola" at Dodger Stadium). I live in the neighborhood of Angelino Heights, so I am familiar with the traffic and congestion that occurs, especially around Sunset/Douglas in the lead up to Dodgers games and stadium events (the bottom of our lovely hill!). That being said, I still am opposed to this project, because the research does not adequately demonstrate that the disruption, fanfare, and purpose of this project will meaningful reduce congestion in the neighborhood, and benefit the greater public good. Furthermore, this is not a community serving project. As it stands, there is no rail connectivity in the neighborhoods of Echo Park and Silverlake. Instead of a community serving transportation project that could connect residents to major transport hubs through innovative public infrastructure, this gondola serves one purpose and one purpose only: to whisk tourists into the hills of Elysian park to attend major sporting events at Dodgers Stadium. It reminds me a bit of Angels Flight, or what the Roosevelt Island Gondola has become in New York– it operates as a spectacle more than it serves an actual, urgent transport need. And when the projects LA Metro can take on are supposedly so limited by resources, I don't think this is where residents want to see a priority investment made. Even in the 50 year transport plans, there remains little connectivity for these neighborhoods. Is this really where we want to prioritize an investment? It may be in the neighborhood, but it's not for the neighborhood. And it doesn't even make a meaningful dent in the congestion problem it claims to address. Next, on every tourist to-do guide will be a must-see trip on the Dodgers stadium gondola. But for actual residents of the city, this billionaire passion project has little day-to-day relevancy. There is nothing else up in that parking lot besides Dodgers Stadium. There is no plan for public infrastructure that could bring those people to public gathering places and hiking trails in Elysian Park, no way for residents who, of course, do not live in the parking lot of a major MLB stadium, to access shops and grocery stores, link up to major train stations, and access by rail a greater map of the city. It's very clear who this project is for, and it's embarrassing to call this a public transportation project, when it so clearly serves a private sector. I really hope LA Metro can acknowledge the limited relevancy of this passion project, and can fulfill its duty to the public good, and invest in smart, sustainable, community-serving public transportation with connectivity and far-reaching IMPACT that Los Angeles so desperately needs.

Deputy Executive Officer Cory Zelmer,

First off, WHO ASKED FOR THIS? Literally NO one in the community wants this stupid Gondola and this won't actually do anything to help dodger traffic. I lived on sunset blvd for years and though I was priced out of Echo Park, I still work there and NOTHING about this project will do anything actually help the community. P231-01

HOW hell did Metro approve this this far? This idea should've been laughed out of consideration and it's appalling I even have to write a letter to you opposing this. P231-02

Consider this my formal opposition to the Los Angeles Aerial Rapid Transit Project ("The Gondola" at Dodger Stadium) and please PLEASE don't waste Los Angeles money on such a stupid pointless idea that will negatively affect the entire community around Dodger stadium and help only Frank McCourt. There's also no way this will actually take 3,000 cars off the road during dodger season. And why destroy the neighborhood, subject elderly folks homes to a gondola whizzing by their windows of their home nonstop during games for…a stupid gondola? Cue Simpsons Monorail jingle. P231-03

Deputy Executive Officer Cory Zelmer,

I am writing to voice my opposition to the Los Angeles Aerial Rapid Transit Project ("The Gondola" at Dodger Stadium).

I am a resident of Los Angeles and concerned about this project that seemed to be pushed through while the community has been neglected and our voices have not been heard.

Metro went forward with this project without an open public process and without competitive bidding. I don't understand the ownership or operation of the project because the details have been hidden from the community. Who is paying for this project? Will taxpayers be left holding the bag?

P234-01

Dodger Stadium was already stolen from the residents of Chavez Ravine, and this project only continues that legacy. Ultimately leading to future commercial development in Chavez Ravine, without community input and without disclosure to the community. Sound familiar ?

Subject: Opposition to the Aerial Rapid Transit Project / Gondola Project

Hello - I want to voice a strong opposition of this Gondola Project.

First of all, this would destroy views to an already compromised area of Union Station and Pueblo de Los Angeles. This is one of the oldest and most historic areas of Los Angeles and should not be altered any further. It's bad enough that the hideous apt building took over part of the Union Station lot. P239-01

Secondly, this area has become very dangerous and is highly populated with homeless and has not been given any extra security. P239-02

Thirdly, this project just isn't necessary and would be very costly and would have a negative impact on the area during construction and for the long term future. Not only that, it has such a finite use and Dodger Stadium isn't even open for games but for part of the year. WHY? This project is a total joke and there are far bigger traffic concerns in a ton of other parts of Los Angeles. P239-03

Vote NO on the Gondola Project!!

Subject: No on the Dodger Stadium Gondola

Dear Mr. Zelmer,

I am a resident of the City of Los Angeles, and a lifelong Dodger fan. I am also firmly opposed to the construction of the Dodger Stadium Gondola. P240-01

To start, the Gondola Project was never a community priority. As a city that prioritizes the input of its neighbors, this stands in opposition to the values we espouse as a city. P240-02

Second, I am deeply concerned about the unintended consequences this Gondola will bring to the neighborhood. Already local residents are dealing with traffic congestion and high rents, and bringing an unwanted attraction to the neighborhood will further exacerbate these problems. P240-03

Third, the Gondola Project will impact historic and cultural resources such as the Los Angeles State Historic Park, historic Union Station, and the Pueblo de Los Angeles Historic Monument. P240-04

Finally, if the problem is that Dodger games cause way too much traffic, and that this Gondola is a solution, then that is wrong thinking. For instance, I commute from the San Fernando Valley all the way to Union Station to take the Dodger Express Bus. If such a bus existed in the San Fernando Valley, perhaps be even based at the North Hollywood or Universal Metro Stations, then I am confident that many Dodger fans in the Valley would choose to use this transportation over driving into the Stadium. Think of how many cars we'd remove from the roads if that was an option. P240-05

Thank you,
Christian Arana

Deputy Executive Officer Cory Zelmer,

As a community stakeholder, frequent visitor to Los Angeles State Historic Park and a lifelong Angeleno and Dodgers fan I am opposed to the Los Angeles Aerial Rapid Transit Project (aka "The Gondola" at Dodger Stadium). I am concerned about this project for the following reasons: P244-01

The Gondola Project's towers will cause aesthetic impacts in my community by obstructing views, and the gondola cars will no doubt be used for all manner of advertising. Additionally, the project will open the region around it to the potential for unchecked development that could end up displacing longtime residents and changing the character of these long-standing neighborhoods. P244-02

The Gondola Project will not reduce traffic but instead will simply displace it from Dodger Stadium into and around Chinatown and Union Station, making already difficult traffic conditions worse and further compromising air quality for the area residents and park visitors. P244-03

The lack of transparency involved in the development of this project is infuriating. Metro appears to have moved forward without an open public process and without competitive bidding, leaving the appearance of an apparent disdain Metro has for the the communities that will be directly impacted on a variety of levels. P244-04

By and large the communities don't want this project. Show me one community stakeholder who asked for it -- besides Frank McCourt. And his connection to the community only involves how much money he can make at their expense. P244-05

Gondolas are fun, taking public transit is fun and an essential part of LA's future, and the gondola is a way to increase Metro ridership and visibility. P247-01

HOWEVER, I have serious questions about the plan:

- Will the gondola generate revenue to improve metro services across Los Angeles, or will it fuel profits for Frank McCourt's private company? P247-02
- Will the Dodger Express bus remain operational? If the Dodgers want to "get cars off the street" as a recent article said was the goal, why is Metro not fighting instead for permanent bus-only lanes on Sunset along the Dodger Express route? And why is it not working with scooter rental companies to paint scooter lanes and allow use of zero-emission motorized scooters on Dodger property? Or building MetroBike docks and increasing the number of pedal-assist e-bike docks at the stadium? P247-03
- As Metro continues building a citywide transit network, why does the gondola have so few connections to the rest of the Metro network? This is an expensive project for something that will only be used 62 days a year for a few hours around gametime. P247-04

I fully support Metro's efforts to increase transit ridership to and from Dodger games, but I cannot support this plan until these concerns are addressed. P247-05

Instead of creating a new, untested transit method, why not make less expensive infrastructure improvements to increase the use of transportation options for which there is already proven demand? Most importantly, as someone who took the Red line to work for years, why would Metro not want any new Dodger-related plans to increase their revenues, instead of allowing a private company to edge in on your turf? Have a backbone! Don't bow to billionaires! P247-06

I'm rooting for you and confident you will figure this out.

Best,

Andrew Mueth

Subject: Public Comment: Los Angeles Aerial Rapid Transit (LA ART) Project DEIR

Deputy Executive Officer Cory Zelmer,

I am writing to voice my opposition to the Los Angeles Aerial Rapid Transit Project. I am concerned about this project for the following reasons: The Gondola Project will impact historic and cultural resources such as the Los Angeles State Historic Park, historic Union Station, and the Pueblo de Los Angeles Historic Monument. The gondola will increase the impacts of air pollution from vehicle emissions in an area already overburdened by air emissions. And the project will lead to displacement and increase the cost of rent in the area.

Hi,

Hope this email finds you well.

This is Sophie Li, a reporter with The Epoch Times.

I am writing a story about the Dodger Stadium gondola project that LA Metro is working on. Do you have any press pictures that we can use for the gondola?

Please let me know at your earliest convenience. If you can get back to me by 3 p.m. today, it?ll be much appreciated.

Thank you!

P249-1

Voicemail received January 11, 2023 via email from Robyn Lopez/Metro.

P250 Kate Wolf, January 9, 1:25pm via telephone

Hi, I'm a community member and I wrote a letter to Corey Zelmer but I also wanted to just leave a message voicing my opposition to the gondola project. I can't make it to the public hearing on Thursday. But I just wanted to say that I live in Northeast LA. I don't see any positive benefit to this gondola project for the people that actually live in these neighborhoods. It seems to just benefit the owner of the Dodgers and the owner of Dodger stadium. And I think it sounds like a really disruptive project, environmentally hazardous. It sounds like it would also pull the thread apart of the Chinatown neighborhood and the most historic district of Los Angeles even more. And add to the kind of blight that is surrounding that area now. And I just, I think, that the people who live in the neighborhood, their, their quality of life should be put first. And I don't think this project will, you know, increase that quality of life and that's why I am voicing my strong, strong opposition to it. And I hope that Metro will not go ahead with this project. My name is Kate Wolf, and no need to call back. But please mark my opposition. [phone number given] I live in Highland Park, 90002 is my zip code. Thank you. P250-1

Subject: Public Comment: Los Angeles Aerial Rapid Transit (LA ART) Project DEIR

Deputy Executive Officer Cory Zelmer,

I am writing to voice my opposition to the Los Angeles Aerial Rapid Transit Project ("The Gondola" at Dodger Stadium).
The Gondola Project will have detrimental impacts on the historic and cultural resources such as the Los Angeles State Historic Park, historic Union Station, and the Pueblo de Los Angeles Historic Monument.
Regarding environmental impacts, this project will increase the impacts of air pollution from vehicle emissions. These areas already are overburdened by air emissions.
This project will also lead to increased rental costs and therefore displacement for those in our communities who can't afford the increases.

Subject: Aerial Rapid Transit

With all due respect, this project appears to me to be an incredible waste of public resources for what is essentially a private venture - the Los Angeles Dodgers. i am a huge Dodger fan myself. But the taxpayers shouldn't be footing the bill to make it easier for baseball fans to attend games. Seriously, this needs to be jettisoned now.

RE: Comments for Draft Environmental Impact Report (DEIR) (See attached)

Project description, assessments, and alternatives considerations are totally inadequate and incomplete and without engineering and construction considerations and descriptions. Many references mention future studies, engineering, and designs to be done before construction, but all such would be without public review and comments and thereby not in compliance with CEQA. P253-1

Although Goals/Purposes and Objectives are required for a DEIR, this DEIR provides vague and ambiguous descriptions and totally inadequate development of the Project, its objectives, and its alternatives and their numerical/quantified comparisons. Thus, the discussion of alternatives and Project and their numerical/quantified comparisons are totally inadequate. P253-2

Although directly related to the DEIR descriptions and assessments, the DEIR does not even minimally use/mention the LA City Department of City Planning database, ZIMAS, which must be fully incorporated if the Project is to be placed within the City of Los Angeles. As no Memorandum of Understanding or Agreement between the sponsor, Metro, and City of Los Angeles is provided or even mentioned, this absence is understandable avoidance, but renders the DEIR unacceptable, incomplete, and inadequate. P253-3

Without an adequate and complete DEIR, alternatives to the proposed Project cannot be adequately formed and compared. Thereby the consideration of alternative cannot be considered adequate nor complete, but should include ZE/NG buses and dedicated bus lanes and perhaps with congestion pricing for DTLA and the Project site.

For detailed comments see attached, including pertinent identified portions of the DEIR with highlighted issues of the current texts for the specific comments. P253-4

SUBJECT: Los Angeles Aerial Rapid Transit Project SCH Number 2020100007 Notice of Availability (NOA)
Re: Comments of Draft Environmental Impact Report (DEIR)

Project description, assessments, and alternatives considerations are totally inadequate and incomplete and without engineering and construction considerations and descriptions. Many references mention future studies, engineering, and designs to be done before construction, but all such would be without public review and comments and thereby not in compliance with CEQA.

Although Goals/Purposes and Objectives are required for a DEIR, this DEIR provides vague and ambiguous descriptions and totally inadequate development of the Project, its objectives, and its alternatives and their numerical/quantified comparisons. Thus, the discussion of alternatives and Project and their numerical/quantified comparisons are totally inadequate.

Although directly related to the DEIR descriptions and assessments, the DEIR does not even minimally use/mention the LA City Department of City Planning database, ZIMAS, which must be fully incorporated if the Project is to be placed within the City of Los Angeles. As no Memorandum of Understanding or Agreement between the sponsor, Metro, and City of Los Angeles is provided or even mentioned, this absence is understandable avoidance, but renders the DEIR unacceptable, incomplete, and inadequate.

Without an adequate and complete DEIR, alternatives to the proposed Project cannot be adequately formed and compared. Thereby the consideration of alternative cannot be considered adequate nor complete, but should include ZE/NG buses and dedicated bus lanes and perhaps with congestion pricing for DTLA and the Project site.

For detailed comments see below, including pertinent identified portions of the DEIR with **highlighted** issues of the current texts for the specific ***comments.***

ES-1/3 When complete, the proposed Project would have a maximum capacity of approximately 5,000 people per hour per direction, and the travel time from LAUS to Dodger Stadium would be approximately seven minutes.
5000passengers/hr and 40p/gondola = 125 gondolas(g)/hr = 1 g/29 sec
Travel ROT = 14 min including loading/unloading = 3 sec/person x 40 = 120 sec = 7min transit + 2 min ld/uld = 60/9 = 7 g-trips/hr x 40pgr = 280 total passenger/hr x 2 hr = 560 p/game – nine/9 gondolas/cabins operating each game/event
Provide Project operations for peak passenger processing and gondola travel for 2 hours prior to Stadium events.
Provide seating/standing design floor capacity for each gondola/cabin used for Project's process flow and movements.
Provide total weight of all loaded gondolas and angular load distribution for each tower (one way loaded/opposite way unloaded).

ES-2/3 The standards of **adequacy** of an EIR, defined by Section 15151 of the CEQA Guidelines, are as follows:

An EIR should be prepared with **sufficient level** of **analysis** to provide decision-makers with information which enables them to make a decision which intelligently takes account of environmental consequences. An evaluation of the environmental effect of the proposed project need not be exhaustive, but **sufficiency of an EIR is to be reviewed in light of what is reasonably feasible**….The courts have not looked for perfection but for adequacy, completeness, and good faith effort at full disclosure.

First of 79 mentions of feasible, vs financial and fiscal of <10, and must be considered as an acceptable alternative for costs. Provide "costs" comparisons for each use of "feasible" or "fiscal" and for alternatives throughout the DEIR.

Provide documentation of database for the "analysis" and numerical/quantified assessments and comparisons in table forms.

Provide Project definitions and demonstrations of feasible and infeasible conditions within the Project. Definitions of feasible commonly include "practical" issues, costs, funding, probability of changed conditions, and unexpected costs for safety, hazards, and changed conditions claims.

Overall the DEIR is inadequate and incomplete for reasonably public accessible considerations (review and comments) of the Project, its impacts, mitigations, and alternatives.

Lack of use of LACity-DCP-ZIMAS database for issues along the entire route and for specific facilities located along the route. Provide ZIMAS database for any DEIR references to equivalent data from elsewhere, e.g., seismicity, landslide, liquefaction, etc..

ES-3/4 The ART system has the **ability** to overcome **grade and elevation issues** between LAUS and Dodger Stadium, and would provide **safe, zero-emission, environmentally friendly, and high-capacity transit connectivity** in the Project area that would **reduce greenhouse gas (GHG) emissions** as a result of reduced vehicular congestion in and around Dodger Stadium and on neighborhood streets, arterial roadways, and freeways. The proposed Project would operate daily to **serve existing residents, workers, park users**, and visitors to Los Angeles.

Provide engineering design drawings and calculations and all derived assessment of engineering forces on towers and cableway given the imbalance of cabin loads during specially events with no passengers on one side and full capacity loads on the opposing cableways.

ES-4/2 The proposed Project "alignment" includes the suspended above-grade cables and **cabins** following the position of the Project components along the ART route….

Provide assessment of engineering forces on towers and cableway given the imbalance of cabin loads during specially events with no passengers on one side and full capacity loads on the opposing cableways.

ES-4/4 When complete, the proposed Project would have a maximum capacity of approximately 5,000 people per hour per direction, and the **travel time from LAUS to Dodger Stadium would be approximately seven minutes**.

Provide Gondola loading/unloading/travel timing cycles as part of the overall 23 second/7 minute travel patterns including a time chart for each cycle element.

e.g., Loading/unloading 3 sec / passenger 40p/g = 120sec each for loading and unloading

Provide same cycles including 10% ADA passengers.

ES-4/7 The alignment then crosses over the western edge of the Los Angeles State Historic Park and the Metro L Line (Gold) tracks.

No mention of Buena Vista til pg.3.11/20. Provide currently proposed building outlines for both ground area and heights compared to this Project along with full cabin presents during target events.

ES-10/2 The Dodger Stadium Station….The Project Sponsor **will request consideration** by the Los Angeles Dodgers of the potential for the Dodger Stadium Station to include **a mobility hub**…to access Elysian Park and other nearby neighborhoods, including Solano Canyon.

No specific design or drawings are provided for the mobility hub or for the access to surrounding neighborhoods, and no beneficial effects are proposed for such a hub and accesses. No proposed schedules for LA ART are proposed for daily services, frequencies and loads or for pedestrian/bike/handicapped movements from/to hub and the neighborhoods.

Provide Daily and Daytime schedules, frequencies, and ridership access for non-games days public access.
Provide definition of specific considerations by LAD for non-game day operations and riderships.

ES-10/6 At the Chinatown/State Park Station, cabins would detach from the rope and decelerate to the station speed. Since passenger access would be provided at this station, the cabins would **decelerate to about one foot per second (less than one mile per hour) and the doors would open**.
Provide station speeds schedules and pathways other than zero/dead stop and temporal sequencing for unloading and reloading of 40 passenger each. Provide same for at least 10% ADA related passengers and seniors (65+yr olds).

ES-11/1 Operation of the proposed Project would require approximately 20 personnel. Station **attendants would be located within each station to assure safe boarding or to execute stops, if necessary**. Attendants would also provide customer interaction and observation; if a passenger needs special assistance, an attendant may either **further slow or stop a cabin**.
Provide personnel/staffing levels for each Project element during an event operations. Provide for full element operations, e.g., three stations and as to any staff shifting during event operations, e.g., No staff at Park Station and rotating staffs for initial Alameda Out-bounds vs later Stadium outbounds.
Provide Gondola loading/unloading/travel timing cycles as part of the overall 23 second/7 minute travel patterns including a time chart for each cycle element e.g., Loading/unloading 3 sec / passenger 40p/g = 120sec each for loading and unloading
Provide same cycles including 10% ADA passengers.
Provide requirements for agent-initiated stoppage (=0.0fps).

ES-13/2 The proposed Project's stations, junction, towers, and gondola cabins would incorporate energy efficient, **sustainable**, water and waste efficient, and resilient features, **as feasible**. The proposed stations and junction are designed to be open-air buildings, allowing for **passive ventilation strategies** and providing direct access to outdoor air and natural daylight, while also providing adequate shade protection from heat. **The cabins would be ventilated to enhance air quality for passengers**.
Provide definitions for sustainable (40+ years operations) and feasibility calculations.
Provide definition and design for cabin ventilation and for any station ventilation (e.g., fans).
Provide definitions and designs of Passive Ventilation and enclosing solar panels for shading.

ES-13/3 Materials for the stations, junction, and towers would be locally sourced **where possible**, and would include recycled content **where possible**.
Provide conditions for "possible" sourcing and recycled contents, rather than "where feasible".

ES-14 Table ES-1: Proposed Project Construction
Maximum Depth of Drilled Piles ***Maximum Depth below pile cap***
Clarify Maximum depth of pile tip = 10ft + 120ft bpc = 130ft bgs
Maximum Depth of Excavation ***Provide Maximum Depth to base of pile cap and top of pile***
Amount of Excavation
Provide excavation volume including bulking for pile cap, 10ft depth = 3 cuyd/sq yd plus times surface area.
Provide piles boring/auguring volumes for all Project stations, towers, and junction e.g., = 1 yds x 40yd = 40 cu yd/pile x 25-40 piles = 1000-1600 cu yd, Stn Pile 55-80-125 Exc 2700-6300 cuyd, and Twr Pile 120-125 Exc 1300-6400 cuyd.
Provide clarifications regarding pile depth below ground levels vs pile lengths (feet and below pile cap bottom/floor.

ES-**19/1** Furthermore, the existing DSE service operates up to **8 buses per hour**, while the **TSM Alternative would require 77 buses per hour**.
Based on 5000-6000 passengers/hour, bus loads would be 65-80 passengers (sitting and standing). Provide a round trip flow chart and process flow (in seconds) including times for unloading/loading, start up and stopping times, and travel times (loaded and unloaded).

Provide comparative table for both cabin- and bus-based alternatives, especially for unloading/loading of single-door-cabins vs double-door-buses and for total cabin/bus seated/standing capacities.
Provide calculations and design requirements for bus-only lane access to Stadium Station site.
Provide a Project Alternative and comparisons for single- vs double door cabins/gondolas along with examples of existing operational double-door ART systems worldwide.

ES-19/4 Of the alternatives analyzed in this Draft EIR,…Although the No Project Alternative would not meet any of the Project Objectives, it would avoid all of the Project's significant impacts, including the Project's significant and unavoidable construction noise and vibration impacts. Conversely, the No Project Alternative would not result in ART **connections between the neighborhoods noted above**. Additionally, VMT and vehicle congestion would not be reduced, and the associated reduction in GHG emissions and air quality improvements would not take place.
Provide non-game days road transportation equivalent to that of the Project. Assume all electric buses with solar shade panels on buses and transit stops.

ES-19/5 Because the TSM Alternative would also avoid the Project's significant and unavoidable impact with respect to construction noise and vibration without the need for mitigation, and would reduce the range of impacts to the greatest extent listed in Table 4-3, it is deemed the Environmentally Superior Alternative. However, the TSM Alternative would not meet the **majority of the Project's Objectives in full or in part**. Conversely, the Spring Street Alignment Alterative would meet all of the Project Objectives.
Provide comparisons of TSM and proposed Project numerical rankings for each Project Objective. Provide required mitigations for full or equivalent compliance for each objective compared to the proposed Project alternative configuration.

ES-22 - ES-84/Table ES-2: Summary of Environmental Impacts
No references to sections/pages/paragraphs.
Project Design Feature(s) (PDF) and/or Mitigation Measure(s) (MM) without clear references within 62 pages of text tables and columns.
Table provisions are inadequate, incomplete, and unrelatable to the DEIR for public review and comments. Provide revised table including specific page/paragraph references to Project and alternatives descriptions.

ES-29/4 ES 13. SUMMARY OF ENVIRONMENTAL IMPACTS Table ES-2 provides a **summary of the environmental impacts** of the proposed Project evaluated in this Draft EIR. Based on the analysis in Chapter 3.0, Environmental Impact Analysis, **implementation of the proposed Project would result in significant and unavoidable impacts related to** Noise and Vibration.

The Table is not coordinated and referenced with the text to assure consistency and thereby renders the table irrelevant, inadequate, and incomplete for public review and comments.

As indicated elsewhere below, significant, unavoidable, and unmitigated impacts would arise in the Hydrology, Geology, Visual, Aesthetics, and Services/Infrastructure elements of DTLA.

Provide a fully cross-referenced table with text citations to each sector, and clearly identify significant impacts and required mitigation/compensation.

ES-29/5 Project Design Features (PDFs), while **not necessary** for the **impact significance determination**, are included in Table ES-2 because **they** are inherent in the design of the proposed Project. Best Management Practices, or other measures required by law and/or permit approvals, are also requirements of the proposed Project. Additionally, Mitigation Measures have been identified and are additional actions designed to avoid, minimize, or compensate for significant environmental impacts and are required where significant impacts have been identified based on the analyses in Chapter 3.0 of this document. Where applicable, Mitigation Measures are described on Table ES-2.

54 pages of Table ES-2, while not necessary, are confusing and distractive compared to Chapters 3 and 4 for public reviewing the EIR. Especially distractive when the DEIR repeatedly references preparation of future final design studies and documents and final design conditions based on further site conditions analyses, descriptions, and changes of Project design conditions.

Provide fully rectified/cross-referenced table or eliminate.

ES-30 – ES-84 – Table ES-2

No coordination of table summaries and texts (pages/paragraphs). Table is a morass of uncoordinated words in boxes and texts. Totally inadequate and incomplete for public review and comments and purposefully distractive and destructive of meaningful public review/comments.

ES-50 Table ES-2: Summary of Environmental Impacts Geology and Soils

MM-GEO-A: Prepare a **Site-Specific Final Geotechnical Report**. The Project Sponsor shall engage a California-registered geotechnical engineer to prepare and submit a **site-specific final geotechnical investigation and report to the City of Los Angeles for review, consistent with the requirements of the CBC, applicable Los Angeles amendments, and California Geological Survey Special Publication 117 (as amended)**. A **site-specific geotechnical exploration program**, along with associated laboratory testing, is necessary to complete a **design-level evaluation of the geologic hazards and conditions, seismic hazards, grading conditions, and foundation capacities**. The **site-specific final geotechnical report** shall provide

a description of the geological and geotechnical conditions at the site;

the findings, conclusions, and mitigation recommendations for potential geologic and seismic hazards; and

design-level geotechnical **<u>recommendations</u>** in support of grading and foundation design….

<u>recommended</u> measures to reduce potential impacts related to landslides, subsidence, liquefaction, differential settlement, expansive soils, soil corrosivity, or other potential ground failures induced by the proposed Project. …ES-51…**The submittal and approval** of the final geotechnical report **shall be a condition of the grading and construction permits issued by the City of Los Angeles Department of Building and Safety.** The Project Sponsor shall implement the **recommendations** contained in the **approved report during project design and <u>construction</u>**.

Geology and hazards/hazardous materials sections both reference the "Site Specific Final Geotechnical Report" which must be prepared and considered during final pre-construction stages and which will not be available for public review and comments.

This current discussion of impacts clearly is biased, vague, inadequate, and incomplete for descriptions and assessments and not provided by qualified specialists.

Provide a sites specific geotechnical report based on actual borehole and sediments/groundwater chemical analyses as part of a revised/subsequent Environmental Impact Report for the Project.

Current literature reviews and discussions do not include Metro's extensive experiences with soil and groundwater contamination experienced during construction of the Red Line Station at

Union Station which required millions of additional change-order costs, major groundwater collection and treatment of contaminated groundwater. Then experiences indicated that methane, numerous hydrocarbons, and creosote had sources between Chavez and Broadway from oil fields, oil processing facilities, railroad yards, and railroad ties/wood soaking pits.

Provide review of existing conditions and potential impacts from foundations/pile caps, pile drilling, and pile placement/formation at each tower and project support features. Provide geotechnical/chemical composition testing and drilling/sampling in at least four borings per tower and revise the Project area description and impact assessment accordingly.

ES-52 A PRMMP **shall** be developed by a qualified paleontologist meeting the criteria established by the Society for Vertebrate Paleontology. The plan **shall** apply to paleontologically sensitive deposits, including older Quaternary alluvium and Puente formation deposits, that may be impacted by the proposed Project, as determined by a qualified paleontologist in consultation with the construction team and guided by geotechnical coring. The qualified paleontologist **shall** supervise the paleontological monitor, who **shall** be present during construction excavations into older Quaternary alluvial deposits and Miocene Puente formation deposits. Monitoring **shall** consist of visually inspecting fresh exposures of rock for larger fossil remains, and where appropriate, collecting wet or dry screened sediment samples of promising horizons for smaller fossil remains. The frequency of monitoring inspections **shall** be determined by the paleontologist, and **shall** be based on the rate of ground-disturbing activities, the material being excavated, and the depth of excavation; and if found, the abundance and type of paleontological materials. If any paleontological materials are found, the paleontological monitor **shall** temporarily divert or redirect ground-disturbing activities in the area of the exposed fossil to facilitate evaluation, and if necessary, salvage. The paleontologist **shall** assess the discovered material(s) and provide a recommendation(s), if necessary, for the preservation, conservation, or relocation of the resource, as appropriate. The Project Sponsor **shall** comply with the recommendations of the…53…evaluating paleontologist, and ground-disturbing activities may resume once the paleontologist's recommendations have been implemented to the paleontologist's satisfaction. If paleontological materials are found, the paleontologist **shall** prepare a report identifying the resource and the recommendations proposed and implemented, within 1 year of completion of the fieldwork. A copy of the report **shall** be submitted to the Los Angeles County Natural History Museum.

Compared to 6-37/1 "Mitigation Measures GEO-A (prepared a site-specific final geotechnical report) and GEO-B (prepare a paleontological resource monitoring and mitigation plan (PRMMP)) **would** also be implemented."

Unlike other future mitigation measures, the PRMMP is laced with "shall" rather than "would" although no such document is or would be available for public review and comments prior to approval of the Project by Metro Board. Provide all mitigation measures with "shall" and remove any conditional instructions as a required and dependent condition for all impact assessments. Provide a thoroughly revised and supplemented Subsequent Draft Environmental Report (S-DEIR) for public review and comments.

ES-53 MM-HAZ-A: Prepare a Soil and Groundwater Management Plan. The Project Sponsor **shall** retain a qualified environmental consultant to **prepare a Soil and Groundwater Management Plan prior to** any re-grading, decommissioning, or construction activities. The Soil and Groundwater Management Plan **would be prepared** and implemented to specify methods for handling and disposal in the event contaminated groundwater, contaminated soil, or structures are encountered during Project construction. The Soil and Groundwater Management Plan **shall** provide a summary of…54…the environmental conditions at each Project component site, including stations and towers.

The Soil and Groundwater Management Plan **shall** include methods and procedures for sampling and analyzing soils and/or groundwater to classify them as either hazardous or non-hazardous; and if identified as hazardous, **shall** include additional methods and procedures for the proper handling and removal of impacted soils and/or groundwater for off-site disposal and/or recycle.

Methods and procedures in the Soil and Groundwater Management Plan **shall** be in accordance with current federal, state, and local regulations, and be protective of workers and the environment.

Unlike other future mitigation measures, the S&GWMP is laced with some "shall" and a "would", although no such document is or would be available for public review and comments prior to approval of the Project by Metro Board.

Provide a S&GWMP with all mitigation measures with "shall" and remove any conditional instructions as a required and dependent condition for all impact assessments.

1-1/4 The aerial gondola system would consist of cables, three passenger stations, a non-passenger junction, towers, and gondola cabins. When complete, the proposed Project would have a maximum capacity of approximately 5,000 people per hour per direction, and the travel time from LAUS to Dodger Stadium would be approximately **seven minutes**.

Attempts to confirm passenger transport requires more specific information than provided, the DEIR is inadequate to confirm Project capacities and therefore is incomplete and inadequate for public review and comments.

Provide full engineering drawings for any type of gondolas to be used for this Project and demonstrate typical event passenger positions and the total number of passengers to be safely transported.

Provide a numerical and timed flow chart for passenger conveyance from Alameda to Stadium stations using 420 seconds for total trips (including loading/unloading, seating/standing, Park Station stops/goes and other identifiable activities).

1-1/6 1.2 PURPOSE OF THIS DRAFT ENVIRONMENTAL IMPACT REPORT In accordance with Sections 15050 and 15367 of the CEQA Guidelines, Metro is the **Lead Agency for the proposed Project**, and has the principal responsibility for approving the proposed Project. This Draft EIR has been prepared for the following purposes:

Given the number of agencies involved in Project, absence of an Memorandum of Agreement/Understanding must be provided especially for the responsibilities and origins of design and engineering aspects, without such the DEIR is incomplete and inadequate for CEQA.

Provide MOA/MOU regarding Lead Agency agreement, parties, status, and responsibilities.

Provide MOA with LACity-DPW, DOT, DB&S.

Provide submission date for DEIR and NOA via SCH/OPR. NOP was issued to SCH but not so far for NOA/EIR.

Provide MOA of Metro and Calif. State Lands Commission.

1-2/2 • To inform public, agency decision makers and the public of the environmental effects of the proposed Project, including
any **significant** environmental effects, as well as
possible ways to minimize those significant effects, and
reasonable alternatives to the proposed Project.
• To enable Metro to consider environmental consequences when deciding whether to approve the proposed Project.
• To enable other **responsible public agencies** that must approve activities undertaken with respect to the proposed Project, including permits and other approvals,
to consider the environmental effects of the proposed Project.

Given the number of agencies involved in Project, absence of an Memorandum of Agreement/Understanding must be provided especially for the responsibilities and origins of design and engineering aspects, without such the DEIR is incomplete and inadequate for CEQA.

Provide definitions and requirements for use of Possible vs Feasible,

Provide draft MMRP for summary of mitigation and enforcement.

Provide contracts (drafts of issued) for inspection and construction operations.

Provide drafts of Preliminary/Final Design Documents and their use in construction contracts.

Provide a thoroughly revised and supplemented Subsequent Draft Environmental Report (S-DEIR) for public review and comments.

1-2/3 As described in CEQA and the **CEQA Guidelines**, lead agencies are charged with the duty to avoid or substantially lessen significant environmental impacts of a project, **where feasible**. For some effects, significant environmental impacts cannot be mitigated to a level considered less than significant; in such cases, impacts are considered significant and unavoidable. In discharging this duty, a lead agency has an obligation to **balance the economic, social, technological, legal, and other benefits** of a project against its significant unavoidable impacts on the environment. This Draft EIR is an informational document, designed
to **identify the potentially significant impacts** of the proposed Project on the environment;
to indicate the manner in which those **significant impacts can be minimized**;

to identify **reasonable and potentially feasible alternatives** to the proposed Project that would avoid or reduce the significant impacts; and
to identify any significant unavoidable adverse **impacts that cannot be mitigated**.

Provide Citations/References list including specific page and paragraph for each document reference.

Provide clear definition of feasible and economic benefits, including costs/financials/fiscal aspect and apply same to all aspects of the Project.

Provide financial assessments of all construction and operations activities and public/private cost/economic sharing/distributions.

Provide financial and economic analyses for first five years of operations after stated targets of event ridership are attained.

Provide summary list of all significant impacts based on current level of design and those following detailed construction design documentation.

Provide a thoroughly revised and supplemented Subsequent Draft Environmental Report (S-DEIR) for public review and comments.

1-2/4 1.3 CEQA RESPONSIBLE AND TRUSTEE AGENCIES

The information in this Draft EIR may also be used by other agencies involved with the Project that have a responsibility under CEQA, including but not limited to, the following:

• California Department of Parks and Recreation
• California Department of Transportation
• City of Los Angeles

Provide a list of all agency and the lead-agency agreements (MOA/MOU) and all assigned responsibilities for each and for Metro/MTA.

Provide all funding requirements and assignments for full implementation of construction and initial operations for each responsible agency.

Provide a list of organizations and assignees for LA City Boards/Commissions and Dept.s of Transportation, Building and Safety, and Public Works (City Engineer, Bureaus of Street Services and Engineering).

For CEQA OPR/SCH# SCH# 2020100007, Add County departments (DPW, DRP, LASD, etc).

Provide a thoroughly revised and supplemented Subsequent Draft Environmental Report (S-DEIR) for public review and comments.

2-42/2 During peak operations, the proposed Project would carry up to approximately 5,000 people per hour per direction, and the travel time from LAUS to Dodger Stadium would be approximately seven minutes. The cabins would move at a maximum speed of **13.4 miles per hour** with headways of **approximately 23 seconds**, which represents the time between cabins.

40 passengers/gondola loading in 19sec w/ 2sec / closing and opening doors = 4 pass/sec 40 out =10sec + 40 in = 9sec

Provide a quantified flowchart/model for a single RT Cabin travel with speeds and durations to confirm the stated speeds and headways, along with durations of travel, stopping/starting, loading/unloading, and total RT.

Provide a thoroughly revised and supplemented Subsequent Draft Environmental Report (S-DEIR) for public review and comments.

2-9/5 2.3.6 Project **Purpose, Need**, and Objectives

Remove "Need" which is a federal NEPA replacement for Objective-CEQA, perhaps replace all "Purposes" with "Goals".

2-10/1 2.3.7 **Purpose and Need**

2-12/1 Within two hours prior to the start of and after a game or event at Dodger Stadium, more than 10,000 people could be transported to the stadium via the proposed Project. The average attendance at a Dodger game was approximately 49,000 for the 2019 season.\18 Given the capacity of this system, approximately 20 percent of the fans could take aerial transit connected to Metro's regional transit system. This would reduce vehicular congestion in and around Dodger Stadium, on neighborhood streets, arterial roadways, and freeways during game and special event days.

Remove "Need" which is a federal NEPA replacement for Objective-CEQA, perhaps replace all "Purposes" with "Goals".

2-12/4 2.3.8 Project Objectives

Provide clear and quantifiable definitions of Goals/Purposes, their directly related objectives, and the policies/programs related thereto for the specifics of this Project and its alternatives.

Provide a thoroughly revised and supplemented Subsequent Draft Environmental Report (S-DEIR) for public review and comments.

3.5-1/1 3.5 CULTURAL RESOURCES This section evaluates the potential impacts of the proposed Project as it relates to cultural resources, including built resources and archaeological resources. The analysis in this section is **based in part** on information contained in the Archaeological and Paleontological Resources Assessment for the…Project and the Historical Resource Technical Report for the…Project prepared for the proposed Project (Appendices F and G of this Draft EIR, respectively).

Provide specific page/par citations for all base information for this description and assessment. Provide a mandatory Mitigation, Monitoring, and Report Plan, including recovery of significant remains for all foundation and piling construction activities.

3.5-24/1 Overall, the mitigation measures discussed above **would ensure** that the proposed Project, **when combined with other related projects**, would not result in significant impacts to historic resources. Therefore, cumulative impacts with respect to historic resources would be less than significant.

No identification of "other related projects" has been provided related to either historic, archaeologic, or paleontological resources.

Use of conditionals for assurances is vague and uncommittable for this and any other environmental sector. Provide replacements of "shall" for all "would's".

3.7-1/3 Before a project can be permitted, a geologic investigation is required to demonstrate that proposed buildings would not be constructed across active faults capable of surface fault rupture. An evaluation and written report of a specific site **must be prepared** by a licensed geologist. If an **active fault capable of surface fault rupture** is found, a structure for **human occupancy** cannot be placed over the trace of the fault, and must be **set back from the fault (generally 50 feet)**.\2 **Because no active faults capable of surface rupture cross the Project alignment, a fault investigation is not required**. The **fault closest** to the Project alignment is the Elysian Park fault. The Upper Elysian Park fault is a north-to-northeast–dipping fault that underlies the northern Los Angeles basin from Griffith Park to Garvey Reservoir. **However, the Elysian Park fault is a blind thrust fault, which means it is not capable of surface fault rupture, and therefore is not subject to the conditions of the Alquist-Priolo Act**.

The Project is planned for elements (Stadium and Park Stations, Broadway Junction, & SR-110 Tower) to be located "Within Fault Zone" (ZIMAS) on the surface of the Upper Elysian Park Fault.

As a signatory agency for this Project, such assignment of seismic hazards to the ground for this Project must be considered reliable and worthy of evaluation and assessment.

The Project must provide a thorough review of the ZIMAS backup/-ground for the Upper Elysian Park Fault. Such review must be available for public review and comments under CEQA and therefore must be included in the supplemental/subsequent DEIR.

3.7-11/1 Additionally, the Stadium Tower and Dodger Stadium Station sites are in a **City-designated hillside area**, which increases the sites' potential susceptibility to landslides.**\16** Because of the steep slopes and high seismicity in the vicinity of the proposed Stadium Tower and the…Stadium Station, the potential for earthquake-induced slope failure **could be considered moderate to high** in the landslide hazard zone. FN\16 City of Los Angeles. Zone Information and Map Access (ZIMAS). Interactive map available at: http://zimas.lacity.org/. Accessed August 2022.

Provide map of "City-Designated Hillside Area" including various failure considerations mentioned and pertinent references for such. Such review must be provided for public review and comments under CEQA and therefore must be included in the supplemental/subsequent DEIR.

3.7-11/2 3.7.2.6 Subsidence Subsidence is the loss of surface elevation due to the removal of subsurface support. Subsidence is caused by the reduction of pore space in the ground that was formerly

occupied by a fluid such as water or oil, caused by activities that contribute to the loss of support materials within the underlying soils, such as agricultural practices or the overdraft of an aquifer. The **existing alluvium of the Project area is susceptible to collapse or settlements**; therefore, there is a **moderate potential for subsidence** to occur.

No factual backup is provided for such statements, nor is any reference provided for both the alluvial and bedrock areas of the alignment.

Provide all LiDAR sources and topographic reference materials and conduct assessments of past and thereby potential future subsidence of ground surfaces along the alignment and at each ground facility to be constructed. Provide review of past and potentials for subsidences at all ground facilities sites, especially those within the Elysian Park Fault surface zones (ZIMAS).

Provide estimates of dewatering requirements for towers, junction, and stations.

Such assessments and reviews must be provided for public review and comments under CEQA and therefore must be included in the supplemental/subsequent DEIR.

3.7-8/1 The southern California area contains numerous active and potentially active earthquake faults….**The Project site is not in a State of California Earthquake Fault Zone for known Holocene active faults capable of fault surface rupture, or in an Alquist-Priolo Earthquake Fault Zone**.\13

The Project must provide a thorough review of the ZIMAS backup/-ground for the Upper Elysian Park Fault. Such review must be provided for public review and comments under CEQA and therefore must be included in the supplemental/subsequent DEIR.

3.7-8/2 The fault closest to the Project site is the Elysian Park fault. According to the **U.S. Geological Survey Quaternary fault and fold database**, the **location of the Upper Elysian Park fault is inferred to cross under the alignment**. The Upper Elysian Park fault is a north-to-northeast–dipping fault that **underlies the northern Los Angeles basin from Griffith Park to Garvey Reservoir [Monterey Park]**. However, the Elysian Park fault is a blind thrust fault, **which means it is not capable of surface fault rupture**,….The Elysian Park thrust fault is considered to be seismogenic (capable of generating earthquakes) from a depth of approximately 2 miles below ground surface in the south-southwest, to approximately 10 miles below ground surface in the north-northeast.

Provide reference to USGS Quaternary fault and fold database.

The Project is planned and located for Project elements (Stadium and Park Stations, Broadway Junction, & SR-110 Tower) to be located "Within Fault Zone" (ZIMAS) on the surface of the Upper Elysian Park Fault.

As a signatory agency for this Project, such assignment of seismic hazards to the ground for this Project must be considered reliable and worthy of evaluation and assessment.

The Project must provide a thorough review of the ZIMAS backup/-ground for the Upper Elysian Park Fault. Such review must be available for public review and comments under CEQA and therefore must be included in the supplemental/subsequent DEIR.

All areas south of Broadway are indicated by ZIMAS as being subject to liquefaction during an earthquake. Provide all engineering design consideration for liquefaction, subsidence, and shaking from a 6.4 magnitude earthquake in the Upper Elysian Park Fault.

Provide a thoroughly revised and supplemented Subsequent Draft Environmental Report (S-DEIR) for public review and comments.

3.7-11/2 3.7.2.6 Subsidence Subsidence is the loss of surface elevation due to the removal of subsurface support. Subsidence is caused by the reduction of pore space in the ground that was formerly occupied by a fluid such as water or oil, caused by activities that contribute to the loss of support materials within the underlying soils…. The existing alluvium of the Project area is susceptible to collapse or settlements; therefore, there is a **moderate potential** for subsidence to occur.

EIR does not mention any subsidence experienced over the Union Station and Los Angeles Oil Fields and their production.

As these fields and their underlying reservoirs were not subject to injection and other returns of fluids/pressures, subsidence would be assumed to be dominant, and the DEIR would be considered incomplete and inadequate.

Provide a review and engineering considerations for an earthquake on the Upper Elysian Park Fault and associated impacts from liquefaction and subsidence associated for the Project.

3.7-11/4 The majority of the Project area is on the floodplain of the Los Angeles River and its tributaries: Cemetery Ravine, and Chavez Ravine. As shown in Figure 3.7-1, the geologic unit for the Project area is mapped as **younger Quaternary alluvium**, and consists of unconsolidated deposits of silt, sand, and gravel deposited relatively **recently** by the meandering Los Angeles River and its tributaries. The sediments were deposited during the **Holocene**, within the **last approximately 11,700 years**, and are therefore **too young to typically contain significant fossil deposits**. Along the Los Angeles River, the younger Quaternary deposits **can be** tens of feet thick.

DEIR requires facts rather than conjecture and possibilities; DEIR requires borings and samplings at each tower/station/junction sites, and assessment of ages and potential scientific importance of fossil contained within each site.

Provide 1-4 borings for each construction site and assess for pollen, wood, micro-fossils, and bone fragments

Provide usage of consistent terms, younger Quaternary or Holocene or <11,700 years old, throughout the document. Encountering of any remains would be significant as Paleoindian deposits are known from more than 10,000 years old and associated with mammoth elephants.

Provide a thoroughly revised and supplemented Subsequent Draft Environmental Report (S-DEIR) for public review and comments.

Mitigation Measures GEO-A (prepared a site-specific final geotechnical report) and GEO-B (prepare a paleontological resource monitoring and mitigation plan (PRMMP)) **would also be implemented**.

Use of conditionals for mitigation renders the document inadequate. Provide an adequate and well-established MMP for paleontological and archaeological remains and include as required plans before certification of the CEQA documents and processes..

3.7-12/4 / 71/2 There are also significant fossil deposits in the Miocene Puente Formation near the Area of Direct Impacts. Northeast of the Area of Direct Impacts, near the intersection of North San Fernando Road and Humboldt Street, a fossil snake mackerel….At locality LACM 4967, just outside the Project area in Elysian Park, an extinct fossil herring (Clupea tiejei) was recovered. Fossil fish and marine mammals are commonly found at localities in the Puente Formation, which is considered to have a **high sensitivity for significant fossil remains**.

Identify potential significant impacts for paleontological remains for the Broadway Junction, Tower, and Stadium Station construction and mitigation provided by an adequate MMP for paleontological resources and specifically for excavations and pile borings for these sites.

Provide for thorough investigation of boring samples for ostracodes, diatoms, and foraminifera within Project sites.

Provide results for potential and mitigation from Buena Vista Project investigations.

Provide a thoroughly revised and supplemented Subsequent Draft Environmental Report (S-DEIR) for public review and comments.

3.7-14/1 As discussed above, the Elysian Park fault traverses the Project area; however, it is a blind thrust fault, which means it is **not capable of surface fault rupture**. Accordingly, the risk of surface rupture due to faulting is **considered low**. Construction of the proposed Project would not directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving rupture of a known earthquake fault. **Impacts related to rupture of a known earthquake fault would be less than significant.**

The EIR is totally inadequate and incomplete, as the City of Los Angeles ZIMAS (DCP) Database clearly designates northern half (north of College St. to Casanova St.) of the Project route within the "Fault Zone" of the Upper Elysian Park North Fault in surface parcels.

As a signatory agency for this Project, such LA City assignment of seismic hazards to the ground for this Project must be considered reliable and worthy of evaluation and assessment.

The Project must provide a thorough review of the ZIMAS backup/-ground for the Upper Elysian Park Fault. Such review must be available for public review and comments under CEQA and therefore must be included in the supplemental/subsequent DEIR.

All areas south of Broadway are indicated by ZIMAS as being subject to liquefaction during an earthquake. Provide all engineering design consideration for liquefaction, subsidence, and shaking from a 6.4 magnitude earthquake in the Upper Elysian Park Fault.

3.7-14/2 The Alameda Station,…are in an area mapped as potentially subject to liquefaction, as shown on Figure 3.7-2. The **Stadium Tower and Dodger Stadium Station are approximately 20 feet and 60 feet from a mapped liquefaction zone, respectively**.

The EIR is totally inadequate and incomplete, as the City of Los Angeles ZIMAS (DCP) Database clearly designates the parcel including the tower and station as being subject to landslides AND liquefaction and being within the "Fault Zone" for the Upper Elysian Park North Fault.

3.7-14/2 Liquefaction-induced settlement can occur during a seismic event, but can also be **exacerbated by increased loading during construction activities**. Because there is potential for liquefaction-induced settlement and collapse during a strong to severe ground-shaking event, damage to on-site structures and infrastructure could occur during construction of the proposed Project. Therefore, **impacts related to strong seismic ground shaking, seismic-related ground failure, and/or liquefaction during construction of the proposed Project would be potentially significant**.

Seismic impacts on the Project facilities would be significant if occurring during construction but would even be more significant if occurring during operations and especially during a game day operations. Provide revised DEIR and add "operations" of at least 50 years. Provide Project safety and operations response plans to the DEIR and Mitigation, Monitoring and Report Plan.

Although stated as "potentially significant", the DEIR does not clearly identify such as significant, only noise and vibration. Revise throughout the DEIR to include seismic impacts as significant and provide for suitable mitigation measures in the subsequent/supplement DEIR when recirculated.

3.7-14/3 The proposed Project…**would** ensure structural integrity and safe construction. Additionally, Mitigation Measure GEO-A, **development of a site-specific geotechnical investigation and report to be approved by the City of Los Angeles, would be required**. The geotechnical investigation and report **would include geotechnical recommendations** for project design and construction. **With compliance to existing standards and codes and implementation of Mitigation Measure GEO-A, impacts related to the strong seismic ground shaking, seismic-related ground failure, and/or liquefaction during construction of the proposed Project would be reduced to less than significant.**

Conditional references and allusions to future studies and assessment cannot be considered as Project commitments especially as no design nor construction contract designs and specifications have been provided. Provide contract specifications and drawings to confirm "recommendations" will be incorporated into the Design and into the construction contract documents.

As the investigation, report, and recommendations are not part of the current DEIR, they cannot be considered in the review for completeness and adequacy and the potential for seismic related impacts must be considered significant and the DEIR must be considered as incomplete and inadequate.

Once provided, the DEIR must be recirculated as a supplement, subsequent DEIR for public review and comments.

3.7-15/1 Therefore, impacts related to earthquake-induced slope failure **could be considered moderately significant to significant**. However, **compliance with existing laws and regulations**, and implementation of **Mitigation Measure GEO-A**, requiring the development and implementation of **geotechnical recommendations** to be incorporated into the **design plans and specifications**, including applicable site stabilization based on grading conditions and foundation capacities, would prevent instability of the slope during construction, and **reduce impacts to less than significant** under the proposed Project.

Based on ZIMAS assignments of the Elysian Fault Zone. Provide description and assessment for facilities located in the LA City-documented fault zone and liquefaction/landslide risks.

Provide technical evaluation of current designs for a proposed 6.4 magnitude earthquake at >10,000 depth, and specifically the effects on a gondola with 40 passengers between Park Station and Broadway Tower.

As the investigation, report, and recommendations are not part of the current DEIR, they cannot be considered in the review for completeness and adequacy and the potential for seismic related impacts must be considered significant and the DEIR must be considered as incomplete and inadequate. Once provided, the DEIR maybe recirculated as a supplement, subsequent DEIR for public review and comments.

3.7-15/3 In addition, the proposed Project **would adhere to its Emergency Operations Plan**, as described in Chapter 2, Project Description….**would** include **emergency response protocols**, and **would** state that in the event of a major earthquake, the system **would** be fully evacuated and shut down, and would not operate. The proposed Project **would be designed and constructed** in accordance with applicable building codes, and therefore **would not directly or indirectly cause potential substantial adverse effects**, including the risk of loss, injury, or death involving rupture of a known earthquake fault; strong seismic ground shaking; seismic-related ground failure, including liquefaction; or landslides, and the impact **would be less than significant**.

No draft EOP has been provided and references to it are incomplete, inadequate, and conditional without any public review or comments. Provide a draft Emergency Operations/Response Plan within the EIR and recirculate EIR.

Provide definition of "potential", "substantial", and adverse effects.

As mentioned, once the system is shutdown, provide detailed response plan to remove 30-40 passengers from a gondola above the Park.

As the Plan, protocols, report, plans, designs, and recommendations are not part of the current DEIR, they cannot be considered in the review for completeness and adequacy and the potential for seismic related impacts must be considered significant and the DEIR must be considered as incomplete and inadequate. Once provided, the DEIR maybe recirculated as a supplement, subsequent DEIR for public review and comments.

3.7-19/5 Construction Impacts Less Than Significant Impact with Mitigation. Surface deposits in the majority of the proposed Project alignment and surrounding area consist of **younger Quaternary alluvium** deposited by the Los Angeles River. These deposits are younger than 10,000 years, and have a **low probability of yielding scientifically significant fossils**….deposits are underlain with older Quaternary Alluvium and Miocene Monterey or Puente Formation, where fossils have been encountered at depths ranging from 35 feet to 100 feet at locations southeast and northeast of the Project site. An **assessment of paleontological resources** in the Project vicinity indicated that older Quaternary alluvium is expected to be present at **differential** depths in the Project area. **Construction work is anticipated to reach up to 125 feet in depth for installation of the piles and an excavation depth of up to 10 feet,** except for at the proposed Dodger Stadium Station, which has an excavation depth of 42 feet, **and therefore may encounter paleontological deposits.**

Differential/different spelling error for depths of pile cap block and tops of piles beneath the capping block.

Revise as pile-caps are estimated to be based at about 10ft below ground surface and piles extend from the base of the pile-cap to 125 ft below the base, = 135ft below ground surface.

Younger Quaternary (Holocene) deposits, south of Broadway, are known to contain "paleo-indian" remains and artifacts elsewhere in the US and California. Paleo-indian remains and artifacts could be encountered during pile borings. Similarly at depths of 5-feet and deeper American Indian remains and artifacts could be expected.

Provide for archaeological monitoring and protection programs for all foundation excavations and representative sampling of produced debris for all pile boring at all Project sites, and a special paleontologic and archaeologic monitoring program be required for the Stadium Station and SR-110 Tower.

3.7-20/1 To avoid potentially high sensitivity areas for paleontological resources, or in the event paleontological resources are encountered, implementation of **Mitigation Measure GEO-B** would minimize impacts that would directly or indirectly destroy a **unique paleontological resource or site**, or unique geologic feature. **Mitigation Measure GEO-B would require the development of a Paleontological Resources Monitoring and Mitigation Plan (PRMMP)** to provide direction on the identification of high-sensitivity areas and appropriate monitoring, excavation, and preservation processes during construction excavation activities. With the implementation of **Mitigation Measure GEO-B, impacts related to paleontological resources would be reduced to less than significant**.

The Mitigation Measure requires additional studies before construction and development of a specific PRMMP monitoring and reporting plan to mitigate potential significant impacts for fossils.

A tentative "mitigation measure" does not provide adequate nor complete mitigation or compensation for potential paleontological impacts from excavations for towers and stations

foundations and >100 borings for piles. Provide a draft PRMMP for all excavations deeper than 3ft and recirculate DEIR.

As no PRMMP is available for review, revision, and comments, the impacts on paleontological resources must be considered as greater than significant, or at least "significant". With the supplemental provision of the MMGeo-B and PRMMP, such impacts maybe mitigated but not without the full reports for public review and comments.

3.7-20/3 3.7.5 Mitigation Measures The following mitigation measures are **proposed to reduce** significant impacts related to geology and soils to a level that is **less than significant**.
MM-GEO-A: Prepare a Site-Specific Final Geotechnical Report: The Project Sponsor shall engage a California-registered geotechnical engineer to prepare and submit a site-specific final geotechnical **investigation and report** to the City of Los Angeles for review, consistent with the requirements of the CBC, applicable Los Angeles amendments, and California Geological Survey Special Publication 117 (as amended).

As proposed the provision of a future FINAL geotechnical investigation and report does not mitigate impacts and does not provide for public review and comments on the adequacy of the future document. Provide a site specific (for each excavation site) investigation and a Geotechnical Report based on at least four borings to the same or deeper depths than the proposed 100+foot soldier piles and recirculate the augmented DEIR for public review and comments.

Impacts on geological resources must be considered as greater than significant, or at least "significant" until such a report has been provided. With the supplemental provision of the MMGeo-B and PRMMP, such impacts maybe mitigated but not without the full reports for public review and comments. Geological impacts must be considered as significant until such a report is available.

3.7-21/2 Implementation of Mitigation Measure GEO-B **would include the preparation of a PRMMP** to provide direction on the identification of high sensitivity areas for paleontological resources and appropriate monitoring, excavation, and preservation processes during construction activities. **Upon implementation of Mitigation Measures GEO-A and GEO-B**, significant impacts related to geology and soils would be reduced to less than significant.

Therefore only after implementation of the MM-GEO-A/-B including their public presentation can impacts be considered "less than significant". Therefore the DEIR must be considered incomplete as the MM-GEO-A/-B have not been prepared, reviewed, nor implemented. Provide the mitigation monitoring and report plan for all geological, paleontological, and archeological resources sectors along with mandatory requirements for agencies and contractors.

Provide complete and adequate MM-GEO-A/-B as part of the FEIR or as part of a SEIR.

3.9-1/1 Hazards and Hazardous Materials This section evaluates the potential impacts related to hazards and hazardous materials from construction, operation, and maintenance of the proposed Project. This section is based in part on the Phase I Environmental Site Assessment (ESA) that was prepared for the proposed Project by AECOM in July 2022 (Appendix K of this Draft EIR). The environmental regulatory database report and records review prepared for the proposed Project in April 2022 is provided in Section 6 of Appendix K.

The "database report" is not based on specific borings at the Project's tower, junction, and station locations and in the vicinity of proposed foundation and piling sites for towers and stations. And thus the DEIR is inadequate and incomplete for the geotechnical setting of hazardous materials. The same situation occurred for the excavation of the Union Station and US-Yard tunnels which lead to major contaminations and massive change orders for mitigation of groundwater and soils contaminations. Provide specific citations (appendix, page, and paragraphs) when referencing other sources and add such information herein.

Provide four borings and appropriate gas, fluids, and soil monitoring and samples for analyses of hazardous materials and potential impacts from such during excavations and boring at each of the Project tower/station sites prior to certification of the FEIR.

Provide a thoroughly revised and supplemented Subsequent Draft Environmental Report (S-DEIR) for public review and comments.

3.9-10/1 City of Los Angeles Municipal Code The Los Angeles Municipal Code, Chapter IX (Building Regulations), Article 1 (Buildings), Division 71 (Methane Seepage Regulations), commonly known as the City Methane Ordinance ***No references***, describes methane testing and control requirements based on building type, building use/occupation, and whether a structure is in a methane zone or buffer zone. Requirements for new construction in such zones include methane gas sampling; and depending on the detected concentrations of methane and gas pressure at the site, application of design remedies for reducing potential methane impacts ***No references***. The **City has prepared a map** of methane zones and methane buffer areas in the City ***No references***. The proposed Project alignment crosses a methane zone and buffer zone and **may require site-specific methane testing** for particular structures, depending on the final architectural design.

Entire paragraph is incomplete and inadequate for this DEIR. No references/mentions (report/pg/par) are to given to ZIMAS where parcel-parcel notations are given as to presence in methane or buffer zones.

As known and designated gas zones lie within the Project area and construction site, methane gas issues must be considered significant and require an appropriate mitigation program in a supplemental/subsequent DEIR.

Provide for a thorough review and provisions of all relevant references are provided. Provide a gas survey of each site with gas probes/boring and their analyses and assessments. Provide such along with pertinent mitigation measures for a supplemental/subsequent DEIR.

3.9-10 22/6 Division 71 (Methane Seepage Regulations) describes methane testing and mitigation requirements based on building type, building use/occupation, and whether a structure is located within a methane zone or buffer zone. The proposed Project alignment crosses a methane zone and buffer zone and **may require site-specific methane testing** for particular structures, depending on the **final <u>architectural</u> design**.

As known and LA City designated gas zones lie beneath the Project area and construction sites, methane gas issues must be considered significant and require an appropriate mitigation program in a supplemental/subsequent DEIR.

Provide final Project designs and documents, their description, and their bases for draft Mitigation, Monitoring, and Reporting Plans for public review and comments prior to preparation of the Project FEIR.

Provide for a thorough review and provisions of all relevant references are provided. Provide a gas survey of each site with gas probes/boring and their analyses and assessments. Provide such along with pertinent mitigation measures for a supplemental/subsequent DEIR.

3.9-18/2 3 Methane Zones Methane zones are usually a result of naturally occurring tar and crude oil, or shallow soil contamination by old oil drilling wells….Non-pressurized methane is not normally problematic **<u>if properly monitored and controlled per Cal/OSHA regulations</u>**….Methane ***and associated oil field gas*** exposure to workers during construction can be hazardous at higher levels, especially in confined spaces. In addition, methane seepage can result in an explosion if an adequate concentration of methane gas exists where combustion is possible.

During 1985 Ross Dress for Less Store Explosion, RTD/Construction Management staff for Phase 1 Red Line assisted LAFD in monitoring, control, and treatment of methane leakage and fire and such activities laid base for the Methane Gas ordinances and restrictions.

Methane and Methane-buffer zones are identified for all Project sites, except for Alameda Station. Revise/recirculate the DEIR based on significant impacts related to methane for the Project. Provide MMRP within the SDEIR for the Project sites in methane and methane-buffer zones based on gases found in soils/boring of each Project site for public review and comments of the recirculated DEIR.

3.9-18/3 Methane gas is known to be generated in the **area**. The City of Los Angeles Department of Building and Safety's Los Angeles Methane Zone Map categorizes two types of zones: Methane Zones and Methane Buffer Zones….based on the proximity to a methane gas source. According to the City of Los Angeles Department of Building and Safety maps, portions of the proposed Project alignment pass through identified Methane Zones and/or Methane Buffer Zones (Figure 3.9-1). The proposed Chinatown/State Park Station, Broadway Junction, Alpine Tower, and Stadium Tower are in a Methane Zone and/or Methane Buffer Zone.

RTD/MTA project experience of Red Line Phase 1 Union Station Tunnel/Station construction included major change orders for groundwater and methane, creosote, and hydrogen sulfide gases released from groundwater and dry soils.

Methane and Methane-buffer zones are identified for all Project sites, except for Alameda Station. Revise/recirculate the DEIR based on significant impacts related to methane for the Project. Provide MMRP within the SDEIR for the Project sites in methane and methane-buffer zones based on gases found in soils/boring of each Project site for public review and comments of the recirculated DEIR.

3.9-19/Fig.3.9-1: Methane Zones Within the Project Area

No source for figure is provided as reference and hazard zone seems different from CalGEM boundaries for the Los Angeles Oil Field, and map appears to also differ from parcel designations in ZIMAS. Provide references for all gas issues.

Provide sources and analyses for development of map. Provide comparison with ZIMAS and basis for comparisons and mitigative requirements for safe construction of the Project.

3.9-26/3 As shown in Figure 3.9-1,…portions of the proposed Project alignment pass through Methane Zones and/or Methane Buffer Zones….Chinatown/State Park Station, Broadway Junction, Alpine Tower, and Stadium Tower are in a Methane Zone and/or Methane Buffer Zone….usually a result of naturally occurring tar and crude oil, or shallow soil contamination by old oil-drilling wells. Non-pressurized methane is not normally problematic **if properly monitored and controlled….** If the gas accumulates to **high concentrations** and becomes pressurized, detectable levels may enter the interior of a structure through cracks or other penetrations present in floor slabs.

Given methane's buoyancy, the gas must be pressurized or contained or released in massive volumes in order to reach monitorable levels. Provide MTA/Metro action levels for construction sites and for publicly occupied/used areas, e.g., gas alarm levels for Red Line tunnel, Union Station-Civic Center.

Provide borehole monitoring for 24 hours and of at least borings within the excavation areas for stations, junction, and towers.

Revise/recirculate the DEIR based on significant impacts related to methane for the Project. Provide MMRP within the SDEIR for the Project sites in methane and methane-buffer zones based on gases found in soils/boring of each Project site for public review and comments of the recirculated DEIR.

3.9-26/4 Methane exposure to workers during construction **can be hazardous at higher levels**, especially in confined spaces. In addition, methane seepage can result in an explosion if an adequate concentration of methane gas exists where combustion is possible. The anticipated construction methods for the proposed Project involve relatively shallow and wide excavations and **would not be considered confined spaces**; therefore, this reduces the likelihood of construction workers being exposed to methane gas concentrations that **would be hazardous due to inhalation**. Further, construction activities and workers **would be required** to comply with OSHA and Cal/OSHA regulations, including but not limited to 29 CFR Section 1926.55 and 8 CCR Section 5416, **to develop and enforce workplace safety standards and ensure worker safety during construction**, and project **contractors would be required to comply with OSHA and Cal/OSHA regulations** regarding any potential construction activities that may cause methane release***.***

Provide approved MTA construction requirements for methane and exposure. Provide for mandatory requirements and enforceable statements of certainty rather than "would", "could", or "should".

Provide borehole monitoring for 24 hours and of at least borings within the excavation areas for stations, junction, and towers.

Revise/recirculate the DEIR based on significant impacts related to methane for the Project. Provide MMRP within the SDEIR for the Project sites in methane and methane-buffer zones based on gases found in soils/boring of each Project site for public review and comments of the recirculated DEIR.

3.9-27/1 The proposed Project **would also be required to be designed and constructed to comply** with the regulations…. **Compliance**…which includes appropriate methane exposure or release

identification **protocols based on a site-specific evaluation** of the risk during construction, would be required to ensure worker health and safe construction.

Recognition of a potential threat/risk has not led to provision of a Methane Plan/Protocol presented in the DEIR.

As the project has not been designed, provide a thorough investigation and appropriate gas control designs to avoid/treat methane and other heavier hydrocarbon gases (e.g., BTEX and PAHs) and perhaps contaminated soils before construction begin, during construction, and for operations.

Following review and assessment of methane monitoring, provide appropriate protocols for mitigation of methane exposures and appropriate assessment of hazards and impacts upon the Project and environment. Integrate findings, mitigations, and residual impacts for significance and in cooperate in a supplemental/subsequent DEIR and recirculate for public review and comments.

Revise/recirculate the DEIR based on significant impacts related to methane for the Project. Provide MMRP within the SDEIR for the Project sites in methane and methane-buffer zones based on gases found in soils/boring of each Project site for public review and comments of the recirculated DEIR.

3.9-27/2 With adherence to OSHA, Cal/OSHA, and Division 71 of the Los Angeles Municipal Code, impacts related to methane gas exposure or release during construction of the proposed Project would be less than significant.

As no methane plan/protocol is presented in the Project, no adherence can be reviewed or assumed. Provide mandatory measures for gas controls, releases, and safe exposures.

Provide gas-vapor monitoring results from any/all geotechnical borings conducted to date. If no monitoring, provide for gas monitoring of soil vapors from at least 5 borings of 20ft into the underlying soils/alluvium with specific mandatory mitigation for all impacts.

Revise/recirculate the DEIR based on significant impacts related to methane for the Project. Provide MMRP within the SDEIR for the Project sites in methane and methane-buffer zones based on gases found in soils/boring of each Project site for public review and comments of the recirculated DEIR.

3.10-21/1 Groundwater levels in the Project study area generally range from depths of approximately 20 to 60 feet below ground surface (bgs).\37 \38 Groundwater levels range from 20 to 25 feet bgs in the vicinity of LAUS, 25 feet bgs near the intersection of North Alameda Street and North Main Street, 27 to 35 feet bgs in the vicinity of the southern portion of the Los Angeles State Historic Park, more than 60 feet bgs in the vicinity of the intersection of North Broadway and Bishops Road, and estimated at 60 feet bgs below the proposed Dodger Stadium Station.\39

No direct citations and cannot confirm/deny values given. Provide direct web address and process to locate values by page/paragraph/Figure No..

No map of groundwater level, sources of such information, nor the surface elevations. Provide map of elevations and depths to groundwater at 100ft intervals along proposed alignment.

Provide for and conduct preliminary groundwater characterization at each Project facility site based on at least four borings at each facility site with appropriate testing and monitoring for ground gases, contaminations, and water qualities for each site as part of supplemental review and assessment and then circulate a revised-subsequent/supplemental DEIR for public review and comments.

Revise/recirculate the DEIR based on significant impacts related to methane for the Project. Provide MMRP within the SDEIR for the Project sites in methane and methane-buffer zones based on gases found in soils/boring of each Project site for public review and comments of the recirculated DEIR.

3.10-21/2
Groundwater Quality Regional groundwater basin water quality is poor in some areas due to natural conditions resulting in high total dissolved solids (TDS) levels, while in other areas groundwater quality has been degraded due to infiltration from commercial and industrial discharges, agricultural chemical application, and contaminants from urban runoff.**\40** Deterioration of water quality in some areas has occurred due to inadequate storage, handling, and disposal of chemicals resulting in releases to groundwater. The groundwater in the portions of the Central Basin is known to contain elevated levels of TDS, volatile organic chemicals, perchlorate, nitrate, iron, manganese, and chromium.**\41**

Searches appear totally inadequate and incomplete with regard to Metro and City departments and relevant files related to Gold and Red Line construction along with the Park reviews.
Citations are only to the general document and do not lead to or support groundwater quality descriptions. Provide specific chapters, pages, and paragraphs to summary provided.
Provide Metro contracts and specific citations to Metro files for Red Line Station and US<>CC twin tunnels and Gold Line CEQA documents and construction files dealing with groundwater and water quality along the alignment from Los Angeles Str. to Broadway.
Provide revised descriptions and assessments along with appropriate mitigation or compensation and then circulate a revised-subsequent/supplemental DEIR for public review and comments.

3.10-24/3 3.10.2 Methodology To establish baseline conditions, a search of publicly accessible databases and information from various sources and agencies was conducted….include but are not limited to the SWRCB, California DWR, State of California Natural Resources Agency, FEMA, Los Angeles RWQCB, Los Angeles County Department of Public Works, Los Angeles County Flood Control, **City of Los Angeles** Department of City Planning, LADWP, and Metropolitan Water District of Southern California.
Search appears totally inadequate and incomplete with regard to Metro and City departments and relevant files related to Gold and Red Line construction along with the Park reviews.
Provide Metro contracts and specific citations to Metro files for Red Line Station and US<>CC twin tunnels and Gold Line CEQA documents and construction files dealing with groundwater and water quality along the alignment from Los Angeles Str. to Broadway.
Provide accessible databases for roads and construction information along the proposed alignment for Department of Public Works (Bureaus of Engineering, Streets LA, Sanitation/Environment, etc.) and for Metro construction and CEQA related departments.

Provide revised descriptions and assessments along with appropriate mitigation or compensation and then circulate a revised-subsequent/supplemental DEIR for public review and comments.

3.10-25/4 Construction Impacts Less Than Significant Impact. Construction of the proposed Project components would include site preparation and installation of foundations and columns; erection of stations, towers, and the junction; replacement or restoration of paving, sidewalk, and landscaping; and cable and cabin installation.

No design and related supportive studies/designs have been provided and references indicate none may exist and await final design. No foundation drawings are provided to establish how deep excavations and dewatering may be required. No specific locations and numbers of deep piles (mentioned to be >50ft depths) are located along with their capping foundations. Provide final design drawings and specifications for all towers and stations prior to approval and further considerations.

Current documentation is totally inadequate and incomplete for a pronouncement of "Less than Significant Impacts". Provide a completely revised Supplemental DEIR with adequate descriptions, assessments, and mitigation for alternative projects along with numerical/quantitative comparisons and selection.

Provide contract drawings and description and revised Supplemental EIR for public review and comments.

3.10-25/5 Groundwater Construction activities associated with foundations would involve general earthwork and **concrete work to prepare the foundations, with excavations for foundations at depths ranging between seven feet and 42 feet, and piles to be installed between 55 feet and 125 feet below pile depth….**; therefore, the proposed Project may require the **removal of nuisance water** that **seeps** into boreholes during construction. Water removed from the boreholes would be containerized, and analyzed to determine the proper disposal method.

Provide pre-construction contract drawings of all foundations and pilings, especially for the Union Station facilities and their relation to the Un.Stn.<>Civic Center Tunnels and the groundwater levels (and copies of all boring records for the same).

Provide definition and differentiation between "nuisance" water and dewatered groundwater. Also provide definition of seeps, gal/min, and how big (provide dimensions) the "containers" would be.

Provide a completely revised Supplemental DEIR with adequate descriptions, assessments, and mitigation for alternative projects along with numerical/quantitative comparisons and selection.

3.10-25/6 Groundwater levels range from 20 to 25 feet bgs in the vicinity of LAUS. The foundations for the Alameda Station would be at a depth of 10 feet. Based on these anticipated depths to groundwater, it is considered unlikely groundwater would be encountered during construction of the foundations; however, **piles would be drilled to 125 feet below pile depth**, and may require removal of nuisance water that seeps into boreholes during installation of the piles of this station.

Provide pre-construction contract drawings of all foundations and pilings, especially for the Union Station facilities and their relation to the Un.Stn.<>Civic Center Tunnels and the groundwater levels (and copies of all boring records for the same).

Define: "drilled to 125 feet below pile depth" provide specific dimensions of below ground level or below foundation levels.

Provide a completely revised Supplemental DEIR with adequate descriptions, assessments, and mitigation for alternative projects along with numerical/quantitative comparisons and selection.

3.10-26/1 Groundwater occurs at a depth of approximately 25 feet bgs near the intersection of North Alameda Street and North Main Street. The foundations for the Alameda Tower and the Alpine Tower would be at a **depth of 10 feet**….; however, piles for the Alameda Tower and the Alpine Tower would be drilled to 120 feet below pile depth, and may require removal of nuisance water that seeps into boreholes during installation of the piles of these towers.

Provide engineering considerations loads and dimensions for the Alameda/US Station and the higher angled Alameda and Alpine towers foundations.

Provide geotechnical boring logs and reports for each of the aerial structures considered.

Provide a completely revised Supplemental DEIR with adequate descriptions, assessments, and mitigation for alternative projects along with numerical/quantitative comparisons and selection.

3.10-26/5 Based on groundwater depths, none of the proposed excavations for foundations are anticipated to encounter groundwater; however, removal of **nuisance water** that seeps into boreholes during construction may be required for the pile installations at each of the components.
Groundwater may be encountered during installation of piles, and any **nuisance water** removed **would need to be analyzed prior to disposal**.
Detections of total petroleum hydrocarbons ***TPH*** and volatile organic compounds ***VOCs*** including **BTEX** are known to be present in groundwater at the Los Angeles State Historic Park property, which is directly beneath the proposed Project alignment.\53 Although the groundwater quality in the remainder of the Project study area is **not specifically known**, it may contain elevated levels of constituents such as petroleum hydrocarbons and solvents resulting from commercial and industrial discharges, in addition to potentially elevated TDS and metals related to natural conditions. **Uncontrolled discharge of groundwater carrying these potential pollutants could result in degradation of groundwater and surface water if it is not properly.**

As pile boring will extend well below the top of groundwater, Provide two mitigations for hydrological impacts and potential water discharge violations for groundwater and nuisance waters removal, storage/monitoring for all VOCs, H2S, dioxin, creosote, and other chemicals encountered and treated for in construction for the Metro Union Station in 1980s.

RTD/MTA Red Line Union Station groundwater dewatering required aeration, activated carbon, and H2O2 treatments.

Provide all pile boring drilling systems with H2S and CH4 monitoring sensors and shutdown and require for monitoring, gas/liquids treatment and shutdown, if needed.

Provide a completely revised Supplemental DEIR with adequate descriptions, assessments, and mitigation for alternative projects along with numerical/quantitative comparisons and selection.

3.10-27/1 Additionally, as stated in Section 3.9, Hazards and Hazardous Materials, a S**oil and Groundwater Management Plan** **would be prepared** to **specify methods for handling and disposal** in the event **contaminated groundwater is encountered** during construction. Because…, there is the **potential that excavation in certain areas would encounter groundwater**, and therefore, **dewatering could be required**….Discharges from dewatering operations can contain high levels of fine sediments, which if not properly treated, could lead to exceedance of the NPDES requirements….The **temporary system would comply with all relevant NPDES requirements related to construction and discharges from dewatering operations**. If dewatering is required, the treatment and disposal of the removed water would occur in accordance with the requirements of **LARWQCB's WDRs** for Discharges of Groundwater….

As no specific plans have been prepared and presented in the DEIR, references to such is totally inadequate and incomplete and requires full presentation of such to establish adequacy and completeness of the assessment and mitigation. Provide a draft groundwater management plan for the Project and specific areas most probable to encounter groundwater in excavation and/or pile drilling for public review and comments.

None referenced/cited and no summary of conditions provided.

Provide a completely revised Supplemental DEIR with adequate descriptions, assessments, and mitigation for alternative projects along with numerical/quantitative comparisons and selection.

3.10-36/4 **Nuisance groundwater** may be encountered during installation of piles for each of the components, which **may result in degradation of groundwater quality if not addressed properly**….Refer to Section 3.9 (Hazards and Hazardous Materials) for additional details should contaminated groundwater and/or soil be encountered. However, construction activities are not anticipated to **interfere substantially with groundwater recharge**, **groundwater resource supplies, or groundwater quality**.

No definition nor reference is provided for "nuisance groundwater" and no relationships are provided regarding contamination of the groundwater, its recharge, supplies, and quality during Project construction. Provide definitions for "nuisance groundwater" and its expected characteristics and qualities. Provide a mitigation plan for its control and reduction of all impacts derived from its presence. Provide review and assess potential impacts of construction on the recharge, supplies, and quality of groundwater within and beneath the Project area.

Provide a completely revised Supplemental DEIR with adequate descriptions, assessments, and mitigation for alternative projects along with numerical/quantitative comparisons and selection.

3.10-36/6 With adherence to these laws and regulations, impacts related to implementation of a water quality control plan or sustainable groundwater management plan during construction **would be less than significant**.

Provide specific laws and regulations and the Project compliance measures with such and include in a specific plan with requirements for direct and continuing compliance with requirements on the part of the agencies and contractors. Provide such to be incorporated into all construction contracts along with specific documentation of measures and achievement of regulatory limits.

Provide a completely revised Supplemental DEIR with adequate descriptions, assessments, and mitigation for alternative projects along with numerical/quantitative comparisons and selection.

3.10-37/1 As discussed above, the Sponsor **would comply** with all applicable federal, State, regional, and local agency water quality protection laws and regulations, water quality control and/or sustainable **groundwater management plans**, including the Basin Plan and City of Los Angeles General Plan, as well as **commonly used industry standards**.

As indicated the Basin Plan and appropriate sections of the LA General Plan are referenced but without any specifics as to what would mitigate this specific Project.

As indicate the Project would comply at some time in the future, supposedly before construction contracts, would be approved for construction but without public review and comments before sponsor and relevant authorities would certify completion of the CEQA process. Provide a specific groundwater plan for the Project and all elements specifically venturing into the groundwater resources of the Project area.

Provide a completely revised Supplemental DEIR with adequate descriptions, assessments, and mitigation for alternative projects along with numerical/quantitative comparisons and selection.

3.10-37/4 **It would** also **comply** with all applicable federal, State, regional, and local agency water quality protection laws and regulations, **water quality control and/or sustainable groundwater management plans**, including the Basin Plan and City of Los Angeles General Plan, the **MS4 Permit**, as well as **commonly used industry standards**.

Provide references (doc and page/paragraphs) for mentioned laws, regulations, and requirements.

Provide commonly used industry standards references (docs, pages, and paragraphs) and compiled regulations, laws, and standards requirements as a mandatory compliance mitigation measure.

Provide revised supplemental/subsequent DEIR for public review and comments.

3.10-38/2 With **adherence** to these laws and regulations, and **groundwater management plans**, impacts related to implementation of a water quality **control plan** or sustainable groundwater **management plan** during operations **would be less than significant**.

As no specific plans have been prepared and presented in the DEIR, references to such is totally inadequate and incomplete and requires full presentation of such to establish adequacy and completeness of the assessment and mitigation.

Provide differentiation between compliance and adherence and provide draft construction contract sections for both and for mitigation measures.

Provide a draft groundwater management plan for the Project and specific areas most probable to encounter groundwater in excavation and/or pile drilling for public review and comments.

Provide above in a completely revised Supplemental DEIR with adequate descriptions, assessments, and mitigation for alternative projects along with numerical/quantitative comparisons and selection.

3.10-38/3 3.10.5 Mitigation Measures With **adherence** to applicable federal, State, regional, and local laws and regulations, including **compliance with applicable stormwater permits, wastewater permits, and other water quality regulations**, construction and operation of the proposed Project would result in **less than significant impacts to hydrology and water quality**. No mitigation measures are required for the proposed Project.

Provide references (doc and page/paragraphs) for mentioned laws, regulations, permits, and their requirements.

Provide commonly used industry standards references (docs, pages, and paragraphs) and compiled regulations, laws, and standards requirements as a mandatory compliance mitigation measure.
Provide contractual requirements for all construction contracts and differentiate between requirements and mitigations.
Provide revised supplemental/subsequent DEIR for public review and comments.

3.10-38/4 Mitigation Measures With **adherence** to **applicable** federal, State, regional, and local laws and regulations, including compliance with **applicable** stormwater permits, wastewater permits, and other water quality regulations, **construction and operation of the proposed Project would result in less than significant impacts to hydrology and water quality**. No mitigation measures are required for the proposed Project.
Provide references (doc and page/paragraphs) for mentioned laws, regulations, permits, and their requirements.
Provide commonly used industry standards references (docs, pages, and paragraphs) and compiled regulations, laws, and standards requirements as a mandatory compliance mitigation measure.
Provide contractual requirements for all construction contracts and differentiate between requirements and mitigations.
Provide revised supplemental/subsequent DEIR for public review and comments.
Repetitive comments as required by repetitive references and deficiencies.

Mineral Resources
3.12-2/2 The majority of wells in the Los Angeles City Oil Field, including the wells closest to the proposed Project alignment, are either **plugged or idle**. The nearest **active** well is approximately 1.5 miles west of the proposed Project alignment.\5
Provide a map of all known well sites within 1000ft of the Project excavations and provide and assess historic (1920-1950) aerial photos of the Project site for historic well sites and on-ground facilities which may have contaminated the Project sites. Assess potential impacts and provide specific mitigations for such, and recirculate the DEIR for further public review and comments.
Provide a completely revised Supplemental DEIR with adequate descriptions, assessments, and mitigation for alternative projects along with numerical/quantitative comparisons and selection.

3.12-3/3 Additionally, although the proposed Project alignment is in the Los Angeles City Oil Field, the closest **active well is approximately 1.5 miles west** of the proposed Project alignment, and would not be affected by implementation of the proposed Project. Therefore, the proposed Project would not result in the loss of availability of a known mineral resource that would be of value to the region or State, and no impact would occur.
Plugged and idled wells lie within 500ft of the Project surface footprint and within 1000ft of the Park Station and Broadway Tower. Plugged and idled wells can be easily renovated for production of mineral resources (oil and gas) and can impact the Project construction excavations. More than 50 idled but not plugged wells lie within 1/2mile of the Park Station, and idled (and even plugged) wells can be returned to service cheaply and within a matter of months.
Revise and provide adequate review and assessment of the Project on return to service of more than 50 idled wells to the west of Park Station. Provide a revised review and assessment of mineral resources in a revised and recirculated DEIR.

3.15-20/6
The plan would also address the unlikely scenario where the system cannot be moved to unload passengers normally at stations. The **robust design, periodic and preventative maintenance, and equipment redundancies** are intended to minimize these potential impacts. However, the plan would include procedures to evacuate passengers directly from cabins, if needed. An **Evacuation Plan would be developed** as part of the **Project-specific Emergency Operations Plan**, as required by **industry standards and State regulations**….**would describe** the **preferred methods**….**would also include** the required equipment and procedures for evacuation, site control, and passenger communications….**would**

be performed in advance of opening the system….**would document** the procedures, equipment, and personnel necessary to evacuate the system,….. **Such analysis, practice, and documentation is required by OSHA.**

Provide a draft Project description demonstrating a robust design vs typical design for the Project. Provide a draft maintenance manual for the Project, along with a clear assessment of equipment redundancy and service cycling of such.

Provide a draft evacuation plan for in-station and on-line gondolas and related equipment for such operations.

Provide draft comparisons of industry standards and preferred measures for this Project and relate such to potential impacts or mitigations.

Provide a listing and citations for related references of industry standards and regulations related to the above.

Provide a draft for all OSHA related analysis, practices, and documentation for such a Project, and provide references for such for at least three similar elevated projects in the US.

Provide a completely revised Supplemental DEIR with the above requests along with adequate descriptions, assessments, and mitigation for alternative projects along with numerical/quantitative comparisons and selection.

3.16-31/3 3.17.1 Regulatory Setting Federal Americans with Disabilities (ADA) Act of 1990 Titles I, II, III, and V of the ADA have been codified in Title 42 of the United States Code, beginning at Section 12101….establishing minimum standards for ensuring accessibility when designing and constructing a new facility or altering an existing facility. **The Project <u>will be designed</u> to meet all ADA design requirements**.

Provide a thorough and complete review and draft illustrations/drawings for all ADA design sites within Project and related equipment, especially for wheelchair and walker/stroller devices.

Provide

Provide a completely revised Supplemental DEIR with adequate descriptions, assessments, and mitigation for ADA compliance along with alternative projects and their numerical/quantitative comparisons and selection.

4-1/1 4.0 ALTERNATIVES 4.1 INTRODUCTION Alternatives have been considered in this Draft EIR to explore potential means to mitigate or avoid the significant environmental impacts associated with implementation of the proposed Project, while still achieving the **primary objectives** of the proposed Project….an EIR shall describe the range of **reasonable** alternatives, which may include alternatives to the location of the project, which would **feasibly** attain most of the basic objectives of the project….EIR… does not need to consider every conceivable alternative or consider alternatives that are **infeasible**, but rather only alternatives necessary to permit a **reasoned choice**….No Project Alternative…to determine the consequences of not implementing the project…., and **comparison of alternatives, the relative advantages and disadvantages of each alternative can be determined**.

Provide goals/purposes of the Project and their related dependent objectives and policies/program.

Provide definitions of reasonable, feasibly, infeasible, and reasoned-choice and provide examples of such within the Project description and alternatives.

As required by CEQA, provide a numerical/quantified comparison of all environmental sectors and for all alternatives.

Provide a completely revised Supplemental DEIR in accordance with above deficiencies with adequate descriptions, assessments, and mitigation for alternative projects along with numerical/quantitative comparisons and selection.

Apdx K 1979/ & 1980/ During the late nineteenth and early twentieth centuries, crude oil was extracted from multiple small oilfields nearby and processed at the former **Southern Refining Company** located **immediately northwest** of the Site. **Historical aerial photos and Sanborn maps** indicate that the refinery contained four aboveground storage tanks (ASTs) for storing crude oil. The refinery was apparently dismantled by 1921 and the ASTs were removed sometime between 1921 and 1928. The Site

has been used as a railroad junction for over 100 years and is currently maintained as such for use by three major passenger and freight lines.

Revise mis-directions of historic uses (SE rather than NW) and provide historic aerial photos of such site.

Provide address of site: e.g., 1300 CARDINAL STREET 1700 ft SE-E of Alameda for Southern Refining Company and Amalgamated Oil Company, now Williams Mead Housing Project.

Provide historic aerial photos and maps and revised Apdx K.

The entire DEIR and appendices do not consider or provide information provided in ZIMAS, LA City Dept. City Planning online database Very limited references in DEIR with singular mentions in the DEIR and geotechnical report, only. Withdraw current DEIR, revise, and update and recirculate as supplemental/subsequent DEIR with incorporated ZIMAS information for all pertinent descriptions.

Sept. 2022 Los Angeles Aerial Rapid Transit 16037.000.000 Geotechnical Document in Support of the Environmental Impact Report

APPENDIX I

Apdx. I-1 GeoTechnical Report ENGEO Project No. 16037.000.000

We are pleased to submit this document characterizing the **general geologic/geotechnical conditions** of the Los Angeles Aerial Rapid Transit (LA ART) project in Los Angeles, California. This report is a **compilation of adjacent publicly available previous geotechnical assessments and explorations** to assist in preparation of the Draft Environmental Impact Report (EIR).

Provide references (doc and page/paragraphs) for mentioned assessments and explorations. Provide geotechnical documentation for RTD/MTA Red Line Union Station and US-Civic Center rail Tunnels beneath this Project and adjacent to the Project's Alameda Station.

Provide review and pertinent information from geotechnical documents related to the Buena Vista Project along south side of Broadway and under and adjacent to the Broadway/Bishop Tower.

Provide commonly used industry standards references (docs, pages, and paragraphs) and compiled regulations, laws, and standards requirements for geotechnical settings and impacts as a mandatory compliance mitigation measure.

Provide contractual requirements for all construction contracts and differentiate between geotechnical requirements and mitigations.

Provide revised supplemental/subsequent DEIR for public review and comments.

Apdx. I - 2/1 This document was prepared based on a **desktop study** of **readily available publicly accessible geotechnical reports and data**. Geotechnical explorations and laboratory testing were not a part of this **initial preliminary** study scope.

No project borings, No records of vicinity geotechnical borings, Including Red Line Phase 1, Alameda – Tunnel and UStn, Buena Vista, Cornfields/Historic park, and William Mead Project.

The DEIR is totally deficient and inadequate regarding to geotechnical (and other EIR elements') settings, impacts assessments, and mitigations. Provide at least 4 borings per Project element to establish geological conditions and potential impacts of the Project on the area resources, and their hazards upon the Project.

Provide review of all recorded seismic events within 5000ft of the Project area limits and potential sources (including SCEC, Pasadena).

Apdx. I-13/1 approximately 10 miles within the earth (Wallace, 1990). The predominant fault system affecting the Project area is the Transverse Ranges **fault system**, which **trends east-west** and relieves strain primarily through reverse-slip, and left-lateral, strike-slip displacement.

Provide review of all recorded seismic events within 5000ft of the Project area limits, potential sources (including SCEC, Pasadena).

Provide review of the Elysian Park North Fault (see ZIMAS and others) underlying the Project sites and others north of Broadway.

Apdx. I-13/2 4.1.2 Site Topography The **majority (3/4)** of the proposed Project alignment occupies a gentle, south-sloping alluvial plain located **approximately ½ mile** west of the Los Angeles River (Figures 1 and 2).

Provide measurements in feet: 4057/6260 ft (65%) of length and 2880-3500ft west of LA River low flow channel rather than two different units (% and miles)in same sentence.

Apdx. I -13/5 [**Qyf 1 Holocene-Pleistocene**] This geologic unit was deposited primarily from flood deposits and debris flows.

As used, Qyf includes the entire Quaternary (Holocene and Pleistocene). Provide specific technical term usage, Holocene is an interval of the Quaternary, not Pleistocene.

Apdx. I-13/6 4.1.3.3 Flood and Stream Channel Deposits According to geologic **mapping by Campbell (2014)**, the alignment from the southern end to where it crosses North Broadway is underlain by **late Pleistocene** alluvium (Figure 3 - Qya2).

Provide accessible, specific sources (page/paragraph) for reference or provide copy of map in Appendix.

Provide differentiation between Late Pleistocene (Qo) and Holocene (Qy), as this designation would indicate all surface deposits would have potential for important fossils.

Apdx. I -14/2 The geologic structure in the area of the site is characterized by the **northeast-southwest**-trending Elysian Park Anticline and the underlying **Elysian Park Blind Thrust fault**. The Project site is located over the **southwest limb of the anticline**. Bedding in the **Puente Formation** in the area generally dips from 25 to 50 degrees towards the **southwest**.

Other geotechnical sources (ZIMAS, et al) indicate that the EPBT Fault is aligned NW-SE rather than NE-SW beneath the Project.

Similarly general anticline axis orientation of NE-SW would require the flanks to dip from the axis to the NW and SE, rather than the SW; anticline axis (top of fold) maybe to SW.

Provide review and revisions by qualified geologist for review of relevant appendices and DEIR text for a Supplement DEIR.

Apdx. I -16/ TABLE 4.2.1.1-1: Nearby Active Faults (USGS 2008) Lat.=34.065019; Long.=-118.235495
FAULT NAME **Elysian Park (Upper)***

Provide a single consistent name/term for the fault.

Apdx. I -17/2 **Elysian Park Fault** (Blind Thrust Fault) The fault closest to the Project site is the **Elysian Park fault**. According to the USGS Quaternary fault and fold database, the location of the **Upper Elysian Park fault** is inferred to cross under the alignment.

The **Upper Elysian Park fault** is a north-to-northeast-dipping fault that underlies the northern Los Angeles basin from Griffith Park to Garvey Reservoir. ***ZIMAS***

However, the **Upper Elysian Park fault** is a blind thrust fault, which means **it is not capable of surface fault rupture** and; therefore, is not subject to the conditions of the Alquist-Priolo Act. ***ZIMAS***

It is thought to be seismogenic (capable of generating earthquakes) from a depth….

Because **there is no surface expression of the Elysian Park fault**, constraints on the long-term slip rates on the fault…, rather than from paleoseismic data.

Although these constraints are limiting, the **most current models (UCERF3)** indicate… it has approximately 1.2% probability of participating in an earthquake of magnitude greater than 6.7 before 2038….The likelihood of experiencing an event of Magnitude > 7.0 is 0.8%, and the likelihood of experiencing an event of Magnitude > 7.5 is less than 0.1% in that time period.

Provide references for all such statements along with page/paragraph so that discussion of faults can be verified as accurate.

As ZIMAS shows the Project to cross and extend through the fault zone, this discussion needs to be thoroughly and adequately displayed and rectified as it is wrong, based on LACity ZIMAS.

Provide specifics assessments/mitigation regarding fault/design inclusions for Park Station, Broadway and Elysian towers, and Stadium Station and supports within the ZIMAS designated surface fault zone.

Provide accessible reference for UCERF3 as applied to this fault and location.

Provide seismic assessment of structural responses for towers, stations, cables, and gondolas during a 6.4-6.7 magnitude on the Elysian Park Fault.

Provide description and assessments reflecting the LACity-DCP ZIMAS info-base.

Apdx. I -17/4 These portions of the Project alignment are located in an area mapped as potentially subject to liquefaction on the Safety Element Exhibit B of **City of Los Angeles General Plan** and the State of California Seismic Hazards Zones map as shown on Figure 5. The Alameda Station, Alameda Tower, Alpine Tower, Chinatown/State Park Station, and Broadway Junction are located in an area mapped as potentially subject to liquefaction.
Provide appropriate ZIMAS references. No specific references to ZIMAS.

Apdx. I -18/4 The proposed Project alignment is located in an area classified as MRZ-3 as shown on Figure 6. MRZ-3….” The proposed Project alignment is also located just beyond the eastern end of, but not within, what is designated as the Los Angeles City Oil Field.
Although not within the surface delineation of the LA Oil Field, close enough that may reflect the underlying oil/gas occurrences and production zones.
CalGEM Wellfinder shows the route alignment within the mapped oil field. North of Bruno/Alameda intersection, the Project Park Station lies within the well field along with 1200+ft of the cableway, and the Broadway Junction lies 550 ft east of the mapped field.
As many parcels through which the Project alignment passes are designated as “Methane Zones” they would be within the land above the designated Los Angeles Oil Field.
No references given. Provide appropriate ZIMAS references and DOC CalGEM WellFinder site.

Apdx. I -19/1 …located in a **City-designated hillside area, indicating the sites may have an increased susceptibility to landslides.\3 \3 City of Los Angeles. Zone Information and Map Access (ZIMAS). Available at: http://zimas.lacity.org/.** Accessed May 2022
Only reference to ZIMAS in the entire DEIR although landslides are indicated by ZIMAS for parcels NW of SR-110 and for the Alpine Tower and Stadium Station areas.
Provide review of all Project element locations with regard to ZIMAS database information, e.g., faults, landslide, and liquefactions.
Provide review of liquefaction potential as indicated by ZIMAS for Project area and facilities south of Broadway. Provide appropriate mitigation for liquefaction and for landslides especially when seismically induced.

Apdx. I -20/1 …which require monitoring **before and during construction**. Although **long-term methane controls are not required**, **preliminary construction planning** should adhere to Section 91.7101 of the Los Angeles Municipal Code, which controls for methane intrusion emanating from geologic formations. The need for methane controls **may be reduced or eliminated by conducting site-specific methane testing** for elements constructed within the methane zones and buffer zones to evaluate the potential hazard, pursuant to Section 91.7104.1.
ZIMAS clearly indicates parcels which are designated as being in a Methane Zone or Methane Buffer Zone, is not so designated in the DEIR setting and no mitigation measures are proposed.
As no methane surveys, testing, and monitoring has been conducted within the Project sites, the needs for methane monitoring and controls must be implemented before and throughout construction, especially for towers, the junction, and Park Station.
The appendix does not clearly describe the Project sites but states that monitoring will be conducted before construction and hopefully would be assessed before construction contracts are offered. Without any direct information or assessment, the DEIR assesses that construction and longer term methane controls will not be needed, even though the Park Station and Broadway Tower lie within designated Methane Zones.
Provide a thorough description of methane gas conditions of surface and subsurface based on >10ft borings for each Project site and as required by Metro for construction of major surface and subsurface facilities. Provide suitable mitigation and safety plans for those sites with methane gases in soils and groundwater.
Provide specific contractor programs to monitor, to control, and to assess measures required for continuing safe operations at all Project facilities located in ZIMAS recognized Methane Zones.

Apdx. I -21/1 5.2.2 Seismic Hazards Mapping Act of 1990…addresses earthquake hazards other than surface fault rupture, including liquefaction and seismically induced landslides.…identifying and mapping seismic hazard zones and mitigating seismic hazards to protect public health and safety.

Provide specific page/paragraph citations and include specific parcel references for ZIMAS assignments to surface zones, liquefaction, and landslides.

Provide a thoroughly revised and supplemented Subsequent Draft Environmental Report (S-DEIR) for public review and comments.

Apdx. I -21/1 It requires the California Department of Conservation, Division of Mines and Geology, to map **seismic hazards** and establishes specific criteria for project approval that apply within **seismic hazard zones**, including the requirement for a geological technical report. The California Department of Conservation has mapped seismic hazards or established specific criteria for the area that includes the Project site **(CGS, 1998)**.

Provide specific page/paragraph citations and include specific parcel references for ZIMAS assignments to surface zones, liquefaction, and landslides.

Provide parcel specific seismic hazard zones for all Project construction sites.

Apdx. I -21/2 The geological reports prepared for the Project satisfy the requirements of the Seismic Hazards Mapping Act at the **preliminary project level**. Additional **site-specific studies designed to explore the subsurface conditions in areas of planned development will be completed prior to submittal of final plans**.

Define "preliminary project level" and provide schedule/contents for final plans (and designs) and current/2023 industry standards for designs and project description used for basis of CEQA/EIR compliance and agency certification of this Project.

Provide list, outlines, and completion schedules for all site specific studies. Provide requirements for all such future studies to be incorporated into a subsequent DEIR.

Provide above and a total revision of DEIR, and especially geotechnical considerations, and resubmit as a supplemental/subsequent DEIR for public review and comments.

Apdx. I -22/5 5.2.2 Seismic Hazards Mapping Act of 1990 The California State Seismic Hazards Mapping Act of 1990 addresses earthquake hazards other than surface fault rupture, including liquefaction and seismically induced landslides….The **geological reports prepared for the Project satisfy the requirements of the Seismic Hazards Mapping Act at the preliminary project level**. **Additional site-specific studies designed to explore the subsurface conditions in areas of planned development will be completed prior to submittal of final plans.**

Define "preliminary project level" and provide schedule/contents for final plans (and designs) along with citations + page/paragraph of any references and provide current/2023 industry standards for designs and project description used for basis of CEQA/EIR compliance and agency certification of this Project.

Provide list, outlines, and completion schedules for all site specific studies.

Provide the above and total revision of DEIR, and especially geotechnical considerations, and resubmit as a supplemental/subsequent DEIR for public review and comments.

Apdx. I -22/6 Division 71 (Methane Seepage Regulations) describes methane testing and mitigation requirements based on building type, building use/occupation, and whether a structure is located within a methane zone or buffer zone. The proposed Project alignment crosses a methane zone and buffer zone and **may require site-specific methane testing for particular structures, depending on the final architectural design**.

Provide and implement a methane monitoring and assessment program for all construction sites prior to preparation of a supplemental/subsequent DEIR for public review and comments.

Provide all of the above and total revision of DEIR, and especially geotechnical considerations, and resubmit as a supplemental/subsequent DEIR for public review and comments.

Apdx. I -24/1 Impact: There is potential for the proposed Project to expose people or structures to seismic hazards listed above. **Mitigation measures would be required to reduce impacts to a less than significant level.**

Provide review and assessment of all fault and seismic impacts given for an event equal to 6.4 magnitude as noted in ZIMAS. Provide for pre-construction and ongoing microseismic monitoring for the Upper Elysian Park Fault zone beneath the Project.
Replace all "would's" with shall's or must's.
Provide for additional mitigation programs for at least 120 minute emergency evacuation programs and for damage prevention for surrounding land uses in the event of tower ccollapses or toppling.
Provide all of the above and total revision of DEIR, and especially geotechnical considerations, and resubmit as a supplemental/subsequent DEIR for public review and comments.

Apdx. I -24/2 To mitigate the shaking effects, structures **should be designed using sound engineering judgment and the current CBC requirements, as a minimum.**
Provide definitions and comparisons for should's and would's vs shall's and will's. Replace all "should's" with shall's or must's.
Provide all of the above and total revision of DEIR, and especially geotechnical considerations, and resubmit as a supplemental/subsequent DEIR for public review and comments.

Apdx. I -24/2 However, the proposed Project alignment is not located within a State of California Earthquake Fault Zone for known Holocene-active faults capable of fault surface rupture (CGS, 2017) or located within an Alquist-Priolo Earthquake Fault Zone. Accordingly, the **risk of surface rupture due to faulting is considered low.** As such, the Project **would** not directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving rupture of a known earthquake fault. Impacts **would be considered less than significant.**
Replace all "would's" with shall's or must's.
No reference to ZIMAS nor to Buena Vista Scoping and related studies. No references to competent certified reviewers for such statements and use of conditionals.
Provide an adequate and complete technical review and statement of significance by competent certified engineer. All such additions must be provided in a subsequent/supplemental DEIR prior to further consideration of the Project and public review and comments.

Apdx. I -24/4 The **actual risk** of the liquefaction hazard and related damages **should be evaluated in the site-specific geotechnical report.** The Project **would be required to comply** with all standards, requirements, and conditions contained in construction-related codes (e.g.,…), **which would ensure structural integrity and safe construction.**
Actual risks and mitigation measures must be evaluated in a sites-specific review and assessment by a competent, certified engineer(s), must be based on adequate and complete geotechnical studies and assessments, and must provide appropriate mitigation and compensation measures to warrant a less-than-significant risks to structures and passengers.
Provide an adequate and complete technical review and statement of significance by competent certified engineer. All such additions must be provided in a subsequent/supplemental DEIR prior to further consideration of the Project and public review and comments.

Apdx. I -25/1 Therefore, impacts related to earthquake-induced slope failure **could be considered moderately significant to significant** and **should be addressed** per Mitigation Measure GEO-A.
Use of could/should and ranges of significance are inconsistent with CEQA and must be based on factual evidence for the Project sites and assessments by competent, certified reviewers.
Provide an adequate and complete technical review and statement of significance by competent certified engineer. All such additions must be provided in a subsequent/supplemental DEIR prior to further consideration of the Project and public review and comments.

Apdx. I -25/2 Compliance with existing laws and regulations, and implementation of **Mitigation Measure GEO-A**, requiring the development and implementation of geotechnical recommendations to be incorporated into the design plans and specifications, **would reduce** impacts to less than significant.
As indicated in text, the current DEIR finds current designs would generate significant impacts for seismicity/Geological Resources, as the referenced programs have not been conducted and the public has not had a public review and comments for the mitigation measures to be considered.

Apdx. I -25/3 Operation Upon completion of the construction activities, the proposed Project would have complied with…, as well as Mitigation Measure GEO-A. **Operation of the aerial gondola system would have a less than significant impact with respect to exposing people or structures to seismic hazards if appropriate mitigation measures are applied during construction**.

As indicated, appropriate mitigation measures (which are unknown in this DEIR and not based on evidence) are not available for public review and comment.

As indicated in this text, the current DEIR finds current designs would generate significant impacts for seismicity/Geological Resources, as the referenced programs have not been conducted and the public has not had a public review and comments for the mitigation measures to be considered.

Provide an adequate and complete technical review and statement of significance by competent certified engineer prior to further considerations of this DEIR.

Provide such additions in an adequate and complete subsequent/supplemental DEIR prior to further consideration of the Project and public review and comments.

Apdx. I -29/8 8. CONCLUSION The proposed Project **would** have **less than significant impacts with respect to geologic and geotechnical hazards with application of the recommended mitigation measures**. Prior to grading and construction permits being issued, a **site-specific final geotechnical report should be prepared, as recommended in Mitigation Measure GEO-A**. …**should include site-specific measures and design considerations for the stations, junction, and towers**. The recommendations may vary depending on the geologic and geotechnical conditions at each location.

Replace ALL would's + should's with shall or musts and provide specific and contractual required (must) mitigation along with numerical evaluation of assessed impacts before and after required mitigation.

Provide such additions in an adequate and complete subsequent/supplemental DEIR prior to further consideration of the Project and public review and comments.

Apdx J Greenhouse Gas Emissions Technical Report 20/4 2.2.2.5 Senate Bill 44 Senate Bill (SB) 44, signed October 7, 2021, provides specialized procedures for the administrative and judicial review of processes and approvals for an "environmental leadership transit project." SB 44 defines an "environmental leadership transit project" as "a project to construct a fixed guideway and related fixed facilities" that meets all of the following conditions:

A. The fixed guideway operates at zero-emissions.

B. (i) If the project is more than **two miles in length**,…

(ii) If the project is no more than two miles in length, the project reduces emissions by no less than 50,000 metric tons of greenhouse gases directly in the corridor of the project defined in the applicable environmental document over the useful life of the project, without using offsets.

C. The project reduces no less than 30,000,000 vehicle miles traveled in the corridor of the project defined in the applicable environmental document over the **useful life** of the project.

Provide a specific table of SB44 requirements and Project achievements in quantitative form consistent with the specific requirements of SB44, including for events only and for non-event calendar only.

Provide a useful life period for events-based and full-time base for Project operations.

Provide such additions in an adequate and complete subsequent/supplemental DEIR prior to further consideration of the Project and public review and comments.

Apdx L-58/1 7. Conclusion Construction and operation of the proposed Project **could** result in adverse effects to surface water and groundwater quality in the Los Angeles River and Central Basin, and violate water quality standards and waste discharge requirements, **if not appropriately managed**. However, **adherence** to applicable federal, State, regional, and local laws and regulations **would result in less than significant impacts.**

Provide Project-specific definitions, procedures, and designs of "appropriate" management and adherence. Provide hydrologic model and numerical results based on specific design and operational conditions for each Project construction site.

Apdx L-58/2 Additionally, the proposed Project would not **substantially decrease groundwater supplies** or **interfere substantially with groundwater recharge**….Although the proposed Project would result in increases to impervious surfaces, the additional impervious surface areas are **nominal**, and **all proposed Project components would comply** with the LID ordinance as applicable, thereby reducing runoff. Impacts would be less than significant.

No numerical description and assessment are provided for current and Project conditions and no definitions of "substantially" or "nominal" are provided. Provide numerical analyses for each project construction site and provide specific LID measures and their mitigative effects to bypass rainfall into groundwater for each site, none are provided here and elsewhere.

Provide designs and flowcharts for all LID related designs for collection, conveyance, storage, and recharging for each Project site.

Apdx L-58/4 The proposed Project **could potentially conflict with or obstruct implementation of water quality control** or sustainable groundwater management plans. Although construction and operation of the proposed Project **would potentially impact** the water quality of the Los Angeles River and Central Basin…, **adherence** to applicable federal, State, regional, and local laws and regulations **would ensure** the proposed Project would comply with all federal, State, and local water quality control or sustainable groundwater management plans. Impacts would be less than significant.

No numerical description and assessment are provided for current and Project conditions and no definitions of "substantially" or "nominal" are provided. Provide numerical analyses for each project construction site and provide specific LID measures and their mitigative effects to bypass rainfall into groundwater for each site, none are provided here and elsewhere.

Reference to adherence to laws and regulations is totally unacceptable and must be replaced with a design-operations based mitigation manual with assigned actions/procedure and equipment for all contractors, and associated approved permits from regulatory agencies.

Provide designs and flowcharts for all LID related designs for collection, conveyance, storage, and recharging for each Project site.

Provide a revised, supplemental/subsequent DEIR for all hydrologic elements.

Apdx L-58/5 The proposed Project could have potential adverse impacts related to hydrology and **water quality**; however, with **adherence to applicable…**, significant impacts **would** be less than significant level. The proposed Project **would not result in any significant impacts** related to hydrology and water quality.

No numerical description and assessment are provided for current and Project conditions and no definitions of "substantially" or "nominal" are provided. Provide numerical analyses for each project construction site and provide specific LID measures and their mitigative effects to bypass rainfall into groundwater for each site, none are provided here and elsewhere.

Provide designs and flowcharts for all LID related designs for collection, conveyance, storage, and recharging for each Project site.

Provide a revised, supplemental/subsequent DEIR for all hydrologic elements.

Apdx.F Archaeological and Paleontological Resources Assessment

No mentions are made in DEIR regarding significant historic/archaeological remains recovered from excavations conducted at the Union Station area (for mitigation of suspected impacts from Union Station and subway construction for Red Line Phase 1.

Archaeology – SW Park Station and Alameda/Chavez location (China town 2, 1900-1925) and American Indian – (1800-1900)

Bishop Str. historic uses of Italian (1890-1925) and Chinese (Post 1920) origins - Chinatown 2

Provide four borehole drilling/analyses to depths of 10ft and assessment for potential historic archaeological remains at each Project construction sites, and especially those from Alameda – Broadway sites. Provide at least two boreholes for sites north of Broadway.

Apdx F-70/2 The results of the records search, shown in Table 7, indicated that there are no known NHM vertebrate fossil localities within the Area of Direct Impacts. Moreover, the majority of the Area of Direct Impacts, consisting of surficial deposits of **younger Quaternary alluvium**, is not anticipated to contain significant fossil remains in its **uppermost layers** because the sediment is **too young** to contain such fossils.

Provide the specific technical basis for such identification of "younger", "uppermost" (?= 0.1ft or 10ft) and their distribution. Provide 4 or more borings of 10 ft for each site south of SR-110. Provide thorough and adequate analyses and assessments of potential fossils and remains to document age and resources.

Apdx F-94/2 Quaternary alluvium is expected to be present at **differential** depths within the Project Area. Planned Project excavation is **anticipated to reach up to 10 feet,** except at Dodger Stadium Station where the maximum depth would be 42 feet, and piles would be drilled to a max depth of 125 feet; therefore, Project construction **may encounter paleontological deposits**.

Replace "differential" with different and "up to" with down to.

Provide four borehole drilling/analyses to depths of 10ft and assessment for potential historic archaeological remains at each Project construction sites, and especially those from Alameda – Broadway sites. Provide at least two boreholes for sites north of Broadway.

Provide a thorough construction mitigation program for archaeological and paleontological remains with specific contractual requirements for assessment, encountering, and recovery of all paleontological and archaeological remains. Include in a thoroughly and adequately revised DEIR for public review and additional comments.

A Paleontological Resources Monitoring and Mitigation Plan (**PRMMP**) **shall be developed** by a qualified paleontologist meeting the criteria established by the Society for Vertebrate Paleontology. The **plan shall apply to paleontologically sensitive deposits**, including **older Quaternary** alluvium and Puente formation deposits, that may be impacted by the proposed Project, as determined by a qualified paleontologist in consultation with the construction team and guided by geotechnical coring.

Provide a consistent approach throughout the DEIR regarding the use of conditional and declaratory verbs which herein reflects the direct copying of texts from other, unreferenced sources into this DEIR. Provide consistent approach to all remains encountered during excavation.

Provide a thorough construction mitigation program for archaeological and paleontological remains with specific contractual requirements for assessment, encountering, and recovery of all paleontological and archaeological remains. Include in a thoroughly and adequately revised DEIR for public review and additional comments.

The qualified paleontologist **shall supervise the paleontological monitor** who **shall be present** during construction excavations into **older Quaternary** alluvial deposits and **Miocene Puente** formation deposits. **Monitoring shall** consist of visually inspecting fresh exposures of rock for **larger fossil remains**, and where appropriate, collecting wet or dry screened sediment samples of **promising horizons for smaller fossil remains**.

Provide a consistent approach throughout the DEIR regarding the use of conditional and declaratory verbs which herein reflects the direct copying of texts from other, unreferenced sources into this DEIR.

Provide consistent approach to all remains encountered during excavation.

Provide a thorough construction mitigation program for archaeological and paleontological remains with specific contractual requirements for assessment, encountering, and recovery of all paleontological and archaeological remains. Include in a thoroughly and adequately revised DEIR for public review and additional comments.

The frequency of monitoring inspections **shall be determined** by the paleontologist and **shall be based** on the rate of ground-disturbing activities, the material being excavated, and the depth of excavation, and if found, the abundance and type of paleontological materials found.

Provide a thorough construction mitigation program for archaeological and paleontological remains with specific contractual requirements for assessment, encountering, and recovery of all paleontological and archaeological remains. Include in a thoroughly and adequately revised DEIR for public review and additional comments.

95/2 The areas of paleontological sensitivity include all locations where **undisturbed Older Quaternary alluvium** or the **Monterey/Puente Formation** may be impacted by the Project. The identification of exact locations to be monitored would be guided in part by **geotechnical boring for the Project**.

Define "undisturbed" and require all fossils, even in disturbed deposits be recovered and assessed.

Provide a thorough construction mitigation program for archaeological and paleontological remains with specific contractual requirements for assessment, encountering, and recovery of all paleontological and archaeological remains. Include in a thoroughly and adequately revised DEIR for public review and additional comments.

Subject: Public Comment: Los Angeles Aerial Rapid Transit (LA ART) Project DEIR

Deputy Executive Officer Cory Zelmer,

I am writing to voice my opposition to the Los Angeles Aerial Rapid Transit Project ("The Gondola" at Dodger Stadium). I'm a resident of this community and a Dodger fan.
The Gondola Project's enormous towers will cause aesthetic impacts in my community. I am concerned that the towers will obstruct views, and that the gondola cars will be used for advertising and electronic billboards.
This project will lead to displacement and increase the cost of rent in the area.
We never asked for this project and we don't want this project.

P254-1

Subject: Re: Opposing the Dodger Gondola/ Land Back & Reparations Yes!

My name is Melissa Arechiga and I stand here before you as a representative of the surviving families that were violently evicted from Palo Verde, La Loma, and Bishop three Mexican indigenous communities that were destroyed to build Dodger Stadium. I am here today opposing the gondola project from Union Station to Dodger Stadium. Well, this may be exciting to some it is a sign of change and change that is not inclusive to all specific people of color. The Dodger corporation and the city of Los Angeles have a long partnership together working to destroy and exploit communities of color. The gondola represents gentrification the destruction of not only our communities but the environment and our beloved wildlife. The gondola project is no different than the deal that was made to take away our family's generational wealth by destroying our three communities to build Dodger Stadium. The Dodgers and the Los Angeles City council set to build the gondola in the middle of our communities and this would only benefit the Los Angeles Dodgers. Our residences and small business owners will suffer with this so-called revitalization project which is a code word in communities of color as gentrification a long time term that leaves are most vulnerable community members displaced with no benefit. The history between the Los Angeles Dodgers and the Los Angeles City council has left our city in worse condition from the deal in the 1950s when our homes in our three communities were destroyed and the lies that were told to the public about building public housing today leave us with the current issues of our houseless and affordability crisis that affects us all today. It is a win-win for the Dodgers and has been since Black Friday, May 8 1959 when our three communities were bulldozed and our families drugged out. It is time to put a stop to the Dodge corporation exploiting the people of Los Angeles. I strongly urge that everyone in the public and all elected officials oppose this project as it will have damaging effects that will last from generation to generation.

Subject: RE: Gondola Project Comment

Hello,

Although I agree with the idea of a non-polluting means of getting people to Dodger Stadium, I don't believe the Gondola Project is the answer. P256-1

1) The Gondola idea was generated by former Dodger's owner, Frank McCourt. McCourt still owns the property around the stadium and benefits from the parking receipts. He probably thought of the Gondola Project as another way to earn more money. Currently, parking for drive up cars is $30. If one obtains a pre-game parking ticket, it costs $25. Although no Gondola fare amount has been set, it's rumored it will be about $5 less than the above fees or about $20. Of course by the time the project is completed, who knows how much the parking fee will be? P256-2

2) The project will include towers and cables and a station at the stadium. The towers will cross Chinatown and other buildings and residences. This could displace some residents and provide unsightly views for others. This would qualify as a "not in my backyard" situation. P256-3
3) Dodger Stadium is located in Elysian Park, a large, relatively under-developed open-space providing walking/hiking areas and sports and recreation venues. It is host to wildlife that would be disturbed and displaced by the construction and operation of the Gondolas. It could disrupt the airspace of the birds. P256-4

4) The promoters try to cite the Gondola Project as a functional benefit for the city. Instead, it will merely be a tourist attraction that will become a destination, much like the Hollywood sign. Others hope it will be in operation in time for the Olympics. They also try to say this will provide transportation for the local residents, but don't mention having additional stops or stations along the route. Would it require the residents to hike into the stadium station? Or take a Metro bus up to the stadium? P256-5
5) Although the promoters tout the fare amount as less than driving into the stadium, most people go with their friends and family. If they're driving, they can share the parking cost. If they're taking the Gondola, they would each have to pay the fare! In addition, most people will drive to Union Station where they would pay the $6 parking fee. This practice would not "add up" and would not save vehicle emissions. If they take public transportation to Union Station, that would be an additional cost. If it's a night game, will Metro keep all of their lines running late to accommodate the Gondola fans? P256-6

6) I was once at the Palm Springs tram and I went back down to the station while a friend I came with stayed at the top a little longer. Well, she and her toddler son got on the tram and, about half-way down, it stopped. It turns out the brakes failed and they had to stop it for repairs. They hung there in a crowded car for as long as it took for the needed parts to be picked up and flown to the top in a helicopter and the repairs made. What emergency plans will this project have in case of a mechanical failure? Will there be a means of evacuating the passengers or will they have to hang there indefinitely? P256-7
I believe this project was conceived not as a convenience for fans or a benefit for the city, but as a money-making venture for the McCourts and the others who have joined them. This project is not a good idea and will not benefit the people of Los Angeles. Please register my objection to the Gondola Project. P256-8

Sincerely yours,Carol Ngcarolng38@yahoo.comLos Angeles 90026

Subject: Public Comment: Los Angeles Aerial Rapid Transit (LA ART) Project DEIR

Deputy Executive Officer Cory Zelmer,

Dear Mr. Cory Zelmer,

My name is Mary Livesay and I work in downtown Los Angeles and I am writing to voice my strong opposition to the Los Angeles Aerial Rapid Transit Project ("The Gondola" at Dodger Stadium).

My concerns are surrounding lack of transparency and the increased traffic that will result from this project.

P257-1

From my understanding, Metro went forward with this project without an open public process and without competitive bidding. I don't understand the ownership or operation of the project because the details have been hidden from the community. Who is paying for this project?

P257-2

The other thing that worries me about the Gondola Project is the increase traffic that will occur around Chinatown and Union Station. As someone who commutes to downtown LA and walks from Union Station to work I already experience the high-volume of traffic and sometimes erratic and unsafe driving that results from this traffic. Increased traffic will pose a greater danger to pedestrians and make LA and even more unfriendly city to those who walk since project is designed to displace traffic from Dodger Stadium and push it onto the surrounding communities.

P257-3

Thank you for your consideration of my comments,
Mary Livesay

Subject: Written comments on the Aerial Rapid Transit Technology LLC proposal

Am I able to submit written comments on the Aerial Rapid Transit Technology LLC proposal (gondola) here? If so I would like to say: P259-1

As a longtime resident of Elysian Heights I am against this proposal with every fiber of my being.

Not only will it displace a significant portion of our community, but it will accelerate gentrification and destroy the character of our neighborhood. P259-2

Further, there will be a devastating impact to the area, significantly altering historic view sheds at Union Station and El Pueblo. New stations, towers, wires, and gondolas will result in a major change to this overall area of the city. P259-3

I have not spoken to a single neighbor, civic expert, or local leader in favor of the project. This is bad money looking to swindle taxpayers and leave us as collateral damage. P259-4

Ricky de Laveaga

Subject: I support zero-emissions transportation in Los Angeles

Dear Mr. Cory Zelmer,

I support the proposed zero-emission Los Angeles Aerial Rapid Transit Project (LA ART), connecting Union Station to Dodger Stadium.

The gondola would benefit visitors to Dodger Stadium and the community by taking cars off the road, increasing access to public transit, and reducing greenhouse gas pollution. Projects like these are important in addressing climate change and improving the quality of life for Angelenos.

P261-1

Sincerely,
Regards,
Rahul Gunasekaran

Subject: Gondola to Dodgers Stadium

Cory Zelmer, Deputy Executive Officer,
(or other Metro staff on LA Aerial Rapid Transit project)
Los Angeles County Metropolitan Transportation Authority

Respectfully, I most *strongly *oppose the LAART gondola project. P262-1

The most immediate bad outcome for implementing this project is that it will carve-out and occupy *public space* at both el Pueblo de Los Angeles Historic Monument and the Los Angeles State Historic Park for what will ultimately be *private *gain. We don't have open, green space to spare in Chinatown and these two stations will also loom large in the background of both the 1818 Avila Adobe and the State Park. P262-2

Neither do I view it in any way as a positive addition to the Union Station Forecourt and Promenade project currently under development, as part of the Connect US plan. Even in its latest watered-down iteration, this proposal makes a *start *at rebalancing the use of this area and connection to el Pueblo away from its prioritization of motorized vehicles and toward all of the rest of us on foot, bicycle of taking transit. P262-3

Finally: haven't the residents and neighborhoods in the canyons around Dodger Stadium suffered *enough *over the past six or seven decades from the oppressive presence of the Dodgers? McCourt is only the latest in a string of developers in control of all or part of the huge site of the Stadium, its parking lots and the vast potential embodied there. P262-4

Again, I'd ask why *one square inch* of the public spaces paid for and maintained by taxpayers should be sacrificed to support this theme park-like gimmick or McCourt's dreams of profiting massively from the redevelopment of the Stadium's parking lots? Once again Metro seems to be distracted by the latest shiny object, away from paying attention to the needs or desires of we peons traveling on foot, bike or bus. P262-5

Thank you for your time and attention.

Holly Harper, Architect

Deputy Executive Officer Cory Zelmer,

I am writing to voice my opposition to the Los Angeles Aerial Rapid Transit Project ("The Gondola" at Dodger Stadium).

I live in LA and work a full time job that doesn't pay enough for me to afford a car. I take LA metro bus and train 5 days a week as part of my commute. The experience is disgusting, unreliable, inefficient and unsanitary. We need funding to make the LA metro experience less miserable and more reliable - so why not use funds that *could* go into a tourist trap gondola that will disrupt the communities it would run through and instead use it to put a dent in the hideous current situation that is the LA Metro? Deputy Executive Officer Cory Zelmer,

I am writing to voice my opposition to the Los Angeles Aerial Rapid Transit Project ("The Gondola" at Dodger Stadium). P264-1

From gentrification to environmental impact, this project will be absolutely devastating to Chinatown, LA State Historic Park and the surrounding neighborhoods.
As an arts and cultural worker and organizer in downtown LA since 2008, I've been both an attendee and a facilitator at the State Historic Park many many times, and the experience of the park would be completely impoverished by the presence of this project. P264-2
As a tenants rights organizer since 2017, I can attest that this project, even if well intentioned will push out and destroy the lives of thousands of most vulnerable locals with callous predictability. P264-3

Please do not invest in a project that is a toy of the rich at the cost of hurting the average resident, the poor, and the local neighborhoods.
I'm an avid user of public transportation and I appreciate very much all the transit projects improve the lives of residents across the board (like improvement in bus lines and operation); this Gondola project is not one of them. P264-4

Thank you,

Subject: NO to the proposed aerial gondola to Dodger Stadium

To Cory Zelmer, deputy executive officer, LA County MTA:

I am stating my opposition to the creation of this aerial gondola that would link Union Station and Dodger Stadium at Chinatown's expense.

This is as bad as the proposed aerial tram from Warner Brothers to the Hollywood Sign that would have been at the expense of the City's urban wilderness, Griffith Park.

Both proposals belong in the trash heap of ill-conceived ideas.

P265-1

This Dodger Stadium proposal was given unusual no-bid fast tracking after being proposed by Frank McCourt in 2018. The traffic and environmental claims made by this proposal have been strongly challenged by data from the Sierra Club, by UCLA's Mobility Lab, by LA River State Park Partners, and by UCLA's Institute of Environment and Sustainability.

P265-2

P265-3

Instead of this tram literally hanging over the community, a better option would be dedicated bus lanes for the existing Dodger Express, a shuttle service from Union Station to Dodger Stadium run by LA Metro.

P265-4

The community that would be affected - Chinatown, Lincoln Heights and Solano Canyon - has spoken up vehemently against the tram, most recently at a public meeting on 1/12/2023 that allowed for no public comment, so that the community was forced to take over the meeting in order to have their concerns and protests heard.

P265-5

Please listen to the community and discard this proposal.

Thank you,
Freda Shen

Subject: Stop Plans to Build the Gondola

Hello,

I am a Los Angeles resident writing in to urge you to halt all plans for building the gondola. I was born and raised in LA County and have been taking Metro to school, work, and recreationally since I was 12. I love Metro and I am passionate about expanding access to public transportation in LA. But this gondola project is not that. Research has shown that it will do nothing to help ease traffic. Instead, the gondola simply displaces the burden of Dodger's Stadium parking onto poorer communities who are not asking for this gondola and who will not benefit from it. In line with it changing traffic in the surrounding area by less than one percent, it also does nothing to curb greenhouse gas emissions. We want shuttles, not expensive gimmicks! P269-1

Despite financial backing from Frank McCourt, there has been a pattern of projects like these inevitably footing taxpayers with the bill. Taxpayers can especially expect our money to be wasted because there has been zero transparency about long-term operation costs and who ends up paying if/when the project runs over budget. P269-2

I hope that my personal stake in this is not lost in these more technical talking points. I love this city, I love Metro, I love the Dodger's. I want what's best for all of us, and this gondola just isn't it.
I hope you take this into consideration and recognize what this city needs, and what it doesn't need. P269-3

Thank you,

Ezra Muthiah

Subject: Public Comment: Los Angeles Aerial Rapid Transit (LA ART) Project DEIR

Deputy Executive Officer Cory Zelmer,

I am writing to voice my opposition to the Los Angeles Aerial Rapid Transit Project ("The Gondola" at Dodger Stadium).

I worked to serve Chinatown residents with the Chinatown Service Center vaccine clinic in 2021. As someone who has a deep appreciation for the neighborhood and also has an understanding of the history of forced displacement and marginalization of the LA Chinese American community, I am deeply troubled by the plans to build the Gondola Project in and around Chinatown. Union Station was likewise a project that was built at the expense of the LA Chinese population - it rests on the bones of old LA Chinatown and its inhabitants. This Gondola Project doesn't even have the potential to benefit the residents of LA nearly as much as Union Station, and yet it is for some reason being seriously considered, despite the outsized impact it will have on the residents of neighborhoods like Chinatown, which is already facing gentrification, air pollution, and heavy traffic. The idea of building a gondola is not just outdated, it is also a horribly inefficient method of transit - ferrying somethin g like 16 people a cabin (if that). A far better use of the funds needed to construct an air gondola system would be to simply invest in more existing public transit systems - dedicated bus lanes and more metro lines. This project will cause environmental damage, increase gentrifying pressures on Chinatown, and add an eyesore to the LA skyline, all in exchange for a negligible reduction in traffic at Dodger Stadium. Again, the solution should be methods like metro lines, bus lanes, and improving pedestrian/bike accessibility. All the Gondola Project will due is harm an already beleaguered population in LA's Chinatown and the surrounding areas.

Deputy Executive Officer Cory Zelmer,

Hi Mr. Zelmer, I am writing to voice my opposition to the Los Angeles Aerial Rapid Transit Project ("The Gondola" at Dodger Stadium).
I grew up in Chinatown in the 90's and have seen the gentrification and changes to the neighborhood over the years. The impact of some of these developments have a devastating impact on residents due to corporate greed. Grocery stores that were once convenient to residents, have closed. Gone are the days of mom and pop shops inside tiny stalls that boast a lively neighborhood that drew both locals and tourists alike. P271-1

Many residents are elderly immigrants that don't speak any english nor possess the necessary tools to communicate their opposition to this project. The lack of transparency with the community has shown that there was no intent to invite any true discussion with the residents. P271-2

We should use the funding for better existing transit options for everyone. As we all know, Los Angeles is currently under a state of emergency over the homeless crisis. How about we try to solve a more dire need before we provide luxury transit for visitors? Most Angelenos, including myself, would agree. P271-3

I cannot believe the audacity of this proposal. It's not transit. It's for tourists. And who exactly is paying for it? Even if it's privately funded, it's using a public resource- the historic park. The nature of which will be completely changed when there are massive metal cars dangling above head. That is not what parks are for. P274-2 Where have the public commenting opportunities been? Where is the reach out to the community? All I've seen is propaganda in the form of a car displayed in the dodgers parking lot with no mention of any of the concerns opponents have. Just an advertisement as if the gondola is destiny. Stop the corruption. Build transit for the people. P274-3

Deputy Executive Officer Cory Zelmer,

I am writing to tell you I don't want this Gondola project to go through. What is the point of an aerial gondola that services a specific subset of people going from Union Station to Dodger's stadium? What does that do to solve our traffic congestion? How is this conducive to getting more single rider vehicles off the road? How is this lowering emissions? Why aren't you using OUR resources to fund forms of public transit around the city that actually benefit all Los Angelinos? Do not go through with this. It is not worth the displacement of people in the gondola's planned path. It is not worth the potential rent increases to surrounding neighborhoods. P279-1 P279-2

I love riding the LA metro bus lines and the new expanded rail lines around the city. Those are a way forward in public transit that stand to benefit everyone. Not a specialized gondola to a sports stadium. P279-3

Deputy Executive Officer Cory Zelmer,

I am writing to voice my opposition to the Los Angeles Aerial Rapid Transit Project ("The Gondola" at Dodger Stadium).
As a resident of the solano community, I will be impacted by this project. I am concerned about this project for the following reasons: P280-1

-This project will increase the impacts of air pollution from vehicle emissions in an area already overburdened by air emissions. My son and I already suffer from asthma caused by the pollution already surrounding us , we try our best to keep ourselves as healthy and safe as possible and building the gondola would only impact me and my 5 year olds health even more. P280-2

-This project will lead to displacement and increase the cost of rent in the area. I am trying to raise my family as best I can . I live with my husband and 2 children , we are BARELY surviving and making ends meet and to pay rent . This would greatly impact our lives with rent increases , can you imagine the drastic sudden changes we would need to do to survive and keep our children healthy and safe. I am sure this is not something YOU would be happy having to do let alone the unnecessary stress this will cause not only to my children but my children's friends who all live within the neighborhood. P280-3

-Lack of community consultation: The community has been neglected and our voices have not been heard. No one asked us our vision for our community. You are shutting our voices down and closing us out, when we as a community have been keeping this place safe and clean for all the families and children living here. This is will NOT benefit anyone here Instead it will affect all of us. I am sure you would be very unhappy if this was happening near your home without ever caring about what you had to say about it and without your consent . This unfair to our children they DO NOT DESERVE THIS P280-4

Subject: Proposed aerial tram

Los Angeles County Metropolitan Transportation Authority,
One Gateway Plaza, Los Angeles, CA 90012.

Att: Cory Zelmer, deputy executive officer,

Dear Sir:

A gondola from Union Station to Dodger Stadium makes about as much sense as a ski lift in the Amazon, or a snowmobile in the Sahara. This is Chinatown, Frank. You can't ignore, let alone, leap-frog over it. One must respect both its presence and its inhabitants, while protecting them from serious problems that any aerial transportation system would surely encounter, be it a snapped cable, an earthquake, a short-circuit, a computer glitch, or mechanical malfunctions that would endanger the lives of passengers, motorists and residents, simultaneously. As it stands, the plan is an invitation to disaster, and a major accident waiting to happen. It is also bound to be expensive and far from cost-effective, hence not worth the risk. If only Vin Scully were alive, he'd explain why, in ways that even City Hall might grasp. Listen in: "Frank McCourt has tremendous local power, especially in the alleys adjacent to freeway traffic. . . waiting for the 1-1 switch: Karen Bass lifts a high ride, deep to downtown—she is going, going, gondola." Once again, it's time for political hardball—but why dodger a flying bullet? Or are we still in Chinatown, after all?

P281-1

P281-2

P281-3

Faithfully yours,

Dennis Rohatyn

Subject: OPPOSE Los Angeles Aerial Rapid Transit Project

To Whom It may concern:I oppose the Los AngelesAerial Rapid Transit Project, due to severe negative impacts on the communities that will be "overflown" at low altitude by the gondolas. These communities are being disregarded, indeed sacrificed, for the purpose of yet another gondola tourist attraction. It won't work in Griffith Park and it won't work here, without imposing harsh impacts on citizens that have little to no defense against the City of Los Angeles, LA Metro, and the unaffected populace.This proposed project will not meet the objectives of the project, i.e. reducing traffic by becoming a mobility hub. There are easier, faster, and better ways to meet the objectives, such as making better use of existing bus lanes.In addition, what is a mobility hub? Will this new hub have other purposes, for other modalities such as Advanced Air Mobility/Urban Air Mobility? Will such, extremely impactful, deleterious uses be stacked onto the hub, leading to impacts that are unforeseen by the community, who is left out of decision making, but in the already in the works by LA's policymakers and leaders?As a community activist in Studio City, I have seen continually that citizens are continually ignored when it comes to development, on City, State and Federal levels, and are shut out of the process -- their requests for information about safety, environmental impacts, and costs are left unanswered. This must change.Find a better way to get people to Dodger Stadium. There is no need to work around the Developer/Owner's desire to expand his facilities. For once, listen to common sense -- which is not coming from Metro, but rather the affected communities.STOP THE GONDOLA!Sincerely,Suellen WagnerStudio City, CA 91604Save Coldwater Canyon

Subject: No góndola

To whom it may concern:
I have lived in the community of Solano Canyon for 48 years, and have noticed a lot more traffic, events and parking issues around our local community with the Dodger organization. And with no warning or deal with it type business mentality that has affect the community with parking, carbon foot print, and no benefits to the local community. Dodger organization has benefited from events and expansion, but has no regards with the community. We have voiced our concerns with previous events and falls on deaf ears. Feels like when people got displaced in the 50s and had no voice for the working community of palo verde and Chavez Ravine. Building this gondola doesn't resolve traffic it increases it. Makes. A bigger issue with Carbon foot print, parking issues due to people want to park in the community because it's free vs. parking at the state park because they charge.
The local view of the skyline to downtown gets disrupted by a monstrous towers, cables and gondolas. Metro has created more traffic on streets than lessen the impact for traffic, such a bus lanes. This will be another issue for the local Bishop, China town, and area where there will be a stop for the gondola. Please do not move forward with the gondola.

Subject: Aerial Gondola project feedback

Dear Cory:

I would like to speak with you regarding the Aerial Gondola project.

I have been reading some of the news reports and different quotes of groups, people, orgs, etc. that are against this project.

Since the comment period is due in two days and one of them is a holiday, I would really like to exchange some ideas with you before sending an official comment.

In early September 2022 I was in Bolivia doing some cultural/entrepreneurial training work for indigenous communities and I loved the aerial transportation that they have and I thought "this would be a wonderful way of cutting down dome traffic in LA" not knowing that this project has been in existence. However, as a DRAC Metro member, I know first hand that if community feedback is not secured from the beginning the backlash is harsh.

P284-1

Please get back to me at 562 505 6023.

Thank you.

Subject: COMMENT PERIOD - LETTER OF SUPPORT

Hello,

I live at 3036 Atwater Ave, Los Angeles CA 90039 -- close to both Union Station, Elysian Park, and Dodgers Stadium.

I absolutely support this project, and support the Draft EIR. This will be so helpful to so many people and further encourage the crowds to take transit to Dodgers Stadium, which is currently a giant parking lot choked by car traffic.

P285-1

Best,
Bradley Bain

COMMENTS: I would like to submit the following comments on the LA ART gondola Draft environmental impact report:

COMENTARIOS. Quisiera presentar los siguientes comentarios sobre el borrador del informe de impacto ambiental del proyecto de la góndola LA ART:

注释。我想就《LA ART 缆车环境影响报告草案》提出以下意见：

Zhùshì. Wǒ xiǎng jiù LA ART lǎnchē huánjìng yǐngxiǎng bàogào cǎo'àn tíchū yǐxià yìjiàn:

尊敬的市政府、市议员、有关负责人：

反对亿万富翁良前道奇老板 Frank McCourt 搭建一架人们从联合车站载到道奇体育场的空中缆车！ P286-1

因为浪费纳税人的钱，为谋求娱乐人士的利益服务，又顾缆车极其危险的在唐人街社区民宅业空穿梭，危及居民的人生安全。 P286-2

希望市政府和市议员、洛杉矶县大都会交通管理局副执行官为解决当前首要问题，将1.25亿美元为低收入人士建造老人公寓、和无家可归流浪人士公寓，以及建造24小时急诊医院和住院部、大型超市、公共厕所，更方便、更实际、更美好的优越环境为华人社区广大市民安居乐业服务！ P286-2 P286-3

谢谢！

Yo apoyo La Gondola porque creo que seria una ~~buena~~ buen transporte para llegar pronto al Stadium de los Dodgers y para eliminar traffico.

I support the gondola because I believe that it will be a good idea for transportation ~~and~~ to reduce traffic and gas money.

P356-1

Translation: I support the Gondola because I think it would be a good means of transportation to get quickly to the Dodgers Stadium and reduce traffic.

I look for to the Gondolah for 2 reasons.

#1 Parking Lot Chaos there will less traffic when leaving the park.

#2 Convenience when traveling alone you have convenience of using different means of transportion.

P398-1

Comments | Comentarios | 意见 | 意見

地球需要保护. 用电的缆车正是需求。
用电发动, 减少污染。交通拥塞正当是
道奇球场的大问题。缆车建在道奇站是
非常好的建议, 也给附近商家带来生意。
非常支持缆车建造, 尽快建成是我的希望。

Translation: The earth needs to be protected. This electric gondola meets the need. It is powered by electricity, which will reduce pollution. Currently, traffic jam is a big problem to Dodger Stadium. It is a great suggestion to build the gondola at Dodger Stadium station, which will bring customers to businesses around. I highly support the construction of gondola. Hope it can be built soon.

Yo apoyo el projetado porque llevara 5000 personas por hora y llegara en solo 7 minutos no habia tanto trafilo como ahi ahorita y seria gratis para los residentes del area

P401-1

Translation: I support the project because it will take 5,000 people per hour and it would be there in just 7 minutes. There won't be so much traffic like it is now, and it will be free for the residents of the area.

Es cierto, como demuestra el Proyecto de tránsito Rapido aereo de los Angeles.

Con este proyecto se elevaran las ventas en los comercios en General de cadauna de las Estaciones, Se viajara en Gondola con vista panoramica.
Esto sera impresionante para Muchisimas Personas yo en lo personal lo he comentado con mis Amistades y estan locas porque este proyecto este ya!

Esto es una tendencia de Crecimiento Positivo.

P418-1

Translation: It is true, as shown in the Los Angeles Aerial Rapid Transit Project.
With this project, businesses will have more sales in general in each of the stations. Gondola rides will have panoramic views.
This will be amazing for many people. I personally have talked about it with my friends and they are really excited to have this project ready!
This trend shows positive growth.

Yo apoyo este projecto porque va a beneficiar a mi comunidad muchisisimo ahorita cuando ahí juegos no podemos salir porque sino nos quedamos atorados en el trafico y luego no encontramos donde estacionarnos, con este transpote esperamos quemas gente tome el autobus, el tren o metrolink a Union Station y de ahí la gondola evitando que se parquen en nuestro vecindario.

P420-1

Translation: I support this project because it will benefit my community a lot. Currently, whenever games are played, we can't go anywhere because we just get stuck in traffic and then we can't find any parking; with this means of transportation, we expect that people take the bus, train or metro link to Union Station, and then the gondola, thus preventing them from parking in our neighborhood.

Great idea for the Aerial Rapid transit:
COULD HELP WITH TRAFFIC RELIEF IN THAT PART OF LA
Good for environment because it is electric. (Pollution)
Quiet transportations because it is electric.
Creates jobs or retains jobs to run the ART
RELIEFS PARKING IN THE DODGER STADIUM FOR
NOT ONLY DODGER BASEBALL BUT OTHER STUFF GOING
ON IN THE STADIUM. THIS WILL RELIEF SOME LATE
NIGHT TRAFFIC IN THOSE RESIDENTIAL AREA AROUND TH
STADIUM.

I believe the gondola will be a great idea for many reasons. some of these reasons are less trafic in that populated are of LA. It will also mirus the amount of polution due to it being eletric. Also I belive it will open up parking in Doger statium.

Having the gandola would be a great addition to los Angeles.

It will take less time to get to the stadium, its emissions free. Also free to the public. (Ticket Holders)

Thank you for taking my comment.

My Comentario es que gondola Es muy buen Serbicio para la Comunidad. Por que el Servicio es bastante acsesible pare todas las Personas que lo quieren usar Primero Es que Evitaria la Congestion del Trafico, y el Paseo de la gondola Seria bastante Comodo y una buena Esperiencia al usar el Servicio

P447-1

Translation: My comment is that the gondola will provide a very good service to the community, because the service can be accessed by anyone who wants to use it. First, it would prevent traffic jams and the ride in the gondola would be very comfortable and using the service would be a good experience.

Deputy Executive Officer Cory Zelmer,

I am writing to voice my opposition to the Los Angeles Aerial Rapid Transit Project ("The Gondola" at Dodger Stadium) due to lack of transparency!

Metro went forward with this project without an open public process and without competitive bidding. I don't understand the ownership or operation of the project because the details have been hidden from the community. Who is paying for this project? Will taxpayers be left holding the bag? P458-1

Lack of community consultation: The community has been neglected and our voices have not been heard. No one asked us our vision for our community. NO ONE! P458-2

We never asked for this project. We don't need or want this project. We don't need more GENTRIFICATION and displacement in this area! #stopthegondola P458-3

Subject: Public Comment: Los Angeles Aerial Rapid Transit (LA ART) Project DEIR

Deputy Executive Officer Cory Zelmer,

I am writing to voice my opposition to the Los Angeles Aerial Rapid Transit Project ("The Gondola" at Dodger Stadium).

It will not relieve traffic but be a huge eye sore obstructing nature. If metro really wants to relieve traffic at dodger stadium how about more shuttles and metro bike docks in The stadium and a bike lane from chinatown to them. Currently there is only one bike rack at dodger stadium. Hundreds of people could be biking in which is better for traffic, and the environment. Metro should be thinking about progressing the city with climate friendly low impact solutions. P459-1

There is already a shuttle from union station for people to take. The gondola will be a novelty people will ride it once or twice put it on instagram and never think about it again meanwhile park users below will have it disrupting time in nature. P459-2

The community has been neglected and our voices have not been heard. No one asked us our vision.

This will be a huge disaster and disgrace if it moves forward. P459-3

Subject: Public Comment: Los Angeles Aerial Rapid Transit (LA ART) Project DEIR

Deputy Executive Officer Cory Zelmer,

I am writing to voice my opposition to the Los Angeles Aerial Rapid Transit Project ("The Gondola" at Dodger Stadium). As a frequent user of the LA State Historic Park (the "Park"), current resident and home owner in Echo Park, I will be impacted by this prospective project. I am also a Dodger fan and am a season ticket holder and would not use the Gondola to go to Dodger Stadium. I don't drive to Dodger Stadium; I mostly walk to the Stadium and if I don't, I either take the existing Union Station shuttle or ride my bike. I personally do not want or need the Gondola. The stated benefits and upside of the Gondola are heavily outweighed by the costs and downsides. I am deeply concerned about this project for various other reasons: P460-1

This project will lead to future commercial development in Chavez Ravine, without community input and without disclosure to the community. P460-2 Chavez Ravine already has a negative history related to displacement caused by the construction of Dodger Stadium and the Gondola potentially will repeat the same mistakes. This includes displacement and increase rent in the area. P460-3 I am Chinese American, immigrated from Hong Kong many years ago and first lived in Chinatown near where the Gondola is planned. The community in Chinatown will be negatively impacted by the Gondola and this community must be heard and considered. The community has been neglected and our voices have not been heard. No one asked us our vision for our community. P460-4

The Gondola Project's enormous towers will cause aesthetic impacts in my community. P460-5 Even though it is only on the south side of the Park, the Gondola will still negatively affect the views from the Park and generally affect the experience of visitors to the Park. This project will increase the impacts of air pollution from vehicle emissions in an area already overburdened by air emissions and in an area that has an established and very popular and treasured park that serves as a respite for community members to seek peace, nature and cleaner air and natural environments. P460-6 The Gondola would negatively impact this and is not worth any perceived benefit of this form of transportation.

Metro went forward with this project without an open public process and without competitive bidding. I don't understand the ownership or operation of the project because the details have been hidden from the community. Who is paying for this project? Will taxpayers be left holding the bag? I do know that Frank McCourt has proven from his ownership of the Dodgers that his ethics, business practices and motivations are questionable. I just don't think he should be unjustly enriched by allowing the Gondola to move forward. I just don't trust that he is motivated by addressing transportation and congestion issues and this project is almost all motivated by his commercial interests. The public should not pay for this either in direct funding (tax dollars) or the other costs my comments and others have identified. P460-7

I oppose this project and we do not need it.

Deputy Executive Officer Cory Zelmer,

I am writing to voice my opposition to the Los Angeles Aerial Rapid Transit Project ("The Gondola" at Dodger Stadium). P463-1

I feel like it's disgusting for Metro to move forward with this development without including the people in the community, especially those who will directly be effected by the building of this development. It will also increase the impacts of air pollution and overburden the community it resides in. This is unfair to our taxpayers, it is unfair to our people. P463-2

Deputy Executive Officer Cory Zelmer,

I am writing to voice my opposition to the Los Angeles Aerial Rapid Transit Project ("The Gondola" at Dodger Stadium).

This development does not directly serve the community. It will directly harm it. We do not need a large gondola, we need more laundromats and hospitals in Chinatown. We need community serving developments. Not a gondola that literally only takes you to the dodger stadium.

Subject: LA MUST build the LA ART project

As a long-time LA resident, Dodgers fan, and transit enthusiast, I fully support LA Aerial Rapid Transit. Los Angeles must build much more transit in general, but especially transit that will take people where they want to go. The ART will cut down on emissions and traffic, a win-win for drivers, pedestrians, cyclists, and all others.

The Gondola will become an iconic part of LA infrastructure, as iconic as Dodger Stadium itself. It will bring tourist revenue as well as revenue from baseball fans visiting businesses around Union Station.

Build it, please.

P468-1

To whom it may concern,

I support the innovative and beneficial zero emission Gondola project, and I appreciate the goal of 35%, it's unprecedented for local, small, diverse, and DVBE businesses. We need economic recovery and this project can help.

I know this project will be very beneficial to the community, as I grew up outside of the stadium and commuted into downtown for work and to meet friends.

Subject: STOP the Gondola

Dear Mayor Karen Bass,

Please DO NOT allow Frank Mc Court to do anymore damage to this city, our California State Historic Park, Chinatown, and the residents/taxpayers of The City Los Angeles. Can we really trust him after what happened to the Los Angeles Dodgers under his ownership? Does he have our city's best interest in mind ? Or is this just another way for him to enrich himself to make money off the land, the parking lot he still owns at the top of Dodger Stadium.

This could be an even bigger land grab, than what was once a quiet, under-served, unnoticed neighborhood in Elysian Park, CHAVEZ RAVINE! P470-1

Where are the cars going to park to take the Gondola ride? What our city needs Is to have a firmer grip on installing a well organized Park and Ride system, as there is at the Hollywood Bowl, Greek Theatre, and LA County Arboretum for it's 2plus Lightscape event and more. P470-2

Metro and LA City leaders need to get creative using the land, on the ground, not up in the air! With the money that is proposed for this FLAWED LAND GRAB, to benefit a man(?) that ran the Dodgers into the ground for his own personal enrichment. Think multiple beach houses, city houses, luxury vacations, jewels, cars. Dining Etc.

This is the worst, horrible, most unbelievable idea, that more than reduces the pain and UNFAIRNESS of what was taken away from the residents of Chavez Ravine!. P470-3

This deal wreaks of self enrichment, over the well-being for all the people living in the neighborhood, and all those who visit and use the parks and land, in the surrounding areas! ALL of L.A City is completely affected by this plan. Only someone like Frank Mc Court, the Stadium parking lot landowner, could think of something as deceitful as this "giveaway" that is being proposed!!!

Oh sure he's thinking of us, climate change and traffic$$$$$

Deputy Executive Officer Cory Zelmer,

I am writing to voice my opposition to the Los Angeles Aerial Rapid Transit Project ("The Gondola" at Dodger Stadium). There are many areas of concern: P472-1

1) Who is funding this project?
2) What are the real costs?
3) Is this an equitable solution for the level of investment required? P472-2

4) How will this be used for non-game days? P472-3
5) Will there be further development of Dodger Stadium for non-Stadium events, retail, housing? P472-4
6) How will this affect the State Historic Park, Union Station and the surrounding community? P472-5

It is difficult to understand the expense of the proposed gondola and all of the impacts based on the little bit of information provided. Further discussion and study should be given to such a monumental proposal. P472-6

Thank you,
Judy Kameon

Subject: Public Comment: Los Angeles Aerial Rapid Transit (LA ART) Project DEIR

I am writing to voice my opposition to the Los Angeles Aerial Rapid Transit Project ("The Gondola" at Dodger Stadium). As someone who works in the community, I, Kya-Marina Lê, will be impacted by this project. I am concerned about this project for the following reasons: P473-1

The Gondola Project's enormous towers will cause aesthetic impacts in my community. I am concerned that the towers will obstruct views, and that the gondola cars will be used for advertising and electronic billboards which will bring light pollution to the surrounding neighborhoods. P473-2

The Gondola Project will impact historic and cultural resources such as the Los Angeles State Historic Park, historic Union Station, and the Pueblo de Los Angeles Historic Monument. P473-3

This project will lead to future commercial development in Chavez Ravine, without community input and without disclosure to the community given that this project has set an example of bypassing community input. P473-4

This project will lead to displacement and increase the cost of rent in the area. P473-5

We never asked for this project. We don't need or want this project. P473-6

Sincerely,

Kya-Marina Le

Deputy Executive Officer Cory Zelmer,

I am writing to voice my opposition to the Los Angeles Aerial Rapid Transit Project ("The Gondola" at Dodger Stadium). As a resident of Los Angeles County I am concerned for the local residents, this project will affect, the traffic that will increase in the Chinatown area, they will be displaced and impacted by the increase of traffic. Where is the concern for the local residents who live there. This money should be used more effectively towards local residents or los angeles county public transportation that could always use improving. A gondola is waste of money and space, it will take of the LA historic park and put unsightly poles for this gondola. None of this project reflects how the residents will be impacted and only focuses on tourists or fans who don't live in the area. A very disappointing project. P479-1 P479-2 P479-3

Good afternoon,

I am writing to voice my opposition to the Los Angeles Aerial Rapid Transit Project (The Gondola at Dodger Stadium). As a resident of neighborhood community I am concerned about this project. I foresee the environmental impacts being detrimental to the community and it's surrounding ecosystems. The people in the community have already had historical trauma for the initial choice of profit over people when their homes were destroyed in order to build dodger stadium and does not make sense to continue this unjust path. I foresee opening the door to further commercial development without community involvement and consent. There is a lack of transparency for this project from the very beginning stages and wonder whose interest is really at heart. I urge you to stop the construction of the Gondola. P481-1

Deputy Executive Officer Cory Zelmer,

I am writing to oppose the gondola project I believe that the city has not been fully transparent with us about the funding . This is just another way to spread the already heavy gentrification going around the city and the displacement of people in small businesses and
families living around the area . This in no way will benefit any one else other than dodger stadium and the people fighting for it . P482-1

Deputy Executive Officer Cory Zelmer,

I am a resident of Chinatown, public transit rider, and a frequent visitor of the LA Historic State Park. I writing to voice my opposition to the Los Angeles Aerial Rapid Transit Project ("The Gondola" at Dodger Stadium). THIS IS A BAD IDEA! This project will not reduce traffic and it is ridiculous to invest billions of dollars in a project that does not serve the community. I am an avid Dodger fan and I use the Dodger Express to get to the stadium. The Dodger Express is a great way to get to the stadium meaning we DON'T NEED A GONDOLA. P483-1

My community fought for years for LA State Historic park and this project will harm historic and cultural resources such as the Los Angeles State Historic Park, historic Union Station, and the Pueblo de Los Angeles Historic Monument. There is limited green space in the community and LA Metro should not invest in the destruction of our green spaces. P483-2

Do not encourage future commercial development in Chavez Ravine, without community input and without disclosure to the community. P483-3

DO NOT BUILD THE GONDOLA

Deputy Executive Officer Cory Zelmer,

I am writing to voice my opposition to the Los Angeles Aerial Rapid Transit Project ("The Gondola" at Dodger Stadium). As a born and raised “Angeleno” I have seen the city change in many ways. Some ways positive, most negative. The LA ART Project is definitely amongst the negative possible changes of the city. It will impact our residents of Chinatown, women, children, elderly, small businesses who are already struggling for affordable housing and rents. In many ways LA ART is inefficient by not having environmental impacts in mind, parking in mind, or providing relief and affordable housing to our fellow Angelenos. I urge you to please reconsider this project and come up with something that works for the community and the goal of transportation. P486-1

Subject: I support zero-emissions transportation in Los Angeles

Dear Mr. Cory Zelmer,

Hello! I support the proposed zero-emission Los Angeles Aerial Rapid Transit Project (LA ART), connecting Union Station to Dodger Stadium. The gondola would benefit visitors to Dodger Stadium and the community by taking cars off the road, increasing access to public transit, and reducing greenhouse gas pollution. Projects like these are important in addressing climate change and improving the quality of life for Angelenos. Nobody likes sitting in the traffic that's on Sunset Blvd during dodger games! P487-1

Subject: Dodger Stadium gondola project

Good morning! I am writing today to vote NO for the proposed gondola project through Elysian Park to Dodger Stadium. I feel it would be harmful to the balance of the park. Birds, wildlife, bees, fauna- a project like this would be terribly disruptive, especially since there are already transportation options available that could be expanded without such harmful impact. I think residents of the neighborhood do not need thousands of people traveling over their backyards and peering in through their windows. The proposal says that it can carry 5000 people an hour to the stadium… for a venue that has a capacity of over 54,000- the math doesn't really add up in my opinion. I also feel it would pose a security risk. I am a Dodger season ticket holder, and a lifelong Angeleno- so I feel I really have an insight into this issue. I would prefer to see perhaps the Dodger Express program expanded and switch to hydrogen or electric busses. That would be less disruptive to the community and the beautiful natural landscape that is Chavez Ravine & Elysian Park. So once again, a very emphatic NO vote on this project!

Subject: Aerial Rapid Transit Project - Draft EIR Comments

To Whom It May Concern:

I think that the Aerial Rapid Transit (ART) project should not be allowed to move forward in any form for multiple reasons.

It is not meant to provide any useful public transportation to the local communities. It connects Union Station to only two points in LA, LA State Historic Park and Dodger Stadium. And the park is a rather flat and easy 15 minute/half mile walk from Union Station already. P490-1

It also can't even handle an effective capacity of people for events at Dodger Stadium. The ART's proposed maximum capacity of 5,000 people per hour is unlikely to make a noticeable change in area congestion during events, as Dodger Stadium holds 56,000 people.

It would take ART more than 11 hours running at its most efficient to fill the stadium. People are not likely to arrive to events more than 2 or 3 hours in advance, allowing for at most 10-15,000 people to make use of it for events. This leaves 41-46,000 people to arrive as they have been, continuing to congest the surrounding area.

There would inevitably also be mass crowding at stations when late comers arrive as event start times approach. And even more so when the events end and those 10-15,000 people want to leave Dodger Stadium at once. Are people supposed to accept 2-3 hour waits to return to Union Station? P490-2

Besides there being no real community or logistical benefits to this project, it will also alter and demolish the landscape and structures in many historic and underrepresented areas, while interrupting countless views of the city. The only people who will benefit from this project are the private company, AART, who has proposed it, the contractors they would hire, and the owners of Dodger Stadium. P490-3

Metro needs to stop considering this unsolicited private developer cash grab disguised in the form of "transit." Our city's resources need to support real projects that benefit real Angelenos. P490-4

Deputy Executive Officer Cory Zelmer,

I am a Los Angeles born and raised community member! I have a deep love for chinatown because that is where I would often go shopping with my family! Here I hold the most cherished moments of my childhood. As such, I know how impacted the chinatown community will be by this project. I writing to voice my opposition to the Los Angeles Aerial Rapid Transit Project ("The Gondola" at Dodger Stadium). With growing pollution and environmental justice concerns this will only have disastrous affects on the local community. It will create hostile living situation and make the surrounding environment unpleasant for community members. Additionally this project has received zero feedback from the people! It is irresponsible to continue with this project solely based on the monetary gains! Listen to the community!!!!!

Deputy Executive Officer Cory Zelmer,

I am writing to voice my opposition to the Los Angeles Aerial Rapid Transit Project ("The Gondola" at Dodger Stadium). Please don't ruin LA State Historic Park by putting a ridiculous Gondola, which the community did not ask for, in the sky above it. P492-1

As a community member and property owner of Echo Park and DTLA, I am very concerned about how this project came about and who exactly is paying for it. If taxpayers are paying for it, then we didn't ask for it and don't want it. If the McCourts are paying for it, why would you want to partner with a family that has a history of mishandling finances and making the Dodgers the laughing stock of the sports world? P492-2

I purchased a condo and moved to DTLA in 2006 and have enjoyed all the public transportation improvements that LA Metro has put in place since then. I am a regular user of public transportation, mostly bus and train, but also Metrobike and Metrolink occasionally. There are so many worthwhile improvements that could be done to our existing system instead of a Dodger Stadium Gondola.
LA always gets ridiculed because of their low quality public transportation, and when I go to other cities, I get it. So please don't make it worse. Thank you. P492-3

Deputy Executive Officer Cory Zelmer,

Good evening, my name is Armando Ruiz.

I live and work in Lincoln Heights. I am writing to voice my opposition to the Los Angeles Aerial Rapid Transit Project ("The Gondola" at Dodger Stadium). This proposed project is beyond disrespectful and needs to be halted asap. My neighborhood is currently being sold out by greedy developers and council members who don't care about the most vulnerable. This project will exacerbate the homeless problem in my community by pushing me and my community out of our homes. It's is already difficult il enough for us to make ends meet working full time and going to school. It's saddening to see those who are supposed to be there to help us only make things worse for the most vulnerable. Metro should be focused on creating free public transportation for all Los Angeles. This would help fight climate change and set the bat for the rest of the world. Please prioritize the most vulnerable, not the wealthy. P493-1

Thank you,

Deputy Executive Officer Cory Zelmer,

I am writing to voice my opposition to the Los Angeles Aerial Rapid Transit Project ("The Gondola" at Dodger Stadium). P496-1

I am a resident of Cypress Park and a cyclist/alternative modes of transportation advocate. Cypress Park is one metro stop away from Chinatown. The Gondola Project's will increase traffic around Chinatown and Union Station. This project is designed to displace traffic from Dodger Stadium and push it onto the surrounding communities. The existing traffic conditions are already difficult due to a lack of bike lanes, limited parking, and overall congestion and this project will make it worse. P496-2

We never asked for this project. We don't need or want this project. Please listen to the community, the impacted residents, and think about who this project will benefit. If it doesn't benefit the current community and their way of life, don't impose another unwanted project on them. This community is lacking a grocery store, a gondola project will increase the impacts of air pollution from vehicle emissions in an area already overburdened by air emissions. P496-3 P496-4

Subject: Public Comment: Los Angeles Aerial Rapid Transit (LA ART) Project DEIR

I am writing to voice my opposition to the Los Angeles Aerial Rapid Transit Project ("The Gondola" at Dodger Stadium). As a resident of Council District 1, dedicated cyclist, and frequent park patron at Elysian Park, I, Liliana Cortez, will be impacted by this project. I am concerned about this project for the following reasons: P497-1

(1) The Gondola Project's push of traffic into surrounding neighborhoods will worsen air quality impacts from tailpipe emissions in an already overburdened community. As a cyclist and daily commuter, I'm directly exposed to exhaust fumes and being further exposed to them in an area with already dense traffic, this also impacts my personal health. P497-2

(2) The Gondola Project will increase traffic around Chinatown and Union Station. This project is designed to displace traffic from Dodger Stadium and push it onto the surrounding communities. The existing traffic conditions are already difficult because of lack of protected bike lanes for cyclists to help with the flow of traffic, these are already densely populated residential streets, and the high number of pedestrians in the area. This project will make these conditions worse and further exacerbate accidents involving distracted and impatient drivers against pedestrians and cyclists. Inclusively, my friends and I use the residential streets surrounding the area to reach Elysian Park so as to avoid high traffic streets where drivers are already driving at excessive and dangerous speeds. P497-3

(3) The Gondola Project will impact historic and cultural resources such as the Los Angeles State Historic Park, the Historic Union Station, and the Public de Los Angeles Historic Monument. These are all places that I, as a local resident, enjoy visiting on a regular basis due to their historic nature and the efforts community leaders have put into preserving these historic resources. Do not ignore our pleas to preserve these historic monuments for the sake of a project that will further erode, destroy, and whitewash our city's history. P497-4

(4) It goes without saying that this project will lead to increased displacement of long-time residents, many of whom are monolingual elders, and it will increase the rent cost of rent in the area. P497-5

(5) *Metro went forward with this project without an open public process and without competitive bidding.* I don't understand the ownership or operation of the project because these details have been hidden from the community. Who is paying for this project? Who will pay for its maintenance? Will taxpayers such as myself be left holding the bag? The community has been neglected and our voices have not been heard. No-one asked us our vision for our community and our district, and whether it included a gondola in it. P497-6

Most imporantly: WE NEVER ASKED FOR THIS PROJECT. WE DON'T NEED OR WANT THIS GONDOLA. Stop catering to a rich man who doesn't even go here. If we, the residents of Los Angeles were able to deny a billionaire for mayor, we will deny Frank McCourt. P497-7

Best,
Liliana Cortez

Subject: Public Comment: Los Angeles Aerial Rapid Transit (LA ART) Project DEIR

Deputy Executive Officer Cory Zelmer,

I am writing to voice my opposition to the Los Angeles Aerial Rapid Transit Project ("The Gondola" at Dodger Stadium). As a resident of Los Angeles, someone who frequents Chinatown to visit family and be with community, I, Keiko Utsumi, will be impacted negatively by this project. I am concerned about this project for the following reasons: P501-1

Firstly, it's a gentrification project that will increase rent in the area, leading to displacement of local residents. It's an obvious ploy for further future development in the Chavez Ravine, though the community residents have not been involved in the decision making or input process, nor given proper or accurate disclosure. It is unacceptable that Metro moved this project forward WITHOUT an open public process or competitive bidding, making the whole thing confusing to community members who never asked for the gondola to be built. P501-2

Not only will it cause substantial pollution, further harming the quality of life of the Chinatown community members, but it will also make traffic worse despite being marketed as a solution. The gondola will significantly increase traffic around Chinatown and Union Station, which is already bad due to consistent construction, road obstructions, and downtown busyness. It will also push traffic to surround neighborhoods, which will worsen the air quality and disrupt the lives of the community members who are already overburdened. This project is not ethical in any way, and it will directly harm community members. It must be put to an end. P501-3

Deputy Executive Officer Cory Zelmer,

I am writing to voice my opposition to the Los Angeles Aerial Rapid Transit Project ("The Gondola" at Dodger Stadium). The gondola is an expensive project with a high environmental cost, that will do little to ease traffic, and only make living more expensive for people of the community. Please reconsider this project and divert funds elsewhere. P502-1

Deputy Executive Officer Cory Zelmer,

I am writing to voice my opposition to the Los Angeles Aerial Rapid Transit Project ("The Gondola" at Dodger Stadium).

We need mass public transportation in LA. Not this. Not shuttling a maximum of 12 people every 30 minutes less than a mile. Not by dangling Boeing-747s 40-feet above the roofs of citizens throughout Chinatown. Not by erecting half-a-dozen 6 story tall steel obelisks in the heart of cultural centers 'cuz muh blue sport ball team'. Not this. This is state is the 4th largest economy in the world, and yet we NEED--nay we MUST, it is MANDATORY---to proceed with this Frank McCourt monstrosity? Yikes. Do us all a favor, resign, and go work flipping burgers. It'll build some character and you'll work closer with the community than you ever have with the cumulative decades of elected office from everyone involved with this project. P503-1

Subject: Public Comment: Los Angeles Aerial Rapid Transit (LA ART) Project DEIR

Deputy Executive Officer Cory Zelmer,

Hi there,

I am an LA native and current resident, and I am opposed to the gondola project. Our community needs environmentally and socially responsible projects, and creating a gondola in a community that is struggling to afford basic needs is *not* what our city needs. Green lighting a project that cannot prove itself to be good for our environment, and displace long time residents of Los Angeles, is something Angelenos will be ashamed of for generations to come. The little public transparency behind this project is a sign that folks in charge *know* it is not the right thing to do. They aren't doing it for Angelenos, they are doing it for themselves.

Invest in our infrastructure meaningfully, do it thoughtfully, and do it proudly in the open with community input.

Listen to what Angelenos are saying. This project is not what the community wants, nor what it needs.

P505-1

Thank you for listening,
Michelle

Subject: Public Comment: Los Angeles Aerial Rapid Transit (LA ART) Project DEIR

Deputy Executive Officer Cory Zelmer,

I am writing to voice my opposition to the Los Angeles Aerial Rapid Transit Project ("The Gondola" at Dodger Stadium). Our community didn't ask for this project.
The project will require the use of public rights of way, public airspace, and public lands for the placement of multiple towers with suspended cars intended to move a few thousand people in each direction between Union Station and Dodger Stadium for games and events. P506-1

The plan for massive towers ranging from six stories (84 ft) to 13 stories (195 ft) in height - is frightening and ugly. P506-2

Our neighborhoods will be forever changed. P506-3

Operating at maximum capacity is equivalent to 42 shipping container-size gondolas flying over our neighborhoods. A recent poll shows 76% of Angelenos oppose McCourt's gondola. There is already a free bus shuttle that takes fans to Dodger Stadium. P506-4

OUR COMMUNITY DOES NOT WANT OR NEED THE GONDOLA.

Building a project of this magnitude when the Dodgers only have 81 home games a year and limited events is a waste of taxpayer dollars. What else is McCourt not telling us? Maybe planning on making Dodger Stadium a 365 day theme park? Maybe setting the stage for the Riboli Family to build their 900-apartment complex on our state park? P506-5

Whatever it is - We say "No!"

Subject: Public comment: LA ART project deir

Hello! I'm writing in opposition to the dodgers stadium gondola project. As a resident and employee of the area, I don't want one of our few great parks (LA historic) obstructed by a private and largely single use piece of infrastructure. P507-1

A proper bus rapid transit system on sunset seems to be the real answer for the residents of the area, as that could serve the community and connect us to the greater metro transit, in addition to serving the game day traffic. P507-2

I'd much prefer public funds go towards projects that serve the communities as a whole and don't risk becoming an expensive tourist attraction. P507-3

Thank you,

-Cameron McManus

I am concerned about our neighborhood's historic infrastructure, our neighbor's privacy, our safety, and public costs associated with this project. P508-2

Our community didn't ask for this project. The project will require the use of public rights of way, public airspace, and public lands for the placement of multiple towers with suspended cars intended to move a few thousand people in each direction between Union Station and Dodger Stadium for games and events. P508-3

With massive towers ranging from six stories (84 ft) to 13 stories (195 ft) in height, our neighborhoods will be forever changed. Operating at maximum capacity is equivalent to 42 shipping container-size gondolas flying over our neighborhoods. A recent poll shows 76% of Angelenos oppose McCourt's gondola. There is already a free bus shuttle that takes fans to Dodger Stadium.

*OUR COMMUNITY DOES NOT WANT OR NEED THE GONDOLA. *

NO ONE in this neighborhood is "for" this horrible structure. NO ONE! P508-4

Building a project of this magnitude when the Dodgers only have 81 home games a year and limited events is a waste of taxpayer dollars. What else is McCourt not telling us? Maybe planning on making Dodger Stadium a 365-day theme park? Maybe setting the stage for the Riboli Family to build their 900-apartment complex on our state park?

Whatever it is - We say "No!"

NO GONDOLA. EVER. P508-5

Subject: Gondola vs 710 completion

Dear Sir:

I live in San Marino. Metro shriveled in plans to complete the 710.

Completion of 710 from 10 to the 210 would do more for traffic congestion than building the gondola. Now, more traffic comes through San Marino.

Metro is not a transportation expert, it is a political pawn.

我的名字是_____，我在唐人街有一家公司。

我和我的唐人街小企業，以及我們勤奮的員工，對弗蘭克·麥考特 (Frank McCourt) 在聯合火車站和道奇體育場之間建造 1.2 英里長的空中纜車的計劃極為擔憂。這個被稱為洛杉磯空中快速交通 (LAART) 的項目不會為公眾提供顯著的交通效益，當然也不會造福於它所施加的社區。這個構思不周的空中纜車只為弗蘭克·麥考特和他未公開的發展計劃服務。

(1) **纜車站離唐人街的許多企業太遠，無法在經濟上幫助我們。**
纜車客戶佔用附近的所有停車位然後乘坐纜車飛越我們對我們的業務沒有幫助。

(2) **唐人街的企業和社區將因汽車客流量增加而受到影響。**唐人街的許多企業沒有停車位，或者必須為客戶支付停車費用才能使用他們樓主的停車場。如果負擔得起的路邊停車位消失，私人停車場的停車費率增加，這將使居民在唐人街購物、用餐和獲得基本服務變得更加困難。殘疾人和探望老人的家庭尤其受到傷害。

(3) **唐人街的企業擔心我們最終將需要通過額外的地稅來補貼這艘纜車。**這個項目在沒有真正的社區投入和透明度的情況下被推進，並承諾它將 100% 由私人資助，但沒有關於纜車系統如何在財務上自己付钱維持自身的信息。我們也不知道該項目的總成本是多少，包括維護、運營、安全和保險。倫敦和波特蘭的類似項目也承諾由私人資助，但由於成本超支，最終需要公共資金。

我們擔心我們唐人街社區的公益正在為私人開發商的觀光纜車而犧牲。這是我們的社區，而不是 Frank McCourt 的社區。讓我們選出的官員記住，他們的決定應該首先使我們的社區受益。

令我們非常不安的是，在我們的社區大聲疾呼反對2 年後，市政府繼續無視我們的聲音。

Dear Metro, City Council, Mayor of Los Angeles and other elected leaders,

My name is [illegible], I have a business in Chinatown.

My small Chinatown business, our hard-working employees, and I are extremely concerned about the plan to build a 1.2-mile gondola between the Union Station and Dodger Stadium. This Los Angeles Air Rapid Transit LAART project will not provide significant transportation benefits to the public, and certainly not to the communities in which it is imposed. This ill-conceived gondola project only serves Frank McCourt and his undisclosed development plans. P512-1

(1) The gondola station is too far from many businesses in Chinatown to generate business. It is not helping our business that gondola riders take up all the nearby parking spaces and then take the gondola over us. P512-2

(2) Businesses and communities in Chinatown will be affected by increased car traffic. Many businesses in Chinatown do not have parking spaces or have to pay for parking for customers. If affordable on-street parking reduces and the private parking lot increases its rates, this will make it more difficult for residents to shop, dine and access essential services in Chinatown. It will significantly affect the disabled people and families who visit the elderly. P512-3

(3) Chinatown businesses are concerned that we will eventually need to subsidize the gondola through additional property taxes. This project was pushed forward without community input and transparency. With the promise that it would be 100% privately funded, they do not provide any information about how the system will generate enough revenue to maintain itself. We also don't know the total cost of the project, including maintenance, operation management, security and insurance. Similar projects in London and Portland were also promised to be privately funded. but the cost overran eventually, and it ended up requiring public funding. P512-4

We are concerned that our Chinatown community is being sacrificed for a private developer's tourism gondola project. This is our community, not Frank McCourt's community. Let our elected officials remember that their decisions should consider our communities first and foremost.

We are very frustrated that after 2 years of our community speaking out against it, the city government continues to ignore our voices. P512-5

Dear Metro, City Council, Mayor of LA, and other Elected Leaders,

My name is CHIN JE and I have a business in Chinatown.

I and my fellow Chinatown small businesses, along with our hardworking employees, have extremely serious concerns about Frank McCourt's plans to build a 1.2 mile long aerial gondola between Union Station and Dodger Stadium. This project, known as Los Angeles Aerial Rapid Transit (LAART), does not provide significant transportation benefits to the public, and certainly does not benefit the community it is being thrust upon. This ill conceived gondola serves only Frank McCourt and his undisclosed development plans. P514-1

- **The gondola stations are too far away from many businesses in Chinatown to help us economically.**
  "Parking in Chinatown" defeats the purpose of the zero emissions promise being touted by McCourt. It does not help our businesses for gondola customers to take all of the parking in the neighborhood and then fly over us in the gondola. P514-2

- **Chinatown businesses and community would suffer from the increased traffic.** Many businesses in Chinatown don't have parking or must pay their landlord fees for their customers to use their parking lot. If affordable street parking disappears and parking rates at private lots increase, this would make it more difficult for residents to shop, dine, and access essential services in Chinatown. Disabled people and families visiting elders in senior homes would be especially hurt. P514-3

- **Businesses in Chinatown are concerned that we will eventually be required to subsidize this gondola through additional property taxes.** This project is being pushed forward without real community input and transparency, with promises that it will be 100% privately financed, but there has been no information about how the gondola system would sustain itself financially. We also don't know what the total cost for the project will be, including maintenance, operation, security, and insurance. Similar projects in London and Portland also promised to be privately financed, but required public funding in the end due to cost overruns. P514-4

We are concerned that the well-being of our communities on the ground are being sacrificed for a private developer's site-seeing ride. This is our community, not Frank McCourt's. It's time for our elected officials to remember that their decisions are supposed to benefit our communities first. P514-5

It is extremely disturbing to us that after 2 years of our communities crying foul, the City continues to ignore our voices.

Dear Metro, City Council, Mayor of LA, and other Elected Leaders,

My name is GEOFF KIA MILLER and I have a business in Chinatown.

I and my fellow Chinatown small businesses, along with our hardworking employees, have extremely serious concerns about Frank McCourt's plans to build a 1.2 mile long aerial gondola between Union Station and Dodger Stadium. This project, known as Los Angeles Aerial Rapid Transit (LAART), does not provide significant transportation benefits to the public, and certainly does not benefit the community it is being thrust upon. This ill conceived gondola serves only Frank McCourt and his undisclosed development plans. P518-1

- **The gondola stations are too far away from many businesses in Chinatown to help us economically.**
  "Parking in Chinatown" defeats the purpose of the zero emissions promise being touted by McCourt. It does not help our businesses for gondola customers to take all of the parking in the neighborhood and then fly over us in the gondola. P518-2

- **Chinatown businesses and community would suffer from the increased traffic.** Many businesses in Chinatown don't have parking or must pay their landlord fees for their customers to use their parking lot. If affordable street parking disappears and parking rates at private lots increase, this would make it more difficult for residents to shop, dine, and access essential services in Chinatown. Disabled people and families visiting elders in senior homes would be especially hurt. P518-3

- **Businesses in Chinatown are concerned that we will eventually be required to subsidize this gondola through additional property taxes.** This project is being pushed forward without real community input and transparency, with promises that it will be 100% privately financed, but there has been no information about how the gondola system would sustain itself financially. We also don't know what the total cost for the project will be, including maintenance, operation, security, and insurance. Similar projects in London and Portland also promised to be privately financed, but required public funding in the end due to cost overruns. P518-4

We are concerned that the well-being of our communities on the ground are being sacrificed for a private developer's site-seeing ride. This is our community, not Frank McCourt's. It's time for our elected officials to remember that their decisions are supposed to benefit our communities first. P518-5

It is extremely disturbing to us that after 2 years of our communities crying foul, the City continues to ignore our voices.

We strongly encourage you to oppose and cancel this project.
Sincerely,

Subject: Stop The Gondola

I am certainly NOT in favor of a Monster People Transporting Gondola being built anywhere near our historic neighborhood. This idea is just unacceptable. This construction will only pave the way for more gentrification in our area, something that would have a negative impact on our small community. P519-1

Affordable Housing is what is needed, not a Gondola to be used by a select few from Union Station to Dodger Stadium. Public Transportation is available and should be continued to be used for that purpose, getting fans to the Stadium. P519-2

Deputy Executive Officer Cory Zelmer,

As a resident of Elysian Park (Dodger Stadium is my backyard,) I am writing to voice my opposition to the Los Angeles Aerial Rapid Transit Project ("The Gondola" at Dodger Stadium). P522-1

Fans already have a free bus they can take. Increase the availability of an electric bus fleet rather than the proposed expensive gondola that is not intended to serve angelenos 24/7 365 days. Building the gondola would negatively impact the Los Angeles State Park and will not add an affordable travel alternative. The proposal is another screen for advertising and consumption. Fans already park in our neighborhood because they do not want to pay for parking. Dodgers should make more free electric buses available from outlying areas and city should increase bus lanes. Maybe Dodgers would like to remove the fence around the stadium and parking lot for local residents to walk or bike through the property to areas of commerce without having to walk a long way around. The property could be better incorporated into the rest of Echo Park rather than keeping everyone out. Gondola would be more of the same: expensive, elitist, noninclusive, McCourt money-maker. No thanks.
Andrea Harrow, elysian park resident

Deputy Executive Officer Cory Zelmer,

I am writing to voice my opposition to the Los Angeles Aerial Rapid Transit Project ("The Gondola" at Dodger Stadium).

My name is Kathryn and I've lived in Los Angeles since 2017 and there are so many projects that are more deserving of funds than something this ridiculous.

P523-1

Metro went forward with this project without an open public process and without competitive bidding. I don't understand the ownership or operation of the project because the details have been hidden from the community. Who is paying for this project? Will taxpayers be left holding the bag?
Lack of community consultation: The community has been neglected and our voices have not been heard. No one asked us our vision for our community.

We never asked for this project.

We don't need or want this project.

Subject: Public Comment: Los Angeles Aerial Rapid Transit (LA ART) Project DEIR

Deputy Executive Officer Cory Zelmer,

I am writing to voice my strong opposition to the Los Angeles Aerial Rapid Transit Project ("The Gondola" at Dodger Stadium). This thing is a hideous eyesore. An unnecessary imposition on a cherished park. A money-making gambit that we should neither reward nor encourage. P524-1

And if it is built despite the wishes of those living under it, what happens to this ugly mess after there's no more money to squeeze out of it, or after it fails or ages or becomes obsolete? P524-2

I'm a Dodger fan. I hate the traffic into and out of Dodger Stadium. It's worst part of the stadium experience. But this stupid gimmicky thing is no solution. P524-3

Build a giant parking structure. Set up more than one remote shuttle service. But don't build this useless, ugly boondoggle. P524-4

Comment from Phyllis Ling, Chinatown resident

Thank you. I'm Phyllis, I live a block away from here. The gondola would fly over me and my neighbors. My house would face the mouth of the noisy Broadway junction, a 98-foot tall turning station. I think you've seen how this hearing is not right, the way they are taking public comment. It's been like this since the beginning, trying to hide and not let it get out how horrible this project is. This project is not for us. This project is for Frank McCourt, who is a developer. It's for their Olympics, which is for developers. It's for politicians who are in the pockets of developers. Frank McCourt wants to build right over us, 40 feet over my neighborhood, as if we're nameless faces. But we're not. We're a real community. I'm glad my sister and my neighbors are here tonight as well as all these residents and supporters in a larger community. It's really great to see people show up for each other and speak out. There have been so many lies about this project from LA Art, but we know what this project is really about. Frank McCourt wants to build a giant complex up on the Dodgers Stadium parking lot. It's not a secret! P525-1

If he had a permanent transit stop that would give him incentives to build bigger and bigger and bigger development there. P525-2

This project makes no sense for transit. At max capacity, it can only handle a fraction of the Dodgers Stadium attendance, and how do you think they're getting to the gondola? Driving, most of them. You're only saving the last 1.2 miles! P525-3

Maybe some will take transit, probably the same people who would take the Dodgers Stadium Express, which we support. Let's support expanding and electrifying the Dodgers Stadium Express! That'll enforce bus lanes, more bike lanes, better sidewalks, and an escalator up the hill for pedestrians. P525-4

Not this boondoggle gondola! It doesn't help traffic. It doesn't connect us to parks or transit. Those are lies. What it does is turn Chinatown into Dodgers Stadium's parking lot. It takes away, it takes away parking for businesses! It increases noise, with this gondola running constantly, 18 hours per day, 6 a.m. to 12 a.m., not to mention the invasion of privacy! P525-5

This gondola mows down the entrance of LA State Historic Park. That's our space. The whole point of the park in a city is for people who live in a dense urban environment to get away from all that and to have some peaceful enjoyment in open space with open skies. It wasn't so that Frank McCourt could fly five-ton metal cabins 26 feet over our heads. P525-6

No gondola! No gondola! You know what? McCourt wanted to divide us, in my neighborhood, buy us out, buy some of my neighbors out, so that we would quietly go away. He wanted to fly under the radar with this project, keep everything hush hush, and get the project approved before anyone knew what was going on. You all remember in 2018, they said it could be running by 2022. Remember? My neighbors and I never even had a chance to say anything about this project going on our neighborhood. P525-7

Now, Climate Resolve is putting their greenwashing slime all over it. It's disgusting. I still hear some people say, "Oh, but the gondola would be so great. It would be iconic!" Yeah, it'll be iconic all right: an iconic monument to injustice. P525-8

We're here to call it out for what it is: a scam, a sham. If you're standing up and supporting this, you need to wake up. You're teaming up with Frank McCourt who bankrupted the [inaudible]. You're teaming up with those who erased the original Chinatown and evicted the residents of La Loma, Bishop and Palo Verde to build Dodgers Stadium. You're choosing dark side of history. You really don't have to. I know this gondola sounds good at first in theory, it's like, oh, it'll be so cool and fun, but there's a whole lot more to it. Some people, I think a lot of people, ones who aren't greedy bastards, do come around. But we need everyone's help. So, thank you for being here. We can do this together. Stop the gondola! P525-9

Comment from Gabe Lee, Elysian Park resident

Yeah, what's up? I'm Gabe, I'm born and raised in Elysian Park, just right here. All right, so, I remember growing up, there were basically no sidewalks in Elysian Park, so the suggestion that you could take the, whatever this is, up to Elysian Park and then walk around is pretty absurd. P526-1

This is very clearly a very, all right, no, wait, let me back up. I want to explain something that I feel like none of these posters are going to explain, or they're actively lying about. There are only 82 games, like one of the ladies up here explained. There are only 82 games in the year, which means this would only be running for game days, so I guess 82 days of the year. That leaves 283 days of no game day service. Do you think that this would not be used during those 283 days? What instead this is, this is not a public service. This is part of building infrastructure so that Dodger Stadium can continue building its commercial resources and so that Chinatown is continually gentrified by these big developers buying up these buildings and then turning them into, basically, like empty rental spaces. No, because think about it, 283 days of the year that this is not used, that's not going to happen. P526-2

The other thing is, there's a pie chart over there that is heinous. You really need to check it out if you see it. It says that 67% of the people using this are going to reach it through public transit. What they fail to mention on that pie chart, and they should have put it on the title because this is pie chart rule #1, this is, try making rule #1 that you put what the pie chart is on the title. They didn't do that, first of all. Second, that's wrong. 283 days out of the year, this will be used to funnel people in and out of Dodger Stadium. The people going to Dodger Stadium will be parking there. Most of Dodger Stadium, that's, like, 7 out of the 8 lots that form Dodger Stadium, are parking lots. That means people will be going there, parking there, and then coming in to these areas. P526-3

This is not a public system. This is being paid for by the owners of Dodger Stadium and by Frank McCourt. This means that they're going to want a return on their investment. Do you think that they're doing this for the good will of the people of Chinatown? No! Do you think they're doing it for the good will of the people of El Pueblo? No! This is obviously something else. What's going to happen, and I'm not being conspiratorial here, this is literally in the works, they're not going to tell us. They're going to expand Dodger Stadium into an LA Live type commercial area. There will be no space for people to go in and rent those areas. That will be rented to corporate interest and corporate interest only. So, what's going to happen is we're going to have a mall at Dodger Stadium and Chinatown and these areas will be continuously developed as the project of Los Angeles currently is to expand downtown LA into the surrounding areas. You can see this on Sunset. 1-1-1-1, 1-1, four ones Sunset, all these buildings down here, they're continuously expanding, building commercial properties on the areas around it, areas that used to be and still are inhabited by people who work here, who live here, the normal people that live here. So, what this is, it's part of building commercial infrastructure, commercial retail, and I'm not having it. I don't want this, and nobody else wants this. P526-4

Well put, well well put. P526-5

Comment from Katie Wang, Chinatown worker and member of Chinatown Community for Equitable Development

---

Thanks Kenny. I'm Katie, I'm also with Chinatown Community for Equitable Development, where some of us here are also from. I've been a volunteer with CCED for around 10 years now, and when I first heard about this project, I thought, you know, our organization has been fighting for things that we really need, like a hospital, an active, an active working hospital that's open and accessible to our community. We've been fighting for a full-service grocery store. There are many things our community needs, and a gondola that hangs over our community is not one of them. P528-1

We're asking for an investment in real public transportation, a resource, a resource that everyone can access. And maybe you're familiar with Chinatown, with this neighborhood that this gondola wants to be hanging over. You know, many folks are living at the poverty line. Many folks are working class and poor. It is not accessible to folks who live here to pay upwards of $20 for a gondola trip. P528-2

This is not the kind of resource our community needs, and we will continue to demand that this project be stopped. P528-3

Hey, how's it going? It's Kenny, I'm with CCED. When I came in today over at the front desk to check in, and I asked them, "Where do I go sign up for public comment?", they pointed to the back corner of the room, with a freaking curtain behind it. Does that sound like public comment to you? So, we brought public comment here today, the people did, right? And I still see all these people, all these locals out here like at the science fair, looking at the little billboards, staring, and ignoring us. Here they are, whatever BS consulting agency you work for, Governor, whoever's here, you over there in the corner looking nervously around, you should be here, listening to us!

Comment from Elba Yanyez, El Sereno resident and leader of Save Elephant Hill

---

Speaker 1 The Gondola is not good for Chinatown, it's not good for the state park. Now we have somebody from the state park [who's] going to say a few words.

Elba Yanyez Hello everybody. My name is Elba Yanyez. I'm an El Sereno resident and I'm with Save Elephant Hill. For seven years I served on California's state commission on parks and recreation. During the time that this park was under development, community members undertook one of the greatest environmental justice campaigns in Los Angeles history. It took an entire city to stop the development of warehouses and to create this park. Once that park land was protected, there were 65 meetings led by state park staff to determine what would happen on this land, and at no point during those discussions was there a mention of a gondola. Never. This is a violation of our state law, CEQA, California Environmental Quality Act. This is a complete travesty. If this gondola gets built, not only is it a travesty of the law, but it's a travesty for all the work that people have put in for decades to get this park to what it is. It's not in the EIR; the gondola is not in the EIR. The impacts on the community of this gondola were never considered, so we have to stop the gondola, now.

Speaker 1 We have Xochitl from [inaudible], which is an area affected quite a bit. P531-1

Xochitl Manzanilla Hello, good evening, my name is Xochitl Manzanilla, and I am opposing the gondola very strongly. Listen, Frank McCourt, because we don't need this gondola. This is a monstrosity that we don't need it, we already have transportation to Dodgers Stadium, and you are a billionaire, you only want to get more money from the people, who is poor people. So, the poor are poorer, and the rich are richer. You are already a billionaire; you don't deserve more from the poor people of these communities. You go make your gondola somewhere else because we don't need that. P531-2

We have many, many different problems in the park, LA State Historic Park, and we don't need that gondola because that will destroy all our programs. In the park, we have the farmer's market. P531-3

We have a program with flying kites that are very high, they fly very high. With those gondolas, that program will not be possible. So, we have to stop this monstrosity as soon as possible, so listen Frank McCourt, and stop it, stop it right now. We don't need it. Stop the gondola! Stop the gondola! Stop the gondola! P531-4

Comment from Jose Estrada, William Mead Public Housing resident

Speaker 1 [inaudible] this project is opposed by a lot of people. The next one is Jose. P533-1

Jose Estrada Ok, good evening to all of you. My name is José Estrada, I am a Resident Community Organizer here in the area, and the truth is that as a representative of the Hispanic, Spanish-speaking community, we, as low-income families, know that these projects are not advantageous to our communities. We have many examples in Los Angeles, where right now many Hispanic communities are being evicted because of these false projects, like the Gondola Project.

Speaker 3 Hello, my name is Jose Estrada, I'm a community organizer and I live in the area. As a representative of the Spanish-speaking community in LA and of all the people in the community we work with, we know that these projects are a false promise and only lead to gentrification, one of many projects in LA that is not good for our community. P533-2

Jose Estrada We cannot accept that for the sake of money people are being deceived and being told to accept the project. There is a community nearby called William Meek: 420 homes, 420 families that have been forced to say that they accept the project by intimidating them, by telling them that if they do not accept the project, they will be evicted from their public housing. This must not happen: that through money people are being harassed and lied to. Because afterwards, the problem is that many families will be evicted from this area. Because, as we say, these projects are very expensive and they are for touristic purposes, and what this brings is more evictions, evictions of many families from this area.

Speaker 3 We can't allow poor people to be scared by money. One of the communities that we work with here in Chinatown, [inaudible] Gardens, is a public housing community. It's got over four hundred units. People there have been forced to say that they agree with the project when all we know is that people are afraid. They're being intimidated, they're being scared when this is only going to lead to further displacement. P533-3

Jose Estrada Well, finally, we are grateful because, as they say "Together, everything is possible." The Korean, Chinese, Hispanic, English-speaking communities, from all languages, all cultures, are gathered here. We are very glad that we are united in this fight! Because we have to stop this project. Because if we don't stop it, we will regret it afterwards, so thank you for being here! Together, fighting, saying "Stop Gondola!" Let's stop the Gondola Project! Thank you! Thank you very much!

Speaker 3 [A lovely], I want to thank everyone who's here. As you can see, we have a very diverse community in Chinatown, and people are all coming together to stop this project. Together, we can build [inaudible] and stop this project so that we don't regret the aftermath that's going to happen if this gets approved. Thanks everyone and [stop the gondola!] P533-4

Comment from Amy Ho, Chinatown resident

Hello, good evening, ladies and gentlemen. My name is Amy. I've been living here for 35 years, and I have worked hard, just for, you know, to get a place to live, right? And I'm very happy that, you know, I'm not a burden to the city or to the government or to the society. I worked hard to get my piece of land and home to live here. P534-1

Not [the] Dodgers; they don't have to take away my right to live at [inaudible]. Besides, the Dodgers play, the games is only 82 or 83 games per year out of 365 days. Why [do] they make a big deal about that? Okay. Well, for those who approve the Gondola, please, touch your heart, and, you know, your conscience. If someone put a gondola in front of your house and had to [inaudible] over your head, over your roof, would you think? Would you approve with your hands and legs for that? Think about that, always put yourself, someone in your position and yours in other position before you say something. You know what the Dodgers [inaudible] is always think about? Their money, their revenue, how much they make per cup of beer, per cup of coffee, or cup of Coke. They're not [looking out] for us here. P534-2

Comment from Melissa Arechiga from Buried Under the Blue, descendant of family displaced by construction of Dodgers Stadium

---

Hi, my name is Melissa Arechiga. I stand here before you as a representative of the surviving families that were violently displaced for Palo Verde, La Loma, and Bishop. Three Mexican indigenous communities that were destroyed to build Dodger Stadium. I'm here today to oppose the gondola project, the [inaudible]. P535-1

While this may be exciting for some, it's a sign of change, and the change is not inclusive to all, specifically people of color. The Dodgers corporation and the City of Los Angeles have a long partnership together, working to destroy and exploit communities of color. The gondola represents gentrification, the destruction of not only our communities but the environment and our beloved wild fire. The gondola project is no different than the deal that was made to take away our families' generational wealth by destroying three communities to build the Dodger Stadium. The Dodgers and the Los Angeles City Council set to build the gondola in the middle of our communities, and this would only benefit the Los Angeles Dodgers. P535-2

Our residents and small business owners will suffer with this so-called revitalization project that is code word in communities of color as gentrification and long terms that leaves our most vulnerable community members displaced with no benefits. The history between the Los Angeles Dodgers and the City of Los Angeles has left our city in worse conditions than the deal in the 1950s, when our homes and our three communities were destroyed, and the lies that were told to the public of public housing today leave us with the current issues of our houses and unaffordability crisis that affect all of us today. It is a win-win for the Dodgers. It has been since Black Friday, Friday, May 8th, 1959, when our three communities were bulldozed, and our families dragged out. It is time to put a stop to the Dodgers corporation on exploiting the people and public. [inaudible] elected officials oppose this project as it will have damaging effects that will have lasting effects for generations and generations. Enough. It's time to put an end to Dodgers' corporate greed. P535-3

Comment from Victoria Steele, from Metro Senior Lofts Tenants Association

I live... I'm actually in Chinatown Senior Lofts [inaudible] right on the gondola line, and we have [a] recreation area on the roof. And we are concerned about privacy and, although I've been told that the windows will fog up, [that] there's no problem, we can't really trust that 100% that, that's going to work and continually work. We do not like a loss of privacy for any residential area. P536-1

Also, we're concerned about the traffic, the parking. All the traffic is going to be on our [meter]. Parts of Chinatown have all these small streets. It's already congested enough; we don't need any more then that. P536-2

And, it's a concern too about the park. Should we... Is it really wise having a station in Chinatown? Will that increase parking problems for traffic or are people going to go to Union station and park down there? And visually, how is that going to affect the park? P536-3

Comment from Julie Chow, Chinatown resident

Julie Chow Good evening, everyone.
I'm Julie Chow, and I have lived in Chinatown for many years.
I'm strongly opposed building this gondola.

Speaker 2 [My name is] Julie Chow, I've [lived] in Chinatown for many, many years, and I strongly oppose the gondola project.

P537-1

Julie Chow This approach is really disrespectful to the Chinese community.

Speaker 2 The gondola is very disrespectful to the Chinese community. [inaudible]

P537-2

Julie Chow If they really need it, they can build a subway, a bus.

P537-3

Julie Chow Let's oppose it together, we will not support it, always oppose it!

Speaker 2 Together, we oppose the gondola, forever!

P537-4

Comment from Li Wei Huang, Chinatown resident and tenant leader of Cathay Manor Tenants Association

---

Li Wei Huang We are strongly opposed this gondola project.
We will not sell Chinatown.

Speaker 2 Oppose the gondola. Do not sell- - Chinatown is not for sale.

Speaker 3 Chinatown is not for sale!

P538-1

Li Wei Huang Chinatown is our home

Speaker 2 Chinatown is our home

P538-2

Li Wei Huang If this gondola project proceeds, there is only harm, but no benefits.
If our voice can be heard, they should build the gondola near the park.
Do not pass through Chinatown, right?

Speaker 2 We don't want a gondola. We don't want a gondola [to] pass through Chinatown. Okay.

P538-3

Comment from Ne Huang Hom, Chinatown resident and President of the Cathay Manor Tenants Association

---

Speaker 1 We're going to have a resident from Chinatown, they speak in Chinese. P539-1

Ne Huang Hom Strongly oppose this gondola project.
Our Cathay building has hundreds of residents opposing this.

Speaker 1 He is [a resident of] Cathay Manor, senior citizen housing, he says he strongly opposes the gondola project, and the people, 300 residents of Cathay Manor oppose the gondola. P539-2

Ne Huang Hom We are strongly opposed this gondola project, it is a scam.
Our customers, large and small businesses will be scammed.
It will screw up our Chinatown. It's dirty and polluted. Tall buildings can't be built here.
This gondola will create more harm than good, we are opposed it.

Speaker 1 [inaudible] no good for the Chinatown community, it's not good for the China community. [inaudible] low-income residents, [and this will cause] more air pollution, [lack of] privacy, so we oppose! P539-3

Subject: Gondola

Sirs.
In response to your article re the proposed gondola from UnionStation/Chinatown to Dodger Stadium. If one makes the unlikely assumption that traffic on the gondola is as projected, where will all the cars/users park? The only real parking structure available is on the back side of Union Station. Imagine if you will several thousand folks trying to get into and then after the game out of that facility. At the same time, Dodger Stadium has a wonderful parking facility/lot that is, though sticky at game time works adequately. Yes, there is an increase in traffic at all the Stadium entrance points and surrounding streets (a social price worth the cost for the benefit of having the Dodgers in our city). And what then of the six to eight months during the off season? After building this monstrosity,all that would be accomplished is to shift the congestion to new locations.
This is clearly a vanity (and money making) project for/by Mr McCort: it is not needed
Respectfully submitted
Bob Hanisee

Subject: I OPPOSE Los Angeles Aerial Rapid Transit Project

To Whom It may concern:

*I oppose the Los Angeles Proposed Aerial Gondola to Dodger Stadium. *Gondola's will "fly" over communities in the area at low altitudes. These communities will suffer severe negative impacts including loss of privacy and cluttered airspace above their homes. This is yet another LA tourist attraction/moneymaker for the developer/owner while disregarding the negative impacts on the communities below. Residents are at your mercy, with no control. P542-1

This proposed Gondola Project will sacrifice communities and, like FAA's NextGen, will not meet the objectives. According to a *UCLA study attached*, the Gondola Project would not significantly reduce traffic around Dodger Stadium, will not reduce greenhouse gas emissions, will carry fewer passengers than LA ART claims, will not likely be used after the games, and will unlikely be used for any transportation aside from the games. There are easier, faster, and better ways to meet the objectives, such as making better use of existing bus lanes. P542-2

*The Gondolas will be using "mobility hubs." * Will this new hub have other purposes, for other modalities such as Advanced Air Mobility/Urban Air Mobility ("AAM/UAM")? *It's impossible not to draw the parallel between the Gondolas and AAM/UAM. *We have found that under former Mayor Garcetti, Los Angeles is being sacrificed as a test city for these new transportation modalities, that are little more than "taxis" holding only 2-4 people, flying at disturbingly low altitudes (350 feet AGL), serving only high-income users, and will not reduce freeway traffic. It will be a money maker for aviation industry insiders at the expense of the* communities below who will be subject to extreme impacts *stacked underneath NextGen jets and helicopters. *Unsuspecting sacrificial communities are left out of this process* until it's years in the making by private industry partnered with LA's policy makers/leaders, and too late for the public to put a stop to. P542-3

As a community activist in Studio City, for years I have been requesting information about AAM/UAM development in Los Angeles, only to now find that it is in advanced stages and ready to infiltrate our skies by 2024/2025. Former Mayor Garcetti/Metro/LAWA have been pushing for AAM/UAM progress, while the public remains ignorant of what lies ahead if they happen to be one of the "unlucky ones" under a flight path, or in this case, under a gondola. I have seen first-hand how citizens are shut out of the process -- their requests for information about safety, environmental impacts, and costs are left unanswered. *The human cost has been ignored in favor of monetary gain. * P542-4

LA leaders must start listening to the people. The desire to make a buck can't be greater than the interests of the people you serve who call LA home. Find a better way to get people to Dodger Stadium. *Stop the Gondola and Stop AAM/UAM before it's too late. *

P542-5

Sincerely,

Kimberly Turner

UCLA Mobility Lab

Study Finds Proposed Aerial Gondola to Dodger Stadium Will Do Little to Reduce Traffic and Emissions

October 24, 2022
University of California Los Angeles

Executive Summary

Los Angeles Aerial Rapid Transit (LA ART), a subsidiary of former Dodgers owner Frank McCourt's company McCourt Global, wants to build an aerial gondola to take people from Union Station to Dodger Stadium. Promoters of the gondola claim that it will take 3,000 polluting cars off neighborhood streets and the 110 freeway before and after Dodger games, leading to a net reduction in greenhouse gas emissions.

Transportation researchers from the University of California, Los Angeles (UCLA) examined these claims using a state-of-the-art transportation simulation model and found that the gondola could reduce traffic on major roads around Dodger Stadium on the night of a sold-out game, but the impact would likely be very limited. They found that the gondola likely would take only around 608 cars off the road. The gondola is thus unlikely to significantly reduce greenhouse gas emissions and traffic overall.

Methodology

The UCLA researchers — led by Dr. Brian Yueshuai He and Dr. Jiaqi Ma in the UCLA Mobility Lab at the UCLA Samueli School of Engineering — used the "LA Sim" model they created based on activity-based travel demand and agent-based simulation

models. The model is grounded in the theory of "discrete choice," for which Daniel F. McFadden won a Nobel Prize in economics in 2000. Based on real data about road network, traffic, public transportation, and other modes of moving around the city, including walking and bicycling, LA Sim simulates the individual choices that millions of travelers will make when something changes, such as adding another form of transportation, like a gondola to the Los Angeles transportation network.

The researchers caution that this simulation only models the probable use of the gondola for a sold-out night game and further research could reveal different scenarios for a day game or double-header, for example. But the research does model the most likely scenario for fans to choose the gondola — when traffic around the stadium is likely to be most heavy. Around 85% of baseball games played at Dodger Stadium are night games, starting at 7:10pm.

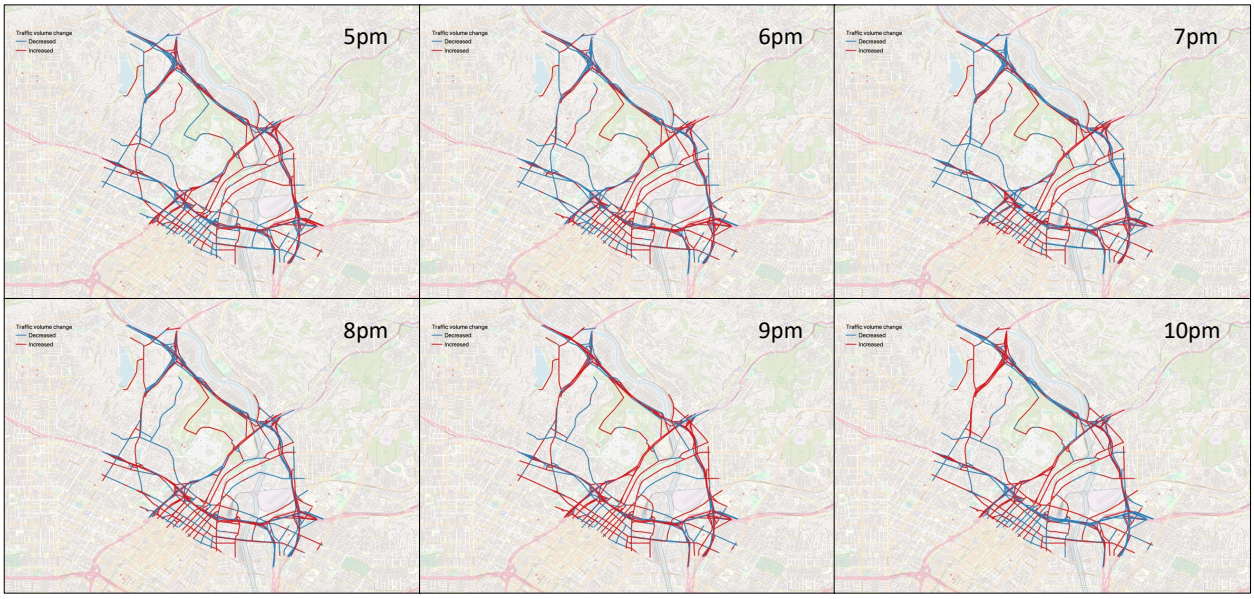

Figure 1: Traffic simulation results by the hour

Findings

- **Contrary to claims from LA ART, researchers found that the gondola would not significantly reduce traffic around Dodger Stadium.** Results showed the gondola would likely slightly reduce traffic on some roads around the stadium for a sold-out night game and increase traffic on others, leading to little

reduction in greenhouse gas emissions. The red lines in Figure 1 above indicate road segments that have a higher traffic volume after the proposed gondola is added to the traffic simulation. The blue lines indicate a decrease in traffic volume. According to the simulation, the total traffic volume would likely be reduced by around 0.9% (less than 1%) on the roads surrounding the stadium if the proposed gondola is built.

- **It's unlikely the gondola would contribute to a significant net decrease in greenhouse gas emissions.** Approximately 608 cars would be taken off the road, not nearly close to the 3,000 LA ART claims. Most of the people who choose the gondola in the simulation — 4,470 —board the gondola at Union Station, with another 220 passengers boarding at a station proposed to be located at Los Angeles State Historic Park near Chinatown. With only 4,690 people taking the gondola in total and of those 2,500 estimated to be regular users of the Dodger Stadium Express clean energy buses there would only be 2,190 new people taking public transportation to the game using the gondola. The average car parking at the stadium carries 3.6 people, which means that the approximate number of cars taken off the road would be around 608. The simulation only models the number of passengers connecting to the gondola via public transportation, on foot or by bike. It does not model people who would drive to Union Station or Chinatown to take the gondola. However, people who drive to those stations to take the gondola would not contribute to a net reduction in traffic or greenhouse gas emissions.

- **The gondola would carry fewer passengers than LA ART has claimed.** LA ART originally claimed that the gondola could carry up to 5,000 passengers per hour on game days. Researchers found that the gondola is likely to carry fewer than a total of 5,000 passengers to Dodger Stadium — 4,690 according to the simulation — even when the service is provided free with a game ticket for a sold-out night game like the playoffs. In a recent parking study, LA ART revised their claim, estimating that 6,000 would ride the gondola to games by 2026, with

4,350 arriving to the gondola via public transportation. The project's Draft Environmental Impact Report contains the same estimate, which corroborates the UCLA estimate of ridership if the gondola were in operation today.

- **Fewer people would take the gondola after the game – resulting in more traffic and emissions.** In the simulation, some fans — around 2,500 — seem to switch from the free Dodger Stadium Express buses to the gondola on the way from Union Station to a sold-out game, reducing the use of that service by close to half of the passengers it has carried to playoff games in the past. But about half of those passengers — more than 1,000 — seem to switch back to the Dodger Stadium Express on the way home, perhaps to avoid having to wait for a gondola car. Only 1,380 fans take the gondola on the way home in the simulation. This suggests that fans are unlikely to wait in line for the gondola after the game, instead taking the Dodger Stadium Express or perhaps opting for a ride-share, which would increase traffic and greenhouse gas emissions after the game.

- **Few people would use the gondola as a form of transportation other than to get to or from games.** The simulated use of the gondola during the daytime before the game suggests that very few people would use it as a form of transportation outside of getting to and from games: in the simulation, only 60 people — around one gondola carload — traveled to Dodger Stadium during the day, and only 140 passengers traveled from the stadium to Chinatown or Union Station during the day.

- **The model produced very similar results at different costs for a gondola trip.** LA ART previously announced that a gondola trip would cost $15. Later, they announced that game ticket holders could ride the gondola for free. They have also said that local rides could be purchased for a standard Metro fare. The researchers modeled two scenarios: 1) $10 for residents and free for game ticket holders, and 2) free to the public, and found very little difference in the results, indicating that residents are more likely sensitive to travel time rather

than cost. One key factor is that the service area of the gondola is limited and may not attract residents to choose it for daily travel.

About the Researchers

Dr. He is an Assistant Research Scientist at the UCLA Mobility Lab. He has extensive experience in big data analytics, transportation system analysis, and transportation policy evaluations. In the scope of cyber-physical systems, his research enables interactions between the physical infrastructure and virtual cyber systems by adopting data-driven techniques to support long-term urban system planning, management, and decision-making.

Dr. Ma is an Associate Professor in the UCLA Samueli School of Engineering and Associate Director of UCLA Institute of Transportation Studies. He has led and managed many research projects funded by U.S. DOT, NSF, state DOTs, and other federal/state/local programs covering areas of smart transportation systems, such as vehicle-highway automation, Intelligent Transportation Systems (ITS), connected vehicles, shared mobility, and large-scale smart system modeling and simulation, and artificial intelligence and advanced computing applications in transportation. He is an Associate Editor of the IEEE Transactions on Intelligent Vehicles and IEEE Open Journal of Intelligent Transportation Systems and Journal of Intelligent Transportation Systems. He is Member of the Transportation Research Board (TRB) Standing Committee on Vehicle-Highway Automation, Member of TRB Standing Committee on Artificial Intelligence and Advanced Computing Applications, Member of American Society of Civil Engineers (ASCE) Connected & Autonomous Vehicles Impacts Committee, Co-Chair of the IEEE ITS Society Technical Committee on Smart Mobility and Transportation 5.0.

Subject: Public Comment: Los Angeles Aerial Rapid Transit (LA ART) Project DEIR

Deputy Executive Officer Cory Zelmer,

I am writing to voice my opposition to the Los Angeles Aerial Rapid Transit Project ("The Gondola" at Dodger Stadium). As a resident of Los Angeles, I will be negatively impacted by this project. I am concerned about this project for the following reasons: P545-1

1. Environment: The Gondola Project will increase the impacts of air pollution from traffic and vehicle emissions in an area already overburdened by air emissions and pollution. P545-2

2. Historic and Cultural Resources: This project will hinder historic and cultural resources such as the Los Angeles State Historic Park, historic Union Station, and the Pueblo de Los Angeles Historic Monument. P545-3

3. Gentrification: This project will lead to displacement and increase the cost of rent in the area. P545-4

4. Lack of transparency and community consultation: Metro went forward with this project without an open public process and without competitive bidding. I don't understand the ownership or operation of the project because the details have been hidden from the community. Who is paying for this project? Will taxpayers be left holding the bag? P545-5

The community has been neglected and our people's voices have not been heard. Please do not go forward with this project.

Subject: OPPOSED to Building the Gondola

I am a Chinatown stakeholder and I am opposed to the Dodger Stadium gondola project. The gondola will serve no useful purpose to Chinatown residents and businesses. Most Chinatown residents do not regularly attend games or concerts at Dodger Stadium. The gondola and its towers would take up airspace in the community and nearby state park, which residents use for exercise and fresh air. It would do nothing to increase business and tourism in Chinatown, since passengers would fly right over the community. P546-1

Dodger fans presently can conveniently go from Union Station to the stadium on the direct Metro buses provided on game days. Residents and tourists already have transportation access to Chinatown via the Gold Line stop. What residents need from Metro is more frequent and reliable bus service so they can go shopping, to doctors's appointments, etc. P546-2

While your literature makes it look like a wonderful benefit built and supported by private funds, it is unclear where operating expenses down the road will come from. It would be improper if public space and public subsidies are being used to benefit private ventures while the city and Chinatown are in need of affordable housing, health care, social services. P546-3

Metro, as a public agency, needs to get its priorities correct. You are supposed to serve all the residents of the area, not manage wealthy individuals' vanity projects.

Subject: My objection to the proposed Gondola

Cory Zelmer, Deputy Executive Officer,
Los Angeles County Metropolitan Transportation Authority,
One Gateway Plaza, Mail Stop 99-22-6,
Los Angeles, CA 90012

Dear DEO Zelmer,

I am writing to express my deep opposition to the proposed Dodger Stadium gondola. My family has lived in the downtown and eastside community for a hundred years and we have witnessed and experienced many waves of displacement, as when our church and family home was lost to a freeway. At least I can say that freeway provides a service to the many. The gondola will serve the few, as the UCLA Mobility study has shown. I've been saddened to see longtime residents and businesses pushed out of Chinatown. The community is no longer the same. The gondola would further degrade quality of life and increase environmental pollution in the affected neighborhoods, it would privatize public resources for the benefit of private interests Frank McCourt and the Dodger organization, and it would provide very little in traffic mitigation or responsible and practical public transit. P548-1 P548-2

If you want to solve the traffic and parking problem at Dodger Stadium, then build and strengthen a safe, accessible and reliable public transit system. P548-3

Thank you for your attention to this matter.

Sincerely,
Renee Tajima
Los Angeles

To: "LAART@metro.net" <LAART@metro.net>
Subject: Comments on the DEIR

The DEIR is incomplete and inaccurate in fundamental respects. What are the ultimate plans for the Dodger Stadium parking lot? How will those plans impact traffic and greenhouse gas emissions? The data in the DEIR concerning number of car trips eliminated and impact on greenhouse gas emissions is flawed. It does not take into account that most gondola riders will take a rideshare or cab after the game and further that few (if any) will use the gondola on non-event days. This flaw impacts each and every statement in the DEIR on gondola ridership and greenhouse gas impact. P549-1

The construction of a massive tower and station at State Historic Park is contrary to the park?s historical mission and its recreational usage. These unwelcome developments would detract from the refuge offered by the park and the park viewshed. The Broadway bridge can be constructed without the massive gondola. The gondola impact on park users and local residents within the ?flight path? is profound and the lack of concern for residents is callous and heartbreaking. One must ask whether Frank McCourt and Metro board members would welcome gondolas whizzing over their yards and homes every few minutes? P549-2

The TSM Alternative is clearly feasible and superior yet it is discounted in the DEIR in order to present the gondola as the only solution to traffic and transportation issues. It is not the only solution. Express bus service can be increased. Just look at the Hollywood Bowl bus service. Loading stations can be added. No massive gondola is needed to move people around Chinatown, Solano Canyon and Elysian Park. Dash bus and Micro Metro services can do that much more efficiently and far less obtrusively. These existing solutions do not impact State Historic Park or El Pueblo. Take a lesson from the walkways that were built over Flower Street in downtown decades ago ? they are very lightly used while most people walk right down to the street to get to their downtown destinations. P549-3

The gondola would use public rights-of-way and park space for transport to a privately owned stadium and potential future private development. This is wrong. Any gondola built in the City of Los Angeles should serve a broad public purpose, such as transport to employment centers, existing entertainment/cultural centers or major healthcare facilities. Moreover, the DEIR does not specify how gondola operating costs will be funded. Undoubtedly these costs will far exceed some revenues from some third party advertising. I object strongly to use of tax dollars to fund/support the proposed gondola. P549-4

Stop the gondola and focus Metro efforts on more humane, people friendly and less costly green transportation modes. And while you are at it, please get those shade structures installed at the bus stops. How can it be that Metro is focused on constructing a massive gondola for Frank McCourt?s private commercial development objectives while poor working folks are sweltering at bus stops? P549-5

Subject: LAART DEIR Public Comment 01/16/2023

My name is Roger and I am a resident of the City of Los Angeles and was raised in the Chinatown community where the LA Aerial Rapid Transit gondola is being built. I am a data analyst employed in the field of clean transportation and infrastructure so public transportation infrastructure is something I am passionate about. I'm writing to voice my opposition to the construction of LA ART to Dodger Stadium for the following environmental reasons. P553-1

1. The construction of the LAART Gondola will be more environmental impactful than other alternatives such as Zero-Emission (ZE) bus mass transit and contribute noise and air pollution to the community. Metro already has a ZE fleet of busses and the successful Dodger Stadium Express program to provide green transportation to the stadium. P553-2

2. The LAART DEIR does not consider the fact that people will drive and park in Chinatown to take the gondola instead from the LA Historic Park Station (where there is free parking) instead of taking public transit to LAART. This will increase the amount of automotive emissions to the community. P553-3

3. Existing public transit infrastructure exists with the Dodger Stadium Express that connects union station and south bay to Dodger stadium. In the DEIR, the purpose of LAART is to connect public transit riders to Dodger Stadium. The existing infrastructure that is already established and successful invalidates the purpose of constructing the gondola other than the novelty aspect. The ZE bus fleet used in the Dodger Stadium Express would also be used daily on other routes while the LAART only has one route that would only be used during the 80-90 days that the stadium is used for home games. P553-4

These were the 3 biggest issues I had on the environmental impact of the gondola that the narrative of the DEIR does not emphasize. From my reading of the DEIR, it is not an objective and unbiased environmental impact report but rather a report that uses the guise of net-zero carbon emissions and clean transit to push a private development project that will mostly used for novelty and tourism. I would be extremely unsatisfied and disillusioned with Metro if the construction of the LAART begins. I hope you take my comment along with the community's opinions into consideration prior to your decision with LAART. Please reach out to me through email for further discussion or with any questions. Thank you for your time. P553-5

Best,

Roger

Subject: I oppose the LAART Project. (from B.Wong)

Dear LA County Metropolitan Transportation Authority,
This message is to express my opposition to the LAART Project (The Gondola). There has been little community input and comment on the project. When given the opportunity, people and organizations in Chinatown, Lincoln Heights, and the surrounding area express that the Gondola will hurt the community. It is doubtful that it will transport large numbers of people for Dodger games and for concerts. In fact, it is likely to bring more traffic and congestion into the Chinatown area. It is no secret that Frank Court wants to start a giant complex development in the Dodger Stadium area. The Gondola is a step for development that will not benefit the residential and business communities of Chinatown and Lincoln Heights. It will lead to displacement and rent increase for local businesses and residents. I oppose this project because it will hurt the local residential and business communities.

Subject: Dodger Stadium Gondola

To Whom It May Concern,

As a Solano Canyon community resident, I am completely AGAINST the proposed gondola monstrosity being built in our beautiful and historic neighborhood. P556-1

I am concerned about our neighborhood's historic infrastructure, our neighbor's privacy, our safety, and the public costs this project will surely cost. P556-2

Our community didn't ask for this project. NO ONE in this neighborhood is "for" this horrible structure. NO ONE! P556-3

The project will require the use of public rights of way, public airspace, and public lands for the placement of multiple towers with suspended cars intended to move a few thousand people in each direction between Union Station and Dodger Stadium for games and events.

The plan for massive towers ranging from six stories (84 ft) to 13 stories (195 ft) in height - is frightening and ugly. P556-4

Our neighborhoods will be forever changed. P556-5

Operating at maximum capacity is equivalent to 42 shipping container-size gondolas flying over our neighborhoods. A recent poll shows 76% of Angelenos oppose McCourt's gondola. There is already a free bus shuttle that takes fans to Dodger Stadium. P556-6

OUR COMMUNITY DOES NOT WANT OR NEED THE GONDOLA. P556-7

Building a project of this magnitude when the Dodgers only have 81 home games a year and limited events is a waste of taxpayer dollars. What else is McCourt not telling us? Maybe planning on making Dodger Stadium a 365 day theme park? Maybe setting the stage for the Riboli Family to build their 900-apartment complex on our state park?

Whatever it is - We say "No!"

NO GONDOLA. EVER. P556-8

To: LAART@metro.net
Subject: Aerial Rapid Transit Project

I am opposed to the Los Angeles Aerial Rapid Transit Project. After researching what this project will entail, it is clear to me that this project will be detrimental to the affected city's communities, aesthetics, L.A. Historic Park, Union Station and Pueblo de Los Angeles Historic Monument. P557-1

I understand you did not conduct an open public process? This is unacceptable. Who is paying for this project? What is this project projected to produce in financial returns? Is any of that money earmarked fot the affected communities? Who is paying for this project? Who will pay for the maintenance of the completed project? Will taxpayers be saddled with this expense while private owners earn returns? P557-2

Transportation researchers from the University of California, Los Angeles (UCLA) used a state-of-the-art transportation simulation based on a Nobel-Prize winning model and found that the gondola has limited impact - less than 1% - in reducing traffic on major roads around Dodger Stadium on the night of a sold-out game. They also found that far fewer passengers would likely get to the gondola via public transit connections than LA ART claims. Without reducing traffic and increasing public transit connections, the gondola does little to change our air quality and reduce greenhouse gas emissions. P557-3

This sounds like Chavez Ravine Part II. P557-4

This Project is cloaked in secrecy, it is being done with no regard for the communities and people it will affect. The people of Los Angeles are tired of having no input where Big Money projects are concerned, even as they affect their quality of life. P557-5

This sounds like a typical Fascist Project. Big Money talks and the people who actually live in the area suffer. There is seemingly no benefit to them, negligible reduction in traffic (in an already VERY heavy traffic area thanks to Dodger Stadium), desecration of cherished historical places, more damage to local streets, increased litter and more crime. This is happening all over this country, and it's unacceptable. P557-6

I intend to write our Mayor and our Governor. I wonder if they've received any financial incentive to support this project. P557-7

Subject: Public Comment: Los Angeles Aerial Rapid Transit (LA ART) Project DEIR

Deputy Executive Officer Cory Zelmer,

I am writing to voice my opposition to the Los Angeles Aerial Rapid Transit Project ("The Gondola" at Dodger Stadium).

I, as a resident who is sensitive and cares about sustainability in our existing communities would disqualify the importance and emphasize the less-than priority of this project juxtaposed with the current suffering economy in the LA area. (Attention to the homeless crisis is one example of said suffering)

1. Aesthically it is ugly. Where do you find gondola in big city
2. The cost of building will be definitely be more than $125m if you acct for inflation
3. Taxpayer should not shoulder the cost. If McCourt wants it, he has to pay for it.
4. How safe is the gondola? Just last year, gondola fell in Italy. Think about the casualty cost
5. Building the gondola will cause people to lost their homes. Where are you going to house the displace family.
6. Who would use the gondola if there's no event? So it is a waste of resources when it can be use to help taxpayer
7. How can you ensure (prove) that the city will recover the cost of the cable car (gondola) if there is low ridership? Because the city does not care

AS a resident of Chinatown, and a life long Los Angeles resident, I condemn the LA ART Gondola. Gentrification in Chinatown and Los Angeles is rampant & the gondola will contribute to the displacement of the existing community of Chinese, Latin, and Black multigenerational communities. We see no substantial evidence that it will positively impact the environment. ~~positively~~ It will contribute to traffic congestion in the surrounding Chinatown and surrounding union station. We do not have any knowledge of the private investor or his motive to build in Chinatown. Residents need to be educated about the prevalent issues conserning our housing and access to markets, and hospitals.
Chinatown speaks up!

Chinatown does not need a Gondola. In a City with the most severe housing/homelessness crisis in America, it is an absolute travesty & shame that the City is choosing to prioritize this gentrification project that has absolutely no benefit to normal, working class people. I would never pay $30 to ride the Gondola. This is further privatization of instead transportation when the City should be prioritizing increasing public transportation & supporting affordable housing instead of projects like these which will only exacerbate the terrible housing crisis.

I am concerned about the financing and the ability to carry through with the promises being made. Specifically, the implementation and repair of cloudings the windows to preserve privacy for people living in houses and apartments along the route and maintaining the fare equal to that of the buses and use of TAP card. Once this is built, these things can fall to the wayside.

How many people want to use this and how often? The cost will have to be kept low which may require the shifting of money from bus or rail service to the gondola. This route is so small and affects so few people and the cost so ~~suggest~~ high that the project does not seem worthwhile.

How many riders are not able to get on the current buses? Can the addition of more buses solve the need? Is there room to add a bus lane to speed up the service?

As a tenant/resident living in Chinatown, not to mention, being a disabled senior, I struggle in the current situation to find parking near my building. additionally, the foot traffic near my residence is already loud and sometimes rowdy and frightening.

I have noticed that the existing traffic issues caused by Dodger fans be it parking, eating at local restaurants is already quite heavy on the play dates. I'm only imagining now what that is going to mean to our park with hundreds more people "tramping" through our neighborhood. I believe in business, local business benefiting from the additional profits they may gain. However, having worked with in community activism in Boyle Heights and East LA. I have seen what occurs when gentrification occurs. Its very sad and disturbing to see the neighborhood change and destroy families and communities.

Please hear our concerns. Please keep Chinatown as it is

Sent via e-mail: LAART@metro.net

Re: Los Angeles Aerial Rapid Transit Project Draft EIR Comments

Dear Mr. Zelmer,

I'd like to submit the following comments on the Los Angeles Aerial Rapid Transit Project Draft EIR. I believe the DEIR is deficient in a number of areas, including, but not limited to Aesthetics, Cultural Resources and Geology. The project description is also problematic. My detailed comments are below. P590-1

Sincerely,
Casey Maddren
2141 Cahuenga Blvd., Apt. 17
Los Angeles, CA 90068

LOS ANGELES AERIAL RAPID TRANSIT PROJECT DRAFT EIR COMMENTS

Project Overview/Project Description

To begin, there are problems with the Project Overview and Project Description. The DEIR says that the Project will not only convey people to Dodger Stadium, but it will also serve the transit needs of area residents. Given the limited number of stations included in the Project, this is highly unlikely. The Chinatown/State Park Station is already accessible by the existing Metro Line 96 and by the Gold Line. To support its claim, the DEIR references gondolas being used for urban transit in La Paz, Bolivia, and Mexico City, Mexico. The Laz Paz Teleferico includes a number of lines that cover 6 miles and serve 26 stations. Plans are in place to extend it to over 20 miles. Mexicable covers three miles and serves seven stations. The proposed LA ART system is only 1.2 miles in length and has only three station stops, two of which are already served by existing lines. Even if LA ART were to assist in transporting fans to Dodger Stadium during baseball season, it's unlikely that transit riders would have much reason to use it during the rest of the year. P590-2

The DEIR claims that:

"When complete, the proposed Project would have a maximum capacity of approximately 5,000 people per hour per direction, and the travel time from LAUS to Dodger Stadium would be approximately seven minutes." P590-3

The following paragraph says:

"The proposed Project would employ a Tricable Detachable Gondola system (also known as "3S"). 3S Gondola system cabins carry approximately 30 to 40 passengers."

If we divide 5,000 by 40, the answer is 125, so the DEIR seems to be saying that the gondolas will be making 125 one-way trips every hour. This means that a gondola will be leaving Union Station about every 30 seconds. This does not seem credible. First, the authors of the DEIR assume that every gondola will be filled to maximum capacity, which is unlikely. It's also unlikely that each gondola could reliably board 40 passengers every 30 seconds. The authors don't appear to take into account the realities of public transit and the various needs of its passengers, included passengers in wheelchairs, the visually impaired, parents with children in strollers, etc.. Beyond that, the authors' calculations assume that a minimum of 40 passengers will arrive and be able to gain access to the platform every 30 seconds. This is wishful thinking, not a realistic estimate.

cont'd P590-3

Aesthetics

The authors of the DEIR find that the Project will not have a significant adverse impact on scenic vistas or scenic resources. They conclude that:

"[T]he Project would not block any designated scenic views, alter a designated scenic area, or block panoramic views. As such, operation of the proposed Project would not substantially affect scenic vistas or other panoramic views, and impacts would be less than significant."

Further stating:

"As illustrated in Figures 5-1 through 5-8 in Appendix C of this Draft EIR, the proposed Project would be consistent with Objective 4.2 of the Central City Community Plan related to the preservation of visual links to open space areas, as the Project would form a background feature and would not block views of open space areas. The Project design would also provide attractive transit services in compliance with the Mobility Plan 2035."

P590-4

Though the Project may not impact designated scenic areas, it would be built in the oldest part of Los Angeles, a low-rise community filled with some of the city's most important cultural artifacts. The Project does not preserve visual links to opens spaces, and in fact, will obstruct views of open space in the historic core. The authors claim that the Project, with stations 173 feet long, 109 feet wide, and 78 feet high, and towers 195 feet tall would merely be "a background feature and would not block views of open space areas." This is nothing more than the authors' subjective opinion, and many area residents have already let it be known that they disagree strongly.

Furthermore, the photos included in the DEIR under Aesthetics clearly do not give an accurate picture of the aesthetic qualities of the area. They seem to have been chosen to downplay the beauty of the historic core, and none of them capture the numerous scenic views that are available to residents and visitors. To correct the DEIR's deficiencies, I am including a few photos that I believe more accurately represent the area.

cont'd
P590-5

A view of Gold Line Chinatown Station from Spring St.

Cultural Resources

Related to the issues discussed above, the DEIR's conclusion that the Project will have no significant impact on historic resources is not credible. As discussed above, the historic core is a low-rise district that contains some of the oldest structures in Los Angeles. The Project's design and scale are glaringly incompatible with the architecture of Union Station, Pico House, the Avila Adobe, the US Post Office and numerous other structures in the area. P590-6

Additionally, the DEIR does not adequately assess the impact caused by construction of the Project, including significant excavation and associated groundborn vibration. There are a number of structures in the area that are over 100 years old, including the Avila Adobe. Excavation on the scale proposed, including groundborn vibration, could weaken or damage older buildings. The DEIR fails to adequately analyze potential impacts to these historic buildings. P590-7

Geology

The DEIR lists the known faults in the Los Angeles area, and acknowledges hazards at the Project site, including ground shaking, liquefaction, lateral spreading, and ground lurching. The geotechnical report in Appendix I to some degree examines potential impacts related to the Raymond Fault, but the analysis is limited and appears to downplay potential risks. While the presence of the fault does not trigger Alquist-Priolo, there still could be substantial risks. The DEIR states: P590-8

"Although these constraints are limiting, the most current models (UCERF3) indicate it has approximately 1.2% probability of participating in an earthquake of magnitude greater than 6.7 before 2038. The upper 95% confidence limit on this estimate is approximately 2.2% of an event with a magnitude greater than 6.7 before 2038. The likelihood of experiencing an event of Magnitude > 7.0 is 0.8%, and the likelihood of experiencing an event of Magnitude > 7.5 is less than 0.1% in that time period."

The most obvious question is, Why does the DEIR's analysis only go so far as 2038? Since the earliest date for the Project's completion is likely to be 2026, it's hard to understand why the DEIR only looks 12 years into the future. Presumably the Project would stand for decades. And given the LA area's susceptibility to seismic activity, it seems necessary to extend the projection. Also, why does the DEIR not give an estimate for earthquakes measuring less than 6.7? An earthquake on the Raymond Fault measuring 6 on the Richter Scale would have the potential to cause significant damage. Because the Project site is subject to liquefaction, a smaller earthquake also would have the potential to cause significant damage. The DEIR's analysis is clearly deficient. P590-9

Aside from the Raymond Fault, the DEIR fails to consider the Puente Hills Blind-Thrust Fault, which seismic experts believe could represent the greatest threat to the LA area. While the PHBT Fault is five miles from the Project site, scientists have expressed the opinion that a rupture on the PBHT could be felt as far as Downtown and beyond. Though scientists believe the probability of a major rupture on the PBHT is low, they also believe that even a lesser rupture could cause substantial damage. Please see the following study: P590-10

New Methodology for Defining Concealed Earthquake Sources, Puente Hills Blind-Thrust USC, Harvard, USGS, James F. Dolan and Shari A. Christofferson, February 2003 P590-11
https://earthquake.usgs.gov/cfusion/external_grants/reports/02HQGR0042.pdf

Here's an excerpt from page 6:

A large-magnitude PHT event would have devastating societal and economic impact on California. Not only does the PHT lie directly beneath Los Angeles, but this northdipping fault also defines the northeastern edge of the Los Angeles basin, a 10-km-deep, sediment-filled trough. Computer simulations indicate that these thick basinal sediments will significantly amplify both the duration and amplitude of strong ground motions (Olsen and Archuleta, 1996; Wald and Graves, 1998; Field et al., 2000). If a major PHT rupture similar to those we have documented were to exhibit updip directly, a common occurrence in many thrust earthquakes, seismic energy would be focused directly into the thick sedimentary fill of the Los Angeles basin. In addition to strong ground motions associated with Mw≥7 earthquakes on the PHT, the coseismic development of 1- to 2-mhigh, ≤125 m-wide fold scarps, such as those observed at the Carfax site, will greatly disrupt any infrastructure built across the zone of active folding. Recognition of these narrow zones of co-seismic folding indicates that blind thrust faults represent as significant a surface-deformation hazard as faults that breach the surface.

Please see also the following:

Loss Estimates for a Puente Hills Blind-Thrust Earthquake in Los Angeles, California
Seligson, Et Al, May 2005
https://pubs.er.usgs.gov/publication/70029508

Here's an excerpt from the abstract:

Based on OpenSHA and HAZUS-MH, we present loss estimates for an earthquake rupture on the recently identified Puente Hills blind-thrust fault beneath Los Angeles. Given a range of possible magnitudes and ground motion models, and presuming a full fault rupture, we estimate the total economic loss to be between $82 and $252 billion. This range is not only considerably higher than a previous estimate of $69 billion, but also implies the event would be the costliest disaster in U.S. history. The analysis has also provided the following predictions: 3,000-18,000 fatalities, 142,000-735,000 displaced households, 42,000-211,000 in need of short-term public shelter, and 30,000-99,000 tons of debris generated. Finally, we show that the choice of ground motion model can be more influential than the earthquake magnitude, and that reducing this epistemic uncertainty (e.g., via model improvement and/or rejection) could reduce the uncertainty of the loss estimates by up to a factor of two. We note that a full Puente Hills fault rupture is a rare event (once every ???3,000 years), and that other seismic sources pose significant risk as well. ?? 2005, Earthquake Engineering Research Institute.

Subject: Stop the Gondola

Mr. Zelmer, Deputy Executive Officer,
Los Angeles County Metropolitan Transportation Authority,

As a member of the Solano Canyon community, I am AGAINST this proposed gondola our historic neighborhood. I am concerned about our neighborhood's historic infrastructure, our neighbor's privacy, our safety, and public costs associated with this project. P591-1

Our community didn't ask for this project. The project will require the use of public rights of way, public airspace, and public lands for the placement of multiple towers with suspended cars intended to move a few thousand people in each direction between Union Station and Dodger Stadium for games and events. P591-2

We know this is not about Dodger fans, this is Frank McCourt making money. Why is the city and the agencies silent in the fact that a millionaire kept land taken with the power of eminent domain? While other cities are doing the right thing, the city of LA is silent in the land stolen from people in the ravines, and then sold to a private corporation, further divided and kept by Frank McCourt. P591-3

LA should focus on fixing public transportation to and from the stadium. The city of Los Angeles should stop handing out sweetheart deals to millionaires. Metro has a line in Chinatown already, why not connect it to the stadium? This, in and of itself, is an idication that Metro is looking the other way for Frank McCourt. Building a project of this magnitude when the Dodgers only have 81 home games a year and limited events is a waste of taxpayer dollars. What else is McCourt and Metro not telling us? P591-4 P591-5

Do this community right for the first time. You took our land, to put a stadium, them a freeway, then a toxic dump, more freeways. Keep this gondola away from our community. P591-6

L.A. Moreno

Deputy Executive Officer Cory Zelmer,

I am writing to voice my opposition to the Los Angeles Aerial Rapid Transit Project ("The Gondola" at Dodger Stadium). I was born and raised in the Eastside of Los Angeles and I've worked in the community all of my adult life. I will be impacted everyday if this project moves into motion, my daily commute will be impacted as I drive through Chinatown and Union Station daily. I see firsthand the needs of these communities and I am sick and tired of seeing community neglected and cast off for monetary gain. This gondola is not for the people of LA. This does not reflect the needs of this community, stop displacing people and do not proceed with this project. Listen to the needs of community and do better. We do not want this project, we do not need this. We need cleaner air and affordable housing. This project will do the opposite of that, it will continue the rapid gentrification of our neighborhoods and the pollution of an already over polluted community. Do better by your people and this community. We do not bleed blue. We bleed red. Stop the violence and stop the gondola.

To: laart@metro.net
Subject: Public Comment: Los Angles Aerial Rapid Transit (LA Art) Project DEIR

To Whom it May Concern:

I am writing to submit public comment on the matter of LAART. I would like to voice my strong opposition to this project. As a resident of Echo Park and a garden manager at the Solano Canyon Community Garden, I know how disastrous this project would be to our community's quality of life. Time and again the communities of Chavez Ravine, Solano Canyon, and Echo Park have been sacrificed for the benefit of Dodger stadium, and it is time that the city put a stop to this destructive land grab. P599-1 P599-2

There are several reasons I am concerned about this project. A major one concerns traffic. The surrounding neighborhoods to the proposed Gondola project already suffer from congested traffic and gridlocked cars on every home day game. As I have witnessed on numerous occasions, visitors to Dodger Stadium unfortunately lack basic respect for the communities they are traveling through and parking in. This includes littering, being loud, making dangerous traffic maneuvers. The Gondola project will exacerbate, not ameliorate, this problem. It will also directly negatively impact the LA State Historic Park, a cultural gem for everyone who visits it. The project plans to cut down many mature trees in the park, which is a horrible idea for a city that suffers from terrible lack of shade resources impacting its poorest communities. Finally, giving this project a green light would lead to further speculative land grabs in the surrounding areas, which have already suffered at the hands of developers driving rent prices up. P599-3 P599-4 P599-5

At a time when Angelenos are fed up with the lack of public transportation in our city, it is an utter embarrassment and profound negligence to think the city would approve a project for a "public transportation" option that would only benefit visitors to a baseball game. Please consider how detrimental this project would be to all the city, and say no to developers. P599-6

Best,

Isabel Frampton Wade

Subject: Public Comment: Los Angeles Aerial Rapid Transit (LA ART) Project DEIR

Deputy Executive Officer Cory Zelmer,

I am writing to voice my opposition to the Los Angeles Aerial Rapid Transit Project ("The Gondola" at Dodger Stadium). I''m a resident of the Dodger stadium neighborhood and know the current traffic patterns well. It isn''t great, but this proposal only seems to benefit Gondola investors hoping to make a profit from the Gondola itself or future related developments. Any claims of alleviating traffic or helping the surrounding communities are a sham. P601-1

The idea that funneling traffic into Chinatown to solve current traffic jams isn''t sound. It is simply relocating the traffic to an already congested area. The streets around Union station are already jammed, especially during commuting hours. Dodger games and concerts coincide with the evening commute for so much of the year that this traffic seems likely to be worse than current conditions. P601-2

The development of a Gondola will burden Chinatown, a community already struggling with gentrification, with additional rent hikes and elderly displacement. Not to mention the prospect of new commercial and luxury residential developments that are likely to follow the Gondola, further pushing out current residents. P601-3

Subject: Public Comment: Los Angeles Aerial Rapid Transit (LA ART) Project DEIR

Deputy Executive Officer Cory Zelmer,

Good afternoon, I'm writing to ask that you vote against the Los Angeles Aerial Rapid Transit Project ("The Gondola") at Dodger Stadium. P603-1

This project would displace traffic from Dodger Stadium by placing the burden and environmental on residents of Chinatown. This would disrupt the community and is a huge waste of time and resources for something that doesn't truly count as public transit. In reality we need serious investment in public transit across Los Angeles County in order to ease our massive traffic problem. P603-2

This project will also cause a spike in housing costs, displacement, and gentrification in Chinatown, whose residents need more housing security, not less. P603-3

Subject: Public Comment: Los Angeles Aerial Rapid Transit (LA ART) Project DEIR

I am writing to voice my opposition to the Los Angeles Aerial Rapid Transit Project ("The Gondola" at Dodger Stadium). P604-1

The proposed gondola's station in front of one of our most historic and beautiful buildings, Union Station, will be completely blocked from all viewing angles from the Pueblo and from Alameda St. This is unacceptable. No structure should block views of Union Station or the Historic Pueblo. P604-2

Don't fuck up the area around the Historic Pueblo, Union Station and the LA Historic State Park with a gondola that would just be visual and actual blight. Build a subway from union Station to Dodger stadium instead, just like New York City has a dedicated short subway line between Times Square and Grand Central Station. P604-3

Do not allow the gondola to be built. P604-4

Regards,
Boyle Heights Resident

Subject: Public Comment: Los Angeles Aerial Rapid Transit [LA ART] Project DEIR

I am writing today to voice my strong opposition to the LAART project as a representative of the Crenshaw/Slauson community. I, Nina Kagan, will be impacted by this project for a wide array of reasons. P605-1

My primary concern of this project is it's exceptional cost and few benefits for the vast majority of metro riders. As someone who frequently uses the expo, red and purple lines, I feel like it is ridiculous to focus energy on a project that serves exclusively dodgers stadium, because it does so little to incentivize average commuters to use public transportation. If anything, the project looks to push traffic for Dodger's Stadium outside of the area into surrounding areas, while providing no feasible utility for most people, who want to get from home to work with ease. P605-2

I've taken metro for the past decade, and although bus systems have gotten marginally better over time, the infrequencies of service on important routes (Vermont for example) make connecting between the city difficult and inconvenient. The goal of our cities infrastructure should be to get people where they need to be safely, affordably, and environmentally soundly. P605-3

The proposed project will be visually distracting in the overall skyline, and will bring more tailpipe emissions into communities, with new drivers (WHICH PUBLIC TRANSPORTATION SHOULD BE ELIMINATING). P605-4 This project does little to support the mobility of the public, and quite honestly it's an offensive reminder of the failure of the city to build the affordable housing project Elysian Park Heights on the land that the Dodger's stadium now sits on. P605-5 P605-6

Why should I as a taxpayer be forced to foot the bill for something so overtly offensive to me? I've put up with getting screamed at, harassed and watched people openly smoke crack on the Red Line, and yet I continued to take transit, because I found something positive in the lack of emissions public transit options offer in comparison to driving. P605-7

Metro should be transparent in their policies. If you don't care about poor people that's horrible but not surprising. What is offensive is asking us to foot the bill so you can show rich people what your city has to offer to rich clients by the time the 2028 Olympic bid rolls around. It's ridiculous, it's shady and it's downright evil. P605-8

No metro projects should go forward without community input PERIOD. P605-9

Please cancel this project,

Nina Kagan

Deputy Executive Officer Cory Zelmer,

Hi,

I am a part of the LA28 Olympics Creator group. I am writing to voice my opposition to the Los Angeles Aerial Rapid Transit Project ("The Gondola" at Dodger Stadium). This wont reduce traffic or green house emissions. We need so many projects in LA, this isn't one. P606-1

Subject: Comments on the Gondola Proposal

Thank you for the opportunity to comment on a project that will affect those of us who live in Chinatown. Attached is a PDF version for your convenience.

I am a resident of Metro@Chinatown Senior Lofts and have been a Metro rider for decades. My main concerns are as follows: P607-1

Privacy

The gondola will be going over or near residential areas, allowing a view of outdoor community areas in apartment complexes and the backyard of homes, hopefully not through windows or skylights. Those who like to take photographs or shoot video will do so. These photographs and videos could then be posted on social media.

Fogging the windows will frustrate whose who want to take photographs and expect to be able to do so. Not fogging the windows will eliminate privacy for residents. This transit system should never be build over or near current residential areas. P607-2

Trust is a big issue these days. People with authority say something one day, only to be proven to be liars months later. You say that you will fog the windows when near apartment buildings and houses. But will you do so if tourists with cameras are willing to pay $30 for a ride? Once you have your system built, will you keep your promises?

Aesthetics

The modern station design is not appropriate when in the vicinity of historic buildings such as Union Station and those at El Pueblo. The birthplace of our city deserves more respect than this. P607-3

The drawings of the Chinatown Station were not adequate to give a good sense of what the area will look like. The Gold/L Line Station has a Chinese theme which is appropriate for the area. It looks like the gondola is encroaching too much into the park. The park is a celebration of nature and of history. The gondola is neither. P607-4

The design of the gondola may look fine in a more modern community but it does not in the older, historic parts of downtown. P607-5

Other considerations

The lighting should not shine into any home or apartment. P607-6

The Need

Is there truly a need for this project? How many people are standing in line to wait for the next express bus? Are the buses too crowded and do many people have to stand? Do some people give up and leave? Are some late in getting to the game? P607-7

These are the people that you will be serving. They would just be changing from one form of public transit to another. Many others will try the gondola. It is a novelty. But will they continue riding it indefinitely? P607-8

This project is not about how many people the gondola can carry each hour, but how many people P607-9

want to use it on a regular basis. Since it will be disruptive to Chinatown due to increased traffic on narrow streets, decreased available parking, and a probable loss of privacy, the need had better be proven.

cont'd P607-9

I am tempted to think that your modeling of future ridership is too optimistic. Your literature says that the project will remove 3000 cars from the road, but the UCLA study puts the number closer to 600.

P607-10

With the large amount of parking available at the stadium and the desire of many drivers to drive there, the first priority should be to improve access to the parking lots and supply shuttle buses going up the hill before the games if practical.

P607-11

Second, there should be a dedicated bus lanes both before and after the game. Since the gondola does not come to a full stop, some people may prefer the bus even if the gondola is built – handicapped, elderly, a parent with several small children, etc.

P607-12

There is also the possibility of direct bus service connecting to more remote locations or from other directions. Is there any need for bus service to Elysian Park hours before the game?

P607-13

A Further Note

The Los Angeles State Historic Park does not need the gondola. It has the Gold/L Line. It does need a bridge across the tracks at the northern portion of the park. This is a need. It is not directly related to the gondola and would be at the bottom of the list of priorities for its construction.

P607-14

Additional Comments

Metro should never divert money from the public transit system to the gondola since the route is short and few riders would benefit. At this time, it did not sound like a possibility but things can change.

P607-15

I assume that none of the structures build for the gondola system will disrupt the view of the stadium fireworks for any of the surrounding communities. Is this true?

P607-16

Please pay attention to what small business owners and managers are saying. I do not know how the increased traffic and competition for parking places will affect them and their regular customers. These businesses are important to the community.

P607-17

I live in a senior building in Chinatown. The increased traffic should make it more difficult to find parking places. Seniors usually do not want to walk far or may not feel safe at night.

P607-18

There are many important issues examined in the report, such as geology and soil. I have some concern but am not knowledgeable enough to make comments. I will have to leave that to others.

P607-19

There appears to be many good people who worked hard on this proposal, having listened to many of the concerns, and others who have studied it and prepared the report. I respect that. But I have seen too much corruption to fully trust in what I am told. Is this really needed?

Thank you for all the effort that is going into the study of this proposed project. May you reach a wise decision.

P607-20

Victoria Steele

Subject: Public Comment: Los Angeles Aerial Rapid Transit (LA ART) Project DEIR

Deputy Executive Officer Cory Zelmer,

Hi there,

I live in Echo Park near Dodgers Stadium and do not want this project in our neighborhood. I really don't like the traffic during Dodgers games either, but a gondola is not the way to solve it. A gondola is a transit method to get a large amount of people somewhere over a long period of time. It sounds like you need a transit method that will get a large amount of people somewhere in a quick amount of time to fill the stadium. It doesn't make sense to me how this will achieve any benefit for us. P608-1

Solano Canyon, Elysian Park, and the State Park are also beautiful greenspaces that do not need gondola cabins cutting through to ruin that. It is already so hard to access greenspaces in LA, why tamper with the little we have already to give ourselves peace and tranquility? P608-2 I also understand the construction will *destroy* trees and local bat populations in and around the State Park. This is wrong. We are in a climate crisis and to destroy the environment for such an ill-informed idea is awful. P608-3 Please just invest in proper transit. Expand the shuttle system to the gondola. Inform Dodgers game-goers to get there earlier. Anything but this. P608-4

I also understand you are not building any additional parking for this project. That means to board, people have to go to Union or College Station. So you're banking on existing transit-goers to use the gondola. Who would even do that? This is Los Angeles. Everyone knows the majority of us drive everywhere, and drive on gamedays. Do people really think they will stop driving to games just to take the gondola? That doesn't sound like any Angeleno I know. And I have lived here for 28 years. P608-5

Another thing is, there is traffic coming from all sorts of directions throughout LA to get to Dodgers Stadium. I don't see this project proposed from Silver Lake or Angeleno Heights. Instead, it will be built on top of Chinatown where the population is largely elderly immigrants. This isn't right at all, and shows how misguided this project is. P608-6

Please, I too want the traffic to go down. Gamedays really mess with my local traffic as I'm just up the hill from Stadium Way, but this aerial gondola doesn't seem like it will address that at all. It's such an absurd idea. I've seen the advertisements too. People seem to think it will be exciting to ride and that it will have low emissions. P608-7 I too want to reduce my emissions when I'm stuck in traffic, but if you don't build additional parking, aren't you just moving the emissions from our area to the Downtown and Chinatown areas? Making these already run down areas worse? I know I am lucky to live where I live so close to Elysian trails, but not everyone else is. And certainly people in more difficult living situations should not have that be made worse for them. Effectively, this project is a health hazard. P608-8

Oh, and aren't there only 80 home games in a year? So 285 days of the year, 78% of the year you want the gondola to run for no reason? Can you explain how Los Angeles Metro, who we should trust to meet the people's needs for transit, to get to work, to get home— how did your experts decide this was a good idea? How do you justify this? P608-9

Frankly, this injures my faith in our Metro system. I just don't understand how the project got this far. Please, save the trees, save the bats, and leave our elders alone. Please think of something else. P608-10 P608-11

I do not want this LA ART Gondola. I want better for all of this. P608-12

Sincerely,
Yee

Subject: Public Comment re Gondola

Hi,

I'm a resident in Solano Canyon and want to voice that I do not support the construction of the proposed Gondola in any way. Build a bridge from Broadway to the park instead for crying out loud. Surely there's a better way to spent $300 million than a vanity project gondola. P609-1

Deputy Executive Officer Cory Zelmer,

Dear Mr. Zelmer,

I live at the top of the hill where Chinatown meets Echo Park, right up against Dodger Stadium. My neighborhood is most impacted by the traffic on game days and during events, and will be most impacted by the proposed LA ART. P610-1

I am ardently opposed to it, for a myriad of reasons. Chief among them is that this project is exorbitantly costly, and those funds would be better spent improving our existing infrastructure, including bus/bike lanes. Developing an entirely new transportation system from scratch is an unreasonably expensive proposition when compared to making improvements to the existing transit modes. That the project proposes to make up some of that expense by charging passengers -- when the shuttle busses from Union Station are free -- underscores how unwarranted and reckless this added cost is. P610-2

What's more, this project as proposed is a ruthless intrusion into residents' lives. Between the lack of transparency around the ownership, bidding process and eventual operation of the project and the potential for advertising, lighting and other visual assaults to become overhead fixtures in our neighborhood, the entire prospect is unwelcome. P610-3

Please heed the local community opposition and invest in improving our existing transit options instead! P610-4

Deputy Executive Officer Cory Zelmer,

I am writing to voice my opposition to the Los Angeles Aerial Rapid Transit Project ("The Gondola" at Dodger Stadium). I do not think this is a safe project to build. What if it falls on top of the people below? I do not see safety plans in place that will prevent this. And what happens if it stops and people get stuck inside? How will you escape? How long will it take for help to get there in time? And what if you are stuck inside and you need to use the bathroom? The Gondola will mess with the birds flying through the area too and we need our natural animals and birds populations. I think you should build more buses and trains and subways instead. You are Metro, not LAX. P611-1 P611-2 P611-3 P611-4 P611-5

Subject: Public Comment: Los Angeles Aerial Rapid Transit (LA ART) Project DEIR

Deputy Executive Officer Cory Zelmer,

I am writing to voice my opposition to the Los Angeles Aerial Rapid Transit Project ("The Gondola" at Dodger Stadium). I am an Environmental Studies student at Loyola Marymount University and I am concerned about this project's likelihood to break up historic neighborhoods like Chinatown and displace residents, which would contribute further to gentrification in which Angelenos can no longer afford rent in the neighborhoods where they have roots. I am against this project because transit options should be implemented to benefit the communities they are placed in, rather than pushing longtime residents out in order to bring in outsiders for sports events. The community was never consulted about this project and it is irresponsible to move forward without the community getting to lead the process, because this project prioritizes making money from visitors and is not at all based on what local communities (where the impacts will be greatest) need or want. Furthermore, a UCLA study found that the gondola will not reduce environmental impacts *nor* traffic in the area. In fact, it will displace greater vehicle emissions into areas served by the gondola, which are already unjustly burdened with pollution. There are other ways to develop effective public transit and I strongly oppose moving forward with this project that will not have foreseeable traffic, environmental, or social benefits, and may actively harm communities in the affected area, whom were not consulted in the process. It would be more prudent to spend this money on transit projects planned in coordination with community members, which would best serve Angelenos. Thank you for your time reading and I sincerely hope you will incorporate the concerns of local community members into this and future projects.

Subject: Plan for Parking?

Dear Metro:

The plan for the Gondola won't reduce congestion or pollution because it will increase, not reduce, the number of cars coming into the area. It will attract huge numbers of people wanting to ride the Gondola to the stadium, most of whom won't be taking transit, and turning Chinatown into a parking lot for Dodger Stadium. P613-1

*In addition, **the Gondola will detract from the enjoyment of the Los Angeles State Historic Park, which was fought for by the communities in the area, and would cause those who use the Park to feel boxed in and surveilled from above.* P613-2

Please don't build the Gondola.

Sincerely,

Ned Teitelbaum (He/Him)

Yo apoyo pero mi pregunta es porque han tardado tanto ya hace 10 año yo oí hablar de este proyecto y todavía no lo constiuyen que esperan, ya tendríamos tiempo sin tanta contaminación.

P624-1

Translation:
I support it, but I have a question, why has it taken so long? Ten years ago already I had heard of this project but it hasn't been built yet, we would have spent a lot of time without so much pollution.

To: LAART@metro.net
Subject: Public Comment: Los Angeles Aerial Rapid Transit (LA ART) Project DEIR

Deputy Executive Officer Cory Zelmer,

I am writing to voice my opposition to the Los Angeles Aerial Rapid Transit Project ("The Gondola" at Dodger Stadium). P658-1

I live very close to Chinatown (and used to live on Chung King Rd) and this seems like a vanity project, an eyesore, and we have no idea about the impact on the environment as well as the residents. I honestly thought it was a joke when I first heard about it, as in “what is the dumbest thing you can conceive that rich people want to do to help ruin Los Angeles” oh I know! Big GONDOLAS over an already over saturated and gentrified area of our city!
Just, NO. STUPID IDEA. Whoever thought this end can go kick rocks. Thx P658-2

Deputy Executive Officer Cory Zelmer,

I am writing to voice my opposition to the Los Angeles Aerial Rapid Transit Project ("The Gondola" at Dodger Stadium). P659-1

Metro went forward with this project without an open public process and without competitive bidding. I don't understand the ownership or operation of the project because the details have been hidden from the community. Who is paying for this project? Will taxpayers be left holding the bag? P659-2

Lack of community consultation: The community has been neglected and our voices have not been heard. No one asked us our vision for our community. P659-3

We never asked for this project. We don't need or want this project.

Sent: 01/17/2023, 3:49 PM
To: LAART@metro.net
Subject: Public Comment: Los Angeles Aerial Rapid Transit (LA ART) Project DEIR

Deputy Executive Officer Cory Zelmer,

Hello,

My name is Brandon and I was born and raised and longtime resident in Cypress Park. I work at the Eagle Rock Branch Library where you all tried to put your LA Art brochures on our bulletin board. At first, I thought nothing about this. I thought it was a whole new layer to the metro system, that it would be air trains like they have in San Francisco at the SFO and OAK airports. BART is something everyone loves and we should have a Metro like that here in LA. When I found out it was just to only go to see the Dodgers, I thought no way. P660-1

I think LA Metro should focus on the transit problems we already have. How come there aren't more train lines to each neighborhood in LA? How come it says gondola transit is popular in other cities when literally I've never heard of these things before besides when people go skiing? I think if you have money for this, you have money for our trains and buses. P660-2

It's not right that there's only some days the Metro has free fare days. And when people find out about it, it's on social media. That stuff makes a huge difference when you make hourly like me doing something you love because you want to be in the community. If the LA ART which isn't even Rapid Transit because gondolas are slow and this one only goes to one spot, if there's money for something like this, you should use it to benefit everybody and let there be more free fare days. P660-3

Change your plans and build something else. I know Metro wants to actually help people get to where they need to go. This one is not the way to do it. P660-4

Best,
Brandon Gibbons

Re: Draft EIR- LAART – State Clearinghouse No. 2020100007

The purpose of this document is to advocate for the NO PROJECT CEQA ALTERNATIVE. P662-1

I am born and raised in the Metro Downtown area. I travel the Historic Arroyo Seco Pkwy, North Broadway, Spring, Alameda and Main Streets most of my life enjoying the open space vistas of the San Gabriel Mtns., the Repetto Hills, Santa Monica Mtns (of which Elysian Park is considered part of and a National Parks Service, Rim of the Valley Corridor) and the beautiful skyline of Downtown LA. And I strongly believe that this proposed project would despoil these vistas forever. It is a significant unavoidable adverse impact. And the Draft EIR simply states, “scenic vistas taken under consideration” dismissing or omitting the validity and value of said vistas. P662-2

But I get ahead of myself. As it is the purpose for this proposed project that I take issue with.

ES.2 Project Purpose- Improve mobility and accessibility for the region by providing a daily, high capacity, ariel rapid transit from Los Angeles Union Station to the Dodgers Stadium…

The reality is the proposed project is specifically tailored for game days. This use of public land, airspace (what about private property airspace?) and funds for a private venture is stomach-churning. The Daily News recently reported on studies suggesting the opposite of this Draft EIR statement of improved mobility and accessibility. P662-3

The region could use real transportation solutions for better mobility and accessibility that would improve daily life for a larger population and area than this costly and ineffective proposed project.

I would like to add my comments to the on-going administrative record.

Having read and looked over the roughly 1100 pages of this Draft EIR over this MLK weekend because this project fell out of mind during the Covid Pandemic where many stakeholders like me were focused on our lives and livelihood and also may not of had access to digital meetings. This Draft EIR, I feel, is biased toward expenditure and construction of the proposed project regardless of the significant impacts with or without mitigation. Below are some of the concerns I have that I feel were not addressed in the Draft EIR or not addressed to a sufficient level of analysis for intelligent decision making. This list is not complete nor listed in numerical order as to importance: P662-4

1. Neighborhood directly negatively effected by LA ART project , Olvera Street, Chinatown, California State Park, William Holmes Public Housing and Preschool, Ann Street Elementary, Cathedral High, Lincoln Heights, Solano Cyn., Elysian Park, Echo Park, Elysian Valley, Downey Park, Albion Park along with the major transportation roadway corridors of North Broadway, Spring, Alameda and Main streets and possibly parts of the Historic Arroyo Seco Pkwy (Hwy110). Greatest negative impact is during construction over two to five years of six to seven days, morning to evening construction. P662-5
2. LA ART states zero emissions. Omitted are the tables detailing particulates and emissions from construction over two to five years, six to seven days a week from morning till evening. What is the number of construction trucks and heavy machinery necessary to drill, excavate, deliver and haul material and supplies during construction period? How is this then mitigated to a level safe for the surrounding neighborhoods or which a majority is elderly and young families. P662-6

3. Negative Impact through construction roadway closures creating gridlock with vehicles emitting toxic fumes with possible added pedestrian and auto accidents by frustrated drivers. P662-7
4. Goldline offers the same mobility and accessibility from Union Station to Chinatown and California State Park currently. So the LA ART is only offering the Dodgers Stadium. P662-8
5. LA ART ticketing and Hub stations are only accessible via a prepaid access ticket purchased on-line. This exclude a large non-digital local population. P662-9
6. Construction staging areas are not listed nor accounted for in the impact reports. These areas will add to the cumulative negative impacts for neighborhoods and other stakeholders and commuter through the large construction area throughout the two to five years of construction. P662-10
7. Proposed construction schedule lists approximately 2+ years per Hub (3) and Tower (3) with the hope that some sites can run concurrently. Regular construction days – Monday – Friday 6AM-9PM, Saturdays and Holidays 8AM-6PM and Sundays when necessary. This is a unavoidable significant adverse impact to all living people and wildlife in the area. P662-11
8. The majority of agencies, organizations public or private commented via a boiler plate response to adhere to laws and regulations or requesting further updates us up to dates P662-12
9. 10- omits the real unavoidable adverse cumulative impact of Noise, dirt, particulate matter, vibrations, light pollution , despoiling of viewshed , increase gridlock, risk of accidents during construction and operation of LA ART. P662-13
10. LA ART will not eliminate the operation of the Dodgers Stadium Express buses that offer free transportation on game days from Union Station to Dodgers Stadium. P662-14
11. There is no benefit to the residents, businesses or visitors to this area, Chinatown, Olvera Street, California State Park, Elysian Park that is worth the financial, environmental and quality of life cost this project proposes. P662-15
12. ES-13/AES-1, -2,-3,-4, The Draft EIR disregards or downplays the significant negative impact to the despoiling of iconic Los Angeles vistas/viewsheds of the Downtown City Skyline, the hillsides of National Parks Service Rim of the Valley Corridor including the San Gabriel Mtns. The 150' plus Hub Stations and Towers with massive gondola cables will cut right through the open space and despoil vistas and sky views. No mitigation possible. P662-16
13. AIR-3, The Project area includes within ¼ mile California State Park where families and seniors recreate, Elysian Park, Downey Park, Albion Park, established housing both private and public (Blossom Plaza, William Holmes Public Housing, Catholic High School, Temples, and Churches, Elementary and Preschools, the residential neighborhoods of Chinatown, Solano Canyon, Elysian Valley, Lincoln Heights, Arts District but any impact is deemed insignificant and so no mitigation is offered. P662-17
14. AIR-4, Population directly effected may not have been informed of the health dangers of GHG, large and nano dust or particulate matter produced during the two to five years of construction . Project does not offer any mitigation to this issue. P662-18
15. CUL-1, areas effected but downplayed are Elysian Park, California State Park and Historic Arroyo Pkwy. The parks are used for many cultural events and ceremonies where open sky and open space is valued and enriches the cultural purposes. P662-19
16. GHG-1 , Again, the number of construction vehicles and machinery over five years, 7 days a week will make a negative adverse impact. No mitigation is offered. P662-20
17. NV-1, No mitigation offered for Noise during the construction and operation. It is assured that that construction and operation will create noise and some of it will be negative. P662-21
18. NV-2, Draft EIR validates unavoidable during four plus years of construction, seven days a week, morning to night. The suggested mitigation offered is to install monitoring devices with no other mitigation to alleviate impact. P662-22

19. POP-2, Housing, studies prove that this type of attraction will increase pressure on the existing housed population of renters and property owners by increasing rental prices and seeding property sales at higher rates making housing area unaffordable for existing elder and working class families. P662-23
20. PR-1, despoils both California State Park and Elysian Park. No mitigation offered. P662-24
21. PR-2, Negative impact by construction and operation to direct and adjacent areas to California State Park, El Pueblo, Union Station, Pocket Park on Alameda & Main. P662-25
22. PR-3, Construction and operations travel directly overhead by 100 feet or more to the Goldline, Alameda, College, Broadway and the Historic Arroyo Pkwy (110 Fwy). No mitigation offered. P662-26
23. TRA-4, Broadway, Spring, Alameda, Main Streets and 110 Fwy are all major emergency corridors for the area. No substantial mitigation offered. P662-27
24. TCR-1, California State Park programs & provides space for Native and cultural events that honor natural environments and open space (land and sky). LA ART would despoil this open atmosphere forever. P662-28
25. TCR-2, Same as TCR-1. P662-29
26. WFR-1, The project offers zero plan for rescuing human life when a gondola/ cable accident occurs whether it is a gondola falling or a stalled or unresponsive machinery operating gondola. P662-30
27. WFR-5, Gondola will trave above homes, apartments, businesses, parks and open spaces, roadways and a historic highway. P662-31
28. 3.1.2.3, Scenic Resourses, Historic Arroyo Pkwy is listed in many digital and printed maps as a scenic highway from Downtown to Pasadena. P662-32
29. 3.1.2.4, Example of Light and Glare already exist in LA ART area is not a valid reason for the use of No Impact/ Insignificant. There is cumulative Light and Glare Impact to address and/or mitigate. P662-33
30. 3.1.6 Existing view South Entrance to California State Park will have an extensive negative impact and change forever the visual elements to the park and surrounding environment. This area consists of a Chinatown Hub , a Park Tower and heavy cables with gondolas. P662-34
31. Hubs and Towers will shade and block sunshine to residents, businesses , street populations, visitors to State Park and it is downplayed with no mitigation suggested. P662-35
32. Again, Air Rights to the public right of way , businesses, and residents, LA ART has not addressed leasing or mitigation for the use of the rights to keep airspace open and safe from possible harm to persons or property. P662-36

Thank you for admitting my document letter with my comments to the LA ART Draft EIR

Signed here with my typed name and todays date and time, P662-37

Subject: Public Comment: Los Angeles Aerial Rapid Transit (LA ART) Project DEIR

Deputy Executive Officer Cory Zelmer,

Please do not build this gondola in our neighborhood. It will only bring more traffic to Chinatown, not less. It's supposed to make it easier to go to see Dodgers Stadium. But I do not see that. I see more people will come to take the gondola, leave their trash like they always do when there is a baseball game, and then leave. The Dodgers already does not bring more business to Chinatown, where all our business are dying. I do not see how this gondola will make it any different. It's like you planned it without knowing the neighborhood at all. When Dodgers games happens, people park everywhere, people cannot drive, people cannot cross the street, people are very loud with their music and parties, and then they drink and leave trash everywhere. They do this when there is concerts at the big park on broadway too. If you make the gondola, it will just be more of the same thing. You have to listen to us, the people who live here. Please do not build this gondola in our neighborhood. I t will be very bad and you will regret it and then you will waste money to take it down.

Subject: Public Comment: Los Angeles Aerial Rapid Transit (LA ART) Project DEIR

Deputy Executive Officer Cory Zelmer,

I am writing to voice my opposition to the Los Angeles Aerial Rapid Transit Project ("The Gondola" at Dodger Stadium).

As a daughter of immigrants who frequents Chinatown for necessities and community, I will be impacted by this project. I am concerned about this project for the following reasons: P664-1

Built Environment:

The Gondola Project's enormous towers will cause aesthetic impacts in my community. I am concerned that the towers will obstruct views, and that the gondola cars will be used for advertising and electronic billboards. P664-2

Traffic:

The Gondola Project's displacement of traffic onto the surrounding neighborhoods will worsen air quality impacts from tailpipe emissions in an already overburdened community. P664-3

The Gondola Project's will increase traffic around Chinatown and Union Station. This project is designed to displace traffic from Dodger Stadium and push it onto the surrounding communities. The existing traffic conditions are already difficult because of [explain traffic hazards, conditions, etc.] and this project will make it worse. P664-4

Historic and Cultural Resources:

The Gondola Project will impact historic and cultural resources such as the Los Angeles State Historic Park, historic Union Station, and the Pueblo de Los Angeles Historic Monument. P664-5

Environmental Justice:

This project will increase the impacts of air pollution from vehicle emissions in an area already overburdened by air emissions. P664-6

Gentrification:

This project will lead to displacement and increase the cost of rent in the area. P664-7

Future development:

This project will lead to future commercial development in Chavez Ravine, without community input and without disclosure to the community. P664-8

Lack of transparency:

Metro went forward with this project without an open public process and without competitive bidding. I don't understand the ownership or operation of the project because the details have been hidden from the community. Who is paying for this project? Will taxpayers be left holding the bag?
Lack of community consultation: The community has been neglected and our voices have not been heard. No one asked us our vision for our community. P664-9

We never asked for this project. We don't need or want this project.

Subject: Gondola

Cory Zelmer:

I'm sending you this email to let you know I am opposed to the creation of a gondola as public transportation. P665-1

It will be a terrible thing for those who have lived in the neighborhoods it will fly over, eliminating their privacy. P665-2

It also seems rather ridiculous as a means of transportation to help a very few. LA Metro needs to rethink its bus system to and from the stadium. P665-3

Get a fleet of electric busses for the environment, make a dedicated lane in and out of the stadium for the busses, even if you have to remove parking on Sunset for game days. P665-4

If McCourt really thinks the gondola is the way to access his private property, and build retail, entertainment and housing on his parking lots, he needs to use his own money to build the gondola, and he needs to lease the airspace from the citizens that will be effected. P665-5

I am a Dodger fan and I attend 25 plus games a season, I drive from the San Fernando Valley, and have also used the bus from Union Station on a very few occasions. P665-6

Maybe a better idea is for Mc Court to sell all the parking lot land to LA City, and let us as citizens profit from the revenue, and look at better options for getting to and from the stadium. P665-7

Subject: Public Comment re Draft Enviromental Impact Report re Los Angeles Aerial Rapid Transit Project

I am a longtime civil rights and community advocate. I am a volunteer in L.A. Chinatownand actively involved in various community and professional organizations. P666-1

After reviewing the Draft Environmental Impact Report (DraftEIR) regarding the proposed Los Angeles Aerial Rapid Transit Project, it seems that Los Angeles County Metropolitan Transportation Authority(Metro) is going to great lengths to support and condone the proposed aerialgondola system project connecting Union Station and the Dodger Stadium propertyby the private entity, Los Angeles Aerial Rapid Transit Technologies LLC, whichapparently is subject to change. Suchproject will seriously harm and have significant, permanent and irreversible adverseeffects on the residents, small businesses, and others, as well as the environment,aesthetics, preservation, and sustainability of the surrounding communities, suchas Chinatown, Mission Junction, Elysian Park, Solano Canyon, and the LosAngeles State Historic Park. Justbecause there are aerial transit systems in the few cities and countriesreferred to in the Draft EIR, does not justify the construction and operationof an unnecessary, extremely costly, and unwelcomed aerial transit system in theproposed areas of Los Angeles. P666-2 P666-3 P666-4

It is clearly wrong to allow a private entity to permanentlytake-over public air space and various public and privately-owned properties tonegatively gentrify these urban areas by creating a visually and physically objectionablenuisance mainly for profit in order to cater to a few. Such proposed project will establish an extremely badprecedent if this public entity and potentially other public entities areallowed to acquire extensive public air space and public properties for privategain and in order to exploit and harm minority and low-income neighborhoods. This proposed project does not and should notqualify as “the first environmental leadership transit project under SenateBill 44.” P666-5 P666-6

In addition, such proposed project will not significantlydiminish traffic, air and noise pollution or ensure public safety on a short-termor long-term basis. In fact, the oppositeprobably will occur with the construction of such proposed project and changingof the areas with access to the aerial gondola into a huge parking lot primarilyfor the proposed project’s benefit, while creating and causing significant andserious traffic, air and noise pollution, public safety concerns, and otheradverse impacts. P666-7

This proposed project is a substantial waste of taxpayers’money and natural resources, and fails to sufficiently and permanently protect the environment,as well as the residents, small businesses and others in the communities thatare adversely affected. Thesecommunities do not need an amusement park ride, like this proposed aerialgondola, but more appropriate, safe and affordable public transportation, low-costhousing, and culturally-sensitive and necessary community businesses and services,for the people. P666-8

The findings in the Draft EIR pursuant to the evaluation ofthe potential environmental effects associated with the construction andoperation of this proposed project as having “no impact,” “less than significantimpact with mitigation” or “less than significant” impact, are inaccurate, unsubstantiatedor unreasonable and unfair. This proposedproject should be denied due to its potentially significant, substantial andirreversible adverse environmental effects. P666-9

Subject: Public Comment: Los Angeles Aerial Rapid Transit (LA ART) Project DEIR

Deputy Executive Officer Cory Zelmer,

I am writing to voice my opposition to the Los Angeles Aerial Rapid Transit Project ("The Gondola" at Dodger Stadium). P667-1

As a resident of Los Angeles County and as a physician I believe the greater LA community will be impacted by this project. I am concerned about this project for the following reasons: P667-2

Gentrification:
This project will lead to displacement and increase the cost of rent in the area. This is will greatly affect the surrounding areas that currently house many low income residents. By using resources to create this gondola you are actively saying you care more about the Olympics than caring for our unhoused neighbors as this money could be funneled into affordable housing instead. P667-3

Environmental Justice:
This project will increase the impacts of air pollution from vehicle emissions in an area already overburdened by air emissions. They will also displace traffic onto already underserved areas with poor resources worsening air quality. P667-4

Traffic:
The Gondola Project's displacement of traffic onto the surrounding neighborhoods will worsen air quality impacts from tailpipe emissions in an already overburdened community.
The Gondola Project's will increase traffic around Chinatown and Union Station. This project is designed to displace traffic from Dodger Stadium and push it onto the surrounding communities. The existing traffic conditions are already difficult because of [explain traffic hazards, conditions, etc.] and this project will make it worse. P667-5

Historic and Cultural Resources:
The Gondola Project will impact historic and cultural resources such as the Los Angeles State Historic Park, historic Union Station, and the Pueblo de Los Angeles Historic Monument. P667-6

Future development:
This project will lead to future commercial development in Chavez Ravine, without community input and without disclosure to the community. P667-7

Lack of transparency:
Metro went forward with this project without an open public process and without competitive bidding. I don't understand the ownership or operation of the project because the details have been hidden from the community. Who is paying for this project? Will taxpayers be left holding the bag? P667-8
Lack of community consultation: The community has been neglected and our voices have not been heard. No one asked us our vision for our community. P667-9

Subject: Public Comment: Los Angeles Aerial Rapid Transit (LA ART) Project DEIR

Deputy Executive Officer Cory Zelmer,

Hello,

My name is Brandy and I was born and raised in Lincoln Heights. I am writing to voice my opposition to the Los Angeles Aerial Rapid Transit Project ("The Gondola" at Dodger Stadium). P668-1

The Gondola Project's towers will ruin our views, and the gondola cars will be used for advertising and electronic billboards that we do not want in our skyline. You would not build this kind of thing in Beverly Hills or Santa Monica. But you would do it here where working class Asian and Latino families are fighting for their lives. P668-2

It will also displace traffic from the Stadium area to the Chinatown, Dogtown, Downtown, and Lincoln Heights areas. Our neighborhoods will receive worse air quality impacts from tailpipe emissions in our already overburdened communities. This is wrong and your oversight on this shows how greedy you are in wanting to build this gondola at the expense of the people's health. P668-3

The gondola will also ruin impact historic, cultural, and communal resources such as the Los Angeles State Historic Park, historic Union Station, and the Pueblo de Los Angeles Historic Monument and Olvera Street. It is wrong that you've gone through our Olvera Street and Lincoln Heights businesses to make workers sign support letters without educating them on the impacts of the project. How can you do that to people? That says everything about the project, that you would lie to everybody and ruin the historic character of LA to build this vanity project. P668-4

Not only that but the gondola will lead to displacement and increase the cost of rent in the area. It will lead to future commercial development in Chavez Ravine, without community input and without disclosure to the community. If you actually listened to the community, you would know that we need renter protections, we need small business stimulus, we need free transit. How long have people been asking for free transit? If you asked what people wanted from LA Metro, you wouldn't hear anyone say a gondola. P668-5

Come to your senses and kill this project. Unless you have some free shuttles and free bike lending systems to come through with, stay out of our neighborhoods. P668-6

Deputy Executive Officer Cory Zelmer,

I am writing to voice my opposition to the Los Angeles Aerial Rapid Transit Project ("The Gondola" at Dodger Stadium). As a transit and walkable city advocate, I strongly urge you to object this project. It does not solve traffic while wasting money. Sure it's private money but the residents impacts will be not worth this gondola spectacle. There has been little public outreach and therefore feels sketchy. P669-1

In addition, The Gondola Project will impact historic and cultural resources such as the Los Angeles State Historic Park, historic Union Station, and the Pueblo de Los Angeles Historic Monument. P669-2

This will also make gentrification worse. P669-3

If you want less traffic and better transit, a gondola is not the answer. Better transit is. Please side with the people, not a billionaire. P669-4

Deputy Executive Officer Cory Zelmer,

Hi there,

I am writing to voice my opposition to the Los Angeles Aerial Rapid Transit Project ("The Gondola" at Dodger Stadium). I am an avid Dodgers fan and usually drive to the games and park in the stadium. I saw that the gondola would be built on top of the parking lot, taking parking away from people. How will that help the situation? Especially since the plan doesn't even include additional parking. P670-1

If I'm coming from Los Feliz, I'm not going to drive to Union Station to board the gondola and then go into the Stadium. And then what? Wait in a Disneyland style line to get back on the gondola to get to my car at Union Station? That doesn't make sense. I feel like the people who planned this have a fundamental misunderstanding of Los Angeles. We drive places. We don't gondola places. P670-2

Subject: I do not support this corrupt, dishonest report on a boondoggle no one asked for.

Dear Mr. Cory Zelmer, I emphatically oppose the gondola.

First and foremost, leaving off Frank McCourt's desire to build The Grove-Chavez Ravine from the report is reprehensible. Everyone working on this dishonest proposal should be ashamed of themselves. P671-1

Secondly, calling this project a "public transit" project is majorly deceptive since the project is not public, nor does it behave as transit. It is an attraction, and should be labeled that way. P671-2

And thirdly, Chavez Ravine and the surrounding areas have been raped more than enough times. No more. We are paying attention to those of you working on this disgusting boondoggle. P671-3

Shame on you!

Subject: Public Comment: Los Angeles Aerial Rapid Transit (LA ART) Project DEIR

Deputy Executive Officer Cory Zelmer,

To LA Metro,

I am a resident of Echo Park and I am writing to voice my opposition to the Los Angeles Aerial Rapid Transit Project ("The Gondola" at Dodger Stadium). I have four concerns.

First, I am extremely concerned that the DEIR process has not been sufficiently transparent. I would like to know why there have been no public information sessions physically IN CENTRAL CHINATOWN that would allow residents, business owners and neighbors like me to attend. The public information sessions that have been held in late 2022 and early 2023 have been at Union Station, at Cathedral High School, and on Zoom. These sessions have excluded those who cannot easily walk to Union Station or Cathedral High School, well outside of downtown Chinatown, and those who do not have easy access to computers. These sessions have completely excluded those who will be impacted the most by this project. P673-1

I am outraged that the public comment process has been so incomplete and so opaque. How is it possible that LA Metro has been completely unable to hold a public information session IN CHINATOWN, while at the same time using promotional materials that advertise Chinatown as a backdrop? This is unacceptable. This shoddy approach to reaching residents of Chinatown demonstrates arrogance and cynicism on the part of LA Metro and Frank McCourt. LA Metro has not shown so far that it is capable of gathering public input for this project. Thus far, this is a project being undertaken without knowledge of the communities it will impact, and without gathering sufficient input from these communities. P673-2

My second concern is the aggressive construction timeline: the Executive Summary states construction could begin in 2024 and take 25 months. It is obvious that though it is not stated, the goal of the timeline is to get the gondola in place in time for the 2028 LA Olympics. This rushed timeline could explain why the public outreach has been so frankly lame. The timeline makes it appear that LA Metro places no value on conducting an honest and thorough public comment process. P673-3

My third concern is the complete lack of clarity around funding for this project. It is unclear how much of the bill will be footed by McCourt, and completely unclear what the timeline for his funding will be. Will funding for this project eventually end up on LA taxpayers? LA Metro and McCourt need to supply much more detailed information about the funding for this project. P673-4

My fourth concern is one of safety of riders. The Executive Summary states that the gondola will operate from 6am - 12pm, and that it will be operated remotely. How will riders be protected, especially after dark, when the gondola is being operated? There have been numerous security issues after Dodger games, when fans who have been drinking get into conflicts. How will this issue be handled aboard the gondola? Since the pandemic, Metro has struggled to regain riders it has lost, due to dangerous conditions on trains regarding individuals who are mentally unstable, open drug use, and lack of personnel to address and contain these issues. How does Metro plan to maintain safe conditions for its P673-5

riders aboard the gondola, and in gondola stations? What would make the gondola stations any different from any other Metro stations in this regard?

cont'd P673-5

I am disappointed in the lack of true outreach to affected neighborhoods, and I strongly oppose this gondola project.

P673-6

Regards,

Jennifer Martinez
1453 McDuff Street

Subject: Public Comment: Los Angeles Aerial Rapid Transit (LA ART) Project DEIR

I'm writing to voice my opposition to the Los Angeles Aerial Rapid Transit Project. I live in Los Feliz, work downtown, and visit Elysian Park and LA State Historic Park often on my bike. I go to Echo Park often. I'm a bike rider and public transit commuter. The gondola will negatively impact Los Angeles in many ways, including: P674-1

- Increasing traffic around Chinatown and Union Station by pushing it away from Dodger Stadium. The existing traffic conditions in Chinatown and around Union Station are already crowded and chaotic, and this project will make it worse. It will also bring more traffic emissions to Chinatown. P674-2
- The Gondola project's towers will obstruct park views in Elysian and LA State Historic Park, and this project will significantly impact LA State Historic Park, a much-needed green space in the area. P674-3

There are so many better options than this invasive Gondola. I want Metro to fund *real* public transit options to Dodger Stadium that will not displace or harm existing communities. Create a safe route to bike or walk from the Chinatown metro stop to Dodger stadium, and provide secure bike parking at the stadium. P674-4

Thank you,
Sherin Bennett

Subject: Public Comment: Los Angeles Aerial Rapid Transit (LA ART) Project DEIR

Deputy Executive Officer Cory Zelmer,

I have lived and worked in Los Angeles all 30 years of my life. I hate that we are a car-centric city with such poor public transportation. But a gondola is the last solution I would ever come up with to address that. Literally. I would come up with a catapult, or a human slingshot, or the cannon from the Medieval Times backlot before I came up with a gondola. It's like— did you even go to engineering school? P675-1

Don't build this gondola because it will displace working class communities and you have no concept for socioeconomic displacement and how the history of transit construction, freeways, and redlining all plays into that. P675-2 Don't build this gondola because it will make you look like a fool. Have you addressed that in your little environmental report? What do you mean there's no significant impact made by this project? There's significant impact already on my brain just from watching you guys try to justify this. Oh an "innovative" way to travel is coming to Los Angeles. Excuse me? The lime scooters that middle schoolers street race on down 6th St is more innovative than this. How will LA ART compensate the public for the shoddy lies they've told and time they've wasted on the community for all this. P675-3

Maybe you should take a hint from the rest of LA and take some acting classes. You sure need some since you're not very good at pretending this is a good idea either. Clearly you are not meant for transit planning, Mr. Cory Zelmer. Upright Citizens Brigade has open enrollment. I suggest that. P675-4

Subject: Opposition to project

Dear LA Metro staff,

I am writing to express my opposition to the Dodger Stadium Gondola project. I have several concerns about the Draft EIR. P676-1

My first issue concerns AECOM, the company that prepared the Draft EIR. This company was selected and paid by Frank McCourt and LAART and thus, it is natural that the findings in the EIR would favor the interests of the developer. Every category was found to have "less than significant" impacts despite concerns from the community. I fear that the evaluations in the EIR contain a deep bias in favor of the developer. *Metro should work with the community to select an unbiased entity to conduct the EIR.* P676-2

Air Quality
The Air Quality analysis found that the project would reduce VMTs and therefore decrease emissions. I find this hard to believe. As mentioned repeatedly by the community, the project would simply offset the VMTs to another location: either the station at Union Station or the station in Chinatown. People would still have to travel from all over Los Angeles to get to the gondola. The analysis does not account for first and last mile(s - in this case) traveled and therefore I fail to see how the overall emissions would be significantly reduced. P676-3

Energy Analysis
Again, in this section the project claims to reduce VMTs without showing how exactly that will happen. The VMTs will simply be displaced to the gondola stations instead of reduced. Further, this analysis claims that the project will increase public transit ridership. This is a broad claim that seems to be based solely on the fact that people will ride the gondola to the stadium, but does not acknowledge that there is no first/last mile(s) solution included in the project and people will still need to drive to the gondola station in order to take it. P676-4

Greenhouse Gas Analysis
This analysis claims that GHGs will be reduced because people will not be driving to Dodger Stadium. Again, the analysis fails to acknowledge that the project does not include a first/last mile(s) solution. A lot of Dodger fans live in the San Fernando Valley and in unincorporated East Los Angeles. How will these people get to and from the gondola? The GHGs will be offset, but I fail to see how they will be reduced. P676-5

Land Use and Planning Analysis
Contrary to the analysis, the project will most certainly break up the community by breaking up existing walkways that neighborhood residents, especially in Chinatown, use to navigate the neighborhood. Chinatown is the community in LA with the second lowest AMI after Skid Row. It is also an aging community with a lot of elderly residents who will have specific challenges navigating their neighborhood and reaching essential resources during the construction phase and once the project is complete. Their needs have not been taken into account. P676-6

Second, the project does not meet the General Plan of the LA State Historic Park. Trees would need to be cut down in order to build the project. In a City with constantly worsening air quality and increasing temperatures, trees are a vital resource that should be preserved and increased. *An exception to the General Plan should absolutely NOT be granted.* P676-7

Noise Analysis
The Draft EIR evaluated LTS for an average person, despite the fact that Chinatown has a growing elderly community with higher noise sensitivities. The age of the existing community should be taken into account when doing these analyses. The Draft EIR also mentions a Noise Disturbance Coordinator. Who is this person? Will they be fluent in English, Spanish, Cantonese, Mandarin, and other languages spoken in the area? What powers will they have to address noise complaints? This does not seem to be a sufficient mitigation measure.

P676-8

P676-9

Population and Housing Analysis
The project claims that it will not cause any displacement, direct or indirect. However, the potential of the project to increase property values has not been assessed, which is one of the most significant driving factors of gentrification, which would lead to displacement as we have seen in dozens of neighborhoods throughout LA. The idea that this project will not cause any displacement is a false claim as we have seen time and time again.

P676-10

Public Services
The analysis claims that it will not add or alter any existing facilities. However, the Chinatown community has been deprived of services

Subject: my gondola project comment

dear mr. zelmer AND to whomever it may concern at metro -

there is SO MUCH that is wrong with this gondola project that it can't all be addressed here. (luckily, the vast volume of arguments _against_ it is 'out there' in the news and social media, so please consider all that too please!) suffice to say: IT'S A BAD IDEA. it's another chavez ravine-style community ravaging, but more subtle and really just way more stupid. P677-1

beginning with la art's website's first page, there are nothing but lies, deceptions and misrepresentations..... all trying to distract the public with shiny new community 'benefits' that will only prove to put taxpayers on the hook for this shaky, ill-conceived, but very pretty, bait and switch scheme. P677-2

the things it aims to do it can't and won't do: IT WILL NOT REDUCE TRAFFIC CONGESTION OR AIR POLLUTION. period! P677-3

(there are other ways to get bodies up to the stadium and to reduce auto emissions... the already existing dodger express for example.)

to take the project's objectives seriously is to be fooled into missing the point. this is actually a scam, a slight of hand operation that exists solely to benefit one man and his family. the shell game of entities under whose auspices the project is supposed to be completed by is shameful. P677-4

there are very few large scale projects like this that ever come-in on-time or on-budget. first this was supposed to be 'privately' funded. then metro was somehow involved. now the project has been 'transferred' or 'donated', an orwellian move, just another subterfuge to convey the project to a seemingly beneficially-named organization. everyone knows that frank mccourt is only concerned with his personal financial interests - it's the height of irony having the project stewarded by something as seemingly innocuous as 'climate resolve'. the only climate mccourt wants to resolve is his financial climate. P677-5

and regarding the budget, there's no way this project will be fully funded by its proponents nor will it 'pay for itself'. so exactly what provisions are there to remedy any shortfalls in funding due to unforeseen issues in project construction and maintenance - BESIDES having the taxpayers rescue this boondoggle?? P677-6

the gondola project is really a huge impending problem in search of a solid quashing - before it's too late.
this whole thing is a bus wreck you can see coming from miles away. P677-7

once frank mccourt develops his half of the dodger stadium parking lot, there absolutely will be increased traffic and pollution not only in the construction of what is built there, but also from the patrons who will travel to and visit his new retail and restaurant complex. so if he's going to develop his part of the lot, why not just enhance the road capacity to the site and build parking structures there to handle the crowds. P677-8

it's ironic how the conditions the project aims to ameliorate will only set in motion a compounding cascade of outcomes that will only make worse what it proposes to 'resolve'. P677-9

i'm not against building things. new is good! but this is the wrong thing in the wrong place for all the greatly wrong reasons. P677-10

no matter how much the project tries to look pretty or do good for the area, the reality of the project will only bring blight and ruin to every point of its neighborhood contact. (in addition to scooters littering our streets, now there'll be big plastic buses flying over our neighborhood. P677-11

as well, i've not even addressed the irreparable destruction of wildlife habitat. P677-12

as already mentioned, there is so much more to speak to in opposing this debacle in the making. P677-13

thank you for STOPPING THE GONDOLA PROJECT, TODAY!

- - ron frank

Subject: Fwd: Opposition to project

Dear LA Metro staff,

I am writing to express my opposition to the Dodger Stadium Gondola project. I have several concerns about the Draft EIR. P679-1

My first issue concerns AECOM, the company that prepared the Draft EIR. This company was selected and paid by Frank McCourt and LAART and thus, it is natural that the findings in the EIR would favor the interests of the developer. Every category was found to have "less than significant" impacts despite concerns from the community. I fear that the evaluations in the EIR contain a deep bias in favor of the developer. *Metro should work with the community to select an unbiased entity to conduct the EIR.* P679-2

Air Quality
The Air Quality analysis found that the project would reduce VMTs and therefore decrease emissions. I find this hard to believe. As mentioned repeatedly by the community, the project would simply offset the VMTs to another location: either the station at Union Station or the station in Chinatown. People would still have to travel from all over Los Angeles to get to the gondola. The analysis does not account for first and last mile(s - in this case) traveled and therefore I fail to see how the overall emissions would be significantly reduced. P679-3

Energy Analysis
Again, in this section the project claims to reduce VMTs without showing how exactly that will happen. The VMTs will simply be displaced to the gondola stations instead of reduced. Further, this analysis claims that the project will increase public transit ridership. This is a broad claim that seems to be based solely on the fact that people will ride the gondola to the stadium, but does not acknowledge that there is no first/last mile(s) solution included in the project and people will still need to drive to the gondola station in order to take it. P679-4

Greenhouse Gas Analysis
This analysis claims that GHGs will be reduced because people will not be driving to Dodger Stadium. Again, the analysis fails to acknowledge that the project does not include a first/last mile(s) solution. A lot of Dodger fans live in the San Fernando Valley and in unincorporated East Los Angeles. How will these people get to and from the gondola? The GHGs will be offset, but I fail to see how they will be reduced. P679-5

Land Use and Planning Analysis
Contrary to the analysis, the project will most certainly break up the community by breaking up existing walkways that neighborhood residents, especially in Chinatown, use to navigate the neighborhood. Chinatown is the community in LA with the second lowest AMI after Skid Row. It is also an aging community with a lot of elderly residents who will have specific challenges navigating their neighborhood and reaching essential resources during the construction phase and once the project is complete. Their needs have not been taken into account. Second, the project does not meet the General Plan of the LA State Historic Park. Trees would need to be cut down in order to build the project. In a City with constantly worsening air quality and increasing temperatures, trees are a vital resource that should be preserved and increased. *An exception to the General Plan should absolutely NOT be granted.* P679-6 P679-7

Noise Analysis
The Draft EIR evaluated LTS for an average person, despite the fact that Chinatown has a growing elderly community with higher noise sensitivities. The age of the existing community should be taken into account when doing these analyses. The Draft EIR also mentions a Noise Disturbance Coordinator. Who is this person? Will they be fluent in English, Spanish, Cantonese, Mandarin, and other languages spoken in the area? What powers will they have to address noise complaints? This does not seem to be a sufficient mitigation measure.

P679-8

P679-9

Population and Housing Analysis
The project claims that it will not cause any displacement, direct or indirect. However, the potential of the project to increase property values has not been assessed, which is one of the most significant driving factors of gentrification, which would lead to displacement as we have seen in dozens of neighborhoods throughout LA. The idea that this project will not cause any displacement is a false claim as we have seen time and time again.

P679-10

Public Services
The analysis claims that it will not add or alter any existing facilities. However, the Chinatown community has been deprived of services over the past couple of years. The public land used for this project should be used for public services that this community needs. Notably, more affordable housing to help abate the housing crisis city-wide and more healthcare services for the aging community in Chinatown.

P679-11

Transportation Analysis
Again, I reiterate my claim that VMTs would be OFFSET, not reduced. The Draft EIR seems to rely on this A LOT as a condition of the project despite the fact that the analysis is lacking since there is not first/last mile(s) alternative. Futher, the project proposes a Traffic Management Plan. As we have seen in past developments in the City, these plans are created without community input and radically impact the daily lives of community residents. This is not a sufficient mitigation measure for this community which has unique and diverse needs.

P679-12

P679-13

Wildfire Analysis
The project claims that it will not interfere with existing fire routes, but fails to consider that the LA infrestructure is falling apart and existing routes are already insufficient for community members. In Mt Washigton, a nearby hillside community, some of the fire routes are not even paved! A more in depth road quality analysis needs to be done here and fire routes need to be updated and a plan to improve these routes needs to be created with community input so that residents can safely evacuate in the event of a fire.

P679-14

Project Alternatives
The idea that the proposed project alternatives would not meet the goals of the proposed gondola project is absurd. Properly expanding the existing bus line to Dodger Stadium would do everything that the LAART project aims to do withouth disrupting the surrounding community. The goals of the project are broad and the claim that ONLY a gondola project would meet these goals is unfounded - again, a product of a biased evaluation by a company that was handpicked by the developer.

P679-15

P679-16

Parking Study
The parking study evaluated parking spots withing 0.5mi of the project stations. 0.5mi is way too far of a range. Most people do not park that far away and then walk to a public transit hub. It would be far easier to take a rideshare to the stadium than walk 0.5mi to the gondola station. A better range would be 0.2mi. If we evaluate the parking in that range, I'm sure you will find that there is not neraly enough parking in the area. Also,

P679-17

the fact that this section acknowledges that parking will be necessary to the project directly contradicts the claim that the project will reduce VMTs - instead, it support the claim that VMTs will simply be offiset. There is certainly not enough parking around the project and not does the surrounding community want to be used as a giant parking lot. The community has urgent needs, like the need for more affordable housing and a nearby hospital, that need to be addressed. This project overlooks all of this in favor of parking spots - this is a offensive to the lives of community members.

P679-18

Commissioners, I remind you that you have a DUTY to protect the lives and interests of LA residents, and not of LA developers. You have a responsibility to help address the needs of the LA community, and not the desires of LA billionairs. This City is in a serious housing crisis - I'm sure I do not need to explain to you how bad the situation on the streets of this City is. We need to use PUBLIC LAND to address the urgent needs of our City and provide PUBLIC BENEFITS. Please, we are begging you, be responsible with you decisions and help our community that is in such dire need! Take a stand against this project that will bring so much harm and instead bring services that we so urgently need.

P679-19

Thank you for taking the time to read,

Subject: RE: Public comment Los Angeles Aerial Rapid Transit (LA ART) Project DEIR

Dear LA ART Project,

My name is Valerie Albicker and I am a LAUSD teacher and lifelong Angelino community member. I want to express reasons for opposition to the Aerial Rapid Transit Project (Gondola at Dodger Stadium). As a resident of city council district #13 and who works with my students in Chinatown and neighboring communities, my students and families will be negatively impacted by this project. P680-1

The environmental damage and impact of the development, including obstructed views, will bring more light pollution to the surrounding homes and areas. Any lighting or towers will be a nuisance to homes and families. P680-2

The impact of traffic also brings more air pollution into the dense area, further compounding the quality of health of community members that live in the area. Surrounding Chinatown and Union Station is the 101 and 5 FWY, the project will bring additional traffic into the area that affects pedestrians and residents of the area. P680-3

With any development, families, such as my students living at the poverty level, are priced out and displaced as one of the consequences of gentrification. P680-4

In addition to the environmental damage, traffic and displacement of the families I serve, there is the matter of financial transparency. There was no open public process or competitive bidding for this project. How is this project being funded and its ongoing maintenance? Communities, directly impacted by this plan, were not invited to voice whether or not this project is truly an improvement or value to its members! P680-5

Thank you for taking the time to review my opposition and concerns for residents directly impacted. If you have any questions, please feel free to contact me at 310-869-5033. P680-6

Warmly,

Valerie Albicker
SpED Teacher/ CD #13 resident

Subject: Opposition to the Los Angeles Arial Rapid Transit Project

Hello, I am an LA citizen who is writing to express my opposition to the proposed gondola to Dodger's stadium. I am concerned over the aesthetic and cultural damages it will inflict on my community and the lack of benefit it provides the people who actually live in this city. I also strongly oppose the potential cultural damage this will do to the city, as developments such as this may lead to future commercial development and gentrification in an area that has already been subject to much development. Furthermore, it provides no solution to the issue of traffic to and from Dodger Stadium. This community is where I grew up and where I went to school. The people who live there should have *their *needs met, rather than having the needs of billionaire investors forced on them. Please reconsider this project.

Subject: A “NO GÓNDOLA!” comment - negative risks would result.

To
LAART@metro.net

Dear Sir,

The Daily breeze provided this email for public comments on the proposed Gondola.

Request that there:

1
BE NO GONDOLA created over China Town. This project will not have much benifit to the citizens of Los Angeles. This design and rationale is only for the few moments in a month that it would be used, so essentially it will not be used much at all, you can say that this is a project of: P686-1

THE GONDOLA TO NO WHERE.

Mainly to be used during a day of games, it will therefore be
-costly and
-an unsightly hazard
-with many negative impacts to the China Town community. P686-2

2
There are many hazards associated with this concept that are swept under the rug and not included in a balanced perspective. P686-3

2.1 There is constant danger of falling debris from the gondola to the ground. There is no garantes that it will be 100% enclosed and liquids and other items may be dropped. P686-4

2.2 If it is enclosed, there is no air conditioned service to allow fresh comfortable air to be inhaled. Over time, people will trash and urinate (sorry, it is a reality) check the bus and tram lines now, and stink up the ride. P686-5

2.3
The community of Chinatown will bear the stigma of other’s poor stewardship. P686-6

2.4
There will be graffiti on the walls and windows and cut up fabric or switch blade carved out messages on the plastic seats. P686-7

2.5
There is no plan to do several-times-a-day daily Corona virus sanitizing of each Gondola and associated equipment cleaning - like every 30 minutes. This would require a person on staff to ride with each trip and sterilize the cabin for each trip. Where is the requient to pay for these services? Where is the requirement to change scratched and graffitied windows and walls and seating each day that this occurs? P686-8

2.6
Just look at the buses and bus stops and see for yourself that graffiti and vandalism will mirror the Gondolas without adequate cleaning. Did the MTA promos good stops? Why is this not so in many areas? P686-9

2.7
There is no requirement to have the gondola’s windows cleaned every hour or so to keep them clean and shining as other countries would do. A terrible unsightly Gondala system will be evident in a few months time and yet this is to be hung over a community that has been mistreated across the P686-10

generations, such a railroad workers in dangerous jobs. cont'd P686-10

2.8
Have you ridden the Amtrak train? I have. You will see massive graffiti and absolute filth along the tracks for a few miles out of Union Station, that is the true view of what they think of LA. this project will only contribute to that. P686-11

2.9
Family and children and visitors will be at risk for dangerous cable failures of the gondolas. P686-12

2.10
Why isn't there a similar plan over Beverly Hills? Over Marina Del Rey? Over La Canada? Only the poorer areas are giving the shaft. P686-13

2.11
What is the percentage of the "person-hours metric" expected for the 95% of the time that there is no game? It is a waste of funds. This metric needs to be identified per hour basis over the visitar of six months with proper charts to easily show the time this is used by people. P686-14

2.12
There should have been several options proposed to this "traffic congestion" problem for game times.

What are they? P686-15

When were they discussed?

Why weren't they provided?

Why was this a sole-bid contract? Just because the company provided the initial plans, it should not go to them by default. P686-16

2.12
Better use of the funds for all of Los Angeles would be to extend one of the Fwy off ramps leading into the Griffith park to get to the stadium, like the exit southbound on the 2 Fwy. I have driven by there for years commuting to JPL. These is heavy congestion and stress there in changing lanes every time. P686-17

2.13
A better solution than the Gondola is to make all streets One Way towards the stadium at game time. All officers would prepare and direct traffic along each intersection for this to go smoothly. P686-18

2.14
The poor decision to build the stadium where it is, is not for the people of Los Angeles to be expected to pay for their poor business decision. That organization already maltreated and expelled under malevolent intent, to remove poorer residents from their homes in Chavez Ravine to build this stadium, and now the injustices continue. P686-19

2.15
Bicyclist will not be able to be accommodated with their bikes on the Gondola. They would need many bike racks for locking their bikes. Even so, they risk their bikes being stolen during the game. It will take much real estate to adequately feed the Gondola Stations. P686-20

2.16
Additional car parking and motorcycle slots and e-bike slots are required way beyond what is already at union station, now not adequate at all. Have you parked there before? It is a stressful process. I have. You are just moving part of the congestion to this area, that is already not adequate for the citizens of LA, what new massive parking structures would you add - is it part of the proposal? P686-21

2.17
The additional noise of the Gondolas are an added sound hazard to the Chinatown's residents. This extra background noice has an expected decimal noise increase - what is that? Is the regular existing street noise already above safety standards? So will the new levels be on top of that? P686-22

2.18
I would like to have the mayor and her staff and the developers move to continuously work, as mandatory, at this location to work in this hazardous new condition. P686-23

2.19
The bases/towers are to be requiring clean maintenance and it will be a big unpleasant footprint that will massively support this weight - three massive towers. P686-24

2.20
What are the hours of operation? Will it be available 24/7? Has it been promised? What will happen when the developers want to cut back operating hours because it is not cost effective daily, only during the game. P686-25

2.21
Have the infrastructure to water fountains and restrooms access been included in this budget? Including maintenance to first-rate world-class maintenance and cleanliness? P686-26

2.22
What are the traffic metrics now for traffic and gor “after project completion”? If they are way off after completion will it be shut down? A total folly. P686-27

Please seek out the full truth of the many negative consequences to China Town and the people of Los Angeles, as you work to understand all the pros and cons in this decision. I believe that the best decosion is to P686-28

CANCEL THE “GONDOLA TO NO WHERE FOLLY” PROPOSED PROJECT.

Regards,
Jose Mancera

Subject: I support zero-emissions transportation in Los Angeles

Dear Mr. Cory Zelmer,

I support the proposed zero-emission Los Angeles Aerial Rapid Transit Project (LA ART), connecting Union Station to Dodger Stadium.

The gondola would benefit visitors to Dodger Stadium and the community by taking cars off the road, increasing access to public transit, and reducing greenhouse gas pollution.
Projects like these are important in addressing climate change and improving the quality of life for Angelenos.

P688-1

Sincerely,

Andy Sklawer

From: "G. Smith" <baiami@aol.com>
Sent: 1/17/2023 6:52:24 PM
To: "LAART@metro.net" <LAART@metro.net>
Subject: LAART gondola project

To whom it may concern:
Regarding the LAART gondola proposal, it is my opinion that the proposed project be approved because it would provide a valuable transportation resource to those who want to patronize Dodger stadium and various surrounding places of interest.
By having gondolas ferrying people to various venues without the need to clear or otherwise physically harm, historic structures and/or areas, would provide a transportation option that is carbon neutral, would help to reduce traffic congestion and take advantage of unused air space.
Such a project may become a tourist attraction and be a great photography and social networking bonanza, which could infuse much needed and appreciated, money into the economy. P689-1
Although cluttering Los Angeles's air space with support towers, cables and gondolas is a liability, unfortunately Los Angeles lacks much of a historical skyline or natural features that such things would harm anyway.
Ideally a vertical take-off and landing (VTOL) airport would be constructed at or near the historic train station and electric VTOL aircraft would ferry passengers to local destinations autonomously and on-demand; but until such a day comes to light, the gondolas would provide much benefit to Los Angeles's residents and visitors alike and as such, would be a refreshing asset to this great city. P689-2
Thank you.

Re: Comments on Draft EIR for LA ART Project, SCH # 2020100007

I. PROCEEDURAL DEFECTS IN THE DEIR REQUIRE ITS INVALIDATION AND RECIRCULATION.

A. The DEIR Is Defective Due To Its Identifying The Wrong Lead Agency.

As shown in the Figure immediately above, the vast majority of the property affected by the Project is property under City or other governmental agency control, rather than Metro control. As detailed at DEIR pages 2-57 to 2-62, the preponderance of the discretionary approvals required for the Project are required from the City of Los Angeles. Per DEIR page 2-61, the following permits are required from Metro:

P700-1

Los Angeles County Metropolitan Transportation Agency (Metro)

4. Approvals determined necessary by Metro for the Project, could include, but not necessarily be limited to, the following:

    a. Pursuant to Public Utilities Code section 130252, submittal, review, and approval of proposed plans for design, construction, and implementation of the Project.

b. Pursuant to Public Utilities Code section 130521 and Civil Code section 801, an easement or other agreement or approval to authorize the construction and operation of the Project within a portion of Los Angeles Union Station.

c. Pursuant to Public Utilities Code section 130521, an encroachment permit or other agreement or approval to authorize construction and operation of the Project within any Metro L Line (Gold) right-of-way.

cont'd P700-1

It should be noted that Public Utilities Code Section 130252 only relates to approval of a project description, and not detailed project plans, specifications, and estimates as noted in PUC Section 130252(c).[1] Which public agency will be responsible for approval of the detailed project plans, specifications and estimates for this private project and pursuant to what authority?

P700-2

Furthermore, it should be noted that PUC Section 130252(a) specifies that: "No such plan shall be approved unless it conforms to the appropriate adopted regional transportation plan pursuant to Chapter 2.5 (commencing with Section 65080) of Title 7 of the Government Code." A determination of conformance by the Southern California Association of Governments (SCAG), which prepares the Regional Transportation Plan (RTP), is thus needed before it can be assumed that Metro has plan approval power. Given that the Project is not included in the Federal Transportation Improvement Program[2] (FTIP) or the Transportation System Project List[3] used in developing the

FN P700-3

[2] https://scag.ca.gov/sites/main/files/file-attachments/21-05-la-finalcomparison.pdf?1624490178

[3] See: https://scag.ca.gov/sites/main/files/file-attachments/0903fconnectsocal_project-list_0.pdf?1606000813

current Regional Transportation Plan/Sustainable Communities Strategy, (RTP/SCS) it is questionable whether the Project is consistent with the RTP, and thus whether Metro is the appropriate Lead Agency. All of these issues should be resolved as part of public processes prior to proceeding with any DEIR process for the Project.

cont'd P700-3

The following discretionary approvals are required from the City per DEIR page 2-61 to 2-62:

City of Los Angeles

5. Approvals determined necessary by the City for the Project, could include, but not necessarily be limited to, the following:

    a. Pursuant to Charter section 390 and Los Angeles Administrative Code section 13.4, to the extent applicable, to be processed by the Department of Public Works, Bureau of Engineering and the Department of Transportation, a franchise agreement to operate "upon, over, under, or along any street, highway or other place in the City of Los Angeles."

    b. Pursuant to Los Angeles Administrative Code section 22.109, to the extent applicable, approval of the design from the Cultural Affairs Commission for the Project components located within the public right-of-way.

    c. Approvals, to the extent applicable, to be processed by the Department of City Planning, could include, but not necessarily be limited to, the following:

P700-4

i. Pursuant to LAMC section 11.5.7 the creation of a Specific Plan to provide for consistent application of Project design standards, limitations, and operational measures.

ii. Pursuant to LAMC sections 13.11 and 12.32.S, a "SN" Sign District for a comprehensive set of sign regulations on the Project site to permit signage consistent with applicable City requirements.

iii. Pursuant to LAMC section 12.24.M, a Plan Approval under the existing 1960 Dodger Stadium Conditional Use Permit ("CUP") to allow Stadium Tower and Dodger Stadium Station. CUP Condition 4 provides for collaboration "in devising mass transportation service to the Stadium site which will be sufficiently efficient to encourage patronage thereof and thus reduce the number of private automobiles driven to the Stadium events."

iv. Relief from the River Implementation Overlay District, to allow for Alameda Station, Alameda Tower, and Alpine Tower.

v. Relief from the Cornfield Arroyo Seco Specific Plan to allow for Chinatown/State Park Station.

d. Pursuant to Government Code Sections 65864 through 65869.5, a Development Agreement

cont'd
P700-4

between the Project Sponsor and the City of Los Angeles for 20 years.

cont'd P700-4

CEQA Guidelines Section 15051 establishes the criteria for identifying the lead agency, as follows:

15051. CRITERIA FOR IDENTIFYING THE LEAD AGENCY

Where two or more public agencies will be involved with a project, the determination of which agency will be the Lead Agency shall be governed by the following criteria:

(a) If the project will be carried out by a public agency, that agency shall be the Lead Agency even if the project would be located within the jurisdiction of another public agency.

(b) If the project is to be carried out by a nongovernmental person or entity, the Lead Agency shall be the public agency with the greatest responsibility for supervising or approving the project as a whole. P700-5

(1) The Lead Agency will normally be the agency with general governmental powers, such as a city or county, rather than an agency with a single or limited purpose such as an air pollution control district or a district which will provide a public service or public utility to the project.

(2) Where a city prezones an area, the city will be the appropriate Lead Agency for any subsequent annexation of the area and should prepare the appropriate environmental document at the time of the prezoning. The

Local Agency Formation Commission shall act as a Responsible Agency.

(c) Where more than one public agency equally meet the criteria in subdivision (b), the agency which will act first on the project in question will normally be the Lead Agency.

(d) Where the provisions of subdivision (a), (b), and (c) leave two or more public agencies with a substantial claim to be the Lead Agency, the public agencies may by agreement designate an agency as the Lead Agency. An agreement may also provide for cooperative efforts by two or more agencies by contract, joint exercise of powers, or similar devices.

cont'd P700-5

It would appear that the City of Los Angeles has the greatest responsibility for supervising or approving the Project as a whole, and thus that Metro has improperly assumed the lead agency role. In addition, as detailed in this comment letter, the DEIR delegates responsibility for multiple mitigation measures to the City, yet only the City's Los Angeles Historical Monument Authority Department commented on the Notice of Preparation (NOP) for the Project. This is probably because the Notice of Preparation (NOP) failed to identify the important discretionary approvals required from agencies other than Metro.[4] Was the issue of the appropriate Lead Agency discussed with the City? Has an application for the Project been filed with the City?

P700-6

B. <u>The DEIR Is Further Defective In Failing to Identify and Consult with all Responsible and Trustee Agencies.</u>

P700-7

[4] A copy of the NOP is available at: https://files.ceqanet.opr.ca.gov/264989-2/attachment/rT6WZKxmAw5CClASDTjN44ccsc-e8vIZo9I0VPcsZ2kSQAmO_aTD_KV1zEK1cpY0i6HAgSo12LpLfcDZ0

FN P700-6

The DEIR is under-inclusive in identifying and consulting with all responsible and trustee agencies required under CEQA. As a result, the DEIR violates a core CEQA procedural mandate.

The DEIR identifies as "responsible agencies consulted" only certain City of Los Angeles departments, the City of Los Angeles El Pueblo Historical Monument Authority, and the California Department of Parks and Recreation. (DEIR pp. 8-4 & 8-5.) However, the DEIR lists several other agencies with approval authority over parts of the Project. (DEIR pp. 2-57, 2-61 & 62.) All of these should have been named and consulted as responsible agencies.

cont'd
P700-7

As the DEIR acknowledges, permits and approvals will be required from several different agencies, including the California Department of Transportation (Caltrans), California State Parks, and Cal/OSHA. The City of Los Angeles has the most approval authority over the Project, and is the most logical lead agency for this and other reasons, including accountability by elected officials (the Los Angeles City Council) to the public, as opposed to the Metro Board, which is not elected. Because Metro has approval authority over some parts of the Project (DEIR p. 2-61), but far fewer in number than the City of Los Angeles. (DEIR pp. 2-61 & 2-62), Metro itself should be a responsible agency, not the lead agency.

In addition, we believe other public agencies must be named as responsible agencies and consulted as CEQA requires. This includes the Public Utilities Commission (PUC). Because, *inter alia*, the Project would cross over and above railroad tracks, PUC review and approvals are required, with proper public notice and full public hearing processes provided. Also, the Santa Monica Mountains Conservancy is a responsible agency and/or trustee agency under CEQA. (Pub. Res. Code § 33105.) Similarly, the Housing and Community Development Dept. has approval authority as to part of the Project under the Surplus Lands Act, which applies to some of the parcels and large street areas proposed for use as part of the Project.

P700-8

All responsible agencies were required to be identified as responsible agencies and consulted early in the CEQA process. The under-inclusion/omission of responsible agencies, and the mis-attribution of lead

agency role to Metro, creates an insurmountable flaw that renders the DEIR *void ab initio*.

Guidelines Section 15381 provides: "For the purposes of CEQA, the term 'responsible agency' includes all public agencies other than the lead agency which have discretionary approval power over the project."

Further, Pub. Res. Code § 21080.4(a) provides in pertinent part:

> "If a lead agency determines that an environmental impact report is required for a project, **the lead agency shall immediately send notice of that determination** by certified mail or an equivalent procedure **to each responsible agency** . . . . Upon receipt of the notice, **each responsible agency . . . shall specify to the lead agency the scope and content of the environmental information that is germane to the statutory responsibilities of that responsible agency** . . . in connection with the proposed project and which, pursuant to the requirements of this division, shall be included in the environmental impact report." Pub. Res. Code § 21080.4(a) (emphasis added).

cont'd
P700-8

See also Guidelines § 15096(b)(2): the responsible agency "shall specify the scope and content of the environmental information which would be germane to the responsible agency's statutory responsibilities in connection with the proposed project. The lead agency shall include this information in the EIR." Guidelines Section 15005(a) provides: "'Must' or 'shall' identifies a mandatory element which all public agencies are required to follow."

The DEIR's failure to name and specially serve and seek comment from all responsible (and trustee) agencies constitutes a procedural violation that independently renders the DEIR invalid. This failure has also caused Metro to violate CEQA's substantive requirements for full environmental disclosure by failing to obtain the expert views and comments of agencies with specialized knowledge of particular environmental and other issues and concerns.

"The purpose of allowing the public and other governmental agencies the opportunity to review EIRs include: sharing expertise, disclosing agency analyses, checking for accuracy, detecting omissions, discovering public concerns, and soliciting counter proposals." Guidelines § 15200. Guidelines Section 15144 requires an agency to "use its best efforts to find out and disclose all it reasonably can" in preparing the EIR. Metro failed to comply with these mandates regarding soliciting the involvement and opinions of all expert responsible and trustee agencies.

cont'd P700-8

This is an occasion where the lead agency not only must go back to the DEIR drawing board in terms of fixing and recirculating the DEIR, but where the correct lead agency needs to go to the drawing board in the first instance.

C. The DEIR Is Further Defective Due To An Inadequate Notice of Preparation.

CEQA Guidelines Section 15082(a)(1) requires in part that:

> (1) The notice of preparation shall provide the responsible and trustee agencies, the Office of Planning and Research, and county clerk with **sufficient information** describing the project and the potential environmental effects **to enable the responsible agencies to make a meaningful response**. At a minimum, the information shall include:
>
> (A) Description of the project,

P700-9

The description of the Project in the NOP was similarly inadequate, as it failed to inform responsible agencies of the range of discretionary approvals over which they would be required to act. For example, it failed to inform the City of Los Angeles that it would be required to approve a new Specific Plan. The NOP thus failed to trigger comments by the City of Los Angeles regarding the requisite contents of the EIR, and whether Metro is the

appropriate lead agency for Project environmental review. The NOP for the Project was therefore inadequate and ineffective.

cont'd P700-9

D. <u>The DEIR Is Further Defective Due To A Defective Notice of Availability.</u>

Pursuant to Guidelines Section 15097(c)(6), the Notice of Availability (NOA) for an EIR is required to disclose:

> (6) The presence of the site on any of the lists of sites enumerated under Section 65962.5 of the Government Code including, but not limited to, lists of hazardous waste facilities, land designated as hazardous waste property, hazardous waste disposal sites and others, and the information in the Hazardous Waste and Substances Statement required under subdivision (f) of that Section.

P700-10

The NOA for the proposed Project fails to indicate whether any of the sites associated with the proposed Project are listed in any of the Section 65962.5 databases, despite the fact that the Phase 1 Assessment for the Project, included in DEIR Appendix K, states on pages ES-3 to ES-5 that:

> The environmental database report search identified five properties in the proposed Project: LAUS and El Pueblo, which are the proposed locations for vertical circulation elements for the Alameda Station; 901 North Main Street, which is the proposed location of the Alpine Tower; the Los Angeles State Historic Park property, which is the proposed location of the Chinatown/State Park Station; and the 1201 North Broadway property, which is the proposed location of the Broadway Junction.
>
> LAUS (proposed location for construction support space and vertical circulation elements for the Alameda Station) was identified in multiple compliance-related databases, as

well as the Cleanup Program Sites- Spills, Leaks, Investigations, and Cleanups (CPS-SLIC) database. . . .

El Pueblo (proposed location for construction support space and vertical circulation elements for the proposed Alameda Station), on the western side of Alameda Street, was identified in the US Brownfields database, which indicates that a Phase I ESA was completed in 2018 to 2019. . . .

The 901 North Main Street property (proposed location of the Alpine Tower) was identified in several compliance-related databases, as well as the United States (U.S.) Brownfields database, which is maintained by the U.S. Environmental Protection Agency (USEPA). . . .

The EnviroStor database, which is an online data management system maintained by the California Department of Toxic Substances Control (DTSC), reports that Los Angeles State Historic Park (proposed location for the Chinatown/State Park Station) entered into a Voluntary Cleanup Program (VCP) with the DTSC in 2001, and remedial action (soil removal) was completed in 2003. However, according to a *Supplemental Remedial Action Workplan Memorandum* prepared by Group Delta Consultants, Inc. in 2015, during construction of Los Angeles State Historic Park in 2014, arsenic and lead contamination was encountered in near surface soils above the established site-specific clean-up goals. Based on available information on the online EnviroStor database, a complete soil removal action report has yet to be completed for the entire Los Angeles State Historic Park property; however, it appears from the Workplan Memorandum noted above that the soil removal action has been completed in selected portions of the park site. . . .

cont'd
P700-10

Additionally, the Los Angeles State Historic Park property (proposed location for the Chinatown/State Park Station) is

P700-11

> listed with an open-verification monitoring status in the CPS-SLIC database as of 2010. Based on review of documentation available on the online GeoTracker database, which is a data management system maintained by the State Water Resources Control Board (SWRCB), an annual groundwater monitoring program was first implemented in August 2000 at the request of the Los Angeles RWQCB. . . .
>
> The 1201 North Broadway property (proposed location of the Broadway Junction) is listed with a completed-closed leaking UST (LUST) case as of 2001 in the environmental database report and the online GeoTracker database maintained by the SWRCB. . . .

cont'd P700-11

P700-12

The NOA for the Project thus fails to comply with CEQA. The DEIR must be re-noticed and recirculated for public review and comment.

E. <u>The DEIR Is Further Defective By Failing to Obtain Responsible Agencies' Acceptance of Delegation of Mitigation Responsibility.</u>

There are a number of mitigation measures specified in the DEIR which are not within the Lead Agency's control, including MM-LUP-A, MM-TRA-A, MM-TRA-B, MM-TRA-C, and MM-USS-A, as detailed more fully later in this comment letter. Guidelines Section 15097 permits delegation of mitigation monitoring responsibility, provided that the public agency that would be responsible accepts delegation, stating:

P700-13

> **15097. MITIGATION MONITORING OR REPORTING.**
>
> (a) This section applies when a public agency has made the findings required under paragraph (1) of subdivision (a) of Section 15091 relative to an EIR or adopted a mitigated negative declaration in

> conjunction with approving a project. In order to ensure that the mitigation measures and project revisions identified in the EIR or negative declaration are implemented, the public agency shall adopt a program for monitoring or reporting on the revisions which it has required in the project and the measures it has imposed to mitigate or avoid significant environmental effects. A public agency may delegate reporting or monitoring responsibilities to another public agency or to a private entity **which accepts the delegation**; however, until mitigation measures have been completed the lead agency remains responsible for ensuring that implementation of the mitigation measures occurs in accordance with the program. (Emphasis added).

cont'd
P700-13

There has been no demonstration or documentation provided that the responsible agencies in question both concur with these mitigation measures and that they have accepted the delegation. Logically, documentation of acceptance of delegation necessarily needs to be provided as part of the DEIR, otherwise there is a lack of substantial evidence that the mitigations in question are feasible, and commenters cannot rely on the Lead Agency's representation that the mitigation measures would reduce impacts to a level considered less than significant. Since no such documentation is provided as part of the DEIR, the Lead Agency has therefore failed to proceed in the manner required by law.

In the absence of substantial evidence of responsible agency agreement and concurrence with the delegated mitigation measures, the potential for impacts in the areas of land use and planning (LUP), transportation (TRA), utilities and service systems (USS) and any other issue areas that depend on the delegation of mitigation development, implementation or monitoring to a public agency other than the Lead Agency, remain. Including pursuant to Guidelines Section 15088.5(a)(1) and (4), the DEIR must be corrected and recirculated for public review and comment.

II. SUBSTANTIVE DEFECTS IN THE DEIR REQUIRE ITS INVALIDATION AND RECIRCULATION, INCLUDING THE DEIR'S LACK OF AN ACCURATE, STABLE AND FINITE PROJECT DESCRIPTION.

As first noted by the Courts in County of Inyo v. Los Angeles (1977) 71 Cal.App.3d 185, 199, and reiterated in many subsequent cases, "(a)n accurate, stable and finite project description is the *sine qua non* of an informative and legally sufficient EIR." As explained by the Court of Appeal in StopTheMillenniumHollywood.com v. City of Los Angeles (2019) 39 Cal.App.5th 1:

> County of Inyo was the first decision to articulate the need for a definite and unambiguous project description as part of CEQA's environmental review process. . . .
>
> The County of Inyo court . . . concluded that the "incessant shifts' among different project descriptions "vitiated[d] the City's EIR process as a vehicle for "intelligent public participation," because "[a] curtailed, enigmatic or unstable project description draws a red herring across the path of public input." . . . .
>
> "The requirement of an accurate, stable, and finite project description as the *sine qua non* of an informative and legally sufficient EIR has been reiterated in a number of cases since County of Inyo. (See, e.g., Treasure Island, supra, 227 Cal.App.4th at p. 1052, 174 Cal.Rptr.3d 363 ["This court is among the many which have recognized that a project description that gives conflicting signals to decision makers and the public about the nature and scope of the project is fundamentally inadequate and misleading"]; Communities for a Better Environment v. City of Richmond (2010) 184 Cal.App.4th 70, 85–89, 108 Cal.Rptr.3d 478 [EIR failed as an informal document because the project description was inconsistent and obscure as to the true purpose and scope of the project];

P700-14

> San Joaquin Raptor Rescue Center v. County of Merced (2007) 149 Cal.App.4th 645, 653, 57 Cal.Rptr.3d 663 [an EIR must include detail sufficient to enable those who did not participate in its preparation to understand and to consider meaningfully the issues raised by the proposed project].)"
>
> "'Only through an accurate view of the project may affected outsiders and public decision makers balance the proposal's benefit against its environmental costs, consider mitigation measures, assess the advantage of terminating the proposal . . . and weigh other alternatives in the balance.' [Citation.]" Id. at 16-19.

A. The NOP Failed to Provide a Stable Project Description.

cont'd P700-14

The NOP for the Project failed to provide an accurate and stable project description, indicating that:

> The proposed route would travel generally along Alameda Street, Spring Street, and Bishops Road from LAUS to Dodger Stadium. The **proposed Project includes options** for an intermediate station to provide additional transit service adjacent to the Los Angeles State Historic Park and the location where the proposed Project flies over portions of the Park (the Spring Street Alternative and Broadway Alternative). . . . Figure 1 shows the regional location of the proposed Project and Figures 2 and 3 provide an overview of the Spring Street Alternative and Broadway Alternative, respectively. (Emphasis added).

B. The DEIR Fails to Provide a Stable Project Description.

P700-15

The lack of an accurate, stable and finite project description is then carried forward into the DEIR. DEIR page ES-10 indicates that:

> The Project Sponsor will request consideration by the Los Angeles Dodgers of **the potential** for the Dodger Stadium Station **to include** a mobility hub where outside of game day periods, passengers would be able to access a suite of first and last mile multi-modal options, such as a bike share program and individual bike lockers, to access Elysian Park and other nearby neighborhoods, including Solano Canyon. Issues to be addressed in connection with such consideration as to the mobility hub include maintaining security for Dodger Stadium and the surrounding surface parking areas. (Emphasis added).

cont'd
P700-15

How has the potential for the Project to include this mobility hub been addressed in the DEIR? An EIR is required to contain an accurate, stable and finite project description. This shows that there is fluidity in the project description and that the project description is not fully accurate or stable.

This fluidity is further exhibited in both the Executive Summary and DEIR Chapter 6, which describe five Design and Use Options for the Project. As explained on DEIR page 6-1:

> While not proposed as part of the proposed Project, design and use options to the proposed Project have been considered in this Draft EIR to explore potential options to various Project components. Each design and use option offers a variation to the proposed Project.

P700-16

> Pursuant to Section 15126.6(a) of the CEQA Guidelines, an EIR shall describe a range of reasonable alternatives. This Draft EIR provides that analysis in Chapter 4.0. This Chapter 6.0 considers minor variations to the proposed Project, which qualify as design and use options instead of project alternatives.
>
> For the proposed Project, five design and use options are considered for analysis in this chapter:

- Design Option A: Broadway Junction Shift to Avoid 451 E. Savoy
- Design Option B: Single Tower along Alameda Street
- Design Option C: Chinatown/State Park Station with Increased Height
- Use Option D: Chinatown/State Park Station as a Non-passenger Junction
- Design and Use Option E: Pedestrian Bridge at the Los Angeles State Historic Park

The five design and use options are described below, along with an analysis of their potential environmental impacts. The impact analysis is performed relative to the respective Project component of the proposed Project.

cont'd
P700-16

It therefore is obvious that the DEIR includes a menu of possible Project components, rather than an accurate and stable project description, and that the project description thus fails to include the Project's precise location and boundaries. This is a fatal flaw of the DEIR. As noted by the Court in Save our Capitol v. Department of General Services (Dec. 6, 2022) 85 Cal.App.5th 1101 (Save our Capitol):

> The description **must include the project's precise location and boundaries**; a statement of the project's objectives and underlying purpose; a general description of the project's technical, economic, and environmental characteristics; and a statement describing the EIR's intended use. (Guidelines, § 15124, subds. (a)-(d).) Whether the EIR contains an accurate and stable project description is a question of law subject to de novo review. (South of Market Community Action Network v. City and County of San Francisco (2019) 33 Cal.App.5th 321, 332, 245 Cal.Rptr.3d 174 (South of Market); accord Tiburon

Open Space Committee v. County of Marin (2022) 78 Cal.App.5th 700, 738, 294 Cal.Rptr.3d 56.)

An accurate and complete project description is necessary for an intelligent evaluation of a project's potential environmental impacts. (Center for Sierra Nevada Conservation v. County of El Dorado (2012) 202 Cal.App.4th 1156, 1171, 136 Cal.Rptr.3d 351; San Joaquin Raptor/Wildlife Rescue Center v. County of Stanislaus (1994) 27 Cal.App.4th 713, 730, 32 Cal.Rptr.2d 704.) It must contain sufficient information to understand the project's environmental impacts. (Dry Creek Citizens Coalition v. County of Tulare (1999) 70 Cal.App.4th 20, 28, 82 Cal.Rptr.2d 398.) "Only through an accurate view of the project may affected outsiders and public decision-makers balance the proposal's benefit against its environmental cost, consider mitigation measures, assess the advantage of terminating the proposal ... and weigh other alternatives in the balance." (County of Inyo, supra, 71 Cal.App.3d at pp. 192-193, 139 Cal.Rptr. 396.) . . .

cont'd
P700-16

For us, the governing principal is whether the project description may have thwarted the public's ability to participate in the process and comment meaningfully on the EIR. Inadequate or unstable descriptions of the project may mislead the public and thwart the EIR process. (San Joaquin Raptor Rescue Center v. County of Merced (2007) 149 Cal.App.4th 645, 656, 57 Cal.Rptr.3d 663.) "**A project description that gives conflicting signals to decision makers and the public about the nature of the project is fundamentally inadequate and misleading**." (South of Market, supra, 33 Cal.App.5th at p. 332, 245 Cal.Rptr.3d 174.) "A curtailed, enigmatic or unstable project description draws a red herring across the path of public input." (County of Inyo, supra, 71 Cal.App.3d at p. 198, 139 Cal.Rptr. 396.) . . . . (Emphasis added.)

The inclusion of separate, segmented environmental review, of a menu of potential design component options, confuses and misleads the public regarding both the project description and the environmental impacts of the Project. In addition, the differing design options may result in different impacts to treasured historical resources, particularly when it comes to aesthetic impacts on these resources. (See discussion later in this letter documenting the Project's significant aesthetic impacts on historic resources). Thus, the fluid project description, plus introduction of Design Options, renders the project description fatally flawed.

cont'd P700-16

C. The DEIR Is Further Defective Because the Project Description Omits Integral Components of the Project.

The project description included in the DEIR is also fatally flawed because it is incomplete and omits any detail regarding integral components of the Project. As noted on DEIR pages 2-61 to 2-62, the Project requires:

- An amendment to the Los Angeles State Historic Park General Plan
- A franchise agreement from the City of Los Angeles
- Creation and approval of a Specific Plan from the City of Los Angeles
- Modifications or relief from the City's River Implementation Overlay District and Cornfield Arroyo Seco Specific Plan

P700-17

The DEIR fails to provide specific information regarding the contents of the newly required Specific Plan, or the modifications to existing Plans and Overlay Districts. As a result, the Project Description is curtailed, incomplete and thus not accurate. As noted by the Court in Save Our Capitol at p. 130: "A project description that omits integral components of the project may result in an EIR that does not adequately disclose all the project's impacts."

The proposed General Plan amendment, franchise agreement, Specific Plan, and modifications or proposed relief documents should all be provided to the public concurrently with recirculation of a new DEIR.

In addition, the Project Description fails to specify the days and hours of Project operation. This along with the omission of anticipated fare information makes an independent confirmation of the accuracy of DEIR representations regarding ridership and VMT reductions impossible. P700-18

The Project Description in the DEIR is thus fatally flawed. Including pursuant to Guidelines Section 15088.5(a)(4), the DEIR must be corrected and recirculated for public review and comment.

D. <u>The DEIR Is Further Defective Because The Project Description Fails to Provide Evidence That the Project is Financially Feasible in the Long Term or Information on the Fare Structure.</u>

Few public transit systems are fully funded by project fares. This is a private transit project. It is therefore important that the DEIR provide full disclosure regarding Project construction and operating costs, and the anticipated fare structure to demonstrate that the Project and the alternatives are feasible as proposed. This is important for a number of reasons that have implications for the environmental analysis.

For example, first, if the Project does not prove to be financially viable, and the system has to be abandoned or publicly subsidized, it could result in physical degradation of the area, or the diversion of financial resources that support the existing public transit system in order to maintain the Project, thus impacting existing public transit operations. The potential for such economic impacts to result in physical impacts on the environment needs be addressed in the DEIR, including pursuant to Guidelines Section 15131(b), particularly given that it does not appear that there is a financing plan in place which would provide for adequate operational revenues to support this private transit Project long-term.[5] P700-19

[5] According to the Los Angeles Business Journal, September 5, 2022: https://labusinessjournal.com/engineering/dodger-stadium-gondola-project-developer-hands-off-project-to-environmental-group-partner-retains-funding-role/ FN P700-19

Second, the fare structure will have an impact on ridership and the mode choice of potential users. The DEIR claims that the Project will result in a reduction in VMT, but both ridership and resulting changes in VMT are highly dependent of the cost of the fare, particularly when it comes to a transit project such as this one, which will largely serve non-transit

cont'd P700-19

> Los Angeles Aerial Rapid Transit, the gondola tram development company headed by former Los Angeles Dodgers owner Frank McCourt, agreed on Aug. 9 to donate the gondola project to downtown-based Climate Resolve, an environmental nonprofit that focuses on collaborations to fight the impacts of climate change.
>
> Under the deal, Los Angeles Aerial Rapid Transit will continue to fund the entitlement phase of the project, but Climate Resolve – through a newly created subsidiary called Zero Emissions Transit – will be responsible for shepherding the project through the entitlement process and then assembling the funding package and managing the construction phase.

According to the FAQ for the Project at https://www.laart.la/faq/

> Similar to the Dodger Stadium Express, each baseball fan with a ticket to a Dodger game will be able to ride the gondola for free to the game. . . . Recognizing that they are not responsible for the project's financing, the Dodgers will join in providing information about this sustainable and clean energy transit opportunity, so it is well understood by Dodger fans. . . . Just like the Dodger Stadium Express, the aerial gondola will be free to ride for anyone attending a game at Dodger Stadium, which will maximize the air quality benefits from the project and encourage transit ridership. . . . Additionally, to increase local mobility options, the proposed "Community Access Plan" would allow local residents and employees of businesses close to the project to ride the gondola using their Metro fare at no additional cost. . . . For other riders, including tourists, a separate fare is being evaluated, to ensure that LA ART helps to attract visitors to learn more about the history of Los Angeles, starting at Union Station, and enjoy shopping and dining opportunities as well as cultural attractions at Olvera Street and Chinatown.

cont'd FN P700-19

It therefore does not appear that there is a financing plan in place which would provide for adequate operational revenues to support the system long-term.

dependent discretionary riders making non-commute trips.[6] Therefore, information regarding operating costs, responsibility, financing, and anticipated fares is needed to support any claims regarding Project-related VMT reductions. In the absence of such information, any claims of VMT reduction, and consequent GHG reductions, are not supported by substantial evidence. This also means that any claims that the Project is consistent with the RTP are also not supported by substantial evidence.

cont'd P700-19

III. THE DEIR ALSO VIOLATES CEQA BECAUSE IT FAILES TO ANALYZE THE "WHOLE" OF THE PROJECT, AND ENGAGES IN, AND TURNS A BLIND EYE TO, ILLEGAL PIECEMEALING.

P700-20

[6] As noted in Transit Price Elasticities and Cross-Elasticities, 16 September 2022, Todd Litman, Victoria Transportation Policy Institute, available at: https://www.vtpi.org/tranelas.pdf Transit Price Elasticities (i.e. the degree to which transit ridership is affected by changes in price) are a function of:

- *User Type*. Transit dependent riders are generally less price sensitive than choice or discretionary riders (people who have the option of using an automobile for that trip).
- *Trip Type*. Non-commute trips tend to be more price sensitive than commute trips. Elasticities for off-peak transit travel are typically 1.5-2 times higher than peak period elasticities, because peak-period travel largely consists of commute trips.
- *Type of Price Change*. Transit fares, service quality (service speed, frequency, coverage and comfort) and parking pricing tend to have the greatest impact on transit ridership. Elasticities appear to increase somewhat as fare levels increase (i.e., when the starting point of a fare increase is relatively high).
- *Direction of Price Change*. Transportation demand models often apply the same elasticity value to both price increases and reductions, but there is evidence that some changes are non-symmetric. Fare increases tend to cause a greater reduction in ridership than the same size fare reduction will increase ridership. A price increase or transit strike that induces households to purchase an automobile may be somewhat irreversible, since once people become accustomed to driving they often continue. See also: https://digitalcommons.usf.edu/cgi/viewcontent.cgi?article=1339&context=jpt

"Transit fares have a negative and significant effect on ridership in Los Angeles." Per Rui Liu. "Improving Demand Modeling in California's Rail Transit System" Mineta Transportation Institute Publications (2018). Available at: https://scholarworks.sjsu.edu/cgi/viewcontent.cgi?article=1238&context=mti_publications

cont'd FN P700-19

A significant portion of the block located east of Bishops Road, north of North Broadway, and south and west of Savoy Street has been acquired at far above market rates between approximately 2019 and 2022. (**Exhibit** attached hereto [parcel maps, data].) This heretofore undisclosed assemblage of parcels in the direct path of and within the Project area appears to be a piecemealed portion of the whole of the larger Project, which the DEIR fails to disclose to the public and decisionmakers. One must ask why, it appears, McCourt- or LA AART-affiliated entities spent tens of millions of dollars in 2019, and continuing in 2022, at that block. A major parking garage or high density development seem to be likely candidates for that assemblage. (See https://planning.lacity.org/pdiscaseinfo/search/encoded/MjEwNjk00 and https://la.curbed.com/2017/8/10/16126038/johnson-fain-chinatown-headquarters-for-sale). The true plan for Bishops/Broadway has not been revealed, but must be as part of a recirculated DEIR.

cont'd P700-20

This large McCourt-directed development clearly appear linked to the Gondola Project but has not been disclosed, analyzed and mitigated in the current DEIR. As a result, the DEIR violates CEQA's prohibition against piecemealing. It does not account for the whole of the Project, including its significant cumulative and growth inducing impacts.

IV. ADDITIONAL CONCERNS ARE RAISED BY THE DEIR'S EXECUTIVE SUMMARY.

What is the nature of the relationship between the Project Sponsor and the owners and operators of Dodger Stadium? Is this Project, in fact, being proposed by the owners and/or operators of Dodger Stadium, or some subset thereof?

P700-21

The DEIR indicates that the gondola system will require a total of approximately 2.5 megawatts of power (see for example DEIR page ES-12). What is the unit of time for this power use, per minute, per hour, per day, per week?

P700-22

The DEIR describes the Project as a "high-capacity" zero emission ART. In what way is this a zero emission Project? The Project will require

electrical consumption. Electrical generation results in emissions. In what way is this Project high-capacity? The description does not appear to be accurate.

cont'd P700-22

According to Table ES-1, the Project will require the export of a total of 62,623 cubic yards of soil. Table ES-1 should include a line summing the figures provided in the table. The DEIR needs to identify the disposal site for the exported soil and address any indirect impacts associated with the soil export.

P700-23

V. THE DEIR ALSO VIOLATES CEQA THROUGH IMPROPER USE OF PROJECT DESIGN FEATURES (PDFS) AND BEST MANAGEMENT PRACTICES (BMPS).

DEIR page ES-21 states:

> Project Design Features (PDFs), while not necessary for the impact significance determination, are included in Table ES-2 because they are inherent in the design of the proposed Project. Best Management Practices, or other measures required by law and/or permit approvals, are also requirements of the proposed Project.

P700-24

However, some of the PDF's are clearly mitigation measures and the DEIR fails to innumerate the BMPs assumed in the impact analysis, identify what agency has identified them as BMPs, and to demonstrate that they are really features of the Project, rather than mitigation.

In terms of the PDFs, CUL-PDF-A, CUL-PDF-B, CUL-PDF-C, CUL-PDF-D and CUL-PDF-E, for example, are clearly designed to address potential impacts to the *El Grito* mural and historic Winery and do not describe physical components of the Project. The fact that these PDFs are mitigation measures is evidenced by statements in DEIR Appendix G, including the following:

Los Angeles Plaza Historic District and The Winery[7]

The Winery is listed as a contributor to the National Register Los Angeles Plaza Historic District and Los Angeles HCM. The Project may cause direct impacts to The Winery, and thus the Los Angeles Plaza Historic District. Detailed mitigation measures to minimize vibratory impacts to The Winery caused by construction activities to less than significant, including the use of vibration monitoring equipment (VIB-A) and force adjustable ground compaction devices (VIB-B), are provided in LA ART Noise and Vibration Technical Report. In addition to VIB-A and VIB-B, **GPA recommends the implementation of the following PDFs to ensure unforeseen impacts can be minimized to a less than significant level**. . . .

cont'd
P700-24

El Grito (The Cry) Mural[8]

The Project may cause direct impacts to El Grito mural within Placita de Dolores. The mural is eligible for listing in the National Register, California Register, and as a Los Angeles HCM. Detailed mitigation measures to minimize vibratory impacts to El Grito caused by construction activities to less than significant, including the use of vibration monitoring equipment (VIB-A) and force adjustable ground compaction devices (VIB-B), are provided in LA ART Noise and Vibration Technical Report. In addition to VIB-A and VIB-B, GPA **recommends implementation of the following PDFs to ensure unforeseen impacts can be minimized to a less than significant level**. (Emphasis added)

FN P700-24

[7] Appendix G, page 99-100.

[8] Appendix G, page 101.

CUL-PDF-A and CUL-PDF-C require pre-construction documentation of the condition of these two resources. CUL-PDF-B then is designed to address any identified impacts and reads as follows:

> **CUL-PDF-B Post-Construction Documentation of The Winery.**
>
> Post- Construction: After construction is complete, pictures of The Winery equivalent to CUL-PDF-A will be taken to objectively compare the condition of The Winery before and after construction. In the event that damage to the Winery not documented at the time of the pre-construction survey is identified as being caused by construction activities during construction monitoring, the Project Sponsor will retain an experienced professional or professionals qualified to carry out the repairs within 12 months of completion of the project. Repairs will conform to the Secretary of Interior's Standards for the Treatment of Historic Properties (36 CFR Part 68).

cont'd
P700-24

CUL-PDF-D and E similarly reads as follows:

> **CUL-PDF-D Protection During Adjacent Construction.**
>
> Prior to the issuance of building permits for the Alameda Station, the Project Sponsor will ensure that the *El Grito* mural is sufficiently protected from any inadvertent damage caused by construction activities. Following National Park Service guidance for protecting historical resources during nearby construction, the following measures, at a minimum, should be implemented:
>
> 1. Vibration monitoring equipment (VIB-A) should be carefully installed so that it does not permanently damage the face of the *El Grito* mural.

2. The *El Grito* mural should be cushioned and buttressed from either side of the wall with padded wood supports. The padding may consist of insulating foam or similar material.

3. A protective barrier or barriers made from plywood should be installed over the front, back, top, and sides of the *El Grito* mural and curved wall to diffuse the force of any potential physical contact. The barrier should include removable panels or similar features to ensure the vibration monitors and mural can be visually inspected during construction monitoring (CUL-PDF-C).

4. Plastic tarp or polyethylene sheeting should be secured over the wood barriers to protect against the accumulation of dust or contact with materials such as uncured concrete or other liquids that could damage or mark the surface of the *El Grito* mural.

cont'd
P700-24

All of the protective measures described above should be installed and secured in such a way that does not damage the *El Grito* mural or the wall on which is it located. The barrier will not be physically attached to the *El Grito* mural or wall with screws, nails, or other fasteners.

CUL-PDF-E Construction Monitoring Plan (Built Resources).[9]

Prior to the issuance of building permits for the Alameda Station, the Project Sponsor will prepare a Construction Monitoring Plan in coordination with the Los Angeles Department of Cultural Affairs (DCA). The Construction Monitoring Plan will identify specific project milestones at which a qualified professional

cont'd
FN P700-24

[9] It should be noted that a similar construction monitoring plan for significant impacts to archaeological resources, MM-CUL-A, is classified as a mitigation measure in the DEIR.

meeting the Secretary of the Interior's Standards for architectural history or historic architecture will be notified by the Project Sponsor or Project Sponsor's contractor to visit the site and observe and document the *El Grito* mural's condition. Details will be recorded in construction monitoring memorandums submitted to DCA. These milestones will include, at a minimum:

1. Pre-Construction: Before protection measures are installed (CUL-PDF-D), to confirm the baseline condition of the *El Grito* mural is still consistent with the information presented in the HABS-like documentation (CUL-PDF-C).

2. Pre-Construction: Once protection measures (CUL-PDF-D) are installed, to ensure they are sufficient, and their installation has not damaged the *El Grito* mural.

cont'd
P700-24

3. Construction: After each phase of active construction

4. Post-Construction: After construction is complete and protective measures have been removed. At this stage, pictures of the *El Grito* mural equivalent to CUL-PDF-C will be taken to objectively compare the condition of the *El Grito* mural before and after construction.

The Construction Monitor will also be included on notifications from the real-time vibration monitoring equipment (VIB-A).

In the event that damage to the *El Grito* mural not documented at the time of the pre-construction survey is identified as being caused by construction activities during construction monitoring, the Project Sponsor will retain an experienced professional or professionals qualified to carry out the repairs within 12 months of completion of the Project. Repairs will conform to the Secretary of Interior's

> Standards for the Treatment of Historic Properties 36 CFR Part 68.

These are clearly measures intended to reduce impacts. The DEIR includes aesthetic, air quality, biological resource, cultural resource, noise, and wildfire PDFs. While several of the PDF are standard regulatory measures, or include components that are regulatory measures, or are actually physical design features of the Project, the PDFs are, for the most part, clearly measures intended to mitigate, minimize or avoid impacts. The way the DEIR has relied on PDFs in making impact judgements is contrary to the requirement that project impact significance determinations under CEQA be made without consideration of mitigation measures.

The EIR for the proposed project thus understates Project impacts by improperly relying on PDFs, which are in fact mitigation measures, as a basis for concluding that Project impacts are less than significant. In Lotus vs. Department of Transportation (2014) 223 Cal.App.4th 645, the Court found that an EIR violated CEQA by incorporating proposed mitigation measures into the description of the project, and then basing its conclusion of less-than-significant impacts in part on those mitigation measures. This is exactly what has been done in the DEIR for the proposed Project. The Court found that this improperly compressed the analysis of impacts and mitigation measures into a single issue.

cont'd
P700-24

In Lotus, Caltrans was found to have certified an insufficient EIR based on its failure to properly evaluate the potential impacts of a highway project. The Lotus Court found that Caltrans erred by:

> incorporating the proposed mitigation measures into its description of the project and then concluding that any potential impacts from the project will be less than significant. As the trial court held, the "avoidance, minimization and/or mitigation measures," as they are characterized in the EIR, are not "part of the project." They are mitigation measures designed to reduce or eliminate the damage to the redwoods anticipated from disturbing the structural root zone of the trees by excavation and

> placement of impermeable materials over the root zones. By compressing the analysis of impacts and mitigation measures into a single issue, the EIR disregards the requirements of CEQA. Lotus at pp. 655-656 (emph. added).

The Court ordered Caltrans' certification of the EIR set aside, finding:

> [T]his shortcutting of CEQA requirements subverts the purposes of CEQA by omitting material necessary to informed decisionmaking and informed public participation. It precludes both identification of potential environmental consequences arising from the project and also thoughtful analysis of the sufficiency of measures to mitigate those consequences. The deficiency cannot be considered harmless. Id. at 658.

cont'd
P700-24

The analyses of both the proposed Project and PDFs are fatally flawed because many of the PDFs are in fact mitigation measures. The EIR thus understates impacts in a way that is far more extreme than what happened in Lotus. Under CEQA, significance determinations must be made without consideration of avoidance, minimization, and/or mitigation measures. The DEIR for the Project has violated this precept and understated and failed to identify impacts. The EIR is therefore fatally flawed on this additional ground. This must be corrected and the EIR recirculated, including pursuant to CEQA Guidelines Section 15088.5(a)(1), (2) and (4).

VI. THE DEIR FURTHER VIOLATES CEQA BY ENGAGING IN DEFERRED OR DELEGATED MITIGATION, AND BY USE OF MITIGATION MEASURES THAT LACK CLEAR STANDARDS.

P700-25

Metro proposes to depend on other agencies to carry out the vast majority of the mitigation measures in the DEIR, and specifies few, if any, parameters within which these other agencies must operate. The mitigation measures for construction impacts are both improperly delegated and deferred, with the City of Los Angeles, which will presumably issue the

actual construction approvals, bearing the greatest share of the load. This deferral of mitigation and shrugging off responsibility for it reflects Metro's general attitude, expressed in its original Request for Information to LA ART, that "Metro does not envision taking a hands-on, prescriptive, or performance minded approach to this project." (LA ART's Response to Metro's Request for Information, p. 8.) The DEIR reflects this hands-off approach to the Gondola Project.

cont'd P700-25

The DEIR identifies what it considers "significant" impacts only during the construction phase of the proposed Project, and only one impact that cannot be mitigated to less than significant. (DEIR, p. ES-58 [Noise and Vibration].) Other potentially significant construction impacts will supposedly be mitigated by a series of plans, yet to be developed. (See, e.g., Construction Traffic Management Plan [MM-TRA-B, at DEIR p. 3.17-67].)

The CEQA Guidelines are clear that an EIR may rely on mitigation that is deferred past project approval "*provided* that the agency (1) commits itself to the mitigation; (2) adopts specific performance standards the mitigation will achieve; and (3) identifies the type(s) of potential action(s) that can feasibly achieve that performance standard that will be considered, analyzed, and potentially incorporated in the mitigation measure." Guidelines § 15126.4(a)(1)(B) (emphasis added). Section 15126.4(a)(2) requires that mitigation measures "be fully enforceable through permit conditions agreements, or other legally-binding instruments."

P700-26

Many of the mitigation plans are plainly deferred, since they are described in a sketchy, abbreviated manner, in the DEIR and are not required to be adopted prior to the issuance of the relevant building permit (see, e.g., MM-TRA-B, Construction Traffic Management Plan [DEIR, p. 3.17-67], prior to the issuance of a grading permit (VIB-A: Vibration Monitoring [DEIR, p. 3.13-73]), or prior to the start of construction (MM-TRA-C, Temporary Disaster Route Plan [DEIR, p. 3.17-69].) None is required to be fully fleshed out before Project approval, or during the public review of the DEIR. Since these are deferred mitigation measures, Metro must be held to the limitations on deferred mitigation set out in the CEQA Guidelines.

Guidelines Section 15126.4(b) requires in part that:

> Formulation of mitigation measures shall not be deferred until some future time. The specific details of a mitigation measure, however, may be developed after project approval when it is impractical or infeasible to include those details during the project's environmental review provided that the agency (1) commits itself to the mitigation, (2) adopts specific performance standards the mitigation will achieve, and (3) identifies the type(s) of potential action(s) that can feasibly achieve that performance standard and that will considered, analyzed, and potentially incorporated in the mitigation measure. Compliance with a regulatory permit or other similar process may be identified as mitigation if compliance would result in implementation of measures that would be reasonably expected, based on substantial evidence in the record, to reduce the significant impact to the specified performance standards.

cont'd
P700-26

All of the mitigation measures need to clearly state when the mitigation is needed to address the significant environmental impact and should be legally enforceable. This is best accomplished by specifying that specific permits shall not be issued until mitigation compliance has been demonstrated. In addition, the mitigation measures should include standards for achieving the requisite level of mitigation and potential actions that can feasibly achieve the performance standards. This is particularly important when mitigation responsibility has been delegated to another public agency.

A number of the mitigation measures in the DEIR do not comply with CEQA requirements that mitigation measures must be feasible and enforceable, that the EIR must identify any uncertainty in the effectiveness of the measures proposed, and that mitigation cannot be improperly deferred. As explained by the Court in Gardiner Farms v. County Kern (2020) 45 Cal.App.5th 814:

P700-27

The mitigation measures discussed in the EIR should be feasible. (Guidelines, § 15126.4, subd. (a); see Guidelines, § 15364 [definition of feasible].) . . .

CEQA defines the term "'[f]easible'" as meaning "capable of being accomplished in a successful manner within a reasonable period of time, taking into account economic, environmental, social, and technological factors." (§ 21061.1; see § 21081, subd. (a)(3) [necessary findings relating to mitigation measures or alternatives].) The guidelines add "legal" factors to the list. (Guidelines, § 15364; see City of Marina v. Board of Trustees of California State University (2006) 39 Cal.4th 341, 356.) . . .

CEQA imposes several requirements on mitigation measures. Section 21081.6, subdivision (b) provides: "A public agency shall provide that measures to mitigate or avoid significant effects on the environment are fully enforceable through permit conditions, agreements, or other measures. Conditions of project approval may be set forth in referenced documents which address required mitigation measures. . . ." Similarly, Guidelines section 15126.4, subdivision (a)(2) states: "Mitigation measures must be fully enforceable through permit conditions, agreements, or other legally-binding instruments." The responsibility of the public agency does not end with simply imposing enforceable mitigation measures. "The public agency shall adopt a reporting or monitoring program for the . . . conditions of project approval, adopted in order to mitigate or avoid significant effects on the environment." (§ 21081.6, subd. (a)(1).) The purpose of a monitoring program is to ensure compliance with the mitigation measures imposed as conditions of the project approval.

cont'd
P700-27

The absence of specific performance criteria and a commitment by the County leads to the conclusion that the provisions in MM . . . are not "fully enforceable through

permit conditions, agreements, or other legally-binding instruments." (Guidelines, § 15126.4, subd. (a)(2).) . . .

The requirement for a description of the mitigation is based on the general rule that "an EIR is required to provide the information needed to alert the public and the decision makers of the significant problems a project would create and *to discuss currently feasible mitigation measures*." (Sierra Club v. County of Fresno, supra, 6 Cal.5th at p. 523.) The discussion provided must contain facts and analysis, rather than the agency's bare conclusions or opinions. (Id. at p. 522.) Whether the facts and analysis included in the EIR's discussion of currently feasible mitigation measures are sufficient to comply with CEQA depends on "whether the EIR includes enough detail 'to enable those who did not participate in its preparation to understand and to consider meaningfully the issues raised by the proposed project.' [Citations.] The inquiry presents a mixed question of law and fact. . .

cont'd
P700-27

Our conclusions that the EIR must identify and explain the uncertainty in the effectiveness of the mitigation measures proposed is a specific application of the general principles governing the discussion of mitigation measures. To fulfill its informational role, an "EIR must contain facts and analysis" (Concerned Citizens of Costa Mesa, Inc. v. 32nd Dist. Agricultural Assn. (1986) 42 Cal.3d 929, 935). Uncertainty in the extent a measure will be effective, as well as the reasons for that uncertainty, are important facts that should be disclosed to the public and decision makers.

"[A]n EIR is required to provide the information needed to alert the public and the decision makers of the significant problems a project would create and *to discuss currently feasible mitigation measures*." (Sierra Club v. County of Fresno, supra, 6 Cal.5th at p. 523.) To fulfill the EIR's

> informational role, the discussion of the mitigation measures must contain facts and analysis, not bare conclusions and opinions. (Id. at p. 522.) The level of detail CEQA requires in the EIR's discussion of facts and analysis of the mitigation measures depends on "whether the EIR includes enough detail 'to enable those who did not participate in its preparation to understand and to consider meaningfully the issues raised by the proposed project.' " (Sierra Club v. County of Fresno, supra, at p. 516.) . . .
>
> Even if particular technologies and techniques had been identified and described in the EIR, this statement leaves the reader wondering if an applicant would be required to commit to any measures in its application or, alternatively, whether the applicant could omit those measures from its application because they were beyond the County's authority or control. . . .
>
> This "noncompliance with the information disclosure" requirements of CEQA "preclude[d] relevant information from being presented to the public agency" and the public. (§ 21005, subd. (a).) It constitutes a prejudicial violation of CEQA by itself and supports the conclusion that the failure of the mitigation measures to comply with the general rules against deferred formulation was prejudicial.

cont'd P700-27

A number of the mitigation measures in the EIR are legally deficient because, as written, they are not fully enforceable[10] through permit conditions, agreements, or other measures. In addition, several of the mitigation measure are ineffective because they are only required if feasible, thereby vitiating their mitigation value. Other measures are ineffective because they lack standards and constitute improper deferral of mitigation.

P700-28

[10] Mitigation is required by CEQA to be fully enforceable, and to be carried out. Guidelines § 15126.4(a)(2); Lincoln Place Tenants Assn. v. City of Los Angeles (2005) 130 Cal.App.4th 1491, 1508.

FN P700-28

The value of mitigation measures MM-CUL-A and MM-CUL-F are vitiated by language that conditions implementation on the feasibility of the mitigation measure. Mitigation Measure MM-CUL-A reads in relevant part:

> **MM-CUL-A: Cultural Resources Monitoring and Mitigation Plan.** A Cultural Resources Monitoring and Mitigation Plan (CRMMP) shall be prepared for the Project by a qualified archaeologist meeting the Secretary of Interior Standards for Archaeology (36 CFR § 61) prior to construction. Where specific project components, such as the Chinatown/State Park Station, have requirements specific to that component, the CRMMP will lay out regulatory requirements (such as PRC 5024) which will be adhered to. This includes SHPO consultation and following practices that seek to avoid and preserve state-owned historical resources, **when prudent and feasible**. The same would be for any specific requirement from El Pueblo de Los Angeles specific to the work at the Alameda station. (Emphasis added).

P700-29

The DEIR acknowledges that impacts to archeological resources are significant prior to mitigation. Because the mitigation specified "following practices that seek to avoid and preserve state-owned historical resources," (only) "when prudent and feasible," impacts to State-owned archeological resources at the Chinatown/State Park Station and El Pueblo de Los Angeles remain significant and unmitigated.

Mitigation Measure MM-CUL-F is similarly defective and reads as follows:

> **MM-CUL-F: Redesign of Placement of Park Amenity Structures to Avoid Archaeological Features at Los Angeles State Historic Park Station.** After implementation of CUL-E, if it is found that the Park amenities (e.g., concessions and restroom) at the Los Angele State Historic Park have the potential to impact any significant features found during the testing phase of

> CUL- E, the location of the park amenity structures will be reconfigured to avoid and/or diminish impacts to those features **as feasible**. (Emphasis added)

Mitigation Measure MM-CUL-F (in combination of MM-CUL-E) is thus both an example of deferred analysis and improper deferral of mitigation. In addition, the mitigation value of the measure is destroyed by the language "as feasible. Impacts to archeological features at Los Angeles State Historic Park therefore remain significant. The DEIR must be corrected to identify these impacts and recirculated pursuant to CEQA Guidelines Section 15088.5 (a)(1), if the feasibility language is retained.

cont'd
P700-29

The following mitigation measure is an example of improper deferral of mitigation because it lacks a clear standard:

> **MM-HAZ-A:** *Prepare a Soil and Groundwater Management Plan*. The Project Sponsor shall retain a qualified environmental consultant to prepare a Soil and Groundwater Management Plan prior to any re-grading, decommissioning, or construction activities. The Soil and Groundwater Management Plan would be prepared and implemented to specify methods for handling and disposal in the event contaminated groundwater, contaminated soil, or structures are encountered during Project construction. The Soil and Groundwater Management Plan shall provide a summary of the environmental conditions at each Project component site, including stations and towers. The Soil and Groundwater Management Plan shall include methods and procedures for sampling and analyzing soils and/or groundwater to classify them as either hazardous or non-hazardous; and if identified as hazardous, shall include additional methods and procedures for the proper handling and removal of impacted soils and/or groundwater for off-site disposal and/or recycle. Methods and procedures in the Soil and Groundwater Management Plan shall be in accordance with current federal, state, and local

P700-30

> regulations, and be protective of workers and the environment.

The mitigation measure lacks a clear standard because it fails to disclose the specific applicable federal, state and local regulations that define the standard. In addition, the mitigation measure is deficient because it is legally unenforceable. It merely requires that "Project Sponsor shall retain a qualified environmental consultant to prepare a Soil and Groundwater Management Plan." It does not require that the Plan be reviewed and approved by a responsible agency prior to issuance of any grading or construction permits.

cont'd
P700-30

Metro and the DEIR fail to comply with CEQA in other respects related to ostensible mitigation measures. The DEIR sets out a long list of partial and full lane closures for periods lasting up to 30 weeks at a time on Cesar Chavez Avenue, Alameda Street, Main Street, Los Angeles Street, and adjacent to the State Historic Park. A few examples of these closures are at the DEIR's Hazards and Hazardous Materials section at p. 3.9-32 (16 weeks, closures on Cesar Chavez and Alameda, under the Alameda Station, Temporary Deck Option); p. 3.9-35 (16 weeks, require the full-time closure of the two southbound through lanes and the northbound curbside drop off lane during construction of foundations and columns under the No-Deck Option of the Alameda Station); p. 3.9-35 (30 weeks, closure of all lanes on Alameda Street between Cesar Chavez Avenue and Los Angeles Street for the Structural Steel and Gondola Equipment Erection of the Alameda Station); p. 3.9-37 (16 weeks, full time closure of one northbound lane on Alameda Street During Foundation and Columns phase of Alameda Tower construction); p. 3.9-39 (22 weeks, full closure of Alameda Street between Main Street and Alhambra Avenue, except one lane kept open for emergency and local access, for Structural Steel and Gondola Equipment Erection for Alameda Tower); p. 3.9-37 (22 weeks closure of two northbound lands on Alameda between Main and Alhambra for Structural Steel phase of Alameda Tower); p. 3.9-39 (15 weeks, full closure of one northbound land on Alameda Avenue, for Foundations and Columns phase of Alpine Tower); p. 3.17-57 ("full-time closure of all travel and parking lanes on North Broadway (the northbound left/center left turn lane, two northbound through lanes, the southbound through lane, the southbound through-right lane, and the northbound and

P700-31

southbound parallel parking lanes) between Cottage Home Street and Savoy Street, and all travel and parking lanes and shoulders on Bishops Road (the shared eastbound left/eastbound right turn lane, the westbound through lane, and the eastbound parallel parking lane and westbound parking shoulder) between North Broadway and Savoy Street during the approximately three-week deck removal phase.") For brevity's sake, this is only a partial list. Many more closures are identified in the DEIR.

The proposed Project would wreak havoc for weeks at a time on traffic, in multiple phases of the construction of Gondola stations and towers, causing lane closures in heavily-traveled portions of Los Angeles. The DEIR admits, for example, that the "temporary lane closures during construction would, by necessity, increase traffic volumes on the detour routes, which could increase traffic congestion on those routes." (DEIR, p. 3.17-58.) It concludes that "implementation of a Construction Traffic Management Plan, as outlined in Mitigation Measure TRA-B, as presented in Section 3.17.5, Mitigation Measures, below, *would be required to ensure* adequate emergency access is maintained in and around the Project alignment and component sites throughout all construction activities to ensure that the impact is less than significant with mitigation incorporated." (Id.) Similarly, the discussion in the DEIR subsection dealing with emergency response and evacuation plans finds all the lane closures to have less than significant impact only "with mitigation." (DEIR, p. 3.9-31.)

cont'd
P700-31

However, Metro does not commit itself to designing, setting performance standards for, or carrying out the mitigation that the DEIR concludes must be carried out to reduce the impacts of the various closures to less than significant levels. Instead, Metro essentially delegates responsibility for approving and carrying out this mitigation to the City of Los Angeles. The DEIR recognizes that "[a]ll the streets in the Project study area are under the jurisdiction of the City of Los Angeles" (DEIR, p. 3.16-31), and states that, as to mitigation for the impacts of Project construction on traffic and transportation, "the ultimate design, construction process, and traffic handling would be subject to design review and approval by the City of Los Angeles and other reviewing agencies, so the potential construction work areas, and traffic handling could vary from the scenarios identified for the purposes of analysis in this EIR. However, impacts are expected to be less

than significant with mitigation incorporated." (DEIR, p. 3.17-45.) That statement shows that Metro does not know whether what is described in the DEIR is what will actually be done on the ground. Metro cannot commit itself to what it admits it does not know. Nonetheless, the DEIR "expect[s]" impacts to be mitigated to less than significant, even if neither Metro nor the public now knows what the mitigation will be or how well it will (or will not) really work. This is a failure to provide substantial evidence that impacts will, in reality, be mitigated to less than significant levels.

cont'd P700-31

Nor does Metro prescribe full and specific performance standards. Mitigation Measure TRA-B: Construction Traffic Management Plan, prescribes a list of measures to lessen the impacts of lane closures, the presence of construction crews and materials, and so forth. However, it prescribes *no* performance standards for the effectiveness of these measures, except that land uses in proximity to Project construction must be accessible (the degree of accessibility is not specified), and emergency vehicles must be able to get through. (DEIR, p. 3.17-68-3.17-69.) There is no other standard provided for the success or effectiveness of these measures; how well they must work is not specified. The only performance standard provided is the yes/no test of whether or not they are carried out. Neither the decision maker (Metro) nor the public can know how successful any or all of the measures will be, nor is any provision made to determine how well they are or are not working. This violates the Guidelines' requirement for performance standards.

P700-32

Despite this complete lack of standards (except for some access provisions), the DEIR confidently asserts that "transportation impacts would be reduced to a less than significant level." (DEIR, p. 3.17-69.) This is a conclusion that lacks substantial evidence; no standards have been articulated in the DEIR against which the Plans can be evaluated except the two access provisions. This violates Public Resources Code Section 21002 by allowing the approval of a project that has the potential to harm the human environment. In addition, CEQA's full public disclosure requirements are also put in jeopardy by this approach to mitigation. The Construction Traffic Management Plan and Temporary Disaster Route Plan do not need to be completed until "prior to the issuance of a building permit for the proposed Project" (id.), *after* the CEQA process is completed and without any

guaranteed opportunity or process for public scrutiny of the finished plans. Finally, the DEIR does not discuss whether the various plans and measures will be made enforceable through permit conditions or other agreements. Metro has violated all provisions of CEQA Guidelines Section 15126.4(a)(2). cont'd P700-32

Further, as previously noted, CEQA Guidelines Section 15097(a) states that "A public agency may delegate reporting or monitoring responsibilities to another public agency or to a private entity **which accepts the delegation**; however, until mitigation measures have been completed the lead agency remains responsible for ensuring that implementation of the mitigation measures occurs in accordance with the program." (Emphasis added.)

The DEIR must include documentation demonstrating that specified responsible agencies have accepted delegation of mitigation monitoring and enforcement responsibility. In the absence of such a showing that responsible agencies have accepted the delegation, it cannot be concluded that impacts are less than significant. In addition, the absence of a mechanism for the Lead Agency to verify mitigation compliance, the measures are not legally enforceable. The following are examples of mitigation measures which have not be properly delegated to responsible agencies: P700-33

> **LUP-A:** *Obtain a Los Angeles State Historic Park General Plan Amendment*. Pursuant to Public Resources Code 5002.2, the proposed Project shall obtain an amendment to the Los Angeles State Historic Park General Plan to allow transit uses within the Los Angeles State Historic Park General Plan.
>
> **MM-TRA-A**: *Visibility Enhancements.* Prior to the completion of construction of the proposed Project, and in coordination with and **subject to the approval of LADOT**, the Sponsor shall design visibility enhancements for the following locations sufficient to alert drivers to the presence of pedestrians:
>
> - Alameda Tower

- Chinatown/State Park Station

> Visibility enhancement features could include high visibility crosswalk treatments, advanced crossing warning signs, flashing beacons, upgraded lighting, and new or upgraded traffic controls, such as traffic signals and all-way stops and right turn on red restrictions and channelization of pedestrians to marked crosswalk locations via fencing. The mitigation measure would be implemented during the construction phase and would be completed prior to proposed Project operations.

The mitigation relies on the City for the definition of the specific measures. There has been no demonstration that the measure will fully reduce significant impacts regarding hazards to less than significant levels. A clear standard has not been articulated. The measure lacks a mechanism to stop the Project, or require additional mitigation or additional environmental review, if the responsible agency believes impacts have not or cannot be reduced to less than significant levels, or the responsible agency fails to comply with the measure or to accept delegation.

cont'd
P700-33

Other measures that rely on delegation to responsible agencies and thus lack substantial evidence they will be implemented include:

> **MM-TRA-B**: *Construction Traffic Management*. Plan**:** Prior to the issuance of a building permit for the proposed Project, a detailed Construction Traffic Management Plan (CTMP), including street closure information, detour plans, haul routes, and a staging plan, shall be prepared **and submitted to the City for review and approval**. The CTMP shall formalize how construction will be carried out and identify specific actions that will be required to reduce effects on the surrounding community. The CTMP shall be based on the nature and timing of the specific construction activities at each of the Project construction sites. This coordination will ensure construction activities of the concurrent related projects and associated hauling

activities are managed in collaboration with one another and the proposed Project. The CTMP may be updated as construction progresses to reflect progress at the various Project construction sites. The CTMP will include, but not be limited to, the following elements as appropriate:

- As traffic lane, parking lane, and sidewalk closures are anticipated, worksite traffic control plans, approved by the City of Los Angeles, shall be developed and implemented to route vehicular traffic, bicyclists, and pedestrians around any such closures.

- Visibility to open pedestrian crossings will be maintained, or temporary or permanent measures consistent with TRA-A shall be implemented if determined to be appropriate in coordination with LADOT. In the absence of measures to mitigate or eliminate visual obstructions for pedestrians crossing the street, pedestrian crossings may be closed or relocated to more visible locations.

cont'd
P700-33

- Existing school crossings, as denoted by yellow crosswalk striping consistent with the Manual on Uniform Traffic Control Devices (MUTCD) along proposed detour routes shall be evaluated in coordination with LADOT to determine if crossing guards should temporarily be assigned. If it is determined that crossing guards should be assigned, on days/times when detours are active, the proposed Project shall fund crossing guards during morning school arrival and afternoon school departure periods during periods when adjacent schools are in session. If school crossings along detour routes are unsignalized, temporary traffic signals will be evaluated in coordination with LADOT, and would be implemented by the proposed Project if deemed necessary.

- As partial and full street closures are anticipated at various locations during portions of the Project construction, detour plans, approved by the City of Los Angeles, shall be developed and implemented to route vehicular traffic and bicyclists to alternative routes during these periods.

- Ensure that access will remain accessible for land uses in proximity to the Project alignment and component sites during project construction. In some cases, alternative access locations would be provided or supervised temporary access through the worksite would be accommodated during construction phases where access is hindered, such as foundation construction.

- Coordinate with the City and emergency service providers to ensure emergency access is provided to the Project alignment and component sites and neighboring businesses and residences. Emergency access points will be marked accordingly in consultation with LAFD, as necessary.

cont'd
P700-33

- Conduct construction management meetings with City staff and other surrounding construction-related project representatives (i.e., construction contractors) whose projects will potentially be under construction at around the same time as the Project bimonthly, or as otherwise determined appropriate by City Staff.

- Provide off-site truck staging in a legal area furnished by the construction truck contractor.

- Schedule deliveries and pick-ups of construction materials during non-peak travel periods to the extent possible and coordinate to reduce the potential

of trucks waiting to load or unload for protracted periods.

- During construction activities when construction worker parking cannot be accommodated at the Project component sites, identify alternate parking location(s) for construction workers and the method of transportation to and from the Project component sites (if beyond walking distance) for approval by the City 30 days prior to commencement of construction.

- Provide all construction contractors with written information on where their workers and their subcontractors are permitted to park and provide clear consequences to violators for failure to follow these regulations.

MM-TRA-C: *Temporary Disaster Route Plan.* Prior to the issuance of a building permit for the proposed Project, and in coordination with and **subject to the approval of LADOT**, the Sponsor shall submit a temporary disaster route plan to LADOT, which shall include street closure information and detour plans in order to facilitate the movement of emergency vehicles through the study area and minimize effects on emergency response during a disaster. Construction activities and temporary lane closures could quickly be halted in event of an emergency to allow emergency vehicles to travel through the work zones. In addition to detours, the temporary disaster route plan could also include temporary operational measures that would be implemented by the City during a disaster, including temporary contra-flow lanes or reversing directions to flush vehicles during a disaster situation. The temporary disaster route plan would be prepared for the following locations:

cont'd
P700-33

- During those periods when construction of the Alameda Station, the Chinatown/State Park Station, and the Alameda and Alpine Towers require partial closure of one direction or full closure of both directions of Alameda Street or Spring Street.

MM-USS-A: *Development of a Utility Relocation Plan.* Before the start of construction-related activities, including the relocation of utilities, the Project Sponsor shall coordinate with the **LADWP, LASAN, SoCalGas, and Metro** to prepare a Utility Relocation Plan. The Project Sponsor shall also coordinate with the utility companies to minimize impacts to services throughout the Project and **obtain their approval of the Utility Relocation Plan**.

The Utility Relocation Plan shall be prepared, reviewed, and approved by a licensed civil engineer and, at a minimum, include the following:

- Plans that identify the utility infrastructure elements, including access for utility providers and easements, as applicable, that require relocation as a result of the proposed Project;

- Safety measures to avoid any human health hazards or environmental hazards associated with capping and abandoning some utility infrastructure, such as natural gas lines or sewer lines; and

- Timing for completion of the utility relocation, which shall be scheduled to minimize disruption to the utility companies and their customers.

cont'd P700-33

In addition, the mitigation measures in question do not provide an adequate mechanism for the Lead Agency to ensure that implementation of the mitigation measures occurs in accordance with the specified Plans. In the absence of wording in the mitigation providing a mechanism for stopping the

P700-34

Project, pending additional environmental review, if the responsible agency does not demonstrate to the Lead Agency successful compliance with the mitigation measures by a time certain, it cannot be concluded that impacts are less than significant.

Furthermore, a mechanism for the Lead Agency to ensure and demonstrate successful compliance with these type of mitigation measures may not be feasible. In the instant case, the Lead Agency has limited permitting responsibility, and thus has limited opportunity to stop project construction and initiate subsequent or supplemental environmental review if the mitigation measures are not implemented or the responsible agencies fail to fully mitigate impacts. This is because the Lead Agency's permitting responsibility, according to DEIR page 2-61 and as discussed above, is quite limited.

cont'd P700-34

As documented on pages 2-57 to 2-62 of the DEIR, the preponderance of permitting responsibility is vested in other public agencies. The listed mitigation measures are therefore inadequate and the potential for impacts in these issue areas thus remains. The DEIR must be corrected to identify these impacts and recirculated.

VII. THE DEIR FURTHER FAILS BECAUSE OF ITS INADEQUATE ANALYSIS OF LIGHT AND GLARE IMPACTS.

As noted by the Court in the recent Save Our Capitol case: "Aesthetic issues also include the environmental impact of light and glare caused by a project. (See, e.g., Taxpayers for Accountable School Bond Spending v. San Diego Unified School Dist. (2013) 215 Cal.App.4th 1013, 1038, 156 Cal.Rptr.3d 449; Guidelines, Appendix G.)" The DEIR's analysis of the Project's light and glare impacts is fatally flawed.

P700-35

This is an unusual project in its generation and distribution of light. First, while much of the Project's footprint is in urbanized Los Angeles, the alignment also crosses wildlife habitat, but the Biological Resources section of the DEIR devotes only three sentences to any potential impact on wildlife in the Gondola corridor from the effects of light from the Broadway Junction, the Stadium Tower, or the passage of hundreds of lighted gondola cabins over

wildlife habitat in the proposed Project's corridor every night that there is a game or event at Dodger Stadium, or other times when the Project would be used. (DEIR, p. 3.4-19.)[11] Even this cursory discussion does not present actual evidence of lack of impact. Instead, it only observes that lighting would be low-level and directed at the area being illuminated, and that "[d]ue to the high level of exterior lighting currently present in the urbanized BSA, lighting proposed by the Project is not anticipated to have an indirect impact on bird and bat species." (Id.) No citation to any authority is given for this passive-voice conclusion, and no actual evidence is presented as to the amount of light that would be shed on birds, bats, or other wildlife and their habitat in the Project impact area.

Further, the discussion, such as it is, appears to focus on light from architectural features, and to exclude consideration of light shed from the gondola cabins, which will have interior lighting (DEIR, p. ES-11), and may have exterior lighted advertising, which itself separately contributes to visual and aesthetic blight. The DEIR makes clear that lighted "signage" will be integrated into the Gondola's "stations, the junction, towers, and cabins," including signage that "recognizes" Project sponsors; this is otherwise known as advertising. (Id.)

cont'd
P700-35

LA ART's response to Metro's Request for Information (RFI) states that "[i]n-cabin, on-cabin, and in-station advertising are a part of ARTT LLC's business model," and that [w]ith visibility from both the ground and as viewed by riders, the ART system provides a significant and valuable opportunity for potential sponsors and advertisers. Such sponsorship is often packaged with advertising opportunities and can provide substantial upfront and operating capital to subsidize system benefits." (RFI, p. 36.) The statement is both an acknowledgement that light from the cabins will reach

[11] The DEIR estimates that 6,000 game attendees (12,000 trips for round-trip) would ride the proposed Project in 2026 and 10,000 game attendees (20,000 trips for round-trip) would ride the proposed Project in 2042 *per game*, reaching the estimated capacity of the system." (DEIR, p. 3.17-24, emphasis added.) The original proposal estimated cabin capacity at 30-40 passengers each. (Proposal, p. 9.) If the Project carried 12,000 passengers (6,000 each way) on a game night, and if each cabin carried 30 passengers, a total of 400 cabins would fly over the Gondola's route each game/event night; if a cabin carried 40 passengers, it would be 300 cabins, with all their light.

FN P700-28

the ground, and that cabins may have interior and exterior advertising; it is reasonable to assume that such advertising may be lighted.

The DEIR must be revised and recirculated to identify the full range of lighting that the Gondola will contribute to areas that are not fully urbanized and that provide habitat for species that require some darkness, and to analyze this light's potential impacts on such wildlife. The DEIR must also be revised and recirculated to identify the full range of lighting impacts that the Gondola will contribute in terms of aesthetic impacts and glare.

cont'd P700-35

Second, should a reader seek further information on this subject, Appendix C, the technical appendix considering light impacts, fails to provide the clear and readily understandable information to the public that is one of the main purposes of an EIR. (Pub. Res. Code § 21061 ["The purpose of an environmental impact report is to provide public agencies and the public in general with detailed information about the effect which the proposed project is likely to have on the environment[.]")

The Appendix is consistently confusing, often using technical terms without explaining them or providing a context and/or examples a layperson can understand. It uses terms like "candelas," "vertical and horizontal footcandles," and "inverse square law" (DEIR, p. ES-23, 3.1-8; Appdx. C, p. 22) without providing clear explanations or real-world equivalents that would allow laypersons to understand what the terms mean and what the reader is being told, and goes so far as to discuss physics and Newtonian laws, presenting material that many lay readers may find indecipherable. (Appdx. C's Lighting Study, p. 6.) This is a violation of Guidelines Section 15140, which directs that EIRs should be written in plain English. In this respect, the DEIR is less a useful document of information for decision makers and the public on the effects of light from the Gondola than it is a reference manual for those already expert in the subject. Not only must the discussion be expanded to identify all potentially significant impacts of light from the proposed Project, but it must be rewritten in plain English and recirculated, as the Guidelines require.

P700-36

Third and finally, the DEIR presents as "proof" that particular Project light sources will *comply* with a particular light standard – and will not have

P700-37

a significant impact – solely because that light source is *exempt* from the particular standard. (See, e.g., Appendix C, p. 88 ["[T]he proposed Project's lighting and signage would comply with the [Cornfields Arroyo Specific Plan] requirements where they apply at the Chinatown/State Park Station because the Project's light fixtures and signage are exempt from the [Cornfields Arroyo Specific Plan] exterior lighting requirements."]) The DEIR also claims that the Project's light sources comply with the Cal Green (state building energy code) standards in that they are exempt from those standards. (Id.) This is faulty reasoning; merely because a particular source of light is exempt from a standard does not mean that the light it spreads has no significant impact.

Protect the Historic Amador Waterways v. Amador Water Agency (2004) 116 Cal.App.4th 1099, at 1109, holds that "notwithstanding compliance with a pertinent threshold of significance, the agency must still consider any fair argument that a certain environmental effect may be significant." The case holds that even if a project *actually does comply* with an applicable standard, the agency may not conclusively presume that such compliance guarantees that the project will have no significant environmental impact. Analogously, and perhaps with greater force, if a particular light source is exempt from an applicable standard, an agency should not be able to conclusively presume that the source will have no significant impact, unless the agency presents specific, factual proof to support that conclusion.

cont'd
P700-37

The existence of an exemption is not evidence, let alone substantial evidence, of no significant impact, as the DEIR assumes. It is simply a failure by the lead agency, and an omission by the DEIR, to disclose, study and mitigate potentially significant impacts. The agency that set the standard may have created the exemption for many reasons, such as cost, technical feasibility, or lack of agency resources to enforce the standard without the exemption, rather than lack of potentially significant impact. Considerations such as feasibility can excuse an agency from certain types of mitigation for a project's significant environmental effects (Pub. Res. Code §§ 21002, 21081), but they do not and cannot excuse the lead agency from *identifying* all significant impacts of a project.

The exemptions from regulatory standards cited in the DEIR should not be regarded, per se, as evidence – let alone substantial evidence – of lack of significant impact. On the contrary, a lead agency is required to "use its best efforts to find out and disclose all that it reasonably can." (Guidelines § 15145.) The agency may not simply note the exemption and stop the analysis, as the DEIR does. Lack of an applicable standard is not a get-out-of-jail-free card for environmental analysis. The DEIR must be revised and recirculated to examine the potential impact of Project light sources, regardless of their alleged exemption from particular standards.

cont'd P700-37

VIII. THE DEIR VIOLATES CEQA BY FAILING ADEQUATELY TO ADDRESS BIOLOGICAL RESOURCES IMPACTS.

According to DEIR page 3.4-12, among the special-status wildlife species identified in the California Natural Diversity Database (CNDDB) in the study area are: western mastiff bat (*Eumops perotis californicus*; SSC), hoary bat (Lasiurus cinereus; tracked by CNDDB), big free-tailed bat (*Nyctinomops macrotis*; SSC). Furthermore, DEIR page 3.4-16 indicates the presence of possible bat habitat in the Project vicinity:

> With the presence of potentially suitable tree roosting habitat in the BSA in the vicinity of the proposed Alameda Station and Dodger Stadium Station sites, and the proximity of the SR-110 overpass to the Stadium Tower, as well as historic records of three special-status bat species (western mastiff bat, hoary bat, and big free-tailed) in the vicinity of the BSA, there is a remote chance that an individual or small group of special-status bats could occur in the BSA.

P700-38

Although the DEIR did address the potential for construction-related impacts to bats and to provide mitigation for significant impacts, it did not include a robust analysis of the potential operational impacts of the Project on bats. Additionally, statements regarding potential operational impacts on bats and bat behavior are not supported by substantial evidence.

The proposed Project includes the operation of moving lighted gondolas, suspended 159-175 feet in the air. As noted by Orbach and Fenton, bat collisions "often occur with lighted objects, suggesting ambient light may deleteriously affect obstacle avoidance capabilities."[12] As noted by Orbach and Fenton:

> Many anecdotal reports describe bats colliding with large stationary objects such as television towers [1–6], lighthouses [7], and windows [8–9] that should have been detected by echolocation and avoided. Furthermore, many of these collisions involve illuminated objects that should have been detected by vision.[13]

P700-39

The proposed Project would potentially increase the hazard risk by providing what are essentially low-flying lighted objects. The presence of the

FN P700-39

Project may thus pose increased hazards to local bats, and may result in bat avoidance of the area, or changes in bat behavior.[14] This needs to be more fully addressed in the EIR for the proposed Project, given the potential for significant impacts to bat species.

cont'd P700-39

IX. THE DEIR FURTHER VIOLATES CEQA BY FAILING TO FULLY MITIGATE CULTURAL RESOURCE IMPACTS.

The mitigation measures and PDFs provided for in the DEIR to address vibration related impacts of the Project on historic resources are inadequate to avoid significant impacts. CUL-PDF-8 requires:

> **CUL-PDF-B Post-Construction Documentation of The Winery.**
>
> Post- Construction: After construction is complete, pictures of The Winery equivalent to CUL-PDF-A will be taken to objectively compare the condition of The Winery before and after construction. In the event that damage to the Winery not documented at the time of the pre-construction survey is identified as being caused by construction activities during construction monitoring, the Project Sponsor will retain an experienced professional or professionals qualified to carry out the repairs within 12 months of completion of the project. Repairs will conform to the Secretary of Interior's Standards for the Treatment of Historic Properties (36 CFR Part 68).

P700-40

First, this is clearly a mitigation measure, not a Project Design Feature. Second, the measure is inadequate because it fails to guarantee

[14] See also, for example: https://www.researchgate.net/publication/272889669_-Impacts_of_artificial_lighting_on_bats_A_review_of_challenges_and_solutions, and https://movementecologyjournal.biomedcentral.com/articles/10.1186/s40462-020-00238-2 and https://reader.elsevier.com/reader/sd/pii/S0269749122007667?token=E2D5544E3FDCBC1CB36C2B634EA59800E212792181BC74C9B3EAD90A439962D2CE3C12F07FA69675E047963208206203&originRegion=us-east-1&originCreation=20230108225259

cont'd FN P700-39

that the Project sponsor will retain sufficient financial resources to make any necessary repairs. It may therefore not be feasible. A mitigation measure requiring that the Project sponsor post a bond in an amount sufficient to cover any needed repairs is required to ensure adequate financial resources to address any impacts to the Winery and *El Grito* mural and to render this mitigation measure feasible. Third, because this is a PDF, it is not legally enforceable through permit or other conditions, and no monitoring responsibility has been established. Fourth, is fails to require independent review of repairs by a responsible agency to ensure that all required work has been completed, and completed consistent with the *Secretary's Standards*.

cont'd P700-40

MM-VIB-A is not legally enforceable as written. The measure fails to require review and approval of the specified Vibration Monitoring Plan by the Lead or a responsible agency. It also fails to require notification of the responsible monitoring agency should vibrations in excess of the standard be detected, to require all work in the vicinity be stopped pending identification of an appropriate change in construction equipment, to require review and approval by a responsible monitoring agency of any changes to the construction equipment to be used in response to potentially damaging vibration detection, or to ensure that construction activity will not be resumed until it has been determined that construction can be undertaken without exceeding the vibration standard. This measure therefore does not reduce impacts to a level which is less than significant:

P700-41

> **MM-VIB-A:** ***Vibration Monitoring.*** Prior to the issuance of grading permits for the proposed Project, the Project Sponsor shall design a Vibration Monitoring Plan. The Plan shall provide for:
>
> - Vibration Monitoring Equipment: the placement of vibration monitoring equipment **at least 26 feet away** from the Avila Adobe (1970s addition), El Grito mural wall, and The Old Winery by a qualified professional for real-time vibration monitoring for construction work at the Alameda Station requiring heavy equipment or ground compaction devices.

- Modification of Vibration Equipment: The monitoring devices shall notify the construction crew if vibration levels are within 0.1 PPV, in/sec, of the vibration damage threshold. The construction crew shall modify the construction equipment to ensure that the vibration damage threshold is not exceeded.

In addition, the DEIR fails to explain why vibration monitoring equipment would be placed "at least 26 feet away" from the historic resources of concern. As written, would placement of the monitoring equipment 100 miles away comply with the measure, even though such placement would not allow for detection of damaging vibration levels? The measure needs to specify the maximum distance away from the historic resources that monitoring equipment can be located and still be effective, by specifying that monitoring equipment shall not be located more than x feet from . . . . As written, the measure is insufficient to reduce impacts to a level considered less than significant.

cont'd
P700-41

These same comments apply to Mitigation Measures MM-VIB-B which suffers from the same problems as MM-VIB-A, which render the measure ineffective in reducing impacts to a level considered less than significant:

> **MM-VIB-B:** ***Force Adjustable Ground Compaction Devices.*** For construction work occurring at the Alameda Station in proximity to the Avila Adobe (1970s addition), El Grito Mural, and The Old Winery:
>
> • **At a distance of 26 feet or more** from the Avila Adobe (1970s addition), El Grito Mural and The Old Winery, any ground compacting equipment, including vibratory rollers and plate compactors, shall be calibrated onsite prior to use to ensure vibration levels remain below the assumed reference level of 0.21 PPV, in/sec, at 25 feet. If the ground compacting equipment cannot achieve the assumed reference level, equipment with less vibration (less than 0.21 PPV, in/sec, at 25 feet), non-vibrating equipment, or

hand tools shall be required for ground compaction activities.

• Any ground compaction or excavation/drilling operations within 26 feet of the Avila Adobe (1970s addition), El Grito Mural or The Old Winery structures must be completed with non-vibrating equipment or hand tools.

cont'd P700-41

The DEIR has failed to provide sufficient mitigation to reduce construction impacts on historic resources to a level considered less than significant. Including pursuant to Guidelines Section 15088.5(a), the DEIR must be corrected and recirculated for public comment.

X. THE DEIR FURTHER VIOLATES CEQA BY FAILING TO PROPERLY IDENTIFY OR MITIGATE LAND USE AND PLANNING IMPACTS.

CEQA requires that a DEIR's analysis under the Land Use topic disclose and analyze how the Project is *inconsistent* with plans, programs, statutes, ordinances and policies adopted to avoid or mitigate environmental impacts. The Land Use and Planning section of the DEIR, however, consists of an extended "analysis" of the Project's *consistency* with these documents. This methodological flaw permeates the DEIR's analysis, masks numerous conflicts, and misleads the public about the Project's irreconcilable conflicts with multiple binding land use policies.

P700-42

A. Los Angeles State Historic Park General Plan - Inadequate Mitigation.

P700-43

Because the proposed Project is not consistent with the Los Angeles State Historic Park General Plan,[15] the DEIR identifies the need for the following mitigation measure:

[15] Available at: https://lastatehistoricpark.org/wp-content/uploads/2021/07/LASHP-General-Plan.pdf

FN P700-43

> **MM-LUP-A** *Obtain a Los Angeles State Historic Park General Plan Amendment*. Pursuant to Public Resources Code 5002.2, the proposed Project shall obtain an amendment to the Los Angeles State Historic Park General Plan to allow transit uses within the Los Angeles State Historic Park General Plan.

This mitigation measure is outside of the control of the Lead Agency. (As discussed above, its absence as part of this process should also be considered a violation of CEQA's project description requirements. The General Plan Amendment and Specific Plan, and all other land use plan amendments, should be concurrently provided to the public and decision makers along with a recirculated DEIR.) In an absence of a showing that the responsible agency is willing to implement this so-called mitigation measures, a finding that plan consistency impacts can be reduced to a level which is less than significant is not supported by substantial evidence. The potential for Los Angeles State Historic Park General Plan consistency impacts remains.

cont'd P700-43

B. Failure to Identify the Project's Inconsistency With the 2020-2024 Regional Transportation Plan/Sustainable Communities Strategy.

P700-44

The Project as proposed is not consistent with the RTP/SCS.[16] The Project is not included in the City's Mobility Plan 2035[17] or in the Transportation System Project List[18] used in preparing the Regional Transportation Plan (Connect SoCal 2020 or the 2020-2045 Regional

FN P700-44

[16] The RTP/SCS is available at: https://scag.ca.gov/read-plan-adopted-final-connect-socal-2020

[17] Available at: https://planning.lacity.org/odocument/523f2a95-9d72-41d7-aba5-1972f84c1d36/Mobility_Plan_2035.pdf

[18] Available at: https://scag.ca.gov/sites/main/files/file-attachments/0903fconnectsocal_project-list_0.pdf?1606000813

Transportation Plan/Sustainable Communities Strategy),[19] and this needs to be explained in the DEIR. Furthermore, the Project is not consistent with almost all of the RTP/SCS goals, as detailed in this comment letter and summarized in the analysis contained in the following table. DEIR Table 3.11-2 needs to be corrected and recirculated to reflect the following information, and replaced with the following table.

cont'd P700-44

P700-45

Table 3.11-2
Project Consistency with Applicable 2020-2045 RTP/SCS Goals

Goal	Consistency Analysis
1. Encourage regional economic prosperity and global competitiveness	The proposed project is a 1.2 mile fixed route aerial transit system, which neither coordinates nor connects with the larger area transit network. Given its limited scale, it does not have the ability to encourage regional economic prosperity and global competitiveness. Furthermore, given its limited ridership and the fare structure represented to the media, the long-term viability of the Project is questionable. The Project is thus not consistent with this goal.
2. Improve mobility, accessibility, reliability, and travel safety for people and goods	The proposed Project would provide limited additional mobility primarily to ticket holders of Dodger Stadium events by providing a fixed-route system. Greater flexibility can already be achieved in serving these users via the existing Dodger Stadium Shuttle. As designed, the Project competes for ridership at two of its three stations with the existing bus and light-rail transit system. There is nothing inherent in the Project that would improve overall transit system reliability or safety. The

cont'd FN P700-44

[19] Available at: https://scag.ca.gov/sites/main/files/file-attachments/0903fconnectsocal-plan_0.pdf?1606001176

	system is not specifically designed for goods movement. It is questionable whether the Project will result in any real or substantial reduction in passenger vehicle miles traveled and associated GHG emissions. The Project is thus not consistent with this goal.
3. Enhance the preservation, security, and resilience of the regional transportation system	The Project is a new privately constructed and operated fixed-route ART with limited projected ridership. Given the high cost of construction and operation, the limited projected ridership, and the fare structure which has been represented in the media, which would generate limited operational revenues, the long-term viability of the ART as a private project is questionable. There is the likelihood that a failing ART may be required to be taken over by Metro in the future, which would take resources away from the existing public transit system to support an expensive, 1.2 mile system with limited inter-system connectivity. The Project may therefore threaten the preservation, security and resilience of the regional transportation system by drawing operating capital from the regional system. The Project is therefore not consistent with this goal.
4. Increase person and goods movement and travel choices within the transportation system	The Project would have limited ridership, which would mainly consist of Dodger Stadium ticket holders and tourists. Dodger Stadium ticket holders are currently served by a Metro-operated Shuttle from Union Station. Most other riders would be diverted from the existing transit system to

cont'd
P700-45

	experience the novelty of the ART. The Project is therefore not consistent with this goal.
5. Reduce greenhouse gas (GHG) emissions and improve air quality	Given the limited Project ridership and the fact that most of the riders would be diverted from other modes of transit, rather than from automobile use, and the Project's potential to induce additional tourist VMT as tourist commute via Uber or auto to access this ride, the reduction in GHG, if any, would be very limited. The Project is therefore not consistent with this goal.
6. Support healthy and equitable communities	The DEIR indicates the Project is consistent with this goal because the "proposed Project would support healthy and equitable communities by providing a potential mobility hub at the Dodger Stadium property, where passengers would be able to access a suite of first and last mile multi-modal options, such as a bike share program to provide connectivity to Elysian Park and the surrounding communities, as well as a potential mobility hub at the Chinatown/State Park Station." However, the mobility hub is only a "potential" component of the Project, rather than a committed part of the Project. The Project sponsor can therefore not rely on the potential mobility hub as the basis for concluding consistency with this goal. The Project is therefore not consistent with this goal.
7. Adapt to a changing climate and support an integrated regional	Given the limited, 1.2 mile length of the system, the fact that most of the riders are likely to have been diverted from other

cont'd
P700-45

	development pattern and transportation network	modes of transit, and the ability of Metro to convert the existing bus fleet to green energy over time, the Project's contribution to climate change response is highly questionable. The Project would result in the construction of a highly visible, fixed-route system, limiting the ability of the Project to adapt to a changing regional development pattern. Given the Project's lack of connectivity to existing transit modes, the Project works against an integrated transportation network. The Project is therefore inconsistent with this goal.
8.	Leverage new transportation technologies and data-driven solutions that result in more efficient travel	While the Project does represent the introduction of a new transportation technology to the region, it introduces a technology that is not easily or cheaply integrated with the existing transit system. The lack of integration with the existing transit system would force users whose trips are not limited to between Union Station, Chinatown and Dodger Stadium to have to transfer to other modes to complete their trips. This is not efficient. Furthermore, the 1 hour 12 minutes – 2 hour wait-times to board the system after Dodger Games is also not efficient. The Project is therefore not consistent with this goal.
9.	Encourage development of diverse housing types in areas that are supported by multiple transportation	As noted in the existing DEIR consistency analysis: "The proposed Project would encourage development of diverse housing types in areas that are supported by multiple transportation options by

cont'd
P700-45

options	providing an additional transportation option for the residents and visitors in the City of Los Angeles, and enabling access between Dodger Stadium, the surrounding communities, and the regional transit system accessible at LAUS." This is why the Project would be growth-inducing and the DEIR must analyze it as such.
10. Promote conservation of natural and agricultural lands and restoration of habitats	The DEIR states that: "The proposed Project would promote conservation of natural and agricultural lands and restoration of habitats by being constructed in a previously developed area, and would not impede the region's goal of conserving land and restoring habitats." Not destroying habitat is not the same as promoting the conservation of natural lands and habitats. The Project does nothing to further this goal.

cont'd P700-45

C. Failure to Identify or Mitigate Inconsistency With the City of Los Angeles General and Specific Plans.

As previously noted in this comment letter and on DEIR pages 2-61 to 2-62, the Project requires a Specific Plan, and "relief" from the River Implementation Overlay District and Cornfield Arroyo Specific Plan. That is because the Project is not consistent with the General Plan and zoning for the area, or with the associated implementing overlay and Specific Plan. These discretionary approvals represent unidentified mitigation for Project land use plan consistency impacts. These discretionary approvals are outside of the control of the Lead Agency. Absent a showing that the responsible agency is willing to implement these de facto mitigation measures, a finding of plan consistency is not supported by substantial evidence. The potential for Los Angeles City General Plan consistency impacts remains and must be so identified in the DEIR. In turn, those General Plan and Specific Plan

P700-46

discretionary approval requests must be the subject of their own full-fledged CEQA review. cont'd P700-46

XI. THE DEIR FURTHER VIOLATES CEQA DUE TO ITS INACCURATE AND FLAWED TRANSPORTATION ANALYSIS.

The DEIR on page 1-5 claims that as "detailed in Table 3.17-6 of this Draft EIR, the proposed Project is forecast to reduce annual VMT by 2,434,000 in the Project's first operational year in 2026, increasing as ridership increases to an annual VMT reduction of 5,067,000 in 2042." However, the DEIR fails to show the analytic route by which this number was reached in any independently verifiable fashion. This forecast is based on a black-box calculation, not supported by substantial evidence or common sense.

A. Common Sense Explanation of Why The VMT Calculations Are Fatally Flawed.

CEQA Guidelines Section 15064.3(a) defines VMT as "**the amount and distance of automobile travel attributable to a project**". Guidelines Section 15064.3(b)(4) requires: P700-47

> (4) Methodology. A lead agency has discretion to choose the most appropriate methodology to evaluate a project's vehicle miles traveled, including whether to express the change in absolute terms, per capita, per household or in any other measure. A lead agency may use models to estimate a project's vehicle miles traveled, and may revise those estimates to reflect professional judgment based on substantial evidence. Any assumptions used to estimate vehicle miles traveled and any revisions to model outputs should be documented and explained in the environmental document prepared for the project. The standard of adequacy in Section 15151 shall apply to the analysis described in this section.

The DEIR has failed to comply with this standard, both when it comes to the ridership estimates, and then when it comes to the VMT calculation. Table 3.17-4 from the DEIR, reproduced below, shows the Project's anticipated ridership. It should be noted that of these riders, many of the game ticket holders are likely already to be using Metro's free shuttle service from Union Station, or otherwise accessing the Stadium via transit. For these riders, there would be no VMT reduction, as diversion from the existing shuttle or existing transit does not count for purposes of calculating a VMT reduction. It should also be noted that Metro has the capacity to increase the number of shuttle buses to meet demand and the option to convert these buses to clean energy, which makes the usefulness and benefit of investment in the Project highly questionable.

Ridership projections

Table 3.17-4: Proposed Project Estimated Daily Riders

Ridership Market Segment	Daily Weekday Riders				Daily Weekend Riders					
	2026		2042		2026			2042		
	Low Day	High Day - Game	Low Day	High Day - Game	Low Day	High Day – LASHP	High Day - Game	Low Day	High Day – LASHP	High Day - Game

Total Daily Riders										
Total Daily Riders	3,830	8,630	4,230	13,030	4,320	5,440	8,070	4,520	5,640	12,270

Note: This table shows the number of daily riders. It is assumed that each rider will make two trips.
LASHP = Los Angeles State Historic Park.
Total ridership in the high game day scenario exceeds the 10,000 riders destined to the game since the Project will operate during the day before the game, including carrying employees and neighborhood riders.

cont'd
P700-47

There are only 81 Dodger home games in any given season.[20] As shown in Table 3.17-4, it is anticipated that 5,100 in 2026, rising to 8,500 persons in 2042 will access Dodger Stadium on game day via the Project from Union/Alameda Station. The DEIR needs to explain the basis for the assumed increase from 2026 to 2042, which it currently fails to do.

Currently Metro operates a free shuttle to Dodger Stadium from Union Station, the Dodger Stadium Express. According to Yelp reviewers, travel time for the Shuttle is 15-20 minutes. According to Metro: "In 2019 the Dodger Stadium Express transported 377,180 passengers, the largest number of passengers of any given year."[21] This equates to an average of 4,657 passengers from the Shuttle's two locations: Union Station and Harbor Gateway Transit Center.[22] According to DEIR page 2-10, the Dodger Stadium Express buses only carried approximately 1,850 riders on average per game; however, no source is given for this figure. Please provide a verifiable source.

This means that at least 1,850 of Project riders on game day are likely to be users diverted from the existing free bus Shuttle, and thus do not count as a reduction in VMT. The number of actual new and diverted game day riders will be a function of fare, which has not been disclosed in the DEIR. At maximum, 3,250 Project users in 2026, increasing to 6,650 users in 2042 would thus be ticket holders either diverted from other transit or newly using transit to access the Stadium on game day. Given the post-game loading time for the Project of up to approximately 1 hour 12 minutes in 2026 increasing to 2 hours in 2042 given projected ridership, it is unclear how

cont'd P700-47

FN P700-47

[20] https://www.truebluela.com/2022/12/6/23316048/dodger-stadium-gondola-project-study-frank-mccourt

[21] https://www.metro.net/about/l-a-metros-dodger-stadium-express-to-provide-free-service-from-union-station-and-harbor-gateway-transit-center-to-dodger-stadium-for-all-2022-home-games/

[22] https://www.metro.net/about/l-a-metros-dodger-stadium-express-to-provide-free-service-from-union-station-and-harbor-gateway-transit-center-to-dodger-stadium-for-all-2022-home-games/

many ticket holders will want to use this private gondola system, which requires access via Union Station, and which will likely charge a fare in order to maintain the system.[23] Should game day ticket holders choose to make use of the Project, it is unclear how much of a VMT reduction will actually occur, as it would depend on both how, and from how far away, users come to access the system.

In terms of VMT reduction, it does not appear appropriate to count tourist trips when calculating VMT reduction, as tourist trips are likely induced trips. In fact, the VMT calculation would need to account for how tourists access the system and whether the Project induces automobile trips as tourists take Uber or other vehicles to access one of the only three Project stations. The Project is thus likely to result in an increase in tourist-related VMT.

Commuters making use of the Project are likely to already be using public transit. Given that the Project only has three stations, and the location of those stations, it is unlikely that commuters will switch from bus or rail service to make use of the Project. Whether commuters switch to the Project would be a function of their ultimate destination, relative fare, relative wait time, relative walk time, relative travel time, relative transfer time, and relative numbers of transfers between trip ends. Regardless, commuters that switch from public transit to the Project also cannot be counted in the calculation of any Project-induced VMT reduction.

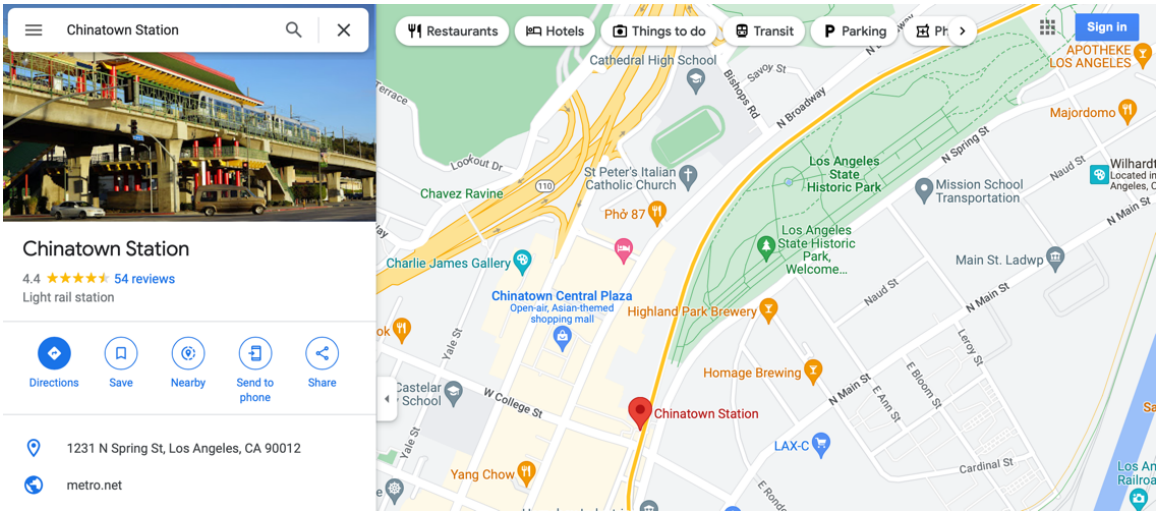
cont'd
P700-47

The DEIR fails to justify why neighborhood users would want to use the Project to access the Dodger Stadium station. There is currently no reason to access Dodger Stadium, other than to see a game. Do the ridership projections assume additional development at Dodger Station? (See piecemealing discussion above.) If so, this needs to be disclosed and analyzed in the DEIR. If not, any assumption of neighborhood users of the system is not supported by substantial evidence.

[23] If a fare is not being charged, the DEIR needs to explain how the system will be financially viable, so as to avoid physical impacts to the environment associated with a non-self-sustaining private transit system.

cont'd
FN P700-47

Instead, any neighborhood users would more likely make use of the system to go between the Chinatown Station and Union/Alameda Station, which each have trip attractors. However, there are already Metro stations at Chinatown and Union Station, as shown in this Figure, which also shows the proximity of the existing Metro Chinatown Station to the Los Angeles State Historic Park.



Proximity of Existing Metro Chinatown Station to the Los Angeles State Historic Park and location of the ART Chinatown Station

In making a trip between Chinatown and the Union Station area, potential riders would be deciding between the use of the Project system, existing Metro public transit, walking, or making the trip via automobile. Only trips diverted from automobile use, to Project use, would count towards a VMT reduction. Given that it is approximately 0.6 miles, or a 12-minute walk between the two existing stations according to Google Maps, and the Metro Gold Line already runs between the existing Metro Chinatown Station and Metro Union Station, use of the Project to travel between these two locations would be dependent on its relative cost, the minor difference in proximity to nearby uses between the Metro and Project systems, and the user's ultimate destination.

cont'd
P700-47

Users that don't have both an origin and destination at one of the Project stations would be more likely to continue to use other existing public transit, which would not require a transfer to reach, or fewer transfers to reach their destination. The likelihood that any riders would be diverted from automobile use, given the proximity of existing transit is unlikely. Therefore, VMT reductions would also be unlikely to result from the Project, from neighborhood users traveling between these two locations.

The VMT reduction claims in the DEIR are not supported by substantial evidence or common sense. It appears that the VMT reduction claims are grossly overstated and that there may in fact be a net increase in VMT due to induced tourist trips.

cont'd P700-47

It also appears that the likely VMT reductions resulting from the Project are not enough to qualify the Project as an Environmental Leadership Transit Project (ELTP), and objection is also made to the characterization and special treatment of the Project as an ELTP. Given the likely significant overstatement of Project-induced VMT reductions, Greenhouse Gas (GHG) reduction estimates are also likely significantly overstated.[24] Furthermore, given the lack of a financial operating plan and representations that fares for ticket holders will be free, as discussed elsewhere in this comment letter, it is highly questionable whether the useful life of the system will extend to 2056, the year used to justify the Project's compliance with Pub. Res. Code Section 21168.6.9 as discussed on pages 1-4 to 1-9 of the DEIR. More likely the Project will become financially unsustainable long before then. Furthermore, as noted elsewhere in this comment letter, the Project is not included in the current RTP/SCS project list, and thus the Project is not consistent with the RTP or many of its goals. Substantial evidence does not support the assertion that the Project as an ELTP. Both the VMT calculations and the GHG calculations in the EIR need to be redone in a recirculated DEIR to

P700-48

[24] Although the Project sponsor claims the Project will have zero emissions, and will make use of Green Power, the Project does not include a mitigation measure to that effect or any other legally binding method for ensuring the Project will use 100 percent Green Power over the entire life of the Project. In the absence of legally enforceable guarantees, GHG emissions reduction figures are likely further overstated.

FN P700-48

more accurately reflect the likely reality of Project use behavior, and must be supported by verifiable substantial evidence.

cont'd P700-48

B. Further Objections to the DEIR's VMT and GHG Reduction Claims, As Well As Its Failure To Address Caltrans Encroachment Requirements.

As described in DEIR Appendix N, due to the unique nature of the proposed Gondola Project, both the Metro ridership forecasting model and the City of Los Angeles travel demand model were inadequate to estimate ridership to Dodger Stadium because they are "regular weekday employment" models that exclude "special generators" like Dodger Stadium.

P700-49

To attempt to remedy the inadequate forecasting and travel demand models, a consultant developed a "regression-based game-day ridership model" to estimate ridership to Dodger Stadium via the proposed Gondola Project. This Ridership Model is inadequate because it fails to validate and calibrate its data (highway speeds, travel times, and Gondola ridership) to ground truth.

1. Lack of Baseline Data Renders The DEIR Invalid.

Per LADOT's 2022 Transportation Assessment Guidelines, Page 2-21, "Caltrans Performance Measurement System (PeMS) data should be used to identify freeway operating speed(s) during the peak hour being analyzed. If reliable PeMS data are not available at the subject location, other sources of speed data including location-based services data from available sources could be used."

P700-50

Appendix N - Transportation in the DEIR states: "Sampled speed data were not available for the SR-110 adjacent to Dodger Stadium." Yet Appendix N, Page 10, concludes: "The ridership model includes an assumed 10% increase in travel time for 2026, and a 25% increase in travel time for 2042 conditions relative to 2019 conditions. Based on the freeway speed trends, assuming trends hold, these assumptions are reasonable."

To decide whether a given project's environmental effects are likely to be significant, an agency must use some measure of the environment's state absent the project, a measure sometimes referred to as the baseline for environmental analysis. The baseline normally consists of the physical environmental conditions in the vicinity of the project, as they exist at the time environmental analysis is commenced. Guidelines § 15125; North County Advocates v. City of Carlsbad (2015) 241 Cal.App.4th 94, 96.

cont'd
P700-50

Here, the DEIR fails as an informational document because there is no baseline travel time speeds provided for the Project vicinity because there is no PeMS speed data available (or obtained and then provided to the public as part of the DEIR) for SR-110 near Dodger Stadium. As such, the base year travel time speeds cannot be validated, making any assumptions for future travel times conjectural and flawed. The DEIR could easily and should have validated travel time speeds near Dodger Stadium to ensure reasonable model calibration. The DEIR should be recirculated to include this foundational baseline information.

2. The DEIR's Transit Mode of Access Analysis is Flawed.

Similarly, the Gondola Project transit access model analysis of proposed ridership is flawed for lack of validation and calibration. Appendix N, Page 8, states: "The existing model was then calibrated to existing conditions for the share of Dodger Stadium Express (DSE) riders that take transit to LA Union Station based on data prepared by Metro in reports to the South Coast Air Quality Management District (SCAQMD) for the 2011-2015 Dodger seasons."

P700-51

Additionally, the transit access model utilized 2014 Dodger Stadium Express intercept survey data to calculate mode of access to Dodger Stadium. The consultants used the same percentages as 2014, which "indicated that 88% of riders arrived via transit, walking, or biking."

Again, these data have not been validated, but are used to calibrate the transit access model. However, 2014 survey data are not an adequate representation of existing mode access to support future forecasts of the

proposed Gondola Project's ridership, which makes future access mode data flawed. The DEIR could and should have validated mode access data to existing conditions to ensure reasonable model calibration. The DEIR should be recirculated to include this foundational information.

cont'd P700-51

3. The "Customer Experience" Factor is Flawed.

Appendix N, Page 12, states: "There is no available data source to quantitatively estimate how this user experience alone will impact ridership, but it is believed that actual ridership could ultimately exceed the model estimates due to the unique experience of the system. An assumed factor of 20% was applied on top of the model estimates to reflect this potential to capture riders associated with the proposed Project's customer experience." P700-52

Nonetheless, the consultant "assumed mode of access for these riders is 65% vehicle mode of access, and 35% transit/walk/bike." Here, there is no dispute these data are not validated or calibrated because the document explicitly states there is no data available, but adds "assumed" factors without any surveys or other data collection. Thus, any VMT or GHG reduction benefits should not be included in the DEIR. The DEIR should be recirculated to remove any alleged VMT or GHG reduction benefits based on this "customer experience factor."

4. The Los Angeles State Historic Park Rider Estimate Methodology Is Questionable.

As above, "No data are available for mode share of attendees travelling to events at the Park." But in this instance the consultants do not make any "assumed" factors, but do acknowledge, "because quantitative data to further refine this estimate was not readily available, Fehr & Peers conservatively did not include in the Transportation Section of this EIR the VMT reduction benefit of the proposed Project for this ridership market segment." Please confirm no VMT or GHG reduction benefits are attributed based on mode share of attendees to the State Historic Park. P700-53

5. The Vehicle Miles Traveled (VMT) Analysis Is Further Flawed.

P700-54

The DEIR at 3.17-26 states: "the proposed Project would not increase vehicle capacity as it is a mode of transit. The proposed Project, as detailed in this section, would reduce VMT. Thus, no VMT analysis is required, and the associated impact is therefore less than significant." However, the Project sponsor is LA Aerial Rapid Transit Technologies, LLC (page 1-1), not a public transit agency. Furthermore, "gondolas" are not a mode listed as exempt under SB 743.

This is confirmed on page 3.17-27. "Transit and active transportation projects generally reduce VMT and therefore are presumed to cause a less-than-significant impact on transportation. This presumption may apply to all passenger rail projects, bus and bus rapid transit projects, and bicycle and pedestrian infrastructure projects." Thus, it is not demonstrated that the Project is exempt from a VMT, in light of the fact that "gondolas" are not mentioned.

cont'd
P700-54

As a matter of precaution, the Project applicants point out that "while not required, the VMT reduction benefit of the proposed Project was quantified for informational purposes." Interestingly, the purported VMT reduction benefits rely exclusively on Dodger games, which equate to eighty-one (81) regular season games, which is only twenty-two percent (22%) of the days of the year.

As detailed above, because the Gondola's Ridership Model is flawed by not being appropriately validated and calibrated, the Estimated Daily VMT – with Proposed Project (Table 3.17-5) numbers are inaccurate. This is further supported by the October 24, 2022 UCLA Mobility Lab Study (https://uploads-ssl.webflow.com/61c3996ce146bfa8fc27adeb/635c2657c071e02577a5c5a0_Report%20on%20UCLA%20study%20of%20gondola%20traffic%20impact%20102522%20.pdf)
which concluded:

> "Promoters of the gondola claim that it will take 3,000 polluting cars off neighborhood streets and the 110 freeway before and after Dodger games, leading

> to a net reduction in greenhouse gas emissions. Transportation researchers from the University of California, Los Angeles (UCLA) examined these claims using a state-of-the-art transportation simulation model and found that the gondola could reduce traffic on major roads around Dodger Stadium on the night of a sold-out game, but the impact would likely be very limited. They found that the gondola likely would take only around 608 cars off the road. The gondola is thus unlikely to significantly reduce greenhouse gas emissions and traffic overall."

cont'd
P700-54

Therefore, the DEIR's analysis of the project's environmental impacts are inadequate. The Gondola's Ridership Model must be validated and calibrated to ensure accurate VMT and GHG results.

6. The DEIR's Greenhouse Gas (GHG) Conclusions Are Invalid.

Analysis of GHG emissions is essential under CEQA. Therefore, even seemingly small additions of GHG emissions into the atmosphere must be considered cumulatively considerable. The DEIR concludes that the Project would result in less-than-significant impacts related to GHG emissions. However, as detailed above, the DEIR presents an incomplete analysis of the Project, which results in a flawed GHG analysis.

P700-55

Appendix N-6, provides: "4.13 Parking and Land Use Management: This policy states that excessive parking can incentivize undesirable behavior or result in large areas of vacant land that make it harder to reach destinations without a vehicle. The Project will not provide any dedicated vehicle parking. The proposed Project would utilize existing off-street parking facilities with available capacity as identified in a future parking management plan, which would also identify strategies for the City of Los Angeles to implement to minimize riders of the proposed Project parking in undesirable locations."

Since there is parking near the Gondola stop at Union Station, the Project does not provide any additional parking. Yet it is presumed that Gondola riders will use the over 10,000 spaces in publicly available lots and garages and in on-street spaces in order to be able to ride the Gondola. The environmental analysis is silent as to the incentivizing of people to drive to the Gondola to avoid parking at Dodger Stadium, which would *increase* VMT and GHG emissions.

cont'd P700-55

The DEIR's traffic and GHG analyses are flawed on multiple grounds, including lack of substantial (or any) evidence to support various critical assumptions and conclusions. The DEIR should be corrected and recirculated to address each of these flaws and omissions.

7. Ridership Queueing After Dodger Games Is Inadequately Analyzed.

Appendix N, Page 20, indicates: "It is estimated that 6,000 game attendees (12,000 trips for round-trip) would ride the proposed Project in 2026 and 10,000 game attendees (20,000 trips for round-trip) would ride the proposed Project in 2042 per game, reaching the estimated capacity of the system."

Additionally, "the travel time from LAUS to Dodger Stadium would be approximately seven minutes. The cabins would move at a maximum speed of 13.4 miles per hour with headways of approximately 23 seconds, which represents the time between cabins." (DEIR, Page 2-42)

P700-56

Based on this information, it can be estimated that a cabin on the Gondola cable every 200 ft[25], travelling a speed of 13.4 mph would have the following queuing time:

a) 6,000 game day riders in 2026 (1hr 12 minutes)
b) 10,000 game day riders in 2042 (2 hours)

[25] It is anticipated that the proposed Project operations would vary the number of cabins in service and speed throughout the day, based on demand. (DEIR Page 2-42.)

FN P700-56

The DEIR does not address the post-game queueing for Gondola rides. Waiting one hour and twelve minutes (2026) to catch a Gondola ride after a night Dodger game is unrealistic. Waiting two hours (2042) to get on the Gondola is even more unrealistic. As such, it is disingenuous to state any VMT or GHG benefits from increasing ridership because those numbers are not realistic or justified. Please confirm no VMT or GHG reduction benefits are attributed based on inflated and erroneous ridership postgame numbers.

cont'd P700-56

8. The DEIR Is Flawed And Incomplete For Failing To Disclose And Address Caltrans Encroachment Permit Issues and Requirements.

The DEIR is silent and ignores any direct or indirect impacts (visual, safety, traffic, construction traffic management, etc.) from Gondolas crossing over SR-110 near Dodger Stadium. As a result, the DEIR also ignores disclosing and analyzing any potential mitigation measures that must be implemented. This crucial final segment of the proposed Gondola system connecting to Dodger Stadium must be analyzed and evaluated for impacts. The DEIR seems to assume that Caltrans will simply provide an encroachment.

P700-57

In general, Caltrans must identify and keep the highways free of encroachments. Jamison v. Dept. of Transportation (2016) 4 Cal.App.5th 356, 363. An "encroachment" includes "any tower, pole, pole line . . . or any structure . . . which is in, under, or over any portion of the highway." (Sts. & Hy. Code § 660.) The California Legislature has determined that Caltrans' obligations to care for and protect the state highways "shall apply to all private corporations authorized by law to establish or maintain any works or facilities in, under or over any public highway." (Sts. & Hy. Code § 661.)

Any encroachment permits issued by Caltrans "may provide such other conditions as to the location and the manner in which the work is to be done as the department finds necessary for the protection of the highway." (Sts. & Hy. Code § 672; see also La Canada Flintridge Dev. Corp. v. Dept. of Transportation (1985) 166 Cal.App.3d 206, 213-215.)

It simply is not adequate for the DEIR to defer consideration of potential impacts to the state highway and its traveling public for consideration at the traffic encroachment stage because "Caltrans requires that an approved environmental document accompany the 'Standard Encroachment Permit Application' (form TR-0100). All required documentation, including environmental, must accompany the encroachment permit application before Caltrans deems the application complete." (Caltrans 2018 Encroachment Permits Manual, Pages 4-1 and 4-2; https://dot.ca.gov/programs/traffic-operations/ep/ep-manual)

cont'd P700-57

Additionally, "No new information can be required from an applicant once the application form with its accompanying documentation has been accepted as complete. However, the applicant can be asked to clarify, correct, or otherwise supplement the information submitted." (Id.)

Therefore, the DEIR does not address potential impacts, nor mitigation, within Caltrans' right-of-way with regard to the Gondolas traveling over SR-110. Evaluating potential impacts and mitigation after completion of the DEIR is inadequate and a failure to proceed in the manner required by law. The DEIR should be corrected and recirculated to address each of these flaws and omissions.

C. The DEIR Does Not Evaluate or Specifically Mitigate the Impact of Project Construction on Biking.

There is one impact that the DEIR has treated only nominally. Guidelines Section 15064.3(a) provides that "[g]enerally, vehicle miles traveled is the most appropriate measure of transportation impacts. However, it also provides that "[o]ther relevant considerations may include the effects of the project on transit and *non-motorized travel*." (Emphasis added.) The most common forms of non-motorized travel are walking and biking. Here, the DEIR does not analyze or effectively mitigate the potential impacts of construction of the Gondola Project on the proposed Esplanade bike path that is planned as part of Metro's LAUS Forecourt and Esplanade Improvements. (DEIR, p. 3.9-32.)

P700-58

The DEIR identifies the points during construction when the Esplanade bike path would be closed (DEIR, pp. 3.17-35 to 3.17-36 [30 weeks full and partial closures]), and other points when bicycle traffic would be "controlled." (DEIR, p. 3.9-33, 3.11-24, 3.17-46.) No description of the nature or level of "control" is given. There is no analysis of the impact on use of the bike path during these closures and "control" periods, and no mitigation is offered except for bikers to use a pedestrian detour (DEIR, p. 3.9-36), which has a potential impact on safety to both. The DEIR should be recirculated to provide a full analysis of the effects of Project construction on bicycle transportation, especially on the planned Esplanade bike path.

cont'd P700-58

D. Mitigation for the Significant Hazard of Drivers Striking Pedestrians Because Project Features Obscure Their View Is Ineffective, Lacks Performance Standards, and Places Responsibility for Mitigation on Drivers, Not the Project.

Because the stations and hugely tall towers require so much ground space for their foundations and structures, the proposed Project will create visual blockages that prevent drivers of cars and trucks from seeing pedestrians at various points. Among these points of blocked visibility are the Alameda Tower and the Chinatown/State Historic Park Station. (DEIR, p. ES-72.)

P700-59

The DEIR proposes mitigation for this significant impact, denominating such mitigation as "visibility enhancement . . . sufficient to alert drivers to the presence of pedestrians." (Id.) The DEIR makes it plain that the size and location of the stations themselves will not be changed to protect pedestrians, but that mitigation will be provided to help drivers become aware of pedestrians, with the responsibility for avoiding the pedestrians then resting upon the drivers. The existing roadways and traffic flow, we are told, must adapt to ensure that Gondola construction and operation do not cause pedestrian injuries or fatalities, rather than the size or location of Gondola facilities adapting.

The DEIR proposes Mitigation Measure TRA A to carry out this "visibility enhancement." (DEIR, p. 3.17-67.) As previously noted, this mitigation measures is an example of improper deferral of mitigation. Like

the mitigation discussed above, this measure does not meet the requirements of Guidelines Section 15126.4(a)(1)(B), in that it is deferred without Metro specifying definite performance standards, and Guidelines Section 15126(a)(2), in that no specific measure is "fully enforceable through permit conditions, agreements, or other legally binding instruments." Instead, the DEIR provides a laundry list of possible visibility enhancements, including "high visibility crosswalk treatments, advanced crossing warning signs, flashing beacons, upgraded lighting, and new or upgraded traffic controls, such as traffic signals and all-way stops and right turn on red restrictions and channelization of pedestrians to marked crosswalk locations via fencing." (DEIR, p. 3.17-67.) However, no performance standards for TRA A are given other than approval by the City of Los Angeles Department of Transportation (LADOT). (Id.) The mitigation is deferred in that it must only be completed prior to operation of the Gondola. (Id.)

Where specific mitigation measures are required, their efficacy rests on the assumption of full compliance by motorists with all traffic laws. For example, the DEIR assumes that a visibility hazard at the Alameda Tower will be fully mitigated by banning right turns on a red light there (DEIR, p. 3.17-41); however, common experience shows that Los Angeles drivers do not always obey such restrictions. Similarly, a potential hazard at the Broadway Junction is dismissed by the DEIR on grounds that, if drivers obey the speed limit, they will see the traffic signal at issue in time to stop, thereby avoiding any pedestrian collisions. (DEIR, p. 3.17-42 to 3.18-43.) Again, common experience shows that Los Angeles drivers do not always obey speed limits, and there is no substantial evidence that they will always do so at the Broadway Junction.

cont'd
P700-59

The DEIR assigns responsibility for avoiding the pedestrian hazards the proposed Project will create to drivers, rather than requiring the incorporation into the Project design of physical mitigation measures that will prevent the hazards without assuming perfect compliance by all drivers with traffic laws. CEQA, on the other hand, assigns the responsibility for mitigating all significant impacts to the project proponent, a responsibility Metro has not carried here. There is a lack of substantial evidence that TRA A will successfully mitigate Project hazards.

Finally, TRA A flouts CEQA's basic requirement of full public disclosure. (Pub. Res. Code § 21061; Guidelines § 15003(c) and (d).) The DEIR does not fully disclose what mitigation measures will be required at which location, nor is the process of approval of these measures by LADOT ensured to be open to public scrutiny and comment; the reverse is likely. P700-60

As a result, the DEIR violates CEQA on these additional grounds. Because hazard impacts are not fully mitigated, hazard impacts must be identified as significant in the DEIR and the DEIR recirculated for public review and comment. P700-61

XII. THE DEIR FURTHER VIOLATES CEQA BY FAILING TO PROPERLY OR FAIRLY PRESENT AND ANALYZE ALTERNATIVES.

As our Supreme Court has repeatedly held, the "EIR is the heart of CEQA, and the mitigation and alternatives discussion forms the core of the EIR." In re Bay–Delta cases (2008) 43 Cal.4th 1143, 1162. Here, the DEIR further fails because it did not consider a reasonable range of alternatives, as required by CEQA.

In Public Resources Code Section 21002, CEQA forbids approval of projects with significant environmental impacts "if there are feasible alternatives or feasible mitigation measures available which would substantially lessen the significant environmental effects of such projects." Section 15126.6(a) of the Guidelines mandates that agencies may not artificially constrict their consideration of alternatives. They must consider alternatives that can "attain most of the basic objectives of the project but would avoid or substantially lessen any significant effects of the project." P700-62

The importance of the consideration of alternatives to the proposed project was emphasized by our Supreme Court in Goleta Valley v. Board of Supervisors (1990) 52 Cal.3d 553, 564, which held that "[t]he *core of the EIR* is the mitigation and alternatives section." (Emphasis added.) The Guidelines prescribe that a "reasonable range" of alternatives must be considered, "even if those alternatives would impede to some degree that attainment of the project objectives or would be more costly." Guidelines §

15126.6(b). Both the "no project" alternative and any alternatives rejected during the DEIR development must be examined. cont'd P700-62

A. <u>The DEIR Presents False Alternatives And Biased Project Objectives That Artificially Favor the Gondola.</u>

Here, the Alternatives section fails in two ways. First, it fails to propose a reasonable range of alternatives. The DEIR seriously considers only the alternatives that are mandated in the Guidelines (the no-project alternative and alternatives discarded during EIR development), the Spring Street Alternative, and the so-called Transportation Management System (TSM) alternative. This letter will refer to this alternative as the Express Bus service, since it basically consists of expanded Dodger Express Bus service between Union Station and Dodger Stadium. P700-63

The DEIR's second violation of CEQA and the Guidelines is that the list of Project objectives by which it evaluates the alternatives is carefully and heavily slanted to favor the proposed Gondola. For example, the objectives include providing passengers with scenic airborne views, which cannot be attained by any alternative to the Gondola. (Project Objectives 2 and 7, DEIR, p. 4-5 to 4-8), and listing the use of a gondola as a project objective in and of itself, one that no non-gondola alternative could achieve. (Objective 8, DEIR, p. 4-7.) P700-64

Third and most important, the DEIR fails to develop the Express Bus expanded bus service alternative fully and accurately, so that it might be fairly evaluated. This alternative would avoid *every* significant environmental impact of the proposed Project, could be carried out quickly and with minimal construction, thereby avoiding all the lane closures, detours, and disruption that years of station and tower construction would cause, and would deliver almost every benefit expected from the Gondola. P700-65

The DEIR deliberately downplays the feasibility of the Express Bus alternative and its ability to avoid every significant impact of the Gondola Project while meeting almost every objective set out in the DEIR except the views and "unique experience" of the gondola and the increased connectivity with the State Historic Park and its surrounding neighborhood. The

Guidelines explicitly provide that an EIR must "focus on alternatives to the project or its location which are capable of avoiding or substantially lessening any significant effects of the project *even if these alternatives would impede to some degree the attainment of the project objective*, or would be more costly." Guidelines § 15126.4(b) (emphasis added).

cont'd P700-65

B. <u>The Spring Street Alternative Fails to Meet the Requirements of CEQA and Should Be Removed From the DEIR.</u>

As noted by the Court in <u>Save Our Capitol</u>:

> Meaningful analysis of alternatives in an EIR requires an analysis of meaningful alternatives. The purpose of an EIR "is *not* to identify alleged alternatives that meet few if any of the project's objectives so that these alleged alternatives may be readily eliminated. . . . [T]he key to the selection of the range of alternatives is to identify alternatives that meet most of the project's objectives but have a reduced level of environmental impacts." (<u>Watsonville Pilots Assn. v. City of Watsonville</u> (2010) 183 Cal.App.4th 1059, 1089, 108 Cal.Rptr.3d 577.)

P700-66

The Spring Street Alternatives fails to comply with this mandate. It is not a meaningful alternative. As detailed in DEIR Table 4-1: Alternatives Conformance with Objectives, the Spring Street Alignment Alternative meets all of the Project Objectives. However, the Spring Street Alternative would impact a greater area with the State Historic Park, and as detailed in DEIR Table 4-3: Alternative Impact Comparison, the Spring Street Alignment Alternative does not reduce any of the Project impacts. This alternative thus fails to meet the basic purpose of an alternative, "to meet most of the project's objectives but have a reduced level of environmental impacts." It should therefore be eliminated from the DEIR as it serves only as a straw man.

C. The Existing Express Bus Service to Dodger Stadium is a Feasible Alternative, and Would Avoid All Adverse Impacts of the Gondola.

The Express Bus alternative is identified by the DEIR as, along with the No Project alternative, the Superior Alternative. (DEIR, p. 4-75.) The DEIR states "both the No Project alternative and TSM [Express Bus] Alternative would not result in significant unavoidable impacts to any environmental considerations" (DEIR, p.4-74), a convoluted way of saying that the Express Bus alternative has no significant environmental impacts. The Express Bus avoids the Project's construction impacts, which are the only significant impacts the DEIR acknowledges, and would avoid countless other impacts that the Project would cause, as discussed in this and other comment letters. As detailed below, it would also fulfill almost all of the Project's objectives. Accordingly, Express Bus is superior to the Project, and should be adopted by Metro.

Express Bus service would take cars and their pollutant emissions off the road, although the DEIR does not bother to calculate how much pollution the Express Bus could eliminate. If the buses were upgraded to operate on electricity, the Express Bus alternative would also be zero-GHG emissions. Such buses would reduce air pollution in one of the nation's most heavily polluted urban areas. (DEIR, p. 3.3-2.) P700-67

Although the Express Bus fleet might add to existing traffic, the DEIR ignores the obvious mitigation for this possibility of extending the existing bus-only lane on Sunset up Vin Scully Avenue and into the parking lots, thereby mitigating any congestion impacts, and making the lane reversible to prevent post-game/event congestion. The DEIR fails in its duty to examine feasible alternatives by failing to fairly and fully present the Express Bus alternative, thereby attempting to tip the scales to favor the Project. This is a violation of CEQA.

The DEIR at pp. 4-59 to 4-62 acknowledges that it is feasible to carry out the Express Bus (TSM) alternative. As Metro carefully structures this alternative, the Dodger Express bus fleet would expand to 77 buses from the current 7 to 11 buses, in order to be able to transport the same number of

passengers as the Gondola is projected to carry (assuming the Gondola works as expected). (DEIR, p. 4-71.) The DEIR does not state, let alone prove, that this expansion would be infeasible. The DEIR makes no comparison between the cost of expanding the Express Bus service and the underestimated $125 million price tag of the Gondola.[26] Expanded Express Bus service may well be cheaper, as well as a transportation method proven by years of local experience.

The DEIR states that this expanded bus fleet would require moving the bus loading/unloading area to a nearby Metro property and reconfiguring some parts of Union Station and the immediately surrounding streets. (DEIR, p. 4-61.) However, the DEIR does not show that this is infeasible, only inconvenient. Given the number and months (in one or two cases, years) of lane closure and the resulting traffic diversion and congestion that the Gondola would cause (see, e.g., DEIR at 3.9-32 through 3.9-43), the expanded Express Bus service alternative is far more feasible and far less disruptive to Los Angeles residents. It would also confer the benefit on Metro that the expanded bus fleet would be available to provide zero-emission service on other routes on non-game, non-event days (about 265 days per year [DEIR p. 2-10]). It would also provide Metro with a much needed opportunity to capture new fares that would benefit the entire Metro public transit system and Los Angeles residents more broadly. (See January 8, 2023 Wall Street Journal article, "*Public Transit Goes Off the Rails With Fewer Riders, Dwindling Cash, Rising Crime*", p. 1, at https://www.wsj.com/articles/subway-mta-bart-public-transit-new-york-boston-san-francisco-11673198418?mod=hp_lead_pos7.)

cont'd P700-67

By failing to fairly and fully present the Express Bus alternative – an alternative that is feasible, environmentally superior, majority-Project-goal fulfilling ***and*** public revenue generating – the DEIR violates CEQA.

FN P700-67

[26] The $125 million price tag does not include the price of a land lease at Union Station or the cost of acquiring land at Dodger Stadium. (ARTT Response to Metro's Request for Information at p. 45.) The real cost of the proposed Project would be higher than the initial estimate, probably much higher.

Guidelines Section 15126.6(b) requires reasoned consideration of alternatives that do not meet every objective of a project's proposer, or that increase costs. Here, the DEIR admits that the Express Bus alternative will meet or moderately meet Project Objective 3 (Provide efficient, high-quality transit from LAUS to Dodger Stadium [DEIR, p. 4-5]), Project Objective 4 (Enhance the safety of neighborhoods around Dodger Stadium by lessening the number of cars driving to and from Stadium games and events [DEIR, p. 4-6]), Project Objective 5 (Reduce transportation related pollution and GHG emissions [DEIR, p. 4-6]), Project Objective 6 (Increase connectivity to the region's public transportation hub [DEIR, p. 4-6]), Project Objective 11 (Minimize the project's environmental footprint [DEIR, p. 4-7]), and Project Objective 12 (Provide a sustainable form of transit [DEIR, p. 4-8]). Project Objective 13, relating to ART alignments, is not relevant to the Express Bus service. (DEIR, p. 4-8.)

While the Express Bus alternative would not meet Project Objectives 2 (Attract new transit riders to the Metro system through use of a gondola) and 7 (Improve transit rider experience by providing unique scenic views), these are self-serving, circular Objectives that favor the Gondola. The DEIR's claim that expanded Express Bus service would not meet Project Objective 1 (Expand mobility options for transit riders) is not supported by any experience, only by speculation that a new mode of transit – the Gondola Project – is the only way to bring in an unquantified number of new riders to Metro. Given the success of the current Express Bus service (DEIR, pp. 4-59 to 4-60), such speculation is unfounded. Express bus service works.

cont'd
P700-67

Further, the DEIR has deliberately set up the Express Bus alternative for failure by designing it so that the buses would use compressed natural gas as fuel, instead of zero-polluting electricity. Positing the use of natural gas ensures continued pollutant emissions, while use of electric buses would eliminate them. Again, the DEIR has chosen to present the Express Bus alternative in a way that makes this alternative fail to achieve important Project Objectives. The public and decision makers cannot know how long the Gondola's novelty will draw riders out of their cars, thereby reducing emissions of conventional pollutants and GHGs. In contrast, the Express Bus service has a proven track record, which could only be improved by an expanded and electric-powered bus fleet.

In addition, Metro currently operates a large number of Express buses that run from various outlying areas to downtown Los Angeles and other destinations, but that do not service Dodger Stadium. (DEIR, p. 3.17-13.) Some or all of these existing Express bus routes that service downtown Los Angeles could be modified to add Dodger Stadium as an additional or final stop on game or event days. This would allow them to bypass the crush at Union Station that the DEIR posits would result from increased Express Bus service. (DEIR, p. 4-60 to 4-61.) By ignoring this obvious opportunity, the DEIR again handicaps the Express Bus service in its comparison with the Gondola.

The DEIR should be revised and recirculated to make a fair comparison of the Gondola to expanded, electric Express Bus service as an alternative to the Gondola. Alternatively, the expanded, electric Express Bus service, including service from outlying areas, should be explored as an Alternative and compared to the Gondola.

cont'd
P700-67

Fairly considered, the TSM (Express Bus) alternative meets every non-Gondola-biased Project Objective except those dealing with enhancing transit connectivity for the State Historic Park and Elysian Park, and even these Objectives could be partially met if Metro simply set up transit hubs at these locations, something it does not need the Gondola to do.

As an alternative that eliminates the Project's environmental harm by not requiring the construction that produces the harm, that meets most of the Project's unbiased objectives, and that meets them with far less damage to the City's transportation systems than what will be caused by Project construction, the Express Bus alternative fulfills all the legal requirements for a viable alternative. Should Metro choose the Gondola as the project it approves, it must make the findings required by Public Resources Code Section 21081(a)(1), must justify rejecting the Express Bus alternative (per Public Resources Code Section 21002), including the Express Bus with the expansions proposed in this letter, and may need to adopt a Statement of Overriding Considerations, as required by Public Resources Codes Section 21081(b). All of these findings must be supported by substantial evidence in the record. The DEIR as it now stands cannot provide this evidence.

The DEIR must be revised and recirculated to fairly present and fairly consider the Express Bus alternative, expanded and powered by electricity, as an alternative.

cont'd P700-67

XIII. THE DEIR FURTHER VIOLATES CEQA BY ITS INAPPROPRIATE TREATMENT OF DESIGN OPTIONS.

The way the Design Options are placed in the DEIR implies that they are not alternatives or significant changes in the Project Description, since they come after both those sections, and calling them "Design Options" minimizes their potential importance. The term "Design Options" makes them sound like they are variants in the appearance, external finishes, or other features that are normally called "design," not changes in location or 25% increase in height. This is a failure of information. The DEIRs inclusion and treatment of "Design Options" has invalidated both the Project Description and Alternatives discussions in the DEIR, and represents an additional fatal flaw in the DEIR.

The Project sponsor and DEIR preparers are attempting to have it both ways, by providing a Project Description, but leaving room for the Project to revert to an earlier, pre-stakeholder-comments version of the Project, without actually including these project options in either an analysis of the Project or an analysis of a fully defined alternative. In this way, the DEIR piecemeals the analysis of a potential project. P700-68

At the very least, the DEIR should analyze a project which includes the impact-maximizing combination of design options, to identify the maximum potential project impacts. The DEIR can then use the design options to define a series of impact-reducing alternatives, and as part of the alternative's analysis make clear the package of mitigation measures that appropriately apply to each alternative. Decision-makers would thus be provided with the information they would need to select the Alternative with the best impact-reducing combination of design options, or would actually be able to understand the environmental consequences of picking a particular combination of design options, as each possible combination would represent a discrete alternative. Currently, as written, the design options represent a

red-herring that only serve to confuse the reader about the likely impacts of the Project and the likely alternatives under consideration. This is unacceptable under CEQA.

cont'd P700-68

XIV. THE DEIR FURTHER VIOLATES CEQA BY ITS FAILURE TO ADEQUATELY ANALYZE GROWTH INDUCING IMPACTS.

The proposed Project constitutes the construction of a new fixed-route transit system and expansion of fixed-route transit into an area, the Dodger Stadium property, currently not directly served by transit, except on game days. Currently the closest, non-game-day transit is the Number 4 bus, and the closest transit stop to the Stadium property is at Sunset Boulevard and Vin Scully Avenue. The Project thus constitutes an extension of service between the Union Station and Chinatown areas directly onto the Dodger Stadium property.

As discussed more fully above, the Project is not included in the City's Mobility Plan 2035 or in the Transportation System Project List used in preparing the Regional Transportation Plan (Connect SoCal 2020 or the 2020-2045 Regional Transportation Plan/Sustainable Communities Strategy). The Project thus removes an obstacle to population growth in the Dodger Stadium area in a way that is not consistent with existing land use plans. It therefore is not growth-accommodating. Rather, it is potentially growth-inducing and thus a robust analysis of likely growth-inducement is required in a recirculated DEIR, including in accordance with Guidelines Section 15126.2(d).

P700-69

The analysis of growth-inducing impacts currently in the DEIR reads like a publicity piece for the proposed Project. The analysis also relies, as a way of avoiding analysis of growth-inducing impacts, on the statement that should "any future development occur in the surrounding proposed Project area, as discussed in Section 3.11, Land Use and Planning, such development would be subject to additional environmental analysis under CEQA, and would be required to comply with City of Los Angeles Community Plan

policies encouraging development near transit stations and corridors."[27] The CEQA mandate to address growth-inducement cannot be avoided in this way.

The proposed Project is a private transit system that would extend access to the Dodger Stadium area. As discussed earlier in this letter there are good existing available transit options from the Union Station area to Chinatown. The only area not well served by transit, except on game days, is the Dodger Stadium area.

Given the existing competing transit options for travel between the Union Station area and Chinatown, the Project system will likely largely need to depend on fares to Dodger Stadium to support the system. Given that it has been announced that the fares, for game ticket holders who are projected to be the primary users of the Project[28] will likely be zero, as previously documented in this letter, some source of revenue will be needed to keep this capital-intensive system in operation. Given that such a source has not been disclosed, it is reasonable to assume that additional fare-paying ridership would thus be required to make the system financially viable and that the Project is intended to foster development in the Dodger Stadium area to generate riders, and thus to be growth-inducing. As has been noted by commentators in the link provided above:

cont'd P700-69

> the proposed gondola would be the first step in an entirely new system – a literal ticket to nowhere for approximately 280 days a year. If the goal is to use this project as a backdoor to creating a new neighborhood in the vicinity of Dodger Stadium, **like the one in Atlanta** or **the one being proposed in Kansas City**, ***the backers of this project need to have the intellectual honesty to say so***.

The DEIR thus needs to analyze the likely growth-inducing impacts of the Project, including its potential to foster growth in the Dodger Stadium

FN P700-69

[27] DEIR page 5-60.

[28] See DEIR Table 3.17-4 reproduced earlier in this letter.

area. In addition, the DEIR needs to disclose any intended development Plans for the Dodger Stadium vicinity, and to address those Plans in a recirculated DEIR, as failure to do so constitutes improper piecemealing or project-splitting under CEQA.

Re: Comments on Draft EIR for Los Angeles Aerial Rapid Transit project (LA ART), SCH # 2020100007

Dear Mr. Zelmer:

This firm represents S&R Partners, LLC, a Riboli Family company. The family has been a stakeholder in the immediate vicinity of the proposed Los Angeles Aerial Rapid Transit project (Gondola Project or Project) for more than a century since the founding of the San Antonio Winery in 1917. The family is proud to be a multi-generational contributor to the local and regional economy in Los Angeles. The family is a proud employer of hundreds of local residents, and participates philanthropically and civically with leading community-based nonprofit organizations. The family members who run the business were raised in the community within walking distance to the Historic State Park, Chinatown, Solano Canyon, and Lincoln Heights.

P701-1

Please keep this office on the list of interested persons to receive timely advance notice of all hearings, votes and determinations related to the proposed Los Angeles Aerial Rapid Transit project (Project), its DEIR and requested entitlements.

Pursuant to Public Resources Code Section 21167(f), please provide a copy of each and every Notice of Determination issued in connection with the Project.

A. The Proposed Project's Location on Public and Private Properties.

According to the DEIR, the Project's stations and towers would range in height from 78 to 195 feet high. The cable for the gondolas would be suspended as high as 175 feet above the ground, and:

P701-2

- Alameda Station - would be located on Alameda Street adjacent to the planned LAUS Forecourt and Placita de Dolores between Los Angeles

Street and Cesar Chavez Avenue. The station would be approximately 173 feet long, 109 feet wide, and 78 feet high at its tallest point, with the passenger loading platform approximately 31 feet above Alameda Street.

- Alameda Tower - would be 195 feet tall with the cable suspended 175 feet above-ground.

- Alpine Tower - would be 195 feet tall at its tallest point, with the cable suspended 175 feet above ground.

- China Town/State Park Station - would be approximately 200 feet long, 80 feet wide, and 98 feet tall at its tallest point, with the passenger boarding platform approximately 50 feet above-grade.

- Broadway Junction – this non-passenger junction would be approximately 227 feet long, 60 feet wide, and 98 feet high at its tallest point, with the platform approximately 50 feet above the ground.

- The Stadium Tower - would stand 179 feet tall with the cable suspended 159 feet above-ground.

- The Dodger Stadium Station – would be approximately 194 feet long, 80 feet wide, and 74 feet high at its tallest point.

cont'd
P701-2

With the exception of its terminus at Dodger Stadium, the Project's stations and towers would be constructed on public land, and the gondolas would pass over both public and private property. As noted on DEIR pages ES4-ES8:

- The proposed Alameda Station would be constructed over Alameda Street between Los Angeles Street and Cesar Chavez Avenue, adjacent to the Placita de Dolores and planned LAUS Forecourt.

- Alameda Tower would be constructed on the Alameda Triangle, a portion of City Right of Way (ROW) between Alameda Street, North Main Street, and Alhambra Street.

- The proposed Alpine Tower would be constructed at the corner of Alameda Street and Alpine Street on city-owned property.

- The proposed Chinatown/State Park Station would be constructed partially on City ROW and partially within the boundaries of the Los Angeles State Historic Park.

- The Broadway Junction would be located at the northern corner of the intersection of North Broadway and Bishops Road (1201 North Broadway) on primarily privately-owned property.

- The proposed Stadium Tower would be located on hillside private property north of Stadium Way between the Downtown Gate entrance road to Dodger Stadium and SR-110.

- The northern terminus of the system would be located in a parking lot at the Dodger Stadium property, where the proposed Dodger Stadium Station would be constructed.

cont'd P701-2

According to the DEIR, the alignment travels over City of Los Angeles right of way, City-owned Property, Metro Property, Caltrans Property, California State Parks Property, and Private Property, as shown in the following Figure reproduced from DEIR Appendix Q. A map should also be provided and coded to show the location of both the public and private land within the full Area of Potential Impact (API) as shown in DEIR Figure 3.1.1. The Project thus involves the use of public land – and the presumed forced taking of private land, not discussed in the DEIR – by a private Project sponsor.[1] DEIR Appendix Q also indicates that the Project requires the acquisition of American National Standards Institute (ANSI) required aerial rights[2] over the following properties, something not disclosed in the Project Description in the body of the DEIR:

- 1028 N. Alameda St.
- 903 N. Main St.
- 901 N. Main St.
- 1251 N. Spring St.
- 1201 N. Broadway
- 455 Savoy St.
- 451 Savoy St.
- 1800 Stadium Way

FN P701-2

cont'd
P701-2

B. The DEIR's Lack of Clarity on the Issue of Eminent Domain.

The DEIR needs to specify if Metro contends that it has the power of eminent domain for use in furtherance of the Project. If yes, then the DEIR should identify the specific statutory bases, if any, that would allow it to exercise the power of eminent domain for the Project.

The DEIR also needs to include a map, keyed to document the mechanisms which would be used within the API, to allow private use of public lands. For example, DEIR pp. 2-81 to 2-82 appears to indicate that in the case of the City of Los Angeles, this would be accomplished via a franchise agreement and a 20-year Development Agreement.

The proposed franchise agreement and Development Agreement must be made available concurrently with a recirculated DEIR.

P701-3

In addition, the DEIR should inform the public what the proposed mechanism is for acquisition of aerial rights and the associated permitting agency(s). In the absence of clear information regarding the mechanism for allowing private use of public lands, and for acquiring aerial rights over private lands particularly if forcibly taken through eminent domain, the Project description is deficient.

P701-4

As noted in the Historic Resources Technical Report included in Appendix G of the DEIR, there are 12 previously-identified historical resources within the proposed Project's API. Two of the historical resources are historic districts with contributing resources located within the API. In addition, the historic resource consultants identified the *El Grito* mural as eligible for listing in the National Register of Historic Places (National Register).

P701-5

The next Figure, reproduced from DEIR Appendix G, shows the Project alignment and API defined for purposes of analyzing the historic resource impacts of the Project.

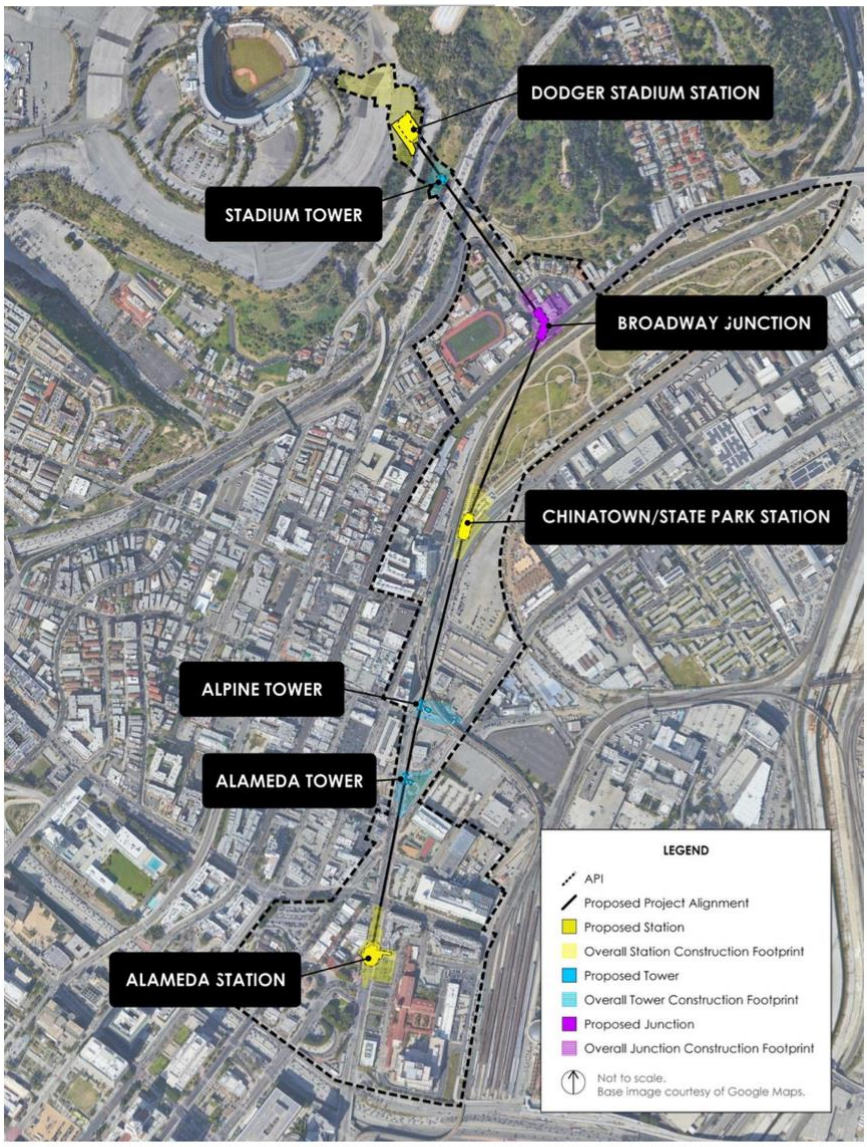

Figure 3: Area of Potential Impact (API). Base image courtesy of Google Maps.

Project Alignment and Area of Potential Impact
Source: DEIR Appendix G

cont'd
P701-5

The historic resources within the API identified in DEIR Appendix G include:[3]

1. Los Angeles Union Station Passenger Terminal and Grounds
   1A. Macy Street Grade Separation

2. Los Angeles Plaza Historic District 2A. Garnier Block
   2B. Sanchez Building
   2C. Old Plaza Fire House
   2D. Hellman-Quon Building
   2E. Masonic Hall (Masonic Building)
   2F. Merced Theatre
   2G. Pico House (Pico Hotel)
   2H. Vickrey-Brunswig Building
   2I. Plaza House
   2J. Plaza (Plaza Area, Plaza Park)
   2K. Old Plaza Church (Nuestra Señora Reina de Los Angeles Church [Our Lady Queen of the Angels])
   2L. Plaza Community Center (Biscailuz Building)
   2M. Plaza Methodist Church
   2N. Plaza Substation
   2O. Avila Adobe
   2P. The Winery
   2Q. Machine Shop
   2R. Sepulveda House
   2S. Pelanconi House
   2T. Hammel Building
   2U. Italian Hall

3. El Grito (The Cry) Mural
4. Los Angeles Terminal Annex Post Office
5. Philippe the Original
6. Granite Block Paving
7. Capitol Milling Company
8. 1035 N. Broadway
9. St. Peter's Italian Catholic Church
10. Cathedral High School
11. 451 E. Savoy Street
12. Charles B. Wellman Residence

cont'd P701-5

FN P701-5 [3] DEIR Appendix G, page 17.

13. Arroyo Seco Parkway Historic District

cont'd P701-5

DEIR page ES-9 indicates that construction of Broadway Junction requires the demolition of the existing commercial building located at 1201 N. Broadway. Does the Project sponsor own this building, or must it be acquired? If it must be acquired, what is the mechanism of acquisition? In the absence of this information, the Project description is again deficient.

P701-6

C. <u>Eminent Domain Concerns and Questions.</u>

Although the DEIR does not explicitly reference Metro's use of eminent domain, a hidden assumption within the DEIR and Project description is Metro's supposed ability to exercise the power of eminent domain against private property owners for the benefit and advantage of LA ART, the private Project proponent. The DEIR fails as a legal document on this ground.

Although LA ART in response to comments it provided to Metro suggests Metro has the power of eminent domain to forcibly take the private property rights of other parties in furtherance of the Project, the stated statutory "rationale" as supplied by LA ART to Metro was based on Public Utilities Code provisions. (**Exhibit 1 [**LA ART Phase II Request for Additional Detailed Information, p. 9].)

P701-7

However, those cited sections (PUC §§ 130252 and 130254) do not clearly provide Metro with the power of eminent domain for a project such as the Project, which throughout the DEIR and public record concerning the Project has unambiguously been described as being privately funded, privately operated and privately owned. Indeed, contrary to LA ART's assertions and the DEIR's assumptions regarding Metro's alleged ability to use eminent domain for the Project, PUC Section 130521 provides:

> The commission may acquire by deed, purchase, lease, contract, gift, devise, or otherwise, any real or personal property, structures, rights, rights-of-way, franchises, easements, air, land, and development rights, and other interests in lands located within this state necessary or convenient for the construction or operation of a project, upon terms and conditions it deems advisable, and to lease, develop, jointly develop, maintain, operate, or dispose of any property, right, or interest in the manner that is necessary or desirable to carry out the objects and purposes of this chapter. **<u>Nothing in this chapter provides eminent domain power</u>**. (Emphasis added.)

As a result, we believe the Project and DEIR are based on the false premise that Metro can use eminent domain to seize private property owners' private property rights for the benefit of LA ART and the Project.

cont'd P701-7

In addition to violating our client's constitutional rights under California Constitution Article I, § 19, and the 5th Amendment to the U.S. Constitution, and similarly the rights of other private property owners, the structure of the Project and implied ability of Metro to seize private property for it, implicates a separate violation of CEQA, that of predetermination. "[A]n EIR must be performed before a project is approved, for [i]f postapproval environmental review were allowed, EIR's would likely become nothing more than *post hoc* rationalizations to support action already taken.' (Laurel Heights I, at p. 394, 253 Cal.Rptr. 426, 764 P.2d 278.)" Save Tara v. City of West Hollywood (2008) 45 Cal.4th 116, 130. The DEIR already, implicitly, embodies a determination by Metro that it will attempt to aid LA ART, the private Project proponent, through the use of eminent domain – over the objections of private property owners such as our client. That is a form of precommitment that undermines the legality of the DEIR and shows Metro "failing to proceed in the manner CEQA provides." Id. at 131.

P701-8

Rather than simply accede to this premise, we ask the following of Metro and request a clear and direct response:

> Does Metro contend it has the power of eminent domain to take private property or private property rights for and/or in furtherance of the Project?

This issue has not been openly addressed in the DEIR, but must be as part of this process.

D. <u>Conclusion.</u>

If the Project sponsor seeks to proceed with the Project, the DEIR must be rewritten to correct these errors and omissions and then recirculated for public review and comment. Thank you for your review and responses to these comments.

P701-9

Very truly yours,

/s/ Robert P. Silverstein

Unsolicited Proposal – Phase II Detailed Review: Request for Information

PROJECT INFORMATION

To be completed by Metro Staff

Project Name: Los Angeles Aerial Rapid Transit (LAART)

Project ID: UP-2018-14

Date Submitted: 25 April 2018

Date Received: 25 April 2018

Phase I Response Date: 11 June 2018

Phase II RFI issuance: 10 August 2018

Requested Response Date: 12 November 2018

Review Team:

-Program Management

-Countywide Planning

-Operations

-Vendor/Contract Management

-Office of Civil Rights

-Office of Extraordinary Innovation

SUMMARY OF PHASE I PROJECT EVALUATION

The Review Team expressed unanimous interest in gathering more information about this proposal and expressed openness to the three main areas of Metro involvement laid out in the Phase I proposal (location at Los Angeles Union Station (LAUS), responsibility as lead environmental agency, and assistance with aerial easements and land acquisitions) (p. 14). The discussion then focused on the costs, impacts and benefits of this project, and what role Metro would play should the proposal advance to implementation, as it influences what information to request.

<u>The costs, benefits and impacts of this project</u>

The review team had some concerns whether this project would deliver noteworthy benefits to local and/or regional mobility, air quality and congestion compared to other potential investments (p. 12). However, the review team discussed other benefits, such as the significant investment being made by the developer, and the intangible benefits of this project as a fun and iconic local attraction that captures the public imagination and instills a sense of civic pride.

This project has the potential to create positive net benefits for the people of Los Angeles County. For its involvement and whenever possible, Metro must work to prevent any potentially negative impacts

to the people of Los Angeles County and deliver value to the people of Los Angeles County. This includes maximizing the return on investment of the taxpayers who invest in Metro's mission.

There are aspects of this project and the role Metro is being asked to play that will have a cost to Metro and the people of Los Angeles County. These may include the social and political costs of acquiring property; the impacts of construction on local communities; acting as the face of the project and mediating opposition; the opportunity costs of expending limited resources and capacity; and the impact of allowing for an additional transit use on the Union Station property given the myriad of projects, both transit and commercial, in early stages of development. To the extent that Metro will be environmentally clearing the project, claiming property, and substantially involved in other ways, the reputational risks of problems that arise on the project such as delays, mismanagement, or operational incidents, also reflect Metro even if Metro is not paying for the project.

While the risks of this project to Metro and the people of Los Angeles County are lower than most of Metro's planned capital projects, every project has risks that must be explored to ensure that the benefits of the project outweigh those risks. The review team saw great advantages to this investment in the connection between two iconic Los Angeles destinations, but because of the risks, Metro is interested in understanding how risks can be minimized and value can be maximized.

The role Metro would play

The review team felt that it would be advantageous to simplify Metro's role as much as possible, and to focus this Request for Additional Detailed Information (RFI) on understanding the Project assumptions (ridership, site needs, and similar) to inform the environmental process; the business case for Metro; the role Metro would play; the long-term vision for the project; and the project's interface with Los Angeles Union Station.

Because this project is unprecedented, Metro must answer interrelated questions surrounding how the project would be structured, what Metro policies and procedures would apply, what contractual vehicle would be used, which entities will be involved and in what ways, etc. As Metro collects additional information on this project, it will continue to refine its position on many of these key questions. This RFI invites the proposer to weigh in on these questions as well, and feels that the earlier the answers can be understood and agreed upon, the better.

The role of this RFI

This RFI requests a substantial amount of supplemental information, and in doing so, makes some assumptions. The reason for asking for such information is to receive the most complete Phase II proposal possible. The more defined the project at the end of Phase II, the more confidently Metro can make its decision to implement the project, and in what manner.

Most of the information requested in Section 3 of this RFI is requested for the following reasons:

To move forward with providing a location at LAUS, Metro needs to understand where the station will go and the potential impacts to projects, parking, and facility use.

To move the project smoothly through the environmental process, Metro needs project details and to understand which policies the proposer believes apply.

To approve the project, Metro needs to ensure the project will be insured and constructed to applicable codes and specifications, and that the proposer has a sound funding plan and business model.

To move from Phase II to implementation, Metro prefers to have as much project definition as is practicable.

If information requested will not be known or available in Phase II, the proposer should explain its reasoning as well as at what point during the process the information would become available.

Purpose of this Document

The purpose of this Request for Information (RFI) is to gain greater understanding of your firm's Unsolicited Proposal and enable Metro to conduct a Phase II Detailed Review of your proposal. It also allows Metro to communicate key needs, challenges, opportunities, and aspirations in a way that should allow you to reiterate your proposal to more adequately fit these parameters.

This RFI will serve as a tool to gather more information about the conceptual proposal to aid Metro's Review Team in making a Phase II determination. The RFI is drafted based on the feasibility assessment previously conducted and approved for the project during the Phase I Review. *The information you provide to respond to this request should help Metro to understand the business case for implementation of your proposal*.

If Metro ultimately chooses to advance your Proposal, and to issue procurement documents, the information provided in response to this RFI will strengthen the procurement document (whether RFP or sole source). Any information received in response to this RFI may assist Metro's Unsolicited Proposal Review Team, Office of Extraordinary Innovation, and Office of Vendor/Contract Management in finalizing the scope of work and requirements which may be used at a future date in the issuance of a Request for Proposals (RFP), or other contracting mechanism. Submitting a response to this RFI is not a guarantee in any way that a supplier will be selected for any subsequent RFP or contracting mechanism, nor does it preclude any supplier from responding to future procurement opportunities.

The issuance of this RFI does not constitute a commitment to issue a request for bids/proposals, award a contract, or pay any costs incurred in preparation of a response to this RFI. Cost and price information provided in proposals will be held in confidence and will not be revealed or discussed with competitors, except to the extent required by law.

PART I: PROBLEM STATEMENT AND KEY REQUIREMENTS

To Be Completed by Metro Staff

1. Problem Statement

Describe the gap/problem(s), its magnitude (i.e., which mission/functional areas, people, organizations, processes, etc. are affected) and the primary mission or business impacts if not corrected.

Sports venues draw large crowds that overwhelm transportation systems before and after events. Because Dodger Stadium is the largest Major League Baseball stadium (capacity 56,000), is located on a hill in Chavez Ravine, is adjacent to several bustling neighborhoods, and sits within traffic congested Los Angeles, traffic getting to and from Dodger Stadium is notoriously challenging. Dodger Stadium draws regional crowds, the vast majority of whom drive their personal vehicles to access the venue. These vehicles converge and bottleneck on the surface streets leading up the Stadium, especially Sunset Boulevard/Cesar Chavez from Union Station and into the communities West of Echo Park. This traffic is exacerbated by a lack of high quality transit options which could more efficiently shepherd people in and out.

As part of the Phase II response, Metro would benefit from hearing more about how the proposer defines the problem statement and solution.

2. Background and Context

Provide additional context that explains the current situation (e.g., policy, process, environmental factors). Identify root causes (if known) and contributors to the observed problem(s). Include relevant research and information on industry or market conditions as appropriate. Keep the focus strategic.

Metro's Responsibility

Because this project is envisioned to be privately designed, built, operated, maintained, funded, insured, and financed, Metro does not envision taking a hands-on, prescriptive, or performance minded approach to this project, instead focusing on the elements of the project for which Metro would be responsible.

Under the structure proposed in Phase I, Metro still needs additional information about each of the above-mentioned aspects of the project to better understand and evaluate it, the case for it, and its impacts, and in order to serve as the agency lead on environmental planning and clearance. Metro also has a significant interest and role to play as the property owner of the LAUS site and a steward of taxpayer investment, which includes better understanding the station location, impact to the immediate site and LAUS facilities, and feedback/approval rights of station designs and operating plans.

For the purposes of this RFI, Metro intends to focus its involvement, and its questions, on the following categories:

1. Metro's mission, financial and business interests, including its role in improving mobility and providing transportation services and return on taxpayer investment for Los Angeles County

2. Metro's role as the lead agency during the environmental review (California Environmental Quality Act) process, for which it will be helpful to have a better understanding of future development plans at Dodger Stadium and/or associated projects; project design and definition; and assumptions and their basis.
3. Metro's role in acquiring property for this project, per CPUC's explanation of the "Powers and Functions of District"
4. Metro's role in approving this project, per CPUC § 130252
5. Current and future plans for Los Angeles Union Station, impacts, and associated concerns as property owner of this regional hub.

LAUS Spatial Context

Information about ongoing and planned projects for LAUS are included in Attachment J

3. Functional Requirements

Summarize functional requirements. Focus particularly on requirements necessary to achieve desired outcomes and measurable performance objectives.

Planning

- The proposal should describe the impacts of the project to Metro and LAUS throughout the lifecycle of the project
- The project should include a conceptual project plan, as well as a high-level schedule, scope and budget, or an explanation of when this information would become available in relation to environmental clearance and/or negotiations
- The proposal should describe the footprint of the facilities, including how much space would be needed for a station, where the preferred station sites are located, and why. The proposal should show how each station area would influence the alignment alternatives. If the alignment alternatives are well known, the proposer should provide some insight into how many properties and aerial easements may need to be acquired, which properties may need to be acquired or operated above, and for what reason.
- The proposal should describe Aerial Rapid Transit Technologies (ARTT), LLC's preferred approach to the environmental process, including but not limited to alternatives analysis, visual impacts, technical analysis, emergency response, feasibility, impact to parking, etc. This should include an interpretation of whether site/economic development plans that rely on this project will also need to be environmentally cleared, and if their clearance would occur separately from this project. With this in mind, the proposal should include any information relevant to the environmental process.
- The proposal should explain which Metro policies ARTT believes should not apply to this project, be waived or granted exemption, or would conflict with this project, and why; a worksheet template has been included in Attachment B
- The proposal should indicate what coordination would be required with other jurisdictions, such as the City of Los Angeles and Caltrans, and who would be responsible for that coordination and its associated outcomes
- The proposal should validate its assumptions, whenever possible corroborating assumptions with comparable, existing projects

- The proposal should not assume that Metro's Dodger Stadium Express would continue to operate when an aerial tram began serving Dodger Stadium (see attachments G and H for more information on the Dodger Stadium Express)
- The proposal should assume that if the project were to proceed on the LAUS property, Metro would be involved in community engagement, outreach, and construction relations and mitigations, and should explain ARTT, LLC's approach to community outreach, including what, if any, outreach would be done, and by whom, during the environmental review process.
- Based on ridership assumptions, how much parking would the project require and where is the parking assumed to be?
- The proposer should consider if the project could/might create transit connectivity or walkability between the north and south sides of the Gold Line tracks near Los Angeles Historic Park
- The proposer should indicate whether they would prefer that TAP be available as a form of payment

Business Model and Finance

- The business plan should be informed by the planning assumptions above, and outline the following:
    - Business model
    - Project budget and the available funding envelope for the project
    - Future plans at Dodger Stadium site
    - How would Metro be compensated for using Metro-owned land and facilities and Metro's authority, for company profit? This should include consideration of assumptions on ground lease payments and/or revenue sharing and/or usage fees, and any other financial payment to Metro for use of the Union Station site and facilities as part of a negotiated agreement; as well as other Metro responsibilities such as right of way acquisition, staff time, etc.
    - Staffing assumptions throughout the lifecycle of the project
        - The proposal should include the expected level and number of Metro Full Time Equivalent staff (FTEs), and percentage of staff time required and the proposed considerations related to reimbursement
        - The proposal should propose how the environmental contractor would be procured, if determined by the proposer, and how ARTT would procure these services
        - The proposal should include proposed staffing assumptions of additional Union Station personnel required in support of, but not direct operation of, the tram
- The proposal should directly acknowledge that financing, funding, and insuring the project and its operation will be the responsibility of Aerial Rapid Transit Technologies, LLC and its partners, including decommissioning and deconstruction of the facilities should they become non-operational
- The proposal should include letters of interest from key financial partners
- The proposal should include a term sheet

- The proposal should explain how the proposer would indemnify Metro from any and all liabilities that may result from the environmental process through construction, operation and decommissioning of the project by a private party.

Operations

- The proposal should indicate the level of service expected to run, and how changes to levels of service impact relevant requirements above
- The proposal should comment on the capacity of the system and anticipated wait times during peak loads
- The proposal shall address how ADA compliance will be achieved, and identify any impacts on proposed capacity

4. Statutory, Regulatory and other Compliance Requirements

Identify any statutory, regulatory, compliance requirements and/or organizational strategic goals and objectives this project/initiative must satisfy. Include as a reference all known statutory and regulatory requirements.

In this RFI, Metro has included a list of policies and laws that it believes may apply to this project. This list is not intended to be comprehensive, nor does it intend to be binding. Attachment B includes a worksheet in which the proposer can describe various policies and laws, including those listed below, and explain whether they consider them applicable and why or why not.

Laws and Policies

- Americans with Disabilities Act
- Metro Adjacent Development Handbook and Adjacent Construction Design Manual (Attachments D, E, F)
- Metro Green Construction Policy
- Construction Careers Policy
- The proposal should outline the preliminary terms of a Project Labor Agreement (PLA) to which LAART would commit, or otherwise argue that the PLA is not applicable to this project
- The review team recommends adherence to the American National Standards Institute (ANSI) Ropeway Standard as best practice (Attachment I)
- Metro Equity Platform Framework (Attachment C)
- LAUS Agreements (Covenants, Conditions & Restrictions and Easement Agreements between LACMTA, MWD, First 5 LA and Mozaic Apartments) to be provided should a formal agreement be entered between LACMTA and AART, LLC.)
- Laws, policies and procedures associated with crossing freeways, if applicable
- Laws, policies and procedures associated with operating ropeways in California

On Metro projects, Metro follows these Fire/Life Safety Policies:

- National Fire Protection Association NFPA 130 Standard for Fixed Guideway Transit and Passenger Rail Systems
- NFPA 101 Life Safety Code

- NFPA 70 National Electric Code
- NFPA 72 National Fire Alarm Code
- Los Angeles Fire Department Chief's Regulation #4 Standards
- Long Beach Fire Department Fire Protection and Life Safety Certification Program
- Metro Fire/Life Safety Design Criteria

Approval from the Board of Directors

Based on Metro's interpretation of its authority under the CPUC, which establishes Metro and its powers, including the powers of eminent domain, the Metro Board of Directors must approve all plans for the design, construction and implementation of public mass transit projects in LA County, including this one.

Rationale

PUC § 130252 states, in relevant part: "All plans proposed for the design, construction, and implementation of public mass transit systems or projects, including exclusive public mass transit guideway systems or projects . . . shall be submitted to the commission [now Metro] for approval. No such plan shall be approved unless it conforms to the appropriate adopted regional transportation plan . . ."

CPUC General Order 164-3 (Eff. 01 May 2018) further defines its authority over Rail Fixed Guideway System, which are defined as "any light, heavy, or rapid rail system, monorail, inclined plane, funicular, trolley, cable car, automatic people mover, or automated guideway transit system used for public transit and not regulated by the Federal Railroad Administration or not specifically exempted by statute from Commission oversight."

Based on these code sections, the Aerial Tram from LAUS to Dodger Stadium is a public mass transit project, and therefore Metro must approve all plans for its design, construction, and implementation.

Metro is also the statutory designated transit guideway operator in Los Angeles County (see, PUC §130254), although Metro is likely able to delegate this function to a third party.

5. Technical Requirements or Limitations

Identify any technical requirements or limitations.

- The station site may not interfere with planned capital projects outlined in this RFI and Attachment J

For the purposes of continuity, some Technical Requirements were included in the Functional Requirements section

6. Other Project Information

Identify any other relevant project information.

Subject: Public Comment – Los Angeles Aerial Rapid Transit (LA ART) Project DEIR

Dear Mr. Zelmer,

Please find attached a DEIR comment letter in OPPOSITION to the LA ART Gondola Project. The letter is a joint statement and collaborative work of residents and property owners on Savoy Street, the neighborhood directly in the path of the gondola, and the site of the massive Broadway Junction.

Sincerely,

Phyllis Ling

VIA EMAIL LAART@metro.net; zelmerc@metro.net

Subject: Public Comment – Los Angeles Aerial Rapid Transit (LA ART) Project DEIR

Cory Zelmer
Deputy Executive Officer
Los Angeles County Metropolitan Transportation Authority
One Gateway Plaza, Mail Stop 99-22-6
Los Angeles, CA 90012

Dear Mr. Zelmer and Metro,

We, as residents of Savoy Street, are writing to voice our opposition to the Los Angeles Aerial Rapid Transit Project ("The Gondola" to Dodger Stadium, or “The Gondola Project”). This project has been – and continues to be – pushed on us without adequate information. P702-1

The first time residents were notified about The Gondola was in September 2020, with the Notice of Preparation of the Draft EIR. By that time, LA ART had already selected the two potential routes for The Gondola. This happened without any public outreach or meetings, depriving us of the opportunity to provide input early-on for a private developer’s plan to occupy the airspace over our homes, public streets and parks. Metro has betrayed our communities by approving LA ART’s outreach plan and allowing the project to progress to this stage through this untransparent and backward process, front-loading the approvals process with the EIR. P702-2

To this day, LA ART still has not provided a feasibility study or funding plan. We can only wonder if this enormous infrastructure project is financially sustainable. Without adequate and consistent funding, The Gondola cannot be properly maintained and secured, and would pose a safety risk to our communities, creating a substantial liability for taxpayers. The news that Frank McCourt intends to “donate” the gondola project to Climate Resolve, a nonprofit with zero experience with construction and operation of transit projects and an annual budget of less than $1 million, does not inspire confidence. Furthermore, according to the documents P702-3

submitted for Metro's November 16, 2022 Ad Hoc Olympics Planning Committee meeting, Metro has listed the Aerial Rapid Transit project on a comprehensive list of projects under consideration for federal and state funding in preparation for the 2028 Olympic Games. This suggests that the staff at Metro believes that public funding is needed for this project, despite all of the claims that The Gondola would not use taxpayer dollars. Metro should not be volunteering to seek out taxpayer dollars for a project that claims to be 100% privately financed.

cont'd P702-3

Even when we were finally notified in September of 2020 with the NOP, the information provided was vague. There was no initial or feasibility study – this for a mode of transit that is novel to the US. Instead of a feasibility study, there was a figure, erroneously labeled "Examples of Gondola Systems," which included photos of cable car systems from around the world. None of those systems use 3S gondola technology for urban transit at the capacities planned for The LA ART Gondola. The only aerial cable systems used for urban transit in the US are the Portland Aerial Tram and the Roosevelt Island Tram. Trams, however, are much simpler; they are lower-capacity systems with only 2 cabins that stay attached to their haul rope and alternate back and forth between two stations. 3S tricable gondolas are detachable grip systems that circulate 20, 30 or even 50+ cabins at a time between two or more stations. LA ART's suggestion that The Gondola project uses proven technology for this proposed application is disingenuous at best.

P702-4

As several commenters noted in their NOP comments, the Notice of Preparation did not contain adequate information for the public to make informed comments about the potential impacts that should be examined in the draft EIR. Problems with the NOP include the following:

- Zero information was provided about the towers, what they might look like, how many there might be and where they could be located.
- There was no information about the intermediate stations, except their locations on a map.
- The approximate height of the cables and cabins – over our homes, streets, and parks – was also not disclosed in the NOP.
- The NOP announcement was so confusing that at least one person, who stated their support for the project, claimed to live under the path of the gondola, when in actuality, their residence was nowhere near either of the proposed routes.
- The NOP also did not include an intermediate station at the southern entrance of Los Angeles State Historic Park. This station was not publicly disclosed until 8 months later, in May 2021. The decision to locate a station at this location and to

P702-5

study it in the DEIR was made without any prior notice or opportunity for community feedback.

cont'd P702-5

Metro, in its role approving LA ART's outreach plan, has betrayed us. This DEIR, which is filled with misleading images and false assumptions that minimize the impacts of this project, is a further betrayal and insult. Despite the breadth of this 8,000 page document, there is still little information addressing how this gondola, which would be new technology for LA, would be operated, secured, financed, and maintained. This document fails as an informational document.

P702-6

Only after the technical and financial feasibility of the LA ART gondola project was established should there have been a draft EIR and a comment period. Metro and LA ART are asking members of the public to comment on the environmental impacts of a project when the project still has too many unknowns, especially in terms of implementation, which will be critical to both the impacts and sustainability of this project. This has been, and continues to be, an enormous waste of our collective time and energy.

P702-7

In order to protect our rights, however, we have prepared a list of our concerns regarding the DEIR document and the impacts of this project. The Broadway Junction and the path of the gondola directly over our 100+ year old neighborhood would have an enormous impact on our lives.

P702-8

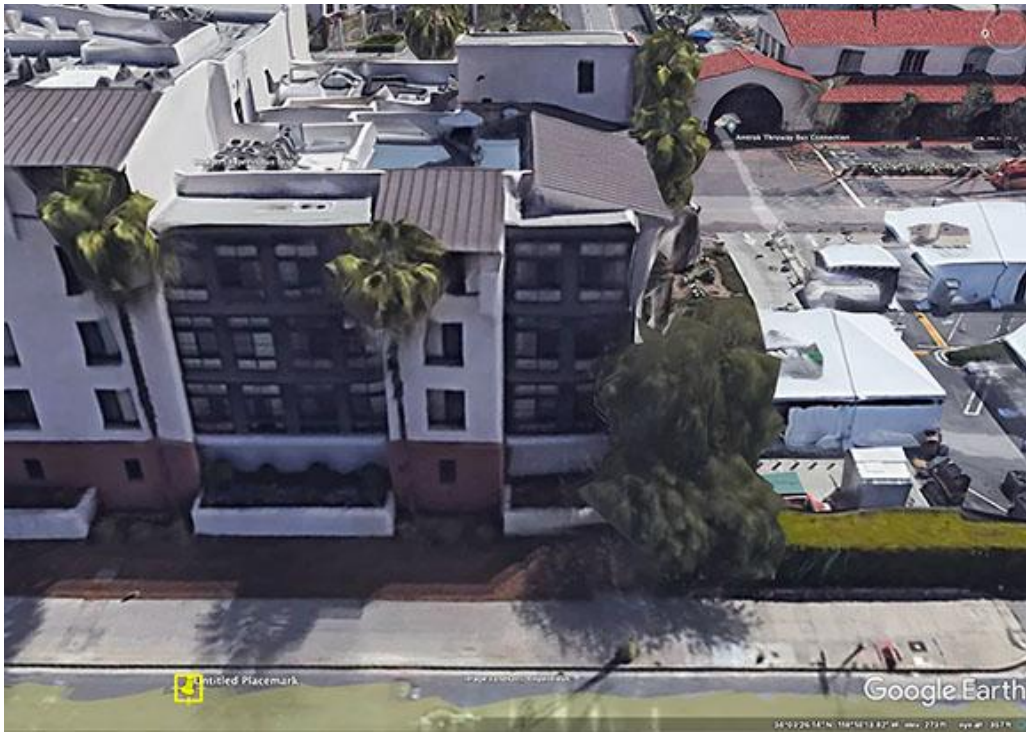
Invasion of Privacy

- The DEIR should explain how the proposed "smart glass" would work, how much it would cost, whether it is feasible or cost prohibitive to maintain, and how would it be implemented. For example, when/where along the route does the glass get activated and which windows are activated at each location? We believe the questions of when the smart glass would be activated should be answered along the entire route, especially where the gondola passes near residences including Mozaic Apartments, Metro Lofts, the future College Station development, Blossom Plaza, and the neighborhoods around Cottage Home Street and Savoy Street.

P702-9

The following pages are Google Earth images along the gondola route at the approximate height of the gondola cabins:

P702-10



Google Earth View of Mozaic Apartments, 84 ft above ground

cont'd
P702-10

Google Earth View of Metro Lofts from 151 ft above ground, facing north

Google Earth View of Metro Lofts from 151 ft above ground, facing west

cont'd
P702-10

Google Earth View of Broadway Junction Site, view from 45 ft above ground

The following two images are Google Earth images in the neighborhood of the Broadway Junction, on Savoy Street. The images are much higher than the views that passengers would see from the cabins. Google Earth did not have view available at the height of the gondola cabins.

cont'd
P702-10

Google Earth Eye view at Broadway Junction Site, Approximately 65ft above ground. This is 20 ft higher than the view from gondola cabin (could not go lower on Google Earth).

Google Earth Eye view at Broadway Junction Site - Approximately 65ft above ground. This is 20 ft higher than the view from gondola cabin (could not go lower on Google Earth).

cont'd
P702-10

- If the "smart glass" malfunctions, will video cameras inside the gondolas record views of our private yards and through windows? We are relying on a private company to keep this system in good working order, and do not want to be inadvertently surveilled.

P702-11

- We are concerned and skeptical about the ability of the battery charging system of the gondola cabins to maintain power to all of the proposed systems in the cabins that require electricity. To our knowledge, the systems that will run off of the cabins' battery power include the security cameras, WIFI for video streaming and audio communications, lighting, smart glass, air circulation/filtration, seat heating, and air conditioning (which at the October 22, 2022 Zoom DEIR meeting was said to be "anticipated"). Here are some of our questions related to the electrical in-cabin systems that we hope will be addressed in the next draft of the EIR:

P702-12

    - Will the smart glass be the first system to be sacrificed if the battery power drops below a certain level? How often could this happen? Would this be likely to happen during heat waves due to the electrical load from the air conditioning system? P702-13
    - How much energy does the air conditioning draw at various outdoor temperatures, and at what outdoor temperatures would The Gondola system be required to shut down for safety reasons? P702-14
    - According to LA ART, the batteries powering the gondola cabins would be recharged mechanically via wheels that are attached to the gondola cabins, turning on the track ropes. We ask that LA ART explain in the EIR how this recharging system works. Realistically, how much energy can be generated from the wheels? P702-15
- How does The Gondola affect our rights to privacy on our private property? There are certain rights that individuals have on private property that they do not have in public. Will the privately owned gondola guideway in the air be deemed a public right-of-way? What is the legal framework for protecting residents' privacy rights on their private property when a private project invades it like this? These include the rights to not be video recorded. Do we lose these rights to privacy on our private property if the smart glass is malfunctioning? Are residents restricted in terms of messages and signage on their private property that can be seen from The Gondola, but is not visible from our public streets? P702-16

Noise / Vibration

- Many homes in our neighborhood are over 100 years old and don't have soundproofing. Homes have plaster walls and single pane windows. And as mentioned in the visual impacts analysis, many of our homes have security bars on the windows. Many of our homes were built before air conditioning existed – with plaster walls, high ceilings, and basements that help keep our homes cool in the summer. We don't have air conditioning or can only afford to use it sparingly, and need to leave windows open at night in the summer for cooling. With the added noise and disturbance of this project, you will force many of us to keep our windows closed and use air conditioning, which is not an environmental benefit of this project. P702-17
- The DEIR states that the maintenance of The Gondola system will be at night, between midnight and 6am. This will create significant noise that is not included in the noise analysis. Would power tools be required to service the Broadway Junction? P702-18

If so, it could sound like an open-air auto mechanic's shop in our neighborhood at night. Would we hear workers shouting at each other? We are not aware of any urban gondola systems that place open-air stations in the middle of residential neighborhoods. We believe the Broadway Junction needs to be redesigned to be a fully enclosed non-passenger station. cont'd P702-18

- The noise and vibration analysis is vague and flawed. For example:
    - Noise measurements were conducted between June 15 and June 18, 2020 – during the COVID-19 pandemic stay-at-home orders when traffic was light. As acknowledged in the DEIR, this underestimates the noise measurements that established the baseline or existing noise in the neighborhood, which in turn, underestimates the total noise once The Gondola Project's noise is added to the existing noise. It's quite possible that the operational noise at NSR-17 would be pushed above the unacceptable levels for single family homes on Savoy Street once this correction is made. P702-19
    - Another NSR location at 455 or 451 Savoy Street should be included in the noise analysis because this is where the noise from the Broadway Junction may be the highest in the neighborhood during operation of The Gondola, according to the Rossi model. The construction noise would also be higher at 455 or 451 Savoy than at NSR-17N because there are no structures between these two locations. P702-20
    - The noise measurements in our neighborhood on Savoy Street were taken at 430 Savoy Street. This location may underestimate the noise from the 110 FWY because the property is partially shielded from the freeway noise by the elevated terrain of Radio Hill. We suggest an additional measurement location at 455 Savoy Street or across the street from that address on Savoy Street. P702-21
    - The noise analysis does not identify by name the gondola system that was measured for reference, only noting that the system is in Austria and can be found in Appendix A. P702-22
    - The noise analysis does not identify differences between the 3S gondola system in Austria that was measured and The LA ART Gondola project that is proposed. The analysis does not make any adjustments to the estimated sound levels of The Gondola to account for these differences. The analysis makes the assumption that the sound power parameter, Lwsφ, for the 3S gondola in Austria, The Koblenz Seilbahn, is the same as that for the proposed LA ART Gondola, and that the same parameter can be used for P702-23

intermediate, angle/junctions, and end stations. We have the following questions about their estimate of LA ART's operational noise: cont'd P702-23

- Were the measurements taken from the gondola station in Austria taken from a station that included the drive motor or was it taken from one with a passive bullwheel? Were the measurements taken while the gondola was operating at maximum capacity? P702-24
- Is the drive motor for The LA ART Gondola underground, like the gondola in Austria? P702-25
- What are the differences in characteristics between the reference drive motor and The Gondola's drive motors that may impact noise levels and vibration? Does the capacity of the gondola system impact the sound power parameter, $L_{WS\varphi}$? If the system in Austria is the Koblenz gondola, that system has a much lower capacity. P702-26
- In the noise analysis, it states that one of the assumptions is as follows: "The proposed Project includes one junction. The junction is a non-passenger junction used to execute a turn in the ropeway (while the junction includes vertical circulation elements, which are for maintenance). Acoustically,it was assumed that the junction would have the same power unit as the stations and was modeled using the same equations and parameters as the stations." We don't believe this is a good assumption. The Junction and intermediate stations contain twice as many components for circulating the cabins. In addition, the Broadway Junction contains both a motor unit and a tensioning system. P702-27

  - What are the differences in the built and natural environment of the reference gondola and The Gondola that is proposed that would impact the propagation of sound from this system? If the reference system is the Koblenz gondola in Austria, that system is surrounded by a flowing body of water and open space that may diffuse, scatter, or absorb noise. However, the alignment of The LA ART Gondola is in an area that is undergoing redevelopment, and will likely see further midrise and highrise developments in the next 40 years. Future development along Alameda Street could propagate the noise from The Gondola's Alameda Station and Chinatown State Park Station via a well-known "urban canyon effect." P702-28

- We suspect that one or more of the large trees between our neighborhood (on Savoy Street) and the 110 FWY will need to be removed due to the height of the trees interfering with the path of the gondola cabins. The EIR needs to confirm P702-29

whether any trees will be removed or pruned, and account for increase in freeway noise in the neighborhood due to the removal or modification of trees for this project.

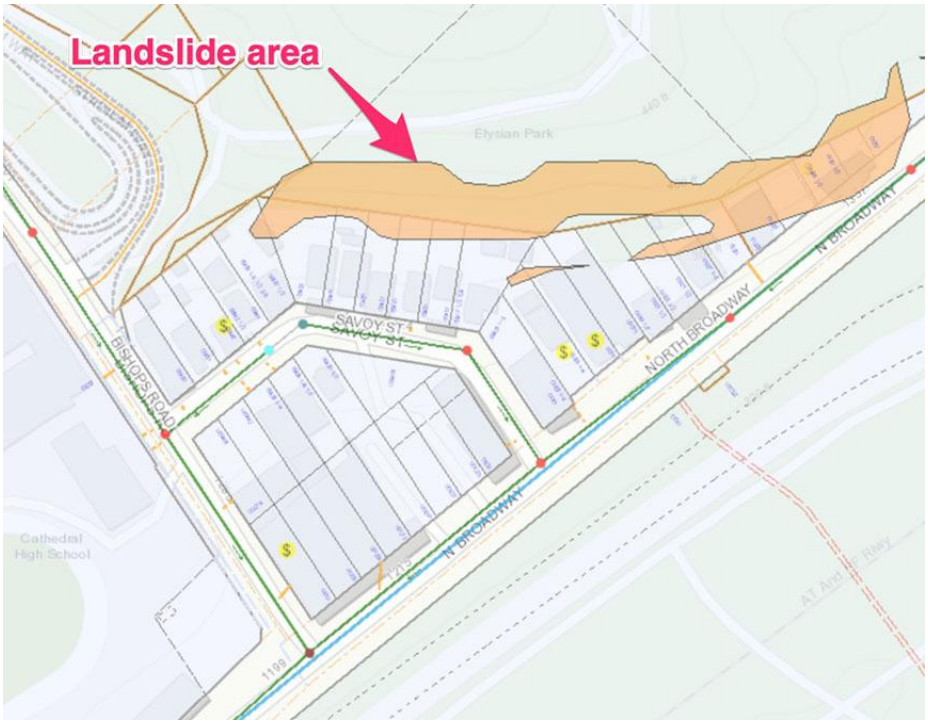
Large Trees Potentially in the Path of The Gondola Cabins/Cables Between 455/451 Savoy and SR-110 (110 FWY)

cont'd
P702-29

cont'd
P702-29

Large Trees East of SR-110 Northbound Lanes, Inside the Onramp Loop

- Even with mitigation, the construction noise at NSR-17S is estimated at 80 to 90dB without mitigation and approximately 70-80dB with mitigation. This is outrageous. P702-30
- The vibration caused during construction of the Broadway Junction's foundation may cause damage to our homes. There are also retaining walls in our 100+ year old hillside neighborhood that were built prior to current building codes that may be damaged and cause instability to our hillsides. Most of the properties on the west and north side of Savoy Street are in a landslide area. We are concerned that the Radio Hill hillside could become unstable during construction of the Junction and trigger a landslide. P702-31



Landslide Area Near the Broadway Junction (NavigateLA)

- We are also concerned that vibration from construction on the Broadway Junction could cause structural damage to our old infrastructure including sewer pipes, sewer laterals, water mains and gas lines. The sewer lines under Savoy Street were installed in 1896 and 1906. Two spot repairs were made on the sewer pipe along Broadway in 2008. We did not see this impact addressed in the DEIR.
- Measurements taken in the Savoy Street neighborhood were taken at 430 Savoy Street, which is partially shielded from the 110 FWY noise by the upslope of Radio Hill behind the homes on Savoy Street. Residences closer to Bishops Road may experience slightly higher freeway noise. A better measurement site, where the maximum noise would be highest in the neighborhood would be at Bishops and Savoy Street.

P702-32

P702-33

We request that these issues be clarified and investigated in relation to the noise and vibration analysis. In addition, the City and other agencies should be looking for ways to help our communities reduce the noise in our neighborhoods that is a result of the freeway traffic and historical redlining, instead of introducing additional sources of noise that nudge us closer to levels that are incompatible with residential land use.

P702-34

Safety/Security

- Because there is still no funding plan and no operational plan, we are concerned that this system will not be properly maintained and secured by this private operator. We are concerned about the cavalier attitude with which LA ART is approaching the challenge of maintaining and securing this system. LA ART does not acknowledge the risks that are being imposed on residents, users of this system, and the general public in right-of-ways under The Gondola. P702-35
- We are concerned about harm that could be caused by vandalism or sabotage of the system, as happened with the Sea to Sky Gondola. The operators of that gondola had to completely revamp their security after a vandal cut their cable on two occasions in just over a year. The operators admitted that security cameras are worthless if no one is monitoring them. How many security cameras will be used to monitor the LA ART Gondola system, and how many people will LA ART employ to monitor all of these security cameras? Will they be monitored 24/7 to prevent acts of sabotage? How much staff will really be needed to operate and maintain this system? The cables of gondola systems are very thick steel; a falling cable could kill a person, as almost happened in the Sea to Sky Gondola case (https://unofficialnetworks.com/2022/09/15/sea-to-sky-reward-doubled/). This is a huge concern for residents who would live under the gondola's path. P702-36
    - https://www.cbc.ca/news/canada/british-columbia/sea-to-sky-gondola-vandalism-update-2022-1.6582667" Operators of the gondola stepped up security after the cable was cut the first time and the attraction now has an in-house security team with tech for around-the-clock surveillance."
    - https://vancouversun.com/news/local-news/security-company-sued-in-connection-with-sea-to-sky-gondola-vandalism "They say USI assured them it would equip the system with sufficient cameras and equipment so as to provide coverage of all of the gondola's towers to detect unauthorized access and which would trigger an alarm in the event of a vandal approaching the scene." …. "As a result of the security breach and the alarm failure, the vandal was able to sever the cable, which parted catastrophically. The loss event caused substantial damage and destruction to the gondola and its components."
    - https://www.squamishchief.com/local-news/sea-to-sky-gondola-to-reopen-with-own-security-team-3839149
        - Brown said having an in-house security team makes a significant difference.

        - "You can have the highest tech stuff on the planet, but if you don't have a team that's constantly attuned to what that information is telling you about your situation, then it's not really worth a lot," he said.
        - It's essential to have security personnel familiar with local topography, the community, and how circumstances change according to time of day and seasons, he said.
        - "I can't tell you how many security cameras are out there that are recording footage that nobody ever watches," said Brown. "You need to be alive to the situation minute-by-minute. and that takes people that care about it. And that's the difference, right there...we now have a team whose — not just their job — but... passion is looking after the Sea to Sky Gondola."
    - The vandal still has not been caught. All they have is a blurry thermal image. This suggests that better lighting is needed for security, which may impact light pollution.

Still no arrests since gondola cable was severed in 2019 and 2020; reward for info doubled to $500K

CBC News · Posted: Sep 14, 2022 9:42 AM PDT | Last Updated: September 15, 2022

B.C. RCMP have released a thermal image of the suspect, circled in red, who they believe severed the Sea to Sky Gondola cable in 2019 and 2020. (B.C. RCMP)

cont'd
P702-36

- We are also concerned about the security inside the gondola cabins for users of the system. What kind of liability will this create by packing every gondola cabin full with 40 people for a full two hours before and after every Dodger Stadium game and event? Will the capacity need to be reduced to better manage security? If so, this

P702-37

could drastically change the estimates of GHG emissions reductions. According to a report from the City of Gothenburg, "When catastrophic accidents occur, such as that in Singapore, it is generally a result of third parties who failed to adhere to policies and/or who were negligent. This suggests that while a cable car operator can implement policies and procedures to safeguard a cable car, operators must also be proactive and engage with all relevant stakeholders." (https://www2.trafikkontoret.goteborg.se/resourcelibrary/underlagsrapport_best-practices.pdf). Also, "However, since each city has its own unique security circumstances, the city should conduct extensive consultations with relevant local stakeholders. This may determine the level of risk that could be anticipated aboard a cable car and in turn, inform the security settings required on a cable car to make passengers feel safe." This is why we question LA ART's commitment to safety and security when they claim that The Gondola will be safe because they will follow all applicable regulations and safety protocols. There is a well documented history of fights at Dodger Stadium and in the parking lots.

- "Jaime was knocked unconscious as another man punched him in the face. Jaime, who is a grandfather, said he and his wife were leaving the Elton John concert when someone in a group smacked his rearview mirror. According to the grandfather, when he got out of the car to ask, a woman punched him shortly before other men started beating him." https://www.cbsnews.com/losangeles/news/lapd-promising-more-arrests-in-beating-of-couple-outside-elton-john-concert-at-dodger-stadium/
- "Rafael Reyna's Los Angeles Superior Court lawsuit alleges negligence, premises liability, assault, battery and intentional infliction of emotional distress. He maintains lighting was poor and security was lacking at the 2019 game." (https://kfiam640.iheart.com/featured/la-local-news/content/2022-05-17-dodgers-want-proof-of-beating-victims-wifes-emotional-distress-claim/)
- "Filed in Los Angeles Superior Court, the suit notes Dodger Stadium has a higher crime rate than any other ballpark. This is not the first time the team has come under legal proceedings due to security issues. A civil trial of Giants fan Bryan Stow, who was brutally attacked outside of the stadium in 2011, resulted in a judgment against the team in 2014." (https://dodgersway.com/2020/04/24/dodgers-news-fan-sues-team-over-2019-beating-at-dodger-stadium/)

cont'd
P702-37

    - In August 2021 there was a peak in violence at Dodger Stadium, mostly related to assaults and alcohol. (https://xtown.la/2021/09/22/dodger-stadium-crime/).
    - The Gondola project needs a security plan that is custom designed for the elevated security risk at Dodger Stadium after a game or event. 2022 was another record year (https://xtown.la/2022/12/09/crime-unusual-places-golf-course-cemetery-dodger-stadium/).

cont'd P702-37

- LA ART must present an operational plan. In real life, gondola systems often cannot operate at or near their rated capacities. The 3S system in Bolzano, Italy is one example. For various reasons, including compact station design and comfort/ease of passenger loading, that system operates at a capacity of approximately 500 people per direction per hour with 3 to 4 minute headways, which is much lower than its maximum capacity. This gondola system also has notoriously long lines and poor passenger circulation inside the station. They allow their cabins to come to a full stop at the stations by default during boarding and deboarding, which is not the case for The LA ART Gondola. (https://www.gondolaproject.com/2010/07/29/the-bolzano-3s-funivia-del-renon-part-3/)

P702-38

- If a person with mobility issues wants to board, how will they make the request to a station attendant? There are many monolingual Chinese speakers in Chinatown. Will there be interpreters at the stations? How will that station attendant stop the gondola cabin? How long can a cabin be stopped without causing the entire gondola system to come to a halt? How does this impact boarding for all of the other cabins in the station? Because the cabins do not come to a full stop by default, this suggests that the boarding area will be a chaotic free-for-all which would be very unsafe, especially if the stations do not have adequate space for boarding. The constant movement of the cabins means more space is needed for boarding.

P702-39

- The dim, underseat lighting of the cabins at night is a security problem. Security video will not be as clear, and in a crowded cabin, the darkness increases the likelihood of accident or injury. People may be more likely to bump into each other and start fights. Would this dark lighting be acceptable on Metro's buses or trains?

P702-40

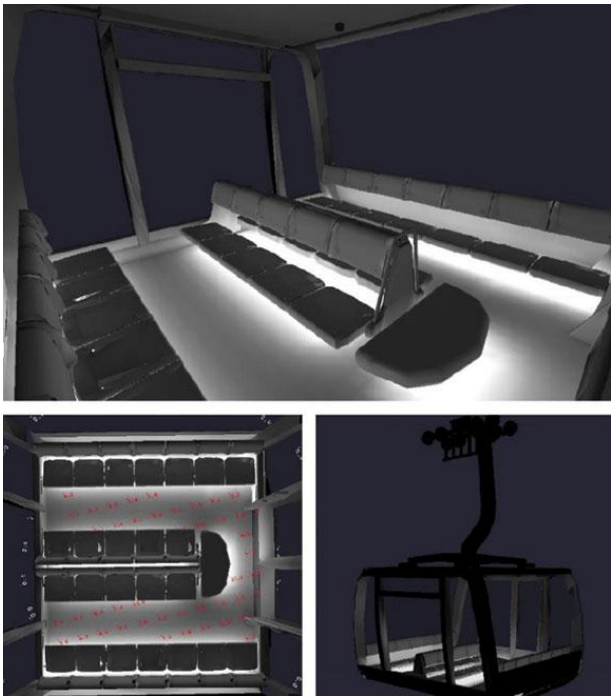


Image from DEIR Appendix C - Visual Impact Analysis / Lighting Design

- There needs to be greater consideration for security of the gondola infrastructure to prevent unintended uses of the system. If the opening of the Sixth Street Viaduct is any indication, the absence of ladders will not prevent people from climbing the towers and stations. If a person is able to get access to the Dodger Stadium parking lot or the Broadway Junction, would they be able to use The Gondola as a zip line? https://www.nbclosangeles.com/news/local/sixth-street-bridge-arches-boyle-heights-downtown-la/2944212/ P702-41
- What would prevent an individual from prying open the doors of a gondola cabin and jumping out for whatever reason? This happened on the Peak2Peak gondola in 2014. (https://www.cbc.ca/news/canada/british-columbia/base-jumpers-condemn-illegal-whistler-peak-2-peak-stunt-1.2537544) P702-42
- During the summer months, the gondola cabins, with its large windows that do not open, will be like greenhouses. Will people be able to open the windows in an emergency, and if so, won't that allow people to throw items outside of the cabin that could harm people, such as cigarettes, bottles, and trash? Will the vents for air circulation in the cabins include holes that are large enough for a cigarette? P702-43
- After a breakdown of the Roosevelt Island Tram on April 18, 2006 that left 69 people trapped for 11 hours (https://www.nytimes.com/2006/04/20/nyregion/options-were-limited-after-a-power P702-44

-surge.html), the tram was required to keep an emergency kit, including blankets, a toilet, and a privacy curtain inside the cabin in case of breakdown. The tram broke down after a power surge. The backup system had been out of service for a while. The tram, however, has an attendant. Will the gondola cabins have an emergency kit that includes a toilet and will the emergency kit be accessible? How will the kit be kept secure without an attendant on board each cabin?

cont'd P702-44

- The Broadway Junction is within an earthquake liquefaction zone, methane zone, and within the fault zone of the Upper Elysian Park earthquake fault. We are concerned that there are too many risks associated with building an junction station at this location.

P702-45

Visual Impacts

- The Gondola Project's enormous towers will cause visual impacts in our neighborhood. We are concerned that the towers will obstruct views. This project also introduces too much cold and bare concrete into our historic neighborhoods. We already have enough concrete from the elevated Metro L Gold Line. We do not need more.

P702-46

- We have previously been told that the Broadway Junction would be 78 ft high, then 84 ft high, and now 98 ft high. This non-passenger station will block our neighborhood's Downtown skyline views and give them to this private company and their gondola customers. This project blocks out much more of the views than the mixed-use, residential project that was previously approved for the site at the Broadway Junction, 1201 N Broadway. That residential project concentrated the height and bulk of the building along Broadway and stepped down the height of the development closer to Savoy Street. The Junction does not do this.

P702-47

- The gondola cars will be used for advertising and electronic billboards. The DEIR only says that they will abide by Metro and City regulations for signs. What messages would the private developer be allowed to display all over our communities for their private gain? Will our communities be subject to advertisements from authoritarian governments that violate human rights, as a platform for self-promotion and propaganda during the Olympics? What other types of objectionable, offensive, or harmful messages could become regular sights on gondola cabins over LA State Historic Park and our neighborhoods because of this project, which would operate 18 hours per day? Online gambling, liquor, cryptocurrencies, advertising of luxury brands? Who would decide what is acceptable? How would this be regulated?

P702-48

- The shadow study does not consider the impacts of shadows from the gondola cabins. If there are gondola cabins leaving every 23 seconds, there could be a gondola cabin passing over a particular point along the path every 12 seconds, which could cast a flickering shadow on a person who is in their yard, sitting in the park, or sitting at home. This type of flickering would be a significant nuisance. For much of the day, large portions of the southern half of the park could be rendered useless for peaceful enjoyment. P702-49
- A major issue for aerial transport is flying over homes, and yet in this 8,000 page draft EIR, there is no image that shows what it looks like over our homes. There are only two images that include a glimpse of the apartment building (438 Savoy Street) next door to the Broadway Junction. The only views are facing the Broadway Junction. There should be renderings that show the gondola cabins as they pass over our homes. P702-50
- LA ART claims The Gondola's cables over LA State Historic Park would not be significantly more impactful to views than the Gold Line's overhead catenary wires. We disagree. The Gondola cables are much thicker and hang directly over greenspace of the park. P702-51

DEIR Image of Chinatown / State Park Station at LASHP with Notes

P702-52A

- Throughout this document are misleading images that downplay the visual impacts of The Gondola project by omission. For example:
    - Only showing two gondola cables in each direction, instead of three. This was in many of the renderings.

- Omission of gondola cabins in images.

DEIR Image of Chinatown / State Park Station at LASHP with Notes

- In this DEIR, The Gondola is never shown operating at full capacity. The main purpose of this system is to relieve traffic for Dodgers games, which LA ART claims can be helped by operating at maximum capacity for a full two hours before and after Dodgers games and events. But in all of the images, there are no lines, the stations are almost empty, the cabins are empty or only have 6 or 7 people (15% capacity). These images do not accurately reflect the challenge of operating this system. These images also do not accurately

cont'd
P702-52A

reflect the real life challenges of accessing and using this system as a gondola customer.

- Draft EIR does not show where any of the jumpers would be. Jumpers are the large metal contraptions attached to the gondola cables that keep the cables a safe distance apart. They are a safety device that are a part of other 3S gondola systems. Are they not needed in The Gondola project? If they are needed, where would they hang over LA State Historic Park and our neighborhoods? The cables are very thick and noticeable, but the jumpers are bulky and even more noticeable.

cont'd P702-52A

P702-52B

Workers performing repairs on Toulouse 3S Teleo Gondola, which suffered several breakdowns during the first month of service.

- The DEIR includes many misleading images that downplay the visual impacts of The Gondola project by using “forced perspective”.

Use of forced perspective with tourist attractions like the Leaning Tower of Pisa is popular in tourist photography.

P702-53

  - Forced Perspective - Rendering of towers on Alameda

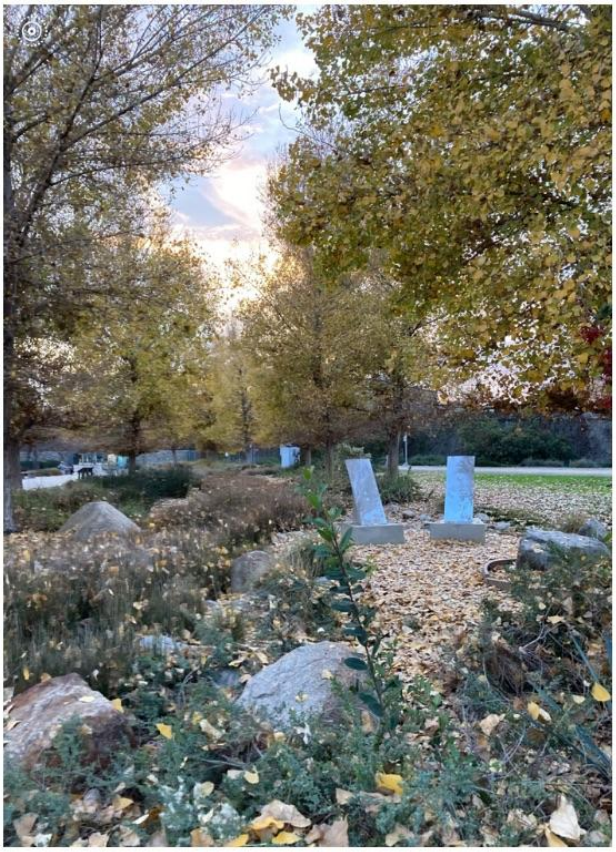
  - Also figures 5-14, 5-20b, 5-21, 5-22, 5-24 are taken from deceivingly far away from the subject, to make the towers or stations look small.

cont'd P702-53

- There is a significant visual impact of the gondola station at the entrance of LA State Historic Park and the gondola cabins as they travel in and out of that station over the park, which is not shown or discussed in the visual impact assessment. The DEIR should show a rendering of this site. This site is the end of the stream (or river) that runs along the eastern edge of the park. This stream fills up and flows during heavy rains. There is also an art installation/monument at this site, called "Origins" by Debra Scacco. This is just north from where LA ART is proposing to build restrooms and concessions.
  - "Origins" - "Works by Debra Scacco explore the notion of place. Her LA River works explore the unique history of the river, and the role it has played in shaping modern-day Los Angeles."

P702-54

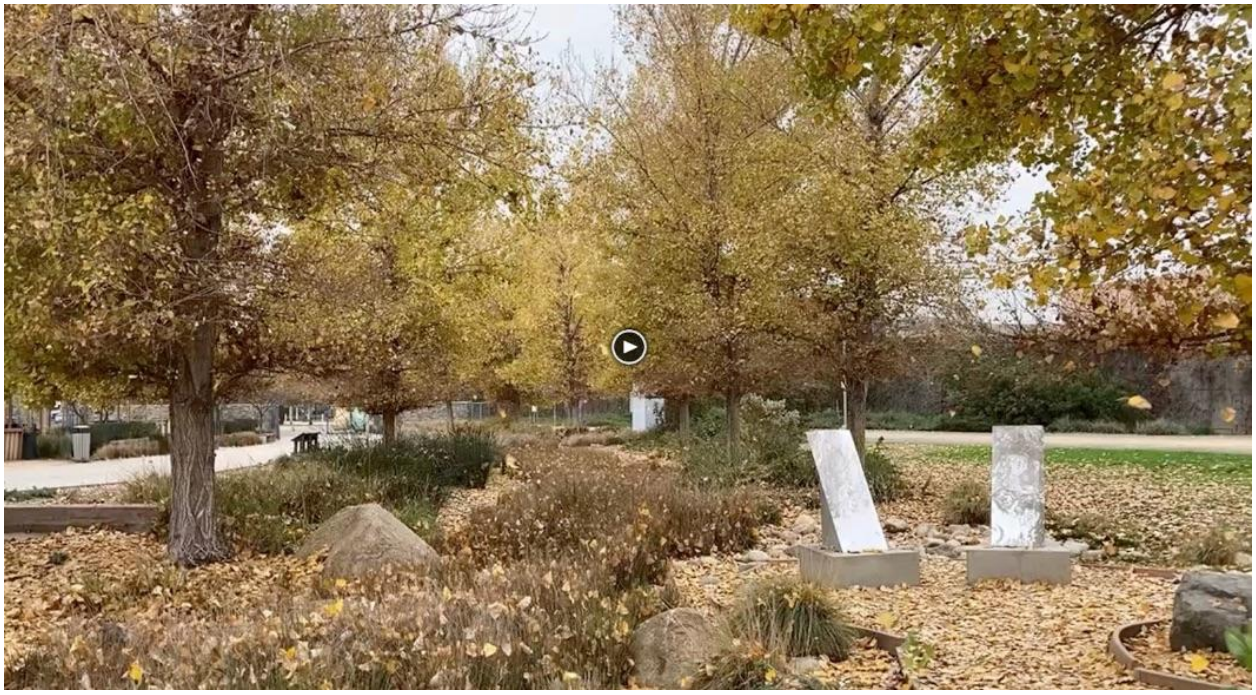


Photos of River and Art Inside the Southern Entrance at LASHP

cont'd
P702-54

- The visual impact of cutting down the trees at the entrance of the park and building restrooms and concessions at the entrance is not addressed. This is a very picturesque portion of the park. Also, what is the visual impact of the gondola cabins casting shadows over people who are trying to enjoy this portion of the park?

P702-55



cont'd
P702-55

Inside the Southern Entrance at LASHP

- The visual impact of the large gondola station sitting in front of the southern/pedestrian entrance of the park seems out of place, unwelcoming, and intimidating. It seems like bad Feng Shui.

P702-56

cont'd
P702-56

- Cabin lighting as shown in the lighting plan is too dark. When everyone is sitting down, it will be fully dark. Overhead lighting inside the cabins is needed for many reasons:
    - Safety and security reasons, especially after Dodgers games and events. A lot of fights start when people are drunk and bump into each other, for example, after the Elton John concert, Brian Stowe, etc.
    - If a fight breaks out in a gondola cabin and it is almost pitch black, what's going to happen. The video system is the onboard security system, but the video quality and clarity is much lower in darkness.

P702-57A

- In a packed cabin that is dark, how hard will it be to find and press the emergency call button to talk to security? This is a huge safety liability.
- If you are adding overhead lighting in the cabins, this will need to be factored into the light pollution study.
- If you are adding overhead lighting in the cabins, then people may not be able to see city light views at night. How will that impact revenue for the gondola from tourists? This will need to be factored into any funding plan for the gondola project.
- Would Metro allow buses and trains at night to be pitch black except for underseat lighting? We don't think so. This raises the question: Is this project transit or is it a tourist trap?

cont'd P702-57A

P702-57B

- Graffiti – There needs to be a plan to manage graffiti on The Gondola, including the cabins, towers, and stations. After the opening of the 6th Street Viaduct, LA City Council had to approve an extra fund, approximately $700,000 for one year of graffiti abatement.
    - LA Magazine: "Members of the Los Angeles City Council found themselves debating whether events at the Sixth Street Bridge are why we just can't have nice things—weighing a proposed $706,000 for graffiti removal and repair for a public works project not yet one month old, ABC7 reports. The stately arches of the 6th Street Viaduct, which connects Boyle Heights with the Arts District, attracted more than *oohs* and *ahs* since opening on July 10. Increasingly daring pedestrian and vehicular adventurers began to converge on the Instagram magnet to pull stunts, burn rubber, tag up, or make their mark in other ways." https://www.lamag.com/citythinkblog/now-the-6th-street-bridge-will-cost-l-a-700k-in-graffiti-clean-up/

P702-58

- The gondola built in Rio for the Olympics closed permanently only weeks after the closing of the 2016 Olympic games (https://www.wired.com/story/rio-de-janeiro-favela-cable-car-gondola/). The visual impact of this project, should it be built and subsequently run out of funding, would be huge. Safeguards must be in place if the project fails or the applicant decides that they will no longer operate and maintain it. Not only would the structures be an embarrassment and an eyesore, an abandoned system would fall into disrepair and pose a safety hazard. Should this project be approved despite all of our communities' concerns, there must be a substantial surety bond paid entirely by LA ART that will guarantee that every part of this project can be removed from our neighborhoods without costing taxpayers.

P702-59

Traffic / Transportation

- The neighborhood around Savoy Street already experiences a lot of traffic and is a heavily accessed corridor. There is traffic from Cathedral High School, both everyday student pickup & drop-off and special events. There is traffic from people accessing the 110 FWY Stadium Way onramp and offramp. There is also traffic from Dodger Stadium games and events. On a typical game day, the traffic starts backing up on Bishops Road approximately 30 minutes before the game. For special or sold out games, the backup usually starts 1 hour before the game. For special events or opening day, the traffic can start backing up into our neighborhood 2 hours before the game. As residents, we are accustomed to planning around the Dodger traffic. We never thought we would have to think about the traffic flying over our heads. P702-60
- The Gondola Project does not make sense as a transit solution for Dodger Stadium games and events. It will simply displace traffic further into our neighborhoods and cause traffic jams around the gondola stations. It will worsen air quality impacts from tailpipe emissions in an already overburdened community. P702-61
- What happens if there are extra innings? Will The Gondola system be allowed to operate later than 12am or will there be only bus service in that case? If people do not want to ride the Dodger Stadium Express bus, they may take a rideshare, which would increase traffic in our neighborhoods. If the games end later than 10 or 10:30, many people who LA ART expects will take the gondola after the game to access transit at Union Station would need to take rideshare home because buses and trains stop operating at around midnight. P702-62
- A UCLA Mobility Study came to a different conclusion than the Traffic Study/VMT Analysis in the DEIR. “Transportation researchers from the University of California, Los Angeles (UCLA) used a state-of-the-art transportation simulation based on a Nobel-Prize winning model and found that the gondola has limited impact - less than 1% - in reducing traffic on major roads around Dodger Stadium on the night of a sold-out game. They also found that far fewer passengers would likely get to the gondola via public transit connections than LA ART claims. Without reducing traffic and increasing public transit connections, the gondola does little to change our air quality and reduce greenhouse gas emissions.” (https://www.stopthegondola.org/ucla-study) The UCLA Study’s findings appear more in line with common sense. P702-63
- We are concerned about the bus stop at Bishops Road and Broadway. Where would the bus stop be relocated during construction and where is the pedestrian access to the bus stop? The bus stop is used by residents and some Cathedral High students. P702-64

- If the GHG emissions reductions were calculated using overall trip length to Dodger Stadium, with an average trip length of 22.3 miles. The Gondola, however, only operates a 1.2 mile route. The VMT calculated should only include the 1.2 miles between Union Station and Dodger Stadium. The only transit it would provide is the 1.2 miles between the Alameda Station and Dodger Stadium, or the .6 miles between the Chinatown / State Historic Park Station and Union Station. The Gondola has no control over whether people will use transit to access the gondola stations. The mode share evaluation is based on the faulty assumption that there will be no wait times at the gondola stations. The estimates that only 25% will drive or use rideshare is based on faulty comparison to Crypto.com arena data. Transfers need to be taken into consideration. Crypto.com arena has direct access to rail, which has a shorter wait time than The Gondola. For many of the riders at Crypto.com, they do not need to make a transfer to another form of transit. For The Gondola, everyone who doesn't live in Chinatown or the Union Station area will need to make a transfer, which includes riders who live in the 90012 zip code which extends into the Downtown LA Civic Center. P702-65
- Most of Metro's Transit (bus and rail) stops at midnight. If the gondola operates until midnight, what happens if a game goes into extra innings? P702-66
- Construction road closures are significant in Chinatown, which is already burdened with traffic during rush hour, and when there is a major event at Dodger Stadium or LA State Historic Park. In our neighborhood on Savoy Street, we also have traffic from special events and daily student drop off and pick up at Cathedral High School. Fire and paramedic access would be compromised during road closures for construction. P702-67
- The Elton John concert ended at 11:15 pm. Would The Gondola have shut down at midnight in that case? Would concerts at Dodger Stadium be required to end at 10 pm? P702-68
- After construction is finished, would the same road closures be needed to replace major equipment in the elevated stations, including the Broadway Junction, which is an elevated, 98ft tall non-passenger station? Cranes would be needed to replace major equipment, and where would they be sited? Where would the equipment be staged? What is the frequency with which major maintenance would be needed even in the best case scenario in which there are no major equipment failures. P702-69
- It looks like the Broadway Junction would be built close to the property line on Bishops Road. This is already a problem area, as there is no sidewalk on this side of the road even though it is an official route to Dodger Stadium. P702-70

Official Route to Dodger Stadium at Bishops Road - No Sidewalk on One Side

- If the gondola has a malfunction, thousands of people may choose to walk down from the Dodger Stadium gondola station from the Downtown Gate, onto Stadium Way and then walk along this route on Bishops Road, using the gondola cables as reference for how to get back to Union Station. There need to be wide sidewalks on this route versus the narrow, unmaintained sidewalks, or non-existent sidewalks. Even on Broadway, the sidewalks are mostly narrow until you get to Golden Dragon.

cont'd
P702-70

Sidewalks on Stadium Way Towards Downtown Gate

cont'd P702-70

- On November 16, 2022, Metro's Ad Hoc Olympics planning committee gave a presentation that indicated an interest in using Dodger Stadium as a park-and-ride lot for the Olympics, citing the positive experience with the recent MLS Championship match (https://www.espn.com/soccer/major-league-soccer/story/4788859/mls-cup-final-in-la-to-have-no-parking-for-fans-due-to-usc-game). The draft EIR does not address the impacts of using Dodger Stadium as a park-and-ride lot, whether for the Olympics, for major events at LA State Historic Park, or year round for rush hour commuters into Downtown's Civic Center. This is a foreseeable use of that property that would be enabled and made much more frequent by The Gondola, and must be studied in the DEIR. Additional vehicle traffic into our neighborhoods could result in substantial increases in traffic, GHG emissions and pollution in our neighborhoods and in Elysian Park. P702-71
- The Dodger Stadium parking lots have 5 entrances. There are huge wide roads leading up to Dodger Stadium. This gondola is not solving the problem of going up a mountain that can only be accessed through only one narrow, windy, two-lane road. P702-72

Other alternatives, including improvements and dedication of lanes on the roads into Dodger Stadium to encourage access via other modes – bicycles/e-bikes, scooters, and walking – need to be studied in the DEIR.

cont'd P702-72

- Operating The Gondola at maximum capacity for a full 2 hours before and after Dodger Stadium games and events seems unrealistic. In order to justify the VMT reductions, more information about how The Gondola system will be implemented is required including management of queues, the boarding areas, and crowds. In addition, ticket prices and the so-called ticket reservation system need to be disclosed. Logistically, operating at maximum capacity appears to be unrealistic at best.
    - Station attendants have to intervene to bring a gondola cabin to a full stop any time a person with mobility issues needs to board the gondola. Can this really be accomplished without slowing down the entire system when cabins are supposed to leave each station every 23 or 25 seconds?
    - We ask LA ART to explain how the passenger loading will be choreographed to make this an efficient and safe boarding process even when the system is operating at maximum capacity. And likewise for deboarding.
    - How will gondola passengers who need their cabins to come to a full stop to deboard make this known to station attendants?
    - How many station attendants will be needed at each gondola station to assist customers when the system is running at full capacity?

P702-73

- The gondola stations appear to be severely undersized, considering their intention to operate the system at maximum capacity for a full two hours before and after each Dodgers game. People do not arrive or leave Dodger Stadium evenly spaced throughout the two hour period before and after each Dodgers game. As residents, we observe that on our streets. The DEIR lacks crucial information about how crowds will be managed in the station and how they will be accommodated while waiting outdoors in very long lines. For example, will there be shade structures in the Union Station Forecourt, and how will they be arranged? Will the shade structures impact the views of historic Union Station? Will there be misting systems to provide cooling while people wait outdoors in long lines in the summer to ride the gondola?

P702-74

- No ticket pricing has been provided to support the claims that this will provide benefits to tourism. Does the price not matter?

P702-75

- The DEIR fails to describe the timed ticket reservation system that LA ART is relying on to manage wait times and crowds at their stations. Long queues are a common problem of gondola systems, and we are not aware of any gondola systems that

P702-76

serve sports stadiums of this capacity. The details of this reservation system must be disclosed in the DEIR to determine feasibility because crowds will impact safety, security and ridership of this system. We have major doubts as to the feasibility of a ticket reservation system, and whether one can be implemented in a fair and equitable manner. Unanswered questions include:

- Will the best tickets (closer to the game start time) be held back and reserved for VIPs?
- How would people reserve tickets to leave via the gondola after the game ends, when games don't end at a set time?
- What happens if people arrive late or early? Does LA ART anticipate that people arriving via transit will be able to arrive on time? How many staff will be needed to help customers who have problems with their reservations?
- Will there be a waiting line for people who show up without reservations?
- How many staff would be needed to manage the different queues they might need to manage for customers in different situations: those arriving early, late, on time, and without reservations? Will this not create a bottleneck? Is there space inside the stations for all of these queues?
- Will a Ticketmaster-type system be set up to allow Dodgers fans to reserve their free tickets?
- Will people with a paid membership to an exclusive club or people who hold a particular credit card be given early access to reserve tickets?
- Will tickets be transferable?
- Can LA ART prevent an aftermarket for gondola tickets from forming that makes it nearly impossible for "regular folks" to reserve their "free" gondola tickets, especially those at the most desirable times?
- Will people be allowed to pay a fee to skip the line, similar to a fastpass at Disneyland?
- Will people be able to reserve tickets if they don't have a computer or smartphone?

cont'd P702-76

- The plans to deal with the massive crowds and queues at the stations before games and events must be in the DEIR. This is a major omission of essential information for evaluating impacts.
    - Where would the queues form, and how many staff would be needed to manage these queues? How would they manage people who are queuing at ground level, but need to use the elevators versus people who can go up the stairs or escalators? Not only would crowds be a safety hazard for the people in the crowds, they would impact street and pedestrian traffic around the

P702-77

gondola stations, perhaps limiting access to LA State Historic Park, Union Station, and El Pueblo.

    - At the October 22, 2022 DEIR information meeting, LA ART's representatives stated that the station platforms had capacity for 150 people. This seems rather low for a system that is expected to board at least 80 people every minute. In terms of the Alameda Station, there appears to be some space for queuing at ground level on the Union Station side of the station, but not on the El Pueblo side of the station, which will have stalls set up for vendors. How will this imbalance of queuing on either side of the station impact the usage of both entrances?

cont'd P702-77

- The Gondola project cannot control how people arrive to utilize it. A fancy gondola does not encourage more people to take transit to Union Station. Reliable, convenient, frequent, safe, and clean rail and bus service to Union Station will encourage more people to take transit to Union Station. And better management and expansion of the Dodger Stadium Express bus service with dedicated bus lanes all the way to the stadium will encourage more people to take transit to Dodger Stadium. The gondola simply provides a tourist attraction that encourages people to drive to Union Station and then take the gondola.

P702-78

- The implementation of gondola systems for a given application and environment is very important and unique to each system due to local constraints. The lack of a clear operations plan is highly concerning and will impact the success of the system and the capacities that can be realized.

P702-79

- In the Transportation Study in Appendix N, there is a discussion about the "customer experience factor" in riding transit and The Gondola, but only the positive attributes of The Gondola are discussed. This bias is not surprising. However, they also need to factor in the degradation of the customer experience that will happen when operating at maximum capacity for a full 2 hours before and after every Dodgers game. The analysis estimates a 20% increase in ridership of The Gondola due to the uniqueness and cool factor of the technology and being able to take in views. However, the cabins will be packed, and at night, the lighting in the cabins reflecting off of the windows will obscure any views outside of the cabins. Also, considering that a large number of DSE riders are protesting Frank McCourt's continued ownership of the parking lots, and Frank McCourt's involvement in The Gondola project, we believe there are additional factors that would reduce the ridership of The Gondola system. The customer experience of waiting in long lines, like at Disneyland, also may discourage usage of the gondola during the full 2 hour period after games and events.

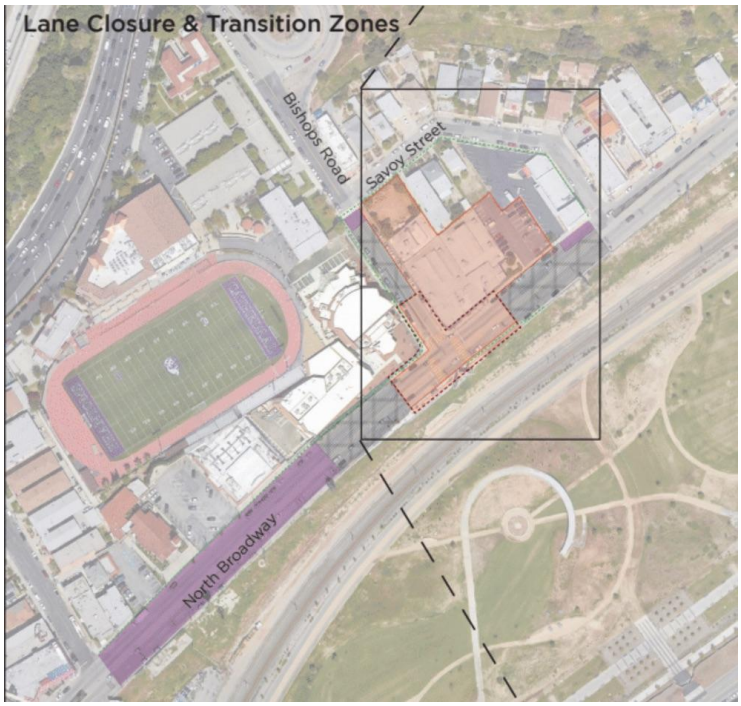
P702-80

- The ridership estimate for The Gondola attributed to people visiting Los Angeles State Historic Park is nonsense. Metro L Gold line already serves the park and connects to Union Station. If you are arriving at Union Station via the Red or Purple Lines or the regional connector, it is much easier to transfer to the Metro L train than to walk all the way outside of Union Station to the gondola station in the middle of Alameda Street. You have to leave Union Station to get to the gondola's Alameda Station. Anyone using The Gondola to access LASHP is doing it for novelty reasons. This should be counted under tourism. P702-81
- Gondola systems like this are designed for tourism and do not warrant the invasion of our neighborhoods and our LA State Historic Park. This quote is in reference to the Rio gondola built for the 2016 Olympics: "Locals often remarked that these spectacularized security and infrastructure investments were "*para inglês ver*" — "for the English to see." This phrase dates back to 1831 when Brazil's government only pretended to stop its slave trade to appease the (suddenly righteous) British. Today, it describes projects that are superficial rather than substantive, designed to impress tourists and investors while leaving underlying problems locals face daily intact."
  https://knock-la.com/from-rio-to-la-the-olympic-games-are-the-exclusion-games-c5bec60a65f1/ P702-82
- This system provides views that are more or less already accessible at Dodger Stadium. Most of the route is less than 50 feet above the ground. There is a high probability of this system being mocked and labeled as "overrated" and too expensive for most tourists. P702-83

Construction Traffic and Staging for Maintenance/Repairs

- During deck removal at the Broadway Junction, which is estimated at 3 weeks, will all of the traffic coming south on Broadway be funneled into our residential Street Savoy Street? This is a major thoroughfare for rush hour traffic into Downtown LA's Civic Center. If Broadway is closed and opened only to residents, how will visitors be able to drive into the area? P702-84
- The construction documents for the Broadway Junction do not show where the drive motor would be located. Is that at ground level? P702-85
- In the DEIR, it states, "Annual maintenance activities may require crane access at tower locations, including the potential to require the temporary closing of traffic lanes." Regular maintenance for this project will add to existing traffic congestion. Enhancing and expanding the Dodger Stadium Express service will not. P702-86

- “For multi-level stations, a strategy to change heavy machinery and parts (i.e. gearboxes, motors and etc.) will be required in case parts are broken. For instance, if a station is 4 storeys high, project proponents must design and have strategies in place to remove and deliver machinery.” (https://www2.trafikkontoret.goteborg.se/resourcelibrary/underlagsrapport_best-practices.pdf)



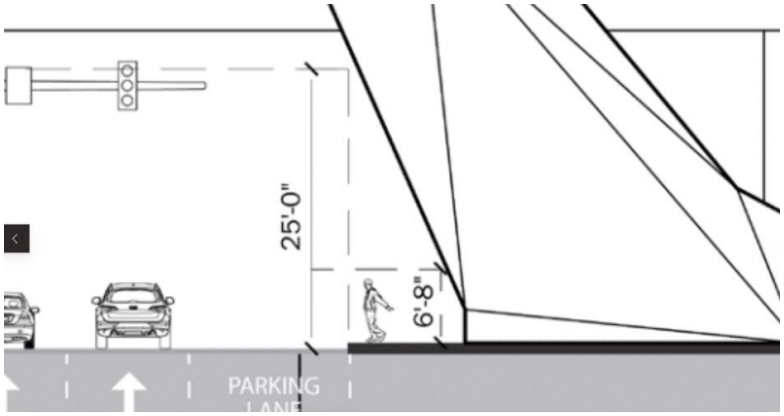
DEIR Image - Road Closures at Broadway Junction during Construction

P702-87

Pedestrian Impact

- Alpine Tower requires that a traffic lane on Alameda Street be sacrificed in order maintain a sidewalk around the base of the 200 ft tall gondola tower, which sits at the edge of the existing curb/sidewalk. The tower, however, still crowds the sidewalk by leaning into the airspace above the sidewalk. This looks like a very unpleasant pedestrian experience. The sidewalk needs to be wider, but this project is already taking space on our streets that could be used for wider sidewalks, bus lanes, and bike lanes. What is the impact of this tower, the space it needs on the street, to planned improvements to Alameda Street? Does this mean a protected bicycle lane or a bus lane can never be on this side of Alameda Street?

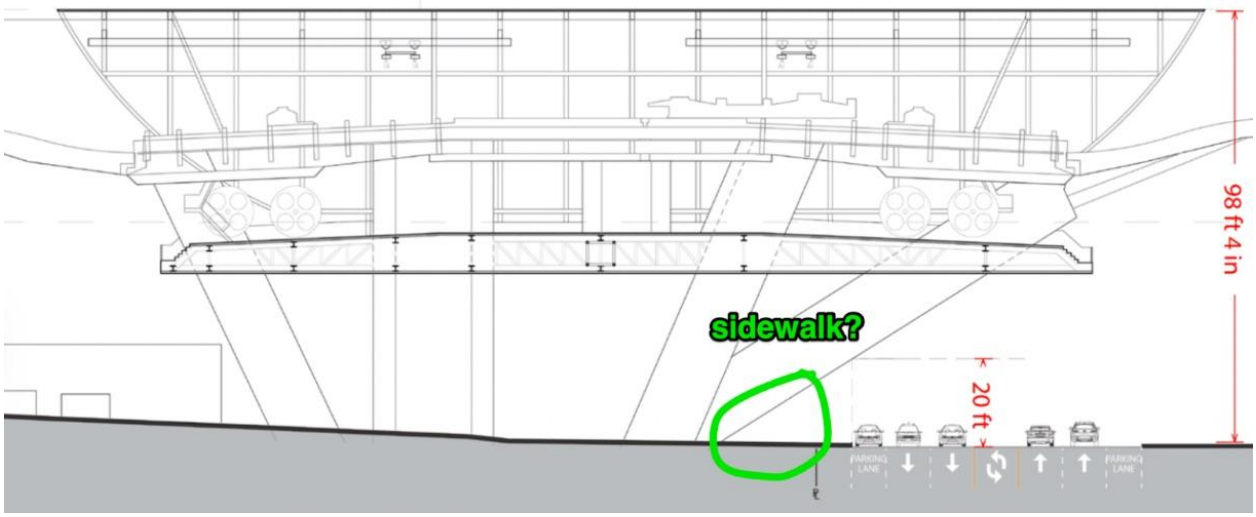
P702-88



Close Up of DEIR Image Showing the Base of the Alpine Tower

cont'd
P702-88

- Broadway Junction: More information is needed on the sidewalks around the Broadway Junction, especially at the area indicated in the image below. How high is the overhead clearance of the support column, how wide is the usable space of the sidewalk? There is a bus stop located at this location on Broadway. Will this interfere with a bus stop shelter? How wide will the sidewalk be along Bishop's Road? Currently, there is no sidewalk, even though it is an official route to Dodger Stadium.



DEIR Image of Broadway Junction with Notes

P702-89

Parking study

- Many of the parking lots identified in the parking study are inappropriately counted as parking in Chinatown that would be available to gondola visitors. These lots include parcels that are already slated for development, lots and garages that close

P702-90

too early for most events at Dodger Stadium, and spaces in the Union Station parking garage that are already reserved for other uses. We respectfully ask that LA ART provide an updated count of the available parking without these spaces rather than offering a vague assurance that there will be plenty of parking even if several parking lots in Chinatown are redeveloped.

The parking lots that are already slated for redevelopment include the lots that LA ART labaeled as Lots 21, 24, 28, and 44 in their map below.

Parking Lot Map Taken from DEIR

- **Lot 21**
  County “Lot 45”.
  https://la.urbanize.city/post/county-owned-parking-lot-chinatown-eyed-development

cont'd
P702-90

https://www.lachinatowncc.org
"We came together with like minded people to turn Lot 45 into housing that will serve the Chinatown community. We are happy to announce that at the request of Supervisor Hilda Solis 1.5M was given to LA County by Representative Gomez to do a study on how to turn Lot 45 into affordable housing in Chinatown. We are aiming for 400 hundred extreme low-income to low-income units to be placed on Lot 45. We will share more details as things continue to develop. It was a great day today! May 4, 2022 "

- **Lot 24 - 643 N Spring St.**
  https://la.curbed.com/2018/4/19/17254338/studio-gang-los-angeles-chinatown-tower
  https://planning.lacity.org/pdiscaseinfo/document/NDU1NzA0/6d189c69-33a8-4be1-9414-6b0ce5c25431/esubmit

- **Lot 28 - 717 N Hill St.**
  https://la.urbanize.city/post/411-apartments-retail-pitched-chinatown
  "Eight-story building slated to replace parking lot on Hill Street"
  "The proposed project is among the largest new housing complexes proposed in Chinatown, eclipsing only by the 725-unit College Station development near Los Angeles State Historic Park."

- **Lot 44 - 211 Alpine St.**
  https://la.urbanize.city/post/developer-retools-chinatown-project-toc-guidelines

cont'd
P702-90

- In addition, **Lot 48** on the map is Los Angeles State Historic Park's parking lot, which closes at sunset. This lot should not be included unless the park has committed to staying open until at least 12:30 am for every game and event at Dodger Stadium to allow people to remove their vehicles from their gated parking lot, which seems unlikely.

- **Lot 37**, the Metro Chinatown Station Parking Garage, should also not be included. Residents at Metro Lofts senior apartments, including seniors with mobility issues, rent spaces there monthly, and already have trouble finding parking there. They pay for the right to park in that lot, but it doesn't guarantee them a space.

- There are several other parking garages in Chinatown that currently close early or are closed on holidays, and their inclusion in the count of available parking for gondola patrons is questionable unless those owners/operators have stated a willingness to modify their operations to serve gondola riders.

P702-91

- **Union Station Parking Count:** Spaces reserved for Metro Emergency Vehicles, Facilities Maintenance, Maintenance Carts, Metro Board and Staff, 10 Minute Waiting Zones, Childcare pickup and drop off, and other reserved uses appear to have been counted as available parking for gondola customers. We ask for an accurate count of available parking that does not include spaces reserved for other uses.

P702-92

- **Flaws in pre-COVID Calibration**
    - The parking study uses 2012 data at Union Station to calibrate the September 2021 survey to estimate the ridership that would have existed had there not been a COVID-19 pandemic. This presumes that the park-and-ride activity at Union Station did not increase between 2012 and 2019, which is inconsistent with their claim that there will be increased demand for the gondola between 2028 and 2040 due to build out of the public transit network. The Expo Line (to USC and to the beach) opened on April 28, 2012, and the Foothill extension of the Gold Line to Azusa opened on March 5, 2016. Yet, no adjustments were made to account for the differences in the public transit system that should have attracted more riders between 2012 and 2019.
    - The 2012 calibration using parking data at Union Station does not account for increased activity at Cathedral High School, which only returned to pre-pandemic levels in September of 2022. In September 2021, the high school did not have football games with full attendance, if at all. But in 2022, football games and events at the school resumed with full attendance, including dances, theater performances, and other sporting events, which often take up all of the parking in our neighborhood on Savoy Street, Bishops Road, Cottage Home Street,, and along Broadway. At peak times, such as Friday night football games, which would have been captured in the September 2021 survey were it not for the pandemic, people park in front of fire hydrants, at street corners, and block driveways. None of the street parking in our neighborhood and along Broadway between Solano Avenue and Bernard Street should be counted in this parking study as “available

P702-93

parking." On Friday, September 16, 2022, all of this parking was fully occupied for a football game at Cathedral High School.

Parking By Cathedral High School, Friday, September 16, 2022

cont'd P702-93

- Our neighborhood is already burdened by traffic at Cathedral High School on an almost daily basis, especially during student pick up and sporting events. Parking enforcement takes more than 1 hour to arrive, even when our driveways are blocked. This is both a nuisance and a safety hazard for residents.

- Much of the paid parking in Chinatown is currently inexpensive street parking or parking lots that charge $5 all day. This will change if the gondola patrons choose to park in Chinatown to ride The Gondola to Dodger Stadium. LA ART has no control over the mode of transportation that their customers use to access their system, but it is a foreseeable outcome that many of The Gondola's customers will choose to drive rather than take transit to its stations. Metro's recent challenges attracting riders back to transit following the sharp decline during the COVID-19 pandemic have been well publicized and lead to the establishment of the transit ambassadors

P702-94

program. Because the gondola system is marketed as a futuristic, luxury transit option, it's highly likely that most riders who would ride the private gondola, but not take the free Dodger Stadium Express, would opt drive to a gondola than rather than take public transit for their entire journey.

cont'd P702-94

- If Chinatown is turned into a park-and-ride lot for The Gondola, businesses in Chinatown that need inexpensive street parking for their customers, especially the mom and pop legacy businesses, will be hurt. Customers may decide to go elsewhere to buy pastries or herbs, rather than to deal with the hassle and expense of parking in Chinatown. The last full-service grocery stores in Chinatown closed in part due to parking fees.
    - "Parking and a new landlord were also a factor for Ai Hoa Market, which is closing and relocating to South El Monte by the end of the year. Linda Hang, 41, the daughter of the market's owners, says their business suffered when the property owner started charging them several thousand dollars a month for use of the parking lot." (https://www.latimes.com/california/story/2019-09-22/chinatown-gentrification-grocery)

P702-95

Green House Gas (GHG) Emissions

- The Gondola Project involves the construction of massive concrete towers and stations to support this new infrastructure. The DEIR does not consider the GHG emissions from the manufacture of concrete that will be used in The Gondola Project. The manufacturing of concrete is a major source of GHG emissions (https://www.nature.com/articles/d41586-021-02612-5). In comparison, the preferred alternative studied in the DEIR of expanding the Dodger Stadium Express shuttle buses does not require the building of new concrete structures. Nor are any new roads proposed.

P702-96

- The GHG emissions estimates for The Gondola are estimated using the flawed VMT analysis provided by Fehr & Peers. (See Traffic section for more information.)

P702-97

- The GHG emissions estimated for The Gondola assume that there is funding to pay for energy sourced from LADWP's Green Energy program. Because LA ART has publicly stated that a funding plan is still under development, this is a flimsy assumption. Therefore, the DEIR must analyze an equally, if not more likely scenario, which is that LA ART may need to purchase energy from conventional

P702-98

LADWP sources if The Gondola suffers cost overruns, which happens more often than not with transit projects, and calculate GHG emissions under this scenario.

- It is confusing whether this project is committing to using air conditioning in the cabins or not, which should impact GHG emissions. Air conditioning may also impact usability of the system in the summer because it may be too dangerous to allow people to ride in the cabins with windows that don't open..

cont'd P702-98

- On page 60 of Appendix J - GHG Technical Report, footnote #4 states, "Estimated annual electricity usage provided by SJC Alliance and was reduced by the amount of electricity anticipated to be used by the park amenities. " and "Estimated electricity usage (kWh/yr):6,881,212." We ask that explanation be provided as to how the estimated electricity usage was calculated. Was air-conditioning in the cabins included in this figure? 6.8 GWh is enough to power approximately 1000 homes for an entire year in the LADWP service region (according to LADWP average of 545 kWh/month per home). Much of the gondola operations near capacity will happen during peak power demand times, 4pm - 9pm. We are concerned that this concentration of new power demand in our neighborhood will put additional strain on our electric grid, and that's with very few electric cars in our neighborhood charging on the grid. There were multiple flex alerts in the summer of 2022 during which residents in Echo Park and Los Feliz lost power for many hours due to overwhelmed equipment.

P702-99

- Ridership estimates are provided on page 65. Without any estimate as to what tickets may cost for tourists and anyone outside of the Community Access Program Area (Historic Cultural North Neighborhood Council boundaries, which includes Chinatown, Solano Canyon, El Pueblo, Victor Heights, and the William Mead area), there cannot be a ridership estimate. The assumption being made is that ridership is price insensitive, which is false. This is another reason why this DEIR has been released prematurely, before the project has been adequately evaluated for feasibility, including financial feasibility. In the absence of an estimate for ticket prices, there should at the very minimum be a range of ridership numbers presented, not just a single number. As mentioned in other sections of this comment letter, there are several other issues that will affect ridership that are not related to ticket prices such as management of queues and the ticket reservation system.

P702-100

- The GHG emissions reductions are overstated and overly optimistic. This system still consumes electricity that has to be generated somewhere. How much electricity will be wasted if this system is running empty most of the day? This is not disclosed in the Draft EIR. At maximum capacity, this system is estimated to use 2.5 megawatts of energy, which is approximately enough electricity to power 2000 homes. Does that include air conditioning for the cabins during the summer months? This is not clear in the DEIR. P702-101
- Pg 104 - Disagree with many conclusions in the table.
    - #1 - This project will be damaging to small businesses in Chinatown that don't have parking for their customers.'
    - #2 - This is private transportation, not public transportation.
    - #6 - If The Gondola is a last mile option to access Elysian Park, then why do people need another last mile option, a mobility hub with bicycles at Dodger Stadium, to access Elysian Park? This is because The Gondola is NOT a last mile option and cannot be described as such. Users can only enter and exit the system at intervals that match those of light rail. Light rail is not a last mile option and neither is The Gondola. LA ART must stop describing The Gondola as a last mile option. Buses are a last mile option. P702-102
- Pg 105 - Disagree with many conclusions in the table.
    - #7 - This project does not adapt to climate change in that during the summer months, the gondola system will be susceptible to shutdowns during heat waves. Electric buses also may need to shut down during heat waves, but can continue running longer. There are not as many safety issues with running electric buses when it is hot outside. P702-103
    - #8 - In other words, this project is being tested on communities of color who have already been divided by transportation infrastructure by redlining.
    - #10- This project destroys habitat at the entrance of LA State Historic Park.

Wildfire Safety

- The report on wildfires in the DEIR does not address the impact of the gondola on firefighting – in particular water dropping helicopters. Our neighborhood has frequent brush fires on Radio Hill, especially during the summer. Water dropping helicopters often fly very low over our homes. Would their flight paths be impacted by the gondola over our neighborhood? P702-104

Phyllis Ling @aPhyllisLing · Aug 7, 2022

The neighborhood by Radio Hill is not a good place for a **gondola**. Homes have been at the edge of Elysian Park for over 100 years. We need water-dropping **helicopters** to fly over our homes. We don't need McCourt's **Gondola** to Dodger Stadium flying over our homes! #StopTheGondola

Water-Dropping Helicopter Over 451 Savoy Street, August 2022

cont'd P702-104

Environmental Justice

P702-105

- This project will increase the impacts of air pollution from vehicle emissions in an area already overburdened by air emissions.

P702-106

- As residents, we are being asked to shoulder the burdens and negative impacts of this project in order to serve a greater good, but we don't believe the case has been made that there is a benefit to the broader community. Traffic will not be helped, it will just be displaced into our communities, according to a UCLA Mobility Study [https://www.stopthegondola.org/ucla-study]

P702-107

- Need to fix the basics, invest in other less costly and less invasive/destructive options before investing all of this time and resources into this project that does not benefit our communities. Add bike lanes, fix sidewalks, build an escalator and staircase up the hill to Dodger Stadium. We support the preferred alternative, the Dodger Stadium Express bus service, but with modifications including electrification and more pickup locations, similar to the shuttle buses to the Hollywood Bowl or the LAX Flyaway bus. With The Gondola, LA ART is shifting the burdens of traffic and parking onto our communities and Chinatown. This is a huge injustice, as we are already burdened with the 110 FWY and the Hill Street/Civic Center offramp cutting

through our communities. Our businesses need more support, not for this gondola to drive their existing customers away because they can't find parking.

cont'd P702-107

- Our last full service supermarket closed, in part, because the fee for their parking was going to be increased. If this gondola project is approved, we could soon find it impossible to find street parking. The paid parking lots, instead of having signs that say "$5 all day" will say "$20 all day". This would be extremely detrimental for elderly people, whose families come to visit them on weekends, go to restaurants and bring them groceries and supplies. It would also hurt many disabled people who can park at parking meters for free. In 10 years, you might see many of our legacy and community-serving businesses close down and replaced with businesses that cater specifically to tourists. These are the unintended consequences of allowing Frank McCourt to turn Chinatown into Dodger Stadium's parking lot.
    - "Linda Hang, 41, the daughter of the market's owners, says their business suffered when the property owner started charging them several thousand dollars a month for use of the parking lot." https://www.latimes.com/california/story/2019-09-22/chinatown-gentrification-grocery

P702-108

- Chinatown has almost no bike lanes. This is probably because our communities were redlined and used as shortcuts for people driving into Downtown Civic Center. Our major north-south streets would have to lose a lane of traffic in order for there to be a bike lane, and this would impact traffic for commuters in and out of Downtown. Hill Street is like an onramp/offramp for the 110 FWY.

P702-109

- The draft EIR does not include an inventory of the trees that would have to be removed for this project. It appears that oak trees near a hill in the park, which flies only 26 ft above the ground at that point, would have to be cut down. Aren't oak trees protected?

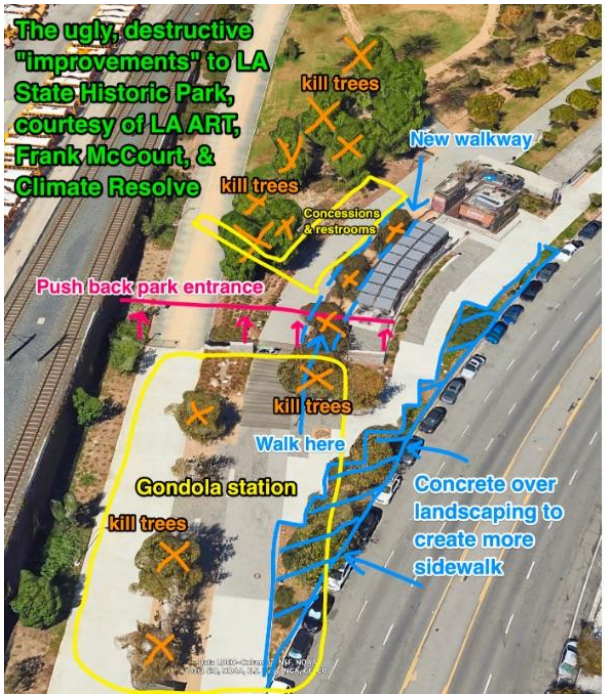
P702-110

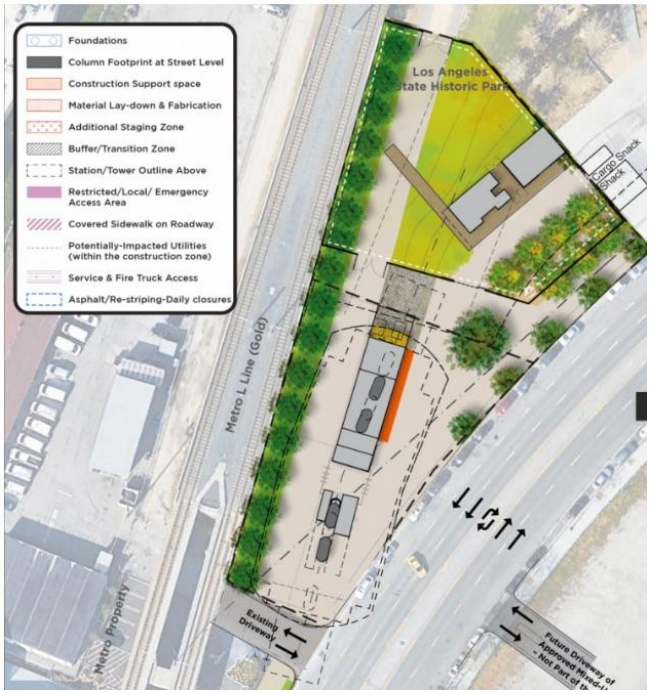
- Contrary to what the developer says, this gondola project would have a dramatic, negative impact on our experience in the park. It would clutter our open skies. It would place an imposing 98 ft tall gondola station at the entrance of the park. As you walk into the park, 5-ton, 40-person gondola cabins would fly 40 ft over you. That would be your first experience as you walk into the park.

P702-111

- Destruction of the entrance to LA State Historic Park, including the destruction of the grove of trees and the end of the riverbed at the entrance of the state park, in order to locate restrooms and concessions, is a huge environmental injustice.

P702-112





Left: Google Earth View Annotated with LA ART's Changes to Park Entrance
Right: Proposed Changes to LASHP Entrance - Image Taken from DEIR

cont'd
P702-112

- LASHP was a hardwon environmental justice victory. The Gondola could be iconic, but in a very bad way (https://www.latimes.com/california/story/2020-11-26/proposed-aerial-tram-for-dodger-fans-ignites-controversy-at-los-angeles-state-historic-park). Allowing this gondola to invade our park would send a clear message that the park does not belong to the community; it belongs to a billionaire developer. The gondola's massive towers and stations would serve as an iconic monument to injustice. Unlike the Metrocable in Medellin, which was considered symbolic of the government's investments in public infrastructure, the LA ART Gondola would be seen as a betrayal of our communities.

P702-113

Los Angeles State Historic Park

A Park is by the People

A Park is by the People is a monument to the civic labor that willed the Los Angeles State Historic Park into being. It is intended to make a public record of the herculean, but often forgotten, work that goes into changing the public idea of what land could be.

Rosten Woo is a designer, writer, and educator living in Los Angeles. He produces civic-scale artworks and works as a collaborator and consultant to a variety of grass-

Screenshot of Image in the Park - Monument to the Creation of the Park (https://lastatehistoricpark.org/art-in-the-park/)

cont'd
P702-113

- LA ART states repeatedly in the DEIR that The Gondola flies over the "western edge" of the park, but that's completely false. It travels over the heart of the park, over a very popular hill where people play and gather. Kids roll down the hill like logs. People sit and dogs play with each other. How are you supposed to relax and enjoy yourself if

P702-114

every 13 to 25 seconds, there's a massive cabin full of people flying less than 26 feet over you with people literally looking down on you?

Photo - Popular Hill at LA State Historic Park
The LA ART Gondola would fly 26ft over this hill.

cont'd
P702-114

Close Up of Image in DEIR - Rendering of Gondola Cabin Flying Over Popular Hill at LA State Historic Park

For residents who live in a dense urban environment, LA State Historic park is an escape and a hospitable environment, especially for those who have dogs. Walking a dog on Chinatown streets can be unpleasant. Sidewalks are narrow, have broken glass, have random garbage/food on the ground. The park is a place where people gather and dogs can interact with other dogs. It's a place where friends and families can get away and play. To add a massive gondola station at the entrance of LASHP that people will have to navigate around or under, and gondola cabins flying very low, as low as 26ft overhead, is a huge invasion and incompatible with current uses of the park. The gondola cabins, with their advertising on the exterior, will also be visually invasive.

cont'd
P702-114

- The construction of the Chinatown / State Park Station would close the main pedestrian entrance and the general area by that entrance for over a year. People will either need to drive or will cross Spring Street farther north, where there is no crosswalk.

P702-115

- Don't hold the bridge hostage.
    - LA ART is offering to build a bridge between Broadway and LA State Historic Park, but there is still no funding plan or budget for the gondola, so can they even contribute funds to a bridge? Tickets will apparently be free for Dodgers fans. There is no estimated ticket price for tourists. Apparently Frank McCourt intends to donate this project to Climate Resolve and is not going to pay for or finance this project. Who, then, is going to pay for it, and will the eventual owners be able to contribute funds to build the bridge?
    - The Gondola has nothing to do with the bridge. There is no reason to link these two projects together.
    - We want the bridge, not the gondola. We currently have to walk almost a half mile to walk to the park, even though we are across the street. We ask Metro, city, and state leaders to actively seek funding for the bridge from Broadway into LA State Historic Park because it will actually improve equitable access to parks for "underparked" communities, unlike the gondola, which only provides access to the Dodger Stadium parking lot.

P702-116

- LA ART claims that The Gondola provides access to parks to "underparked" communities, but the parking lot at Dodger Stadium is not Elysian Park. Elysian Park is a sprawling hilly park. It is disingenuous to claim that the gondola provides access to Elysian Park when it drops people off at the far eastern edge of the parking lot.

P702-117

LA ART's Route Map Laid Over google Map Showing Elysian Park. Elysian Park is big, hilly, & tough to access from the gondola station. What LA ART calls Elysian Park on their map is actually Parking Lot 2 at Dodger Stadium.

cont'd
P702-117

- Our communities already suffer from decisions of the past, including the decisions to divide Solano Canyon with the 110 FWY and split Chinatown with the Hill Street offramp, which is basically a shortcut for the benefit of Downtown and City Hall employees. Now, with this project, LA ART is proposing to cut through our communities' skies, the airspace over our homes and the state park that is an asset from decades of advocacy by both the Chinatown community and park activists.

P702-118

Wildlife

- We are concerned that the noise from the Broadway Junction was not evaluated in terms of scaring away wildlife in our neighborhood, especially small birds. We see many small birds in our neighborhood because we are sandwiched between Elysian Park and LA State Historic Park.
- It appears that mature trees will need to be cut down at the entrance of LA State Historic Park. We are concerned about the loss of habitat for birds, butterflies, and other wildlife at that end of the park. By cutting down those trees, less wildlife will be at the southern entrance of the park, which is the most accessed portion for people arriving on foot or by transit.

P702-119

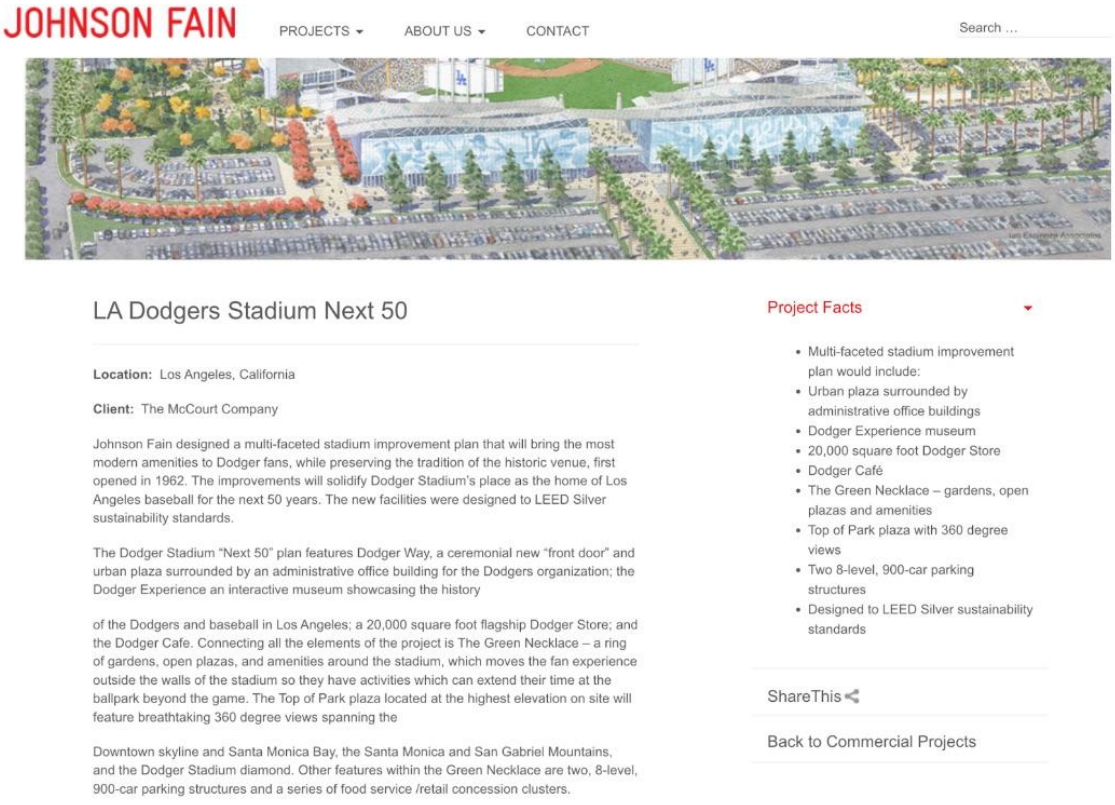
P702-120

Future development

- This project will lead to future commercial development in Chavez Ravine, without community input and without disclosure to the community. This is a foreseeable consequence of The Gondola, especially considering policies and laws that incentivize development near major transit stops. The Draft EIR fails to provide an analysis of the environmental impacts of development in Chavez Ravine. While The Applicant claims that there are no current plans for development, news articles that reported the terms of the sale of the Dodger Stadium parking lot do.
    - “How Frank McCourt Made $2 Billion From The Los Angeles Dodgers And Team Remains Saddled With Debt”
    - “"In addition to another sports facility, the potential property uses cited in the document include homes, offices, restaurants, shops, entertainment venues, medical and academic buildings, and a hotel and exhibit hall." https://www.latimes.com/sports/la-xpm-2012-may-04-la-sp-0505-dodgers-land-20120505-story.html
    - “McCourt has the right to sell his 130 acres to Guggenheim for another $150 million, or can buy back part of the land in order to build a sports venue there.” https://www.forbes.com/sites/mikeozanian/2013/06/15/how-frank-mccourt-made-2-billion-from-the-los-angeles-dodgers-and-team-remains-saddles-with-debt/?sh=40ac62921249

P702-121

- Next50 Plan - Johnson Fain https://johnsonfain.com/projects/architecture/commercial/la-dodgers-stadium-next-50/



Screenshot of Johnson Fain Website - LA Dodgers Next 40

cont'd P702-121

- Prior to turning the land into the Dodger Stadium parking lots, there were plans to build public housing on that site. Public housing was the reason the residents of La Loma, Bishop, and Palo Verde were evicted from their land, which robbed them of their opportunity to build generational wealth. The descendants of this area should have a say as to what happens to this land should it no longer be needed for Dodger Stadium parking. P702-122

- The Draft EIR also fails to provide analysis of the environmental impacts of turning the Dodger Stadium parking lot into a park-and-ride lot for events at LA State Historic Park and for access to Metro's regional rail network at Union Station. The use of Dodger Stadium as a park-and-ride lot was discussed at Metro's November 16, 2022 Ad Hoc Olympics Committee meeting. This is yet another foreseeable use of The Gondola that would bring additional traffic P702-123

congestion, green house gas emissions, and pollution into our already overburdened neighborhoods.

cont'd P702-123

- This project will likely result in the loss of the 100+ housing units that were planned for the 1201 N Broadway site, where the Broadway Junction would be located. The DEIR shows a rendering of a possible housing development incorporated into the Broadway Junction, but building housing at a station, especially one that includes the drive motor, involves vibration and noise isolation and additional engineering, which means additional cost. Given that no funding plan has been presented for this project, we are skeptical that LA ART would be able to build a project that incorporates housing into that site.

P702-124

SB44

- This is not a public transportation project. It is a private transportation project that serves a private property. In addition, Dodger Stadium is not an Olympics venue. For these two reasons, we do not believe that this project qualifies for SB44, and we object to the use of this law as yet another means to fast-track this project.

P702-125

Preferred Alternative - Enhanced Dodger Stadium Express (DSE)

- On page 14 of Appendix N - Transportation, “While the DSE has travel time benefits associated with the bus lanes on Sunset Boulevard, it experiences congestion at gate entrances to Dodger Stadium because there are no dedicated lanes at the entrances, and the DSE and transportation network companies (TNC) like Uber and Lyft use the same parking booth as the DSE”. These problems must be resolved. There should be dedicated bus lanes at the entrances and DSE should not share a booth with Uber and Lyft. We hope that the managers of the parking lot can make these improvements.

P702-126

- Replacing the DSE with electric buses will also make this zero emissions transit.
- We also suggest expanding the DSE service with additional satellite locations where people can access the service, similar to how the LAX Flyaway shuttle can be taken from several locations. This would eliminate transfers for many people. Metro knows how important it is to eliminate transfers. Metro spent billions on the regional connector to provide people with a "1-seat ride." The DEIR only considers stationing buses at Union Station, which means that transfers are almost always a part of accessing Dodger Stadium via The Gondola.

P702-127

Additional Comments

- It is stated repeatedly in the DEIR that gondola systems are proven technology and operating successfully around the world as urban rapid transit. The use of aerial cable cars for urban transit still has many open questions and gaps in research according to a scientific literature review by Flesser and Friedrich published in October 2022 entitled, "Are We Taking Off? A Critical Review of Urban Aerial Cable Cars as an Integrated Part of Sustainable Transport." (https://www.mdpi.com/2071-1050/14/20/13560). Proponents of the LA ART Gondola often point to the transformative effects of the gondolas in Medellin, Colombia. The changes in Medellin, however, were also supported by complementary investments that were six times the cost of the Metrocable gondola. "In contrast to previous studies focusing mainly on cable car costs themselves, a study revealed that the complementary costs for urban improvement projects in Medellín were approximately six times the costs of the cable car itself, not considering the additional expenses for local social programs." P702-128
- We disagree with the conclusion in Appendix H - Energy Technical Report. We contend that The Project would result in a significant impact due to unnecessary consumption of energy resources because this entire project is unnecessary. (See Preferred Alternative - Enhanced Dodger Stadium Express (DSE).) P702-129

Conclusion

This project is not for our communities. This project is for Frank McCourt who is a developer, it's for the Olympics, which is for developers, and it's for the politicians who are in the pockets of developers. Frank McCourt wants to build 40 ft over our neighborhood.

There have been so many lies about this project from LA ART, withholding of information, and misleading statements. But we know what this project is really about. Frank McCourt has long wanted to build a retail and entertainment complex at the Dodger Stadium parking lot. A permanent transit stop would provide incentives to build bigger there. This gondola is to serve those ambitions and not the residents and businesses of the surrounding communities. P702-130

This project makes no sense for serving events and games at Dodger Stadium. At maximum capacity, it can only handle a fraction of the attendance at Dodger Stadium. Most people will not want to take public transit home late at night and will drive to the gondola instead. P702-131

Maybe some will take transit, but these are probably the same people who would have taken the Dodger Stadium Express, which we support.

cont'd
P702-131

The preferred alternative, enhancement of the Dodger Stadium Express bus service can be improved and expanded further than was explored in the DEIR. The bus service also does not have any of the negative impacts associated with The Gondola, including unavoidable construction noise and vibration, destruction of the entrance of LA State Historic Park, operating noise in our neighborhoods, invasion of privacy, safety and security risks, shifting of traffic and parking burdens from Dodger Stadium into Chinatown, and transfer of public property to a private entity. Rather than force this urban cable car experiment on our communities, an experiment we never asked for, there should be a comprehensive study to improve access to Dodger Stadium, a study that includes not only the expansion and electrification of the Dodger Stadium Express bus service, but also more bike lanes, better sidewalks, and an escalator up the hill for pedestrians. Clearly, the Dodger Stadium Express needs to continue to be available in order to serve as a backup to The Gondola, so let's build upon what we already have, our existing infrastructure (the many wide roads into Dodger Stadium), and make it much better.

P702-132

This project is a shame. If you're standing up and supporting this, you're teaming up with Frank McCourt who bankrupted the Dodgers. You're teaming up with those who erased the original Chinatown to build Union Station. You're teaming up with those who evicted the residents of La Loma, Bishop and Palo Verde for public housing, and then gave the land over to build Dodger Stadium. You're choosing that side of history.

P702-133

We respectfully ask that LA ART and Metro respond to all of our comments throughout this letter, not simply the specific impacts listed. We ask this project be placed on hold until a feasibility study is published and a funding plan is released. Certainly, if the project is well-defined enough to be in the environmental review, there is no reason that these two documents cannot be made public, even in draft form. A new DEIR should be released that addresses the omissions and shortcomings identified in the comment letters.

P702-134

Our communities should not be sacrificed for an aerial transit experiment. Rather than create "a cultural landmark that enhances the visibility of Chinatown" as LA ART's supporters contend, The Gondola would serve as a monument to the modern-day exploitation & marginalization of our communities by a billionaire developer & our elected leaders. The LA ART Gondola would be an embarrassment and an iconic symbol of injustice.

P702-135

The solution is for Metro and our elected leaders to deny approval of this project. Work with our communities on common sense solutions to improve traffic and provide other options to get to Dodger Stadium. Please STOP THE GONDOLA.

Sincerely,

cont'd

RE: Los Angeles Aerial Rapid Transit Project
SCH 2020100007

Dear Mr. Zelmer:

This letter is submitted by myself, a citizen of the City of Los Angeles who lives and work in proximity to the proposed Los Angeles Aerial Rapid Transit Project (the "Project") in response to the release of the Project's Draft Environmental Impact Report ("Draft EIR" or "DEIR"). P703-1

I. GENERAL COMMENTS

A. Metro fails to analyze the impact of a private company operating a transit system in the public realm.
   a. After reviewing the entire report, I have not seen a single document detailing ANY hours of operation let alone detailed and specific hour per day, or days of operations per year! Many of the reports would vary drastically if the Aerial Tram operated only during game days, and only for 6 hours during a game day versus being operational 14 hours per day. P703-2
   b. Following the above lack of clarity or commitment by a private company (LAART) fails to identify the business model that would dictate the hours of operation and the cost to the public. This is necessary to determine the feasibility for the operator. and assuming the LAART provides a contractual commitment to a schedule and a cost per passenger, many of the reports may need to be revised! Here are just a few examples: P703-3
      i. The calculation of the energy use would change dramatically (486 hours of operations annually, if it services game days only vs 4,380 hours of operations annually if it is a public service). P703-4

ii. The reduction in vehicle trips is directly related to the hours of operation and the cost of the ride. Since none of this data is provided in a form that can be analyzed, how can we make any assumptions on attendee's behavior. P703-5

iii. The length of hours of service during game days are assumed to be 2-3 hours before the game, and 2-3 hours after the game. In a perfect world and according to the capacity of the system, it could deliver 15,000 people to the stadium before the game and 15,000 back to Union Station. This assumption is flawed as there was no study conducted to determine a person's willingness to wait more than an hour to start their trip home. The project fails to analyze its and Metro's capacity to actually deliver 15,000 passengers to their desired destination withing the 3-hour window. Without such study the assumption of the number of passengers using this new mode of transportation is an uneducated guess and therefore cannot support any assumptions on the reduction of Vehicle mile traveled (VMT). P703-6

iv. The impact on a public that is enjoying the park at all hours of the day, would be very different on game days versus every day. P703-7

v. The efficiency of operating the Gondola will vary dramatically if it operates every day. Even if the use a is minimal, the average use of KW per passenger will grow dramatically amounting to a massive waste of energy. P703-8

c. What is the impact of this project when a private company goes out of business? Who will pay to remove the "scar" that was created in the skies of Angelenos. How would we calculate the many environmental impacts? If the Aerial Tram operating company goes of business, would government step in to run an inefficient, money losing model just to maybe get dodger fans to a game? P703-9

d. The reduction in GHG is based on a number of assumptions: That in the future the electricity would be generated from 100% renewable sources. It also looks to a horizon of 2042. I am assuming the study is based on the mandatory requirement that a utility company be 100% renewable by that date or before. However, the State of California's mandate that all vehicles stop producing GHG by 2035, so even if this project is not implemented, the GHG reduction will be reached within a similar time frame. That change in private vehicles has not been made a factor in the calculation of GHG reduction. P703-10

e. The bus service that offers a shuttle from union station to Dodger Stadium, is very popular and can be easily scaled without massive infrastructure spending or its associated impacts. Why is this not an alternative that was studied in detail. (It would qualify as the "No project" alternative as the components are already in place. (Appendix N refers to the Dodger Express as a static number that can not change and ignores in its time calculation the first mile driven (in other words, it gives the example as if the trip starts at the gold line station in south Pasadena and not in the persons home or office) P703-11

f. The project proponents are portraying this public transportation system as something "normal' that has been implemented in many places around the globe however, the project fails to provide detailed comparisons to other the projects, explaining the inefficiency of the proposed model. P703-12

g. The study alludes to the positive effect of such a project as a way to educate the public on a new type of "innovative" public transportation. However, the study fails to analyze the impact on the public; where the public space on grade has been dominated by transportation, the space below grade is taken for transportation and is now the last bit of "free" space left for the public to engage with nature We are being compromised by an "innovation" that may be attractive to a few for their own selfish devices. What a nightmare! P703-13

h. The DEIR has concluded that there are no significant view impacts as a result of the aerial tram. I have attached few screen shots of a 3D model that represents the Aerial tram, and the China town station as seen from the park. For a park that is designed to have open skies, such conclusion appears to be absurd. The fact that the study did not provide a 3D digital tool for the public to be its own judge on the view impact may explain why the proponent selectively picked a few convenient spots to render (out of a 3 D model that clearly was not make available for public viewing. P703-14

Subject: Olvera Street Restaurant in support of LA ART Project

Dear Mr. Zelmer,

I am writing in support of the LA ART project ? it is an innovative new mode of transportation that will help us meet our climate goals. My Company, Camacho?s Incorporated, has been headquartered at El Pueblo de Los Angeles Historical Monument since 1984 when my father, Andy Camacho, purchased El Paseo Inn Restaurant on Olvera Street. My family and I continue to own and operate that restaurant. We have so much pride for the history and culture that exists on Olvera Street, but each year it continues to be more and more challenging to attract new customers. In addition, the last few years have been extra challenging due to COVID-19. I believe that LA ART would help bring new life to Olvera Street, attracting new patrons and create a destination for El Pueblo. I will continue to advocate for the project and look forward to working with the project proponents and Metro to ensure we have community benefits that will help me and all the merchants along Olvera Street. P704-1

Given my interest to the project, I have reviewed the DEIR, and have a few questions I look forward to the project team answering. Given the proposed proximity of construction to my family?s restaurant and the other Olvera Street merchants, what steps would the project take to make sure that businesses are not negatively impacted during construction? How will road and sidewalk closures be handled? Will access be maintained, or detours provided? I look forward to hearing about mitigation planning during a construction phase. P704-2

Thanks, P704-3

Subject: Public Comment: Los Angeles Aerial Rapid Transit (LA ART) Project DEIR

Deputy Executive Officer Cory Zelmer,

Hi LA Metro,

My name is Colleen and I live really close to where the gondola would be at the Llewellyn Apartments. I board at College Station every day to get to work in West Hollywood. One of my favorite things to do is relax at the State Park after working 50hrs a week. The gondola would ruin that by putting enormous support towers in the sky where people go to enjoy nature and be healthy. Is there any data on the noise this would emit? College Station is already so loud, you can hear it from the entrance of the park and it's not relaxing there at all. I feel like the gondola cars would just make that worse and ruin the are for everybody.

P705-1

P705-2

I also learned the gondola cars would be used for advertising and electronic billboards. This is horrible and we should not allow that into our airspace. Don't we have airspace rights here? This is so useless because giant ads like billboards, people already don't care about that. Why would anyone care about the ads you put on the gondola cars? You would just rake in money and make eyesores for everybody that lives here.

P705-3

In addition, College Station is already not the cleanest. You should invest in keeping your existing stations clean before you take on these projects that would just make them dirtier. And we all know how the Metro takes what? A decade? To clean up the actual bus seats. This gondola might be shiny and new to start, but it will just become disgusting germ vestibules over time. I don't trust you guys to keep anything sanitary honestly. And how are you going to prevent Covid in these cabins where the windows don't open? You're building superspreader boxes.

P705-4

Please reevaluate yourselves.

Colleen

Subject: Public Comment: Los Angeles Aerial Rapid Transit (LA ART) Project DEIR

Deputy Executive Officer Cory Zelmer,

I am a resident and homeowner in Chinatown and I live along the proposed route of the gondola. I am OPPOSED to the Los Angeles Aerial Rapid Transit Project ("The Gondola" at Dodger Stadium) and here's why: P706-1

1- This is not a real public transit project: The route is incredibly short (just over 1 mile), basically only serves the stadium, and it replicates a route that is already served by existing public transit (Dodger Stadium Express buses, metro Gold Line light rail, existing metro bus routes). The limited service that this route offers is not worth the cost of the project in financial terms or in terms of destruction to the community and public spaces. P706-2

2- There was no community input at the outset: This project was hatched privately without any outreach to the very people who will be impacted by it; only when it entered the EIR period was it unveiled to the public and essentially paraded as something that we should want/need, even though we never asked for it. P706-3

3- Destruction of privacy to residents: These gondola cabins will fly so low to the ground and over private homes that all sense of safety and privacy will be eliminated for residents. P706-4

4- Visual and auditory blight: Gondola cabins flying over the park, over the streets, over the homes and apartments, over the pedestrians, etc; Hulking Broadway Junction towering over Broadway/Bishops Road, noise from the machinery at Broadway Junction and whatever noise is created by the gondolas themselves. The towers, new stations, Broadway Junction will all be large and permanent structures which will destroy what's left of the open space of Chinatown and the LASHP. All this for the sake of, not public transportation, but a billionaire's long-scheme to develop his parking lots at the expense of taxpayers? P706-5

We, the residents and stakeholders directly impacted by this proposed project, have stated many times over that we DO NOT WANT the gondolas. You have been given proof that it will not help with air pollution or taking cars off the roads. Chinatown is not for sale. There are better and cheaper ways to address the actual transportation issues with Dodger Stadium - ways that do not destroy the LASHP or the surrounding residential neighborhoods:

1- Electrify the bus fleet for Dodger Stadium Express
2- Increase the number of Dodger Stadium Express buses
3- Have pick-up/drop-off points in other parts of town such as Los Feliz, Atwater, Silverlake for the Dodger Stadium Express
4- Get serious about having bus-only lanes on game days so that these buses get priority over automobile traffic.
5- Improve pedestrian access to the stadium so that it provides wide and safe passage P706-6

If this project gets approval over all of the public outcry, this will be the greatest social injustice since Chavez Ravine was destroyed in order to build the Stadium. Is this the legacy you want for Metro? P706-7

Stop this project, do not approve, do not pass Go.

Sincerely,
Tany Ling
Chinatown resident

Subject: COMMENT LETTER - Los Angeles Aerial Rapid Transit Project SCH 2020100007

Dear Mr. Zelmer -

The attached letter from Land Protection Partners is an exhibit to a DEIR comment letter already submitted by LA Parks Alliance that was emailed to this address for the LAART project on Monday, January 16, 2023. In the earlier submitted letter LA Parks Alliance's requested that it be analyzed as if fully set forth within that letter. To ensure that the entire letter is addressed, and not only the points specifically called out within the LA Parks Alliance comment letter, I am submitting it again separately.

Again, thank you for your attention to the matter and for Metro's consideration of this and other DEIR comments.

Sincerely,

John Given

Re: Draft Environmental Impact Report: Los Angeles Aerial Rapid Transit Project

Dear Mr. Zelmer:

The Los Angeles County Metropolitan Transportation Authority ("Metro") has accepted an unsolicited project to build a private conveyance between Union Station and Dodger Stadium known as the Los Angeles Aerial Rapid Transit Project (the "Project"), has assumed Lead Agency status under dubious authority in that it is not the agency that has the principal responsibility for approving or carrying out the project, and has issued a Draft Environmental Impact Report ("DEIR").

The conclusions in an EIR must be based on substantial evidence, which is discussed in the California Environmental Quality Act as follows (Pub. Res. Code § 21080, subd. (c)):

> Argument, speculation, unsubstantiated opinion or narrative, evidence which is clearly inaccurate or erroneous, or evidence of social or economic impacts which do not contribute to or are not caused by, physical impacts on the environment, is not substantial evidence. Substantial evidence shall include facts, reasonable assumptions predicated upon facts, and expert opinion supported by facts.

In the comments that follow we focus on the impacts to biological resources and identify that most of the conclusions and assertions in the DEIR are not supported by substantial evidence, and in fact substantial evidence supports the opposite conclusion from those assertions. As experts in environmental impact analysis of biological resources with decades of experience (see biographies below), we provide these comments as facts, reasonable assumptions predicated on facts, and expert opinion supported by facts.

P708-1

1 Inadequate Biological Surveys

Biological surveys for the Project are described in Appendix E of the DEIR. The consultants purport to have surveyed the entire alignment on a single day (April 1, 2020), including a 500-foot survey buffer around the route. The methods do not describe how the biologist surveyed the entire three-dimensional project area, which extends up to 200 feet upward from the alignment. This third dimension is often ignored by biologists and its study requires appreciation of the speed at which animals move when aloft (Kunz et al. 2008). A 500-foot survey buffer is inadequate for assessing species that are moving through the air at a rate of 30 miles per hour (the speed of a typical songbird), thereby traversing the entire study area in less than 23 seconds. Furthermore, a single daytime survey in April cannot describe the volume and diversity of migratory birds that traverse the project location at night (most bird species migrate at night) during spring and fall migrations. In short, the survey effort on which the project biological assessment was made is inadequate to be considered substantial evidence regarding any impacts to wildlife and especially to birds that traverse the three-dimensional volume that would be impacted by the proposed project.

P708-2

Published guidelines to reduce impacts of power lines identify many techniques to evaluate the bird use of areas in route planning (APLIC 2006). These include: daytime and nighttime visual observation using tools to measure distance and altitude of birds (clinometers and theodolites), closed circuit television recordings, night vision tools such as image intensifiers, forward-looking infrared devices, and radar. Radar techniques are well established and were developed in 1978 to detect birds specifically to evaluate the risk of new transmission lines (Korschgen et al. 1984). These tools can be used to develop a reasonable assessment of the quantity and general species composition of birds that might be at risk of collision. Examples of such efforts are available in the published literature. Williams et al. (2001) used radar, visual observations, and a ceilometer to describe birds migrating through a mountain pass. Mabee and colleagues have described bird numbers and altitude of flight using radar at proposed wind power sites (Mabee and Cooper 2004, Mabee et al. 2006). Others have used nocturnal flight calls to identify passing migrants (Farnsworth et al. 2004, Farnsworth and Russell 2007). Nocturnal flight calls have been used by community scientists in Los Feliz to document nocturnal migrants passing over the downtown Los Angeles area (see https://www.youtube.com/watch?v=B1RyBDnCqcg&t=1s).

P708-3

2 Collision Risk

The DEIR acknowledges that installing large cables up to 195 feet in the air could pose a collision risk. The preparers' subsequent analysis of that risk, however, is replete with unsupported assertions and mischaracterizations of the literature.

The analysis of collision risk in the DEIR consists of the following statements in the main text and Biological Resources report (Appendix E):

P708-4

- Ropeway cables would pose less danger than transmission lines because they are 1.75 to 2.5 inches in diameter compared with 1–2 inches for transmission lines and 0.5 inches for ground wires above transmission lines.

- The three ropeway cables would be spaced tightly in the vertical plane and so would pose less risk than if they were spread more broadly.
- The tight spacing of cables vertically would make them more visible.
- Cables would be made more visible by the moving cabins.
- Therefore avian collision risk from the cables would be less than for transmission lines.
- Concentrated avian activity is not expected near the project. Migratory movement is focused on prominent ridgelines, shorelines, and where favorable stopover habitat is located. The project is located "on a broad urbanized coastal plain, midway between the coast and the mountains, and lacks significant wetlands or similar habitats that might attract large numbers of migrants as stopover habitat."
- Grouse and ptarmigan have poor maneuverability in flight and collide with ski lift cables but no similar species are found in the project area.

cont'd P708-4

We consider these claims in turn.

Cable size. The DEIR relies on the idea that birds will be able to see the ropeway cables during the day because they can be half an inch larger than transmission wires. This is a preposterous claim. Notwithstanding citations in the DEIR, current published sources indicate that there is no evidence to back this claim, which derives from experiments on transmission lines comparing the main power lines, which are always lower and larger, with the ground wires, which are always smaller and located higher than the main lines (Bernardino et al. 2018). Studies that remove the upper, smaller wires document a decrease in avian mortality but there is "no possibility of disentangling the effects of wire height and diameter" (Bernardino et al. 2018). There is some experimental evidence suggesting that it is the placement of the ground wire that is the important factor and that making it larger does not decrease collisions (Brown et al. 1987). The DEIR therefore errs in relying on the assumption that a tiny difference in cable diameter will mitigate daytime collisions. It also will not mitigate collisions at night, which is when most migratory birds will encounter the structure and cables. Nocturnal migrants do not see cables, even the guy lines that hold up 2,000-ft communication towers that are much larger than the proposed cables (Longcore et al. 2008), because they encounter them in the dark. There may be "general agreement" in the literature that larger cables are safer, but the most recent scientific review "found little scientific evidence that these recommendations [including to use larger diameter cables] are effective" (Bernardino et al. 2018).

P708-5

Vertical spacing of cables. The DEIR argues that because the three cables would be packed tightly in the vertical plane, they would pose less of a risk than if they were spaced out vertically. First of all, this claim has no evidence to support it in the published literature. Second, it imagines that all birds move in a single vertical plane through the atmosphere, as if they were aircraft on a flight path at a cruising altitude. That is not how birds move in space. Because birds increase and decrease in altitude as they use the airspace, the packing of the wires vertically is not the substantial mitigation measure that is assumed in the DEIR.

P708-6

Increased visibility of three cables. The DEIR argues that because there are three cables in close proximity, birds will see them more. Again, power lines often have several lines together and still result in avian collisions and mortality. There is no evidence to support this self-serving claim, and it similarly does not address nocturnal collision risk.

P708-7

Risk relative to transmission lines. The DEIR presents its unsupported assertion that the cables would cause less mortality than a similarly situated power line as if it were evidence that is impacts would be less than significant. This is incorrect on two fronts. First, the DEIR provides no substantial evidence that the rate of avian collision and mortality would be less than power lines. The height of the cables and of power lines are similar. There is no support to claim that moving cars attached to the cables would increase visibility (Bech et al. 2012) and especially moving cars would not be a factor in the middle of the night when the wires would be encountered by nocturnal migrants. Second, the question that must be answered for environmental analysis is not one of relative impacts, but whether the impact itself would be significant. Based on collision rates with power lines, any analysis of the impacts from the proposed project should start from the assumption that the 1.9 km length of the cables will kill up to 152 birds per year, and given the variability in collision rates, an average value would be 75 birds per year (Jenkins et al. 2010). This would be true of any aerial cable system at the heights proposed in the project area. The birds that could collide with it might include sensitive species (given their presence in the surrounding park and along the Los Angeles River) and therefore this should be considered to be a significant impact, both through direct adverse effects on sensitive species and interference with migratory wildlife corridors. The DEIR, in contrast, asserts there will be no adverse effects because it asserts that there will be no concentration of avian movement intersecting with the site, which we consider next.

P708-8

Concentrated avian movement. The DEIR makes the claim that the project site is in the middle of a broad coastal plain, lacking topography to concentrate migrants and lacking habitat that would attract birds as stopover locations. These assertions are flawed.

Significance of impacts depends not necessarily on the quantity of birds but on whether sensitive species are affected. Many sensitive bird species migrate through Los Angeles and could encounter the project site.

P708-9

The assertion that there is no stopover habitat to attract birds ignores the presence of the Los Angeles River and Silver Lake Reservoir Complex, which is a significant stopover habitat for waterfowl, in close proximity to the site. An assessment of this question must look at a broader landscape context than the 500-ft buffer considered in the DEIR because, as noted, birds fly quickly through the air and major stopover locations are found within a few minutes flight from the project site.

There is another factor that concentrates avian migrants that is entirely ignored by the DEIR: artificial light at night. Nocturnally migrating birds can be tracked on weather radar and research has now shown that light at night escaping upwards is associated with greater numbers of birds present during the day, especially in the fall when juveniles are migrating south (La Sorte et al. 2017). As birds are migrating southward they are attracted to lights and then end up disproportionately using habitats in and around cities as compared with potentially better habitats elsewhere (McLaren et al. 2018). Lights can rapidly increase the density of migratory birds in an area at night. A study of the "Tribute in Light" installation in New York documented an increase from 500 birds within 0.5 km of the vertical light beams before they were turned on to 15,700 birds within 0.5 km 15 minutes after illumination (Van Doren et al. 2017). Downtown Los Angeles also attracts and concentrates birds, especially in the springtime, based on radar

P708-10

measurements (Horton et al. 2019). Dodger Stadium itself creates one of these exceptionally bright points on the landscape and would itself attract and disorient birds, as was seen recently with a Greater White-Fronted Goose at a Dodgers playoff game. Therefore, contrary to the assertions in the DEIR, this location is associated with concentrations of avian migrants.

cont'd P708-10

Species susceptible to collision found in project area. The DEIR references a study of grouse and ptarmigan collision with ski lifts (Bech et al. 2012) to conclude that no similar low maneuverability species vulnerable to collision are found in the project area. The DEIR ignores the big message from that paper, which is that searches for carcasses only reveal a small fraction of the birds killed at elevated wires. In that instance, a bird had collided with the wires and was found 600 m (1,969 ft) away, far outside the zone typically searched for mortality at wires. The steep topography of the site may have contributed to this distance, but the genetic linking of an individual bird to feathers underneath an obstruction 600 m away suggests that many current estimates of avian mortality at elevated obstructions are low (Bech et al. 2012).

P708-11

The DEIR does not provide important information about what groups of species are more vulnerable to collision (Bevanger 1994, Savereno et al. 1996, Bevanger 1998, Janss 2000). Although all bird species are potentially exposed, the species that are typically at greatest risk are large, heavy, relatively small-winged birds with poor vision (Jenkins et al. 2010). The most susceptible groups tend to be waterbirds and in particular large ducks, geese and swans, pelicans, large herons and waders (Jenkins et al. 2010). Rails, coots, and cranes (Gruiformes) are most frequently recorded birds killed at power lines (Bevanger 1998). Other groups at risk include waterbirds and diving birds such as ducks (Anseriformes) and loons (Gaviformes), which also have high "wing loading," which means that their wings are small relative to their weight (Bevanger 1998). Records of mortality of species in these groups are common also because they are larger, more easily detected, less likely to be carried off by scavenger, and therefore more likely to be recorded. Other species that are theoretically prone to collisions based on their size, wing loading ratio, and vision are found less in surveys, probably because they are smaller and harder to detect (Drewitt and Langston 2008), or travel significant distances after being injured (Bech et al. 2012). These more sensitive groups would include pigeons (including native Columbiformes such as Band-tailed Pigeon and Mourning Dove), some passerines, and high-speed predators such as falcons (Jenkins et al. 2010). Aerial predators, such as swifts, many raptors, and even gulls, are at risk because they spend so much time in flight that have an increased probability of colliding with wires than other species that fly less (Bevanger 1998, Janss 2000).

P708-12

In conclusion, the collisions analysis in the DEIR misrepresents the published literature and is not based on substantial evidence. The proposed aerial tramway will kill birds through collisions and the proximity of waterbirds attracted to nearby habitats at the Los Angeles River and Silver Lake Reservoir Complex, combined with the excessive light escaping from downtown Los Angeles (Pack et al. 2017), increases the probability of such collisions and the resulting annual fatality rate. From a CEQA perspective, this represents interference with a migratory pathway and adverse impacts on sensitive species, which are included in the migratory species that traverse Los Angeles routinely. It deserves mention that avian collisions with power lines (or by extension, the proposed aerial tram system) cannot be eliminated through mitigations (Alonso et al. 1994, Brown and Drewien 1995, Janss and Ferrer 1998).

P708-13

3 Lighting

The DEIR does not fully describe all sources of lighting. It makes a vague mention of digital billboards (p. ES-11) as follows:

> [E]lectronic digital displays and/or changeable message light-emitting diode (LED) boards that include both transit information and other content, which may include off-site advertising that generates proceeds to support transit system costs and operations. Signage would be architecturally integrated into the design of the ART system including its stations, the junction, towers, and cabins.

P708-14

The prospect of LED billboards festooning the towers, gondolas, and stations is not adequately accounted for in the environmental analysis of biological resources and in fact is not considered at all. The aesthetics analysis contains no renderings of the project at night, so decisionmakers are lacking critical information to understand the full impacts of the lighting from the project both for impacts on visual resources and for the impacts of light pollution on biological resources.

The proposed "project design feature" for lighting (AES-PDF-A) violates national standards set by the Illuminating Engineering Society for off-roadway outdoor signage (RP-39-19). The project proposes 10,000 candela per square meter during the day, when the highest allowable brightness by national standards is 3,500 candela per square meter. At night, the project design feature proposes 300 candela per square meter, while the highest allowable brightness for the lighting zone appropriate for a business district (LZ3) is 80 candela per square meter. The portion of the project in the State Park and heading up into Chavez Ravine should probably be classified as LZ2, where the maximum allowable luminance is 40 candela per square meter. LZ3 is defined as, "Areas of human activity (i.e., habitation, recreation and/or work) where electric lighting may be continuous and is required for safety and convenience at night. This is the recommended default zone for large cities' business districts)," and LZ2 is defined as, "Areas of human activity (i.e., habitation, recreation and/or work) where electric lighting *may* be required for safety and convenience at night. This is the recommended default zone for light-commercial business districts and high-density or mixed-use residential districts" (Illuminating Engineering Society, RP-39-19, Recommended Practice: Off-Roadway Sign Luminance: An American National Standard).

P708-15

The lighting "project design feature" also defines brightness in terms of Watts, which is not useful. Lights have different efficiencies and the restriction that, "Building Lighting will not exceed 60 watts" is not useful unless the lamp type is specified. It should indicate the total lumens that can be produced per fixture rather than specifying energy consumption. The related limitation on light output for outdoor luminaires of 6,200 lumens is set unreasonably high. That is the equivalent of having ten 60-Watt incandescent bulbs in a single fixture. A "design feature" with this limitation will do nothing to mitigate the impacts of the proposed lighting infrastructure on visual resources or people who are exposed to the lights from their residences.

P708-16

The Visual Impact Analysis in the DEIR does not evaluate whether any of the proposed lighting from the project would violate Los Angles Municipal Code Section 93.0117, which reads:

P708-17

No person shall construct, establish, create, or maintain any stationary exterior light source that may cause the following locations to be either illuminated by more than two footcandles (21.5 lx) of lighting intensity or receive direct glare from the light source:

1. Any exterior glazed window or sliding glass door on any other property containing a residential unit or units.

2. Any elevated habitable porch, deck or balcony on any other property containing a residential unit or units.

3. Any ground surface intended for uses such as recreation, barbecue, or lawn areas on any other property containing a residential unit or units.

cont'd P708-17

EXCEPTIONS: This subsection shall not apply to:

1. Any frosted light source emitting 800 lumens or less.

2. Any other light source emitting more than 800 lumens where the light source is not visible to persons on other residential property.

Given that much of the infrastructure proposed will be several stories in the air, it is highly likely that even if lights are shielded from being directed upward, they will result in direct glare on residences in violation of Municipal Code. The calculations provided in the technical appendix are focused on illuminance measurements, when the code allows no direct glare, regardless of the illuminance. None of the Lighting Design Report calculations show compliance with this code section.

Finally, it is unclear the extent to which the stations will remain illuminated at night and overnight and to what extent the shells of the large canopies are transparent. From the renderings it appears that they are somewhat translucent, and therefore would result in escaping light at night, appearing as large glowing masses in the sky at night.

The lighting report also illustrates several examples of uplighting of structures and landscape elements, which is inconsistent with the text in the DEIR claiming that lights will be "shielded," which normally implies that light would be directed downward (see pp. 3.1-8 and 3.1-9 of DEIR). Uplighting is always an adverse environmental impact and illuminating trees at night is harmful to their health (Briggs 2006, Bennie et al. 2016, Meng et al. 2022) and should be avoided. P708-18

4 Structure Design Likely to Result in Large Rock Pigeon Roosts

Project designers do not appear to realize that a large open canopy as depicted in the project renderings in the Lighting Design Report, combined with exposed structural beams and girders, is likely to result in large Rock Pigeon roosts. Pigeons can be vectors of disease and their droppings would foul the surfaces in the stations. The DEIR should consider this eventuality and P708-19

disclose the chemical and/or physical methods that would be used to exclude pigeons from roosting from within these structures. The station design is setting up the operators to be under pressure to undertake ongoing, potentially inhumane, measures to control pigeon numbers.

5 About the Authors

Dr. Travis Longcore and Catherine Rich are principals of Land Protection Partners. Dr. Longcore is Associate Adjunct Professor in the Institute of the Environment and Sustainability at UCLA. He has taught, among other courses, Bioresource Management, Environmental Impact Analysis, Field Ecology, and Ecological Factors in Design. He was graduated *summa cum laude* from the University of Delaware with an Honors B.A. in Geography, holds an M.A. and a Ph.D. in Geography from UCLA, and is professionally certified as a Senior Ecologist by the Ecological Society of America and as a GIS Professional by the Geographic Information System Certification Institute. He is a 24-year member of the Los Angeles County Environmental Review Board. Catherine Rich is Executive Officer of The Urban Wildlands Group. She holds an A.B. with honors from the University of California, Berkeley, a J.D. from the UCLA School of Law, and an M.A. in Geography from UCLA. She is lead editor of *Ecological Consequences of Artificial Night Lighting* (Island Press, 2006) with Dr. Longcore. Longcore and Rich have authored or co-authored over 60 scientific papers in top peer-reviewed journals such as *Auk, Biological Conservation*, *Conservation Biology*, *Environmental Management*, *Frontiers in Ecology and the Environment*, *Trends in Evolution and Ecology*, and *Urban Forestry and Urban Greening*. Longcore and Rich have provided scientific review of environmental compliance documents and analysis of complex environmental issues for local, regional, and national clients for 23 years.

VIA EMAIL LAART@metro.net; zelmerc@metro.net

Subject: Public Comment – Los Angeles Aerial Rapid Transit (LA ART) Project DEIR

Cory Zelmer
Deputy Executive Officer
Los Angeles County Metropolitan Transportation Authority
One Gateway Plaza, Mail Stop 99-22-6
Los Angeles, CA 90012

Dear Mr. Zelmer and Metro,

I am writing this letter in OPPOSITION to the Los Angeles Aerial Rapid Transit Project ("The Gondola" to Dodger Stadium, or "The Gondola Project"). The following are a list of concerns that I would like to add to my previous comment letters: P709-1

Process/Transparency

By allowing this project to move forward to environmental review without a feasibility study, Metro has allowed Frank McCourt to bully our community. It's hard to describe the impact of this. The gondolas would fly directly over my neighborhood. The 98ft tall Broadway Junction would be noisy and imposing. One of my neighbors has said that she has had a lot of anxiety about this project, about the uncertainty of it coming into our neighborhood. P709-2

The following is a speech I gave at a "convening" to introduce a number of community organizations to the gondola project and our efforts to organize against it. I hope it provides a sense of the impact that this project has already had on our community: P709-3

I'm a resident on a street called Savoy that's on the other side of Broadway from this park. My sister and I became homeowners here 10 years ago. We got lucky after two years of searching and bidding wars. Our mom has always encouraged us to own, to have that security and stability, and we love our house. It's over 125 years old, and we've spent many years working on it, and making it our home.

But even more important than the house itself, we've become a part of the community. Many of my neighbors have been here for decades. There are families raising their kids here, seniors who walk and take the bus, some who speak a little English, some none at all. It's a neighborhood where people grow and share fruit and vegetables. When the LA Times reporter was here, my 95 year old neighbor would not let her leave without a bag of vegetables. Some of our neighbors gave us rice dumplings a couple of weeks ago when it was good luck to eat them. It's a neighborhood where people look out for each other.

cont'd
P709-3

Living here, there's Dodger traffic, high school traffic, even concerts in this park. But those things we sort of expect and can deal with. What we never expected was that a billionaire would want to build a massive gondola project over us, and be given a fast pass by Metro to do it.

Four years ago, in 2018 when the gondola was first announced, it was just a concept. No route was proposed. But the next time we heard about it was two years later, with the notice of preparation for the EIR. McCourt's company decided on their two routes, both over my neighborhood, and they made that decision without holding even one public meeting.

P709-4

I guess maybe McCourt didn't want us to know about his plan to invade our neighborhood with his urban gondola experiment. His people like to compare these gondolas to those in South America, but these would be much larger, with 40-person cabins swooping over us all day long, all year long, and very late at night. They would go directly over us, only 40 feet above our roof. How would you like to live under that?

P709-5

Real estate is a big business, but some of us just want to live in our homes, and have some peace, security and stability in our community. Crazy projects like this threaten all of that. It's like we can't even own our little part of our neighborhood. We're at the mercy of a billionaire who can force his project on us.

Even today, there's still no feasibility study. All we have are McCourt's promises that this system will be safe, quiet, and take thousands of cars off the roads. Personally, I'm getting tired of billionaires making big promises they clearly can't keep, when it's all of us in the community who would live with the consequences.

People have told me, "You can't fight it. The people behind this are too rich and powerful. Just negotiate and get what you can." But I look at it another way. I shouldn't be bullied into selling my home and losing my community. I shouldn't be told, "This gondola is happening, so you can either sell and leave, or you can live under it." I don't want to be threatened or intimidated.

We are a lower income community, a community with many non-English speakers, a lot of renters. McCourt probably figured we wouldn't have the resources to fight him in court, and in some ways that might be true. But I'm grateful that The California Endowment is fighting back with their lawsuit. I'm also grateful for any allies who will join us in this fight. I'm grateful that you are here today, because I know that by joining forces we can be stronger than McCourt ever thought.

Thank you.

P709-6

Privacy

A gondola cabin approaching my home on Savoy Street would have a view looking into my living room window, and then into my bedroom if the bedroom door is open. You could literally see my bed. This is when the gondola is approaching my home, not when it is directly over my property. This is why my neighbors and I need more information about the "smart glass" system and how it would be

P709-7

implemented. When or where would the windows of the gondola cabins automatically fog up, and which windows would actually fog up. I imagine that LA ART would like to keep this to a minimum because it would be annoying and disconcerting for gondola passengers if the windows are constantly fogging up. Would the gondola operator be able to disable this feature easily, and how would we file a complaint if we notice it's not working?

cont'd P709-7

Future development

The preferred alignment would fly within my air rights at 451 Savoy St. However, The Gondola is a private company's project, and private companies cannot use eminent domain. This suggests that Design Option A is the only viable alternative because we are not transferring our air rights to The Gondola Project. However, Design Option A crosses over the airspace of Cathedral High School, a historic property. Has the high school given permission to use their airspace for this project?

Even if this design option is chosen, which does not require the airspace directly over my property, The Gondola could still affect my ability to build or rebuild on my property should the need arise (natural disaster, fire, a gondola catastrophe, etc.). It would be detrimental to the value of any upper floor units that would have windows at approximately gondola level as they pass by our property. It could also prevent the use of a crane or other tall equipment to assist in the construction.

P709-8

Noise Study

In the noise analysis, the noise from the LA ART gondola stations is estimated using a model developed by Rossi in 2011. I am requesting an explanation of this model and its limitations that a lay person can understand. Although a list of assumptions is provided, there's not really a discussion about the soundness of these assumptions.

P709-9

I'm concerned that the noise analysis underestimates the noise from the gondola cabins. People tend to be drunk or rowdy after Dodger games and events. This will create more noise than inside the gondola cabins that are flying over our homes until midnight than is described in the DEIR. There will not only be the average and consistent noise, but also the hooting and hollering that is disturbing to peaceful enjoyment of our homes, and shouldn't be averaged out in the noise analysis. The DEIR also should account for peak noise from a person screaming in the cabin.

cont'd P709-9

If we're comparing transit systems, the Portland system does not run as late and serves people who are going to a hospital. That's a very different situation. The LA ART Gondola would serve a major events stadium AND flies low over a residential neighborhood AND will operate until midnight, possibly later in order to accommodate events that end late, such as the Elton John concert. For this reason, cabins need more soundproofing than glass that is similar to automobile glass.

P709-10

The Elton John concert ended at 11:15pm. I am skeptical that for an event like that, the operator of the gondola would really stop running the system at midnight. This project would put a noisy station in the middle of a residential neighborhood and fly cabins with rowdy people very low my neighborhood. That is a lot of noise and disturbance to introduce into a residential neighborhood that includes children and seniors and many single family homes that are over 100 years old that don't have modern soundproofing. My home is 127 years old, and my neighbor's home is 131 years old.

P709-11

Los Angeles State Historic Park

The DEIR does not include any renderings showing the Broadway Junction as viewed from inside LA State Historic Park. Given that it sits on the bluff on Broadway, and is 98ft tall, this will be a huge part of the view. There is currently nothing of this size and scale on Broadway next to the park.

P709-12

Reliability and Safety

The 3S gondola in Toulouse, France has not been reliable so far. It broke down 5 times in the first month, and then went off-line for two weeks only three months after opening, to perform their annual maintenance. Then it broke down again two months later. It broke down one time and left a teenage boy stuck in the hot cabin for 1 hour. It broke down again last week, on January 10, 2023, because of a computer malfunction. This is not yet proven technology for public or urban transit. Teleo has a much smaller rated capacity. A larger capacity system, as proposed for LA ART, is probably even harder to maintain.

P709-13

Alpine Tower

Taking another lane from Alameda for the Alpine tower seems shortsighted. This takes away space on Alameda street for this project that could be put to better use, such as a bike lane or bus lane. Chinatown has practically no bike lanes.

P709-14

Land Use Compatibility

I am not aware of any other 3S gondola systems with **open air** stations or junctions that are situated in a residential neighborhood and this close to homes. This seems like an incompatible use that would be incompatible with the City of LA's land use and zoning. Yet in the draft EIR, LA ART claims that this project is compatible with the City's land use policies. This seems highly unlikely to us, especially because representatives from LA ART made public comments to the City Planning Commission asking for the Downtown Community Plan to consider provisions for aerial transit.

P709-15

I would like to include this document in the record for the DEIR for this project: "Gothenburg – Cable Car Best Practices Report." This report from 2016 has a review

P709-16

of 3S Gondola systems and considerations for implementing such systems with an intermediate station. The following are excerpts from the report, which I believe are relevant to the DEIR for the LA ART Gondola to Dodger Stadium (https://www2.trafikkontoret.goteborg.se/resourcelibrary/underlagsrapport_best-practices.pdf):

> *"To address this question, CCC compiled and documented all tricable detachable gondolas (3S) in the world. It was found that at the time of this report's writing (January 2016), only thirteen 3S systems were operational while six 3S cable cars were in the various stages of planning and construction."*
>
> *"However, only two 3S systems are built with mid-stations. This suggests that it is very challenging to directly address best practices for 3S systems with upper floor mid- stations. To further compound this challenge, Gothenborg's cable car system is still undergoing planning and review and therefore, specific design specifications of the system (i.e. location of multi-storey stations, location of return/drive station and etc) were not disclosed to the Consultants. As such, CCC can only discuss and answer the aforementioned question and best practices for upper level gondola stations in generalities."*

cont'd P709-16

Operational Challenges	*Comment / Description*
Location of Drive vs Return Stations	• *Station will need to be designed appropriately to handle the forces/stresses applied onto building depending on the final locations of drive and return stations.* • *Return stations have less infrastructure components while drive stations have more function-related components (i.e. main drive machinery, auxiliary motors, diesel generator)*

P709-17

	• *Drive stations are generally built over two floors. The machinery room is often times built beneath the station to reduce noise.*

cont'd P709-17

Accessibility Requirements	*• To ensure universal access, many transit agencies now require elevator access for above ground stations. The number and height of elevator systems can add sizable costs and design complexities to a project (i.e. space requirements for elevators). For instance, multi-storey stations may require up to four elevators to provide sufficient service in order to provide access to both sides of the platform. It is also needed in an event that one malfunctions, there's a backup elevator.*

P709-18

Changing Heavy Machinery and Parts	• *For multi-level stations, a strategy to change heavy machinery and parts (i.e. gearboxes, motors and etc) will be required in case parts are broken* • *For instance, if a station is 4 storeys high, project proponents must design and have strategies in place to remove and deliver machinery*

P709-19

"High ridership cable cars must be built with sufficient loading space throughout the station. Poor queuing strategies may reduce passenger satisfaction and safety."

"The Funivia del Renon is one of the few, if not only, 3S cable cars with a loading/ unloading platform built on the second floor. Unfortunately, due to its popularity during high season, low capacity, poor queuing strategy and limited station footprint, this results in an overflow of passengers queuing hapharzardly along the staircase."

P709-20

"However, sensitively incorporating a 3S cable car into an elevated mixed-use building adds complexity to a project. Designers must deal with issues related to noise, vibration, space availability and perhaps most importantly, access.

A loading platform located many storeys above ground level will exacerbate this problem and will require an accompanying system of elevators, stairs and/or escalators. The capacity of these systems linking to platform can ultimately limit (i.e. bottlenecks) the overall capacity of the cable car."

cont'd
P709-20

Traffic / Transportation:

How would the Dodger Stadium gondola station affect Circulation of Vehicles and pedestrian traffic around the Downtown Gate? Will it cause a bottleneck before and after games? I ask that an analysis of the vehicle circulation around the Dodger Stadium gondola station be done.

If people who are waiting in line for the gondola after a game or event become restless after 1 or 1.5 hours, won't many of them start walking down the road at the Downtown Gate? This seems like a likely outcome. Walkways need to be provided between the Gondola Station and Stadium Way for this purpose. Where there are already sidewalks, they need to be widened, improved, and maintained. This needs to be done regardless of whether there is a ticketing system for people to reserve tickets after games and events, in case the ticketing system goes down.

P709-21

Will the LA ART Gondola bring more rideshare traffic into my neighborhood, which is close to the Downtown Gate? Residents in some neighborhoods around Dodger Stadium have reported rideshare drivers using their neighborhoods as waiting areas, and noted that the rideshare companies actually encourage it by paying them a bonus. Will this happen in my neighborhood? There needs to be mitigation for this likely impact. This is just one example of how this gondola project would likely bring more traffic, congestion, and pollution into our neighborhoods, not less.

Aesthetics

StopTheGondola
@stopthegondola

LA ART says that the gondola to Dodger Stadium will be an iconic tourist attraction for Chinatown & Olvera Street, but the cookie-cutter station designs stick out in our historic districts. They look just like the ARTIC train station in Anaheim & Canary Wharf station in London.

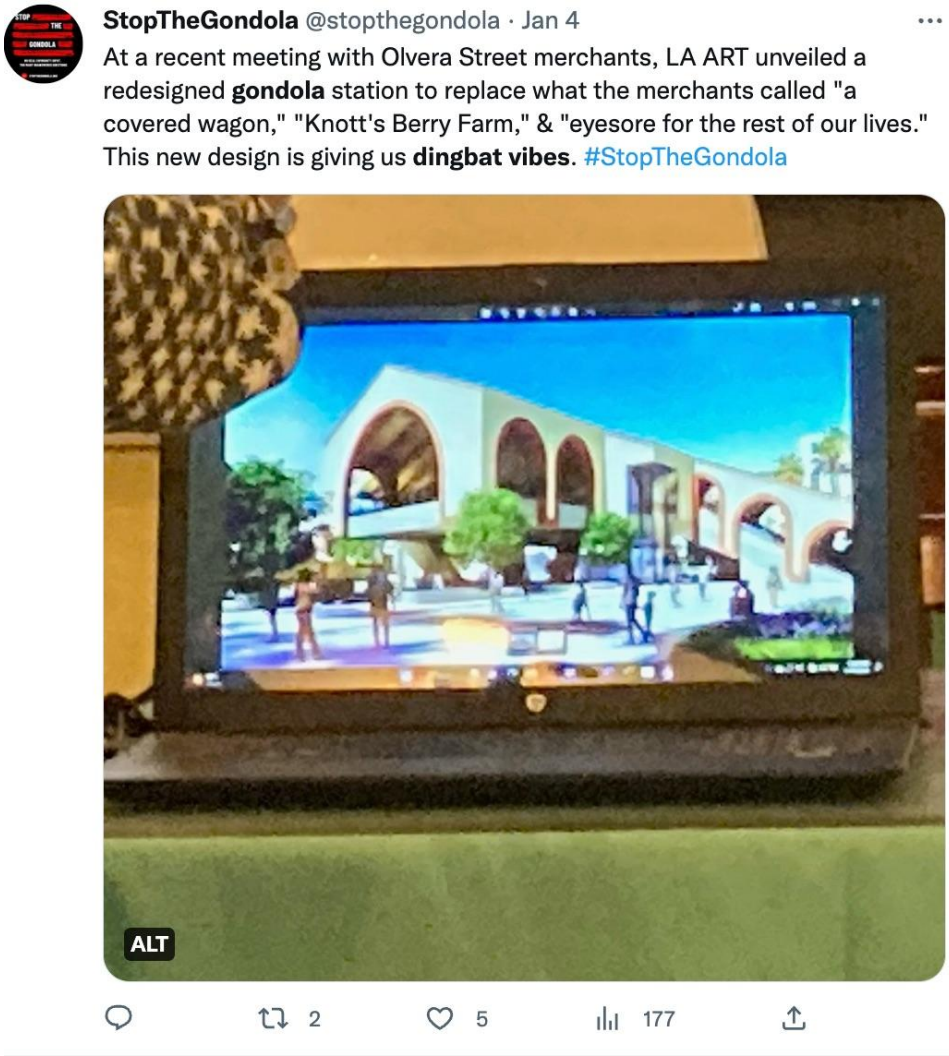
P709-22

cont'd
P709-22

Gondola station and designs should not be cookie cutter or generic. This would be built at the birthplace of our city. LA ART claims this will be iconic, but how is the design iconic? There is no sense of place. Stations look generic and towers are a stark gray concrete. We don't need more gray concrete in our historic neighborhoods. The cabins also appear to be standard cabins.



P709-23

The "improved" station design that was recently presented to a group of El Pueblo merchants looks awkward, and like a dingbat, which is more of a mid century style.

The tower leaning towards Metro Lofts looks like it could fall on the building. Even if it's engineered not to, it looks like it could fall down, which is bad Feng Shui. This seems culturally insensitive, considering that many Chinese seniors live at Metro Lofts.

P709-24

Alternatives

More alternatives should be studied. There are many ways to strengthen or build upon the existing infrastructure. The Yale Street bridge that crosses the 110 FWY

P709-25

needs more lighting. This would be a benefit to both residents and Dodgers fans. People have long talked about adding stairs and escalators up the hill to Dodger Stadium. They have those in Medellin, Colombia as well.

"How giant outdoor escalators transformed a Colombian neighborhood"
https://www.cnn.com/travel/article/colombia-medellin-neighborhood/index.html

"Tear Up the Dodger Stadium Parking Lot"
https://legal-planet.org/2018/11/02/tear-up-the-dodger-stadium-parking-lot/

cont'd P709-25

Please also include in the record the following statement that I made at the January 12, 2023 DEIR meeting:

P709-26

> *I'm Phyllis. I live over there. The gondola would fly over me and my neighbors. And my house would face the mouth of the noisy Broadway Junction, a 98ft tall turning station.*
>
> *I think you've seen how this hearing is not right, the way they are taking public comment. It's been like this since the beginning. Trying to hide, and not let it get out about how horrible this project is.*
>
> *This project is not for us. This project is for Frank McCourt who is a developer, it's for the Olympics, which is for developers, and it's for the politicians who are in the pockets of developers. Frank McCourt wants to build right over us, 40 ft over my neighborhood, as if we're nameless faces. But we're not. We're a real community. I'm glad my sister and my neighbors are here tonight, as well as all of these residents and supporters in the larger community. It's really great to see people show up for each other and speak out.*
>
> *There have been so many lies about this project from LA ART. But we know what this project is really about. Frank McCourt wants to build a*

P709-27

P709-28

giant complex up at the Dodger Stadium parking lot. It's not a secret. If he has a permanent transit stop, that would give him incentives to build a massive development there.

cont'd P709-28

This project makes no sense. At max capacity, it can only handle a fraction of the attendance at Dodger Stadium, and how do you think they're getting to the gondola? By driving, most of them. You're only saving the last 1.2 miles. Maybe some will take transit, these are probably the same people who would have taken the Dodger Stadium Express, which we support. Let's support expanding and electrifying the Dodger Stadium Express, better enforced bus lanes, more bike lanes, better sidewalks, and an escalator up the hill for pedestrians. Not this boondoggle gondola.

It doesn't help traffic.
It doesn't connect us to parks or transit.
Those are lies.

P709-29

What it does is turn Chinatown into Dodger Stadium's parking lot.
It takes away parking for businesses, it increases noise with this gondola running constantly, 18 hours per day, 6am to 12am.
Not to mention the invasion of privacy.

P709-30

This gondola mows down the entrance of LA State Historic Park. That's OUR space. The whole point of a park in a city is for people who live in a dense urban environment, to get away from all that and to have some peaceful enjoyment in open space with open skies. It wasn't so that Frank McCourt could fly 5-ton metal cabins 26 ft over our heads.

P709-31

McCourt wanted to divide us in my neighborhood, buy us out, buy some of my neighbors out, so that we would quietly go away. He wanted to fly

P709-32

under the radar with this project, keep everything hush hush, and get the project approved before anyone knew what was going on. In 2018, they said it could be running by 2022. Remember that?

cont'd P709-32

My neighbors and I never even had a say about this project going over our neighborhood. And now Climate Resolve is putting their greenwashing slime all over it? It's disgusting!

P709-33

You'll hear some people say, "but the gondola will be so great, it will be iconic." Yeah, it'll be iconic alright. An iconic monument to injustice.

We're here to call it for what it is. A scam. And a shame. If you're standing up and supporting this, you need to wake up. You're teaming up with Frank McCourt who bankrupted the Dodgers. You're teaming up with those who erased the original Chinatown, and evicted the residents of La Loma, Bishop and Palo Verde to build Dodger Stadium. You're choosing that side of history. And you really don't have to.

We're speaking out because we know the gondola sounds good at first, in theory — it's like, oh it would be so cool and fun — but there's a whole lot more to it. Some people, I think a lot of people, the ones who aren't greedy bastards, do come around. But we need everyone's help, so thank you for being here. We can do this together. Stop The Gondola!

P709-34

Thank you.

Sincerely,

Phyllis Ling

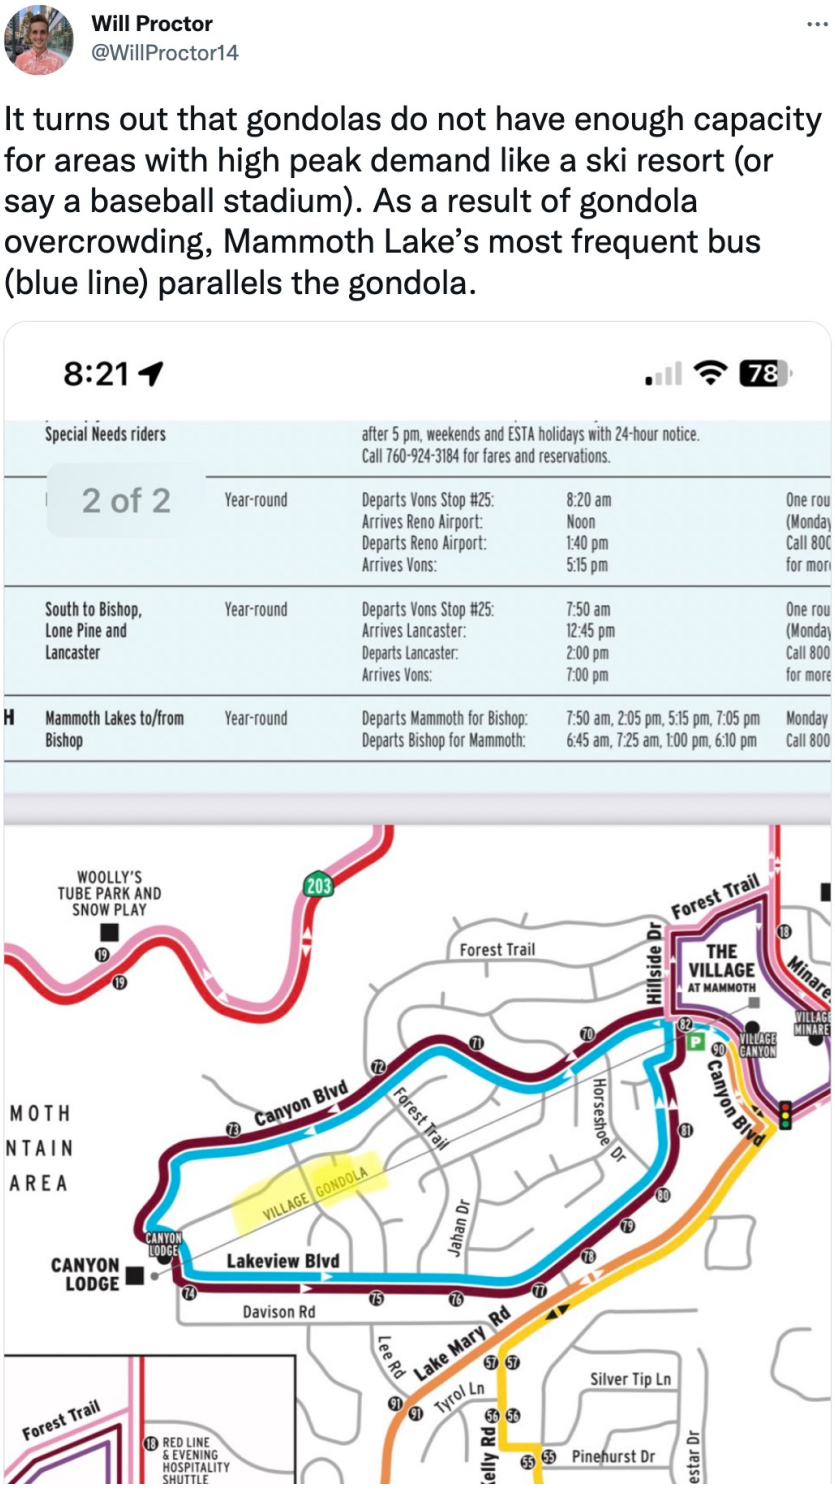
Subject: Comments on Draft EIR for LA ART Project

Dear Mr. Zelmer,

Please include the following attachment as comments for the LA ART Project DEIR. P710-1

Sincerely,

Phyllis Ling



Will Proctor
@WillProctor14

It turns out that gondolas do not have enough capacity for areas with high peak demand like a ski resort (or say a baseball stadium). As a result of gondola overcrowding, Mammoth Lake's most frequent bus (blue line) parallels the gondola.

P710-2

eric nusbaum
@ericnus

I'm not sure how much my opinion matters, but as the author of a recent book about Dodger Stadium, public/private interests in LA, and the destruction of neighborhoods by outside forces, I am strongly against the gondola.

I don't know how you can look at the history of the city (or the current issues it faces) and think "what we need is an expensive transit project through neighborhoods and parks that will only serve one private business."

StopTheGondola @stopthegondola · Dec 29, 2022

In addition to destroying the entrance at LA State Historic Park, the LA ART **gondola** to **Dodger** Stadium would fly only 26ft over a hill where there are several thriving **oak trees**. **Trees** must be protected, not sacrificed for a private developer's tourism project. #StopTheGondola

P710-4

Phyllis Ling @aPhyllisLing · Aug 3, 2022

#Yorkie Roy hanging out on what I call the "doggy hill" at @LASHP. It's the 1st hill when you enter the park from the south. Very popular with dogs. The McCourt **gondola** to **Dodger** Stadium, with its massive 40-person cabins, would fly over this hill. Not cool. 👎👎👎#StopTheGondola

Phyllis Ling @aPhyllisLing · Oct 17, 2022

Poor bird. I hear geese or ducks fly over my **neighborhood** a lot, and wonder if they would be spooked by the towers & steel cables of Frank McCourt's **gondola**, especially at night. The last thing **Dodgers** need is bad karma from injured birds. #StopMcCourt #StopTheGondola

> **Jon Christensen** @the_wrangler · Oct 16, 2022
>
> Some believe a goose jinxed the @Dodgers. I believe it was Frank McCourt, who thought a winning season and pennant race presented an opportunity to foist his latest scheme on the team: a gondola to the stadium and a huge entertainment complex on the parking lots. #stopthegondola

Subject: Public Comment: Los Angeles Aerial Rapid Transit (LA ART) Project DEIR

Deputy Executive Officer Cory Zelmer,

Hello,

My name is Miho Murai and I am a Chinatown resident. I am also an At Large Board Member of the Historic Cultural North Neighborhood Council. I am writing to voice my opposition to the Los Angeles Aerial Rapid Transit Project ("the Gondola Project") at Dodger Stadium. I am submitting this opposition on behalf of myself and not our Neighborhood Council. As a current resident of Chinatown living by the highly congested intersection of College and New Depot, I will be greatly impacted by this project. P711-1

This is a ridiculous project that does not serve any benefits to our community. Rather, the Gondola Project will increase traffic around Chinatown and Union Station and will displace the traffic from Dodger Stadium and push it into the surrounding communities. The majority of the people who will likely utilize the Gondola will not be residents of Chinatown. Where will they park? As it is, the parking lot at Union Station is often full. P711-2

In addition, the Gondola Project will impact historic and cultural places such as the Los Angeles State Historic Park, the historic Union Station, and El Pueblo de Los Angeles Historic Monument. The projected towers will obstruct views and will diminish the natural beauty of Chinatown and these historical landscapes. P711-3

Finally, there has been a lack of transparency in how this project has been developing. For example, Metro went forward with this project without an open public process and without competitive bidding. P711-4
It is unclear who will actually own and operate this project. It is unclear who will be paying for its maintenance. Will these costs fall on taxpayers, such as myself and my neighbors, who are adamantly opposed to this project? The Chinatown community does not need a tourist attraction but rather we need affordable housing, reliable public transportation, and a grocery store that caters to our elders. P711-5

As an active community member, I ask you to please consider the wishes and needs of our community before you allow this ridiculous project to move forward. Please listen to the voices of the community and give us an opportunity to be meaningfully heard. The Gondola Project does not serve our community in any way. Those who support the project do not live in Chinatown and will not be ones that will be impacted by this project. P711-6

Thank you for your time and consideration.

Sincerely,
Miho Murai
Chinatown Resident

Subject: Comments re: Aerial Rapid Transit

To Whom it May Concern:

I am very strongly in favor of this initiative. Innovative projects of this nature are key to encouraging the use of public transportation and reducing the volume of cars on our region's roads. P714-1

I live in Mozaic Apartments, immediately adjoining the proposed Union Station stop of the tram line. Every home Dodger game, I see a dramatic increase in car and bus traffic (particularly due to the extremely heavily used Dodger Express) around Union Station. Having an aerial tram carry these passengers would lessen the reliance of Dodger fans on traveling by road to the stadium, particularly a road that sees extraordinarily heavy traffic on game days. Even on non-game days, this tram would offer a convenient mode of transit to travel north on Alameda from Union Station to Chinatown and the LA State Historic Park area. P714-2

Additionally, I think this development would be a positive one for this area, as it would be a major draw for tourists and an instant city landmark. It would bring more foot traffic and attention to historic Olvera Street and Union Station. Riding the tram would also be a fun leisure activity, offering fantastic views of the LA State Historic Park and the downtown skyline even on non-game days.

This is a unique and exciting opportunity, one that any world-class city should jump to embrace. I hope to see this project approved and constructed. Thank you. P714-3

Subject: Extend Public Comment Period for LA ART project Draft Environmental Impact Report

Dear Ms. Rockwell,
I'm writing to request a 45-day extension of the public comment period for the Los Angeles Aerial Rapid Transit Draft Environmental Impact Report so that the total comment period would be 90 days. P715-1

The community deserves to be heard and provided the opportunity to meaningfully participate in the CEQA process. We know that draft environmental impact reports like this one will likely be long and complex, requiring time to review and analyze the full details of this project. P715-2

LA ART and METRO have failed to provide opportunities for our community members to ask questions, raise concerns, and provide meaningful input. We have not received information on important details of the project and will need sufficient time to review and understand it. P715-3

A 45-day extension to ensure proper community engagement is not only the right thing to do, it's necessary for a public comment period that would fall squarely during the holiday season when COVID-19 is likely to spike, thereby limiting the ability for proper outreach and education efforts.
Please do the right thing in extending the comment period by 45-days to give our neighborhoods an opportunity to review and participate after the holiday season.
Sincerely, P715-4

Xochitl Manzanilla

Subject: comment on Frank McCourt's gondola

I am writing to express my vehement opposition to the Los Angeles Aerial Rapid Transit Project a.k.a. Frank McCourt's preposterous and outrageous gondola project. P731-1

It is unimaginable that this rich man's folly would have gotten this far if it had been proposed for a wealthy neighborhood like Bel Air – it would have been shut down *immediately*. The objections from community members and many others to this undemocratic proposal are informed and persuasive. P731-2

This project is terrible for people, terrible for the environment and terrible for the City of Los Angeles. P731-3

As Kathleen Johnson, the executive director of Los Angeles River State Park Partners, recently wrote in a letter that was published in The Los Angeles Times <https://www.latimes.com/opinion/letters-to-the-editor/story/2023-01-12/frank-mccourts-dodger-stadium-gondola>:

"Metro's opaque deal with former Dodgers owner Frank McCourt to build a gondola to Dodger Stadium through LA State Historic Park would severely compromise people's experience of the park, a taxpayer-funded green space that the area's historically underserved residents fought for decades to establish.

"The gondola would take public park land, destroy 81 mature trees, permanently alter the park's thoughtfully designed vistas, jeopardize park event revenues and vital maintenance, and threaten the park's significant historic features. P731-4

"These impacts on the park would be an environmental injustice. LA State Historic Park was born from an outpouring of community activism that transformed a rail yard into a green urban oasis, with all of the related health and community benefits. It is well used by residents, neighbors and visitors from throughout the city and has also become a vital, climate-resilient native landscape supporting local wildlife.

"After this long-fought struggle, people deserve to have their original designs and uses for the park respected and their public land protected.

"A project such as this would never be proposed over New York's Central Park, so why should the residents of Northeast L.A. be subjected to it?"

I also echo the concerns voiced in another letter to The Times <https://www.latimes.com/opinion/letters-to-the-editor/story/2023-01-12/frank-mccourts-dodger-stadium-gondola>,
this one from Jon Christensen, an adjunct assistant professor at UCLA's Institute of the Environment and Sustainability:

"A study conducted by my colleagues at the UCLA Mobility Lab <https://uploads-ssl.webflow.com/61c3996ce146bfa8fc27adeb/635c2657c071e02577a5c5a0_Report%20on%20UCLA%20study%20of%

found that the gondola will not reduce traffic significantly on the streets and highways around Dodger Stadium on game days and, therefore, will not reduce greenhouse gas emissions.

P731-5

"Furthermore, McCourt has not donated the project to Climate Resolve, according to county counsel. So why is Climate Resolve shilling for the project, while McCourt remains silent about his end game, a massive entertainment complex on the Dodger Stadium parking lots, which he has long touted?

"This is greenwashing, pure and simple. We have better solutions. The existing Dodger Stadium Express from L.A. Union Station is 19 times more energy efficient than the gondola would be per passenger trip. An individual electric vehicle is eight times more efficient."

Sincerely,
Manohla Dargis

Subject: I Oppose LA Aerial Rapid Transit Project

To Whom It May Concern:

I oppose the proposed aerial gondola system between Union Station and Dodger Stadium called LA ART. P732-1

As background, I live in Studio City, which has become a designated sacrifice community for the commercial benefit of Van Nuys Airport (VNY) and Burbank Airport (BUR). P732-2

I do not live near either airport, and there were not overflights here until the FAA implemented its NextGen airspace modernization program. FAA NextGen (1) concentrated what had been for decades a 6-mile wide dispersed departure path, (2) moved it 3 miles to the south, and (3) lowered the altitude for a long, slow ascent. As if this was not enough for a single community to bear from 2 airports, the FAA also layered in eastern arrivals and terrifyingly low wind arrivals.

Studio City now has near-constant low-flying aircraft overhead. The FAA chose Studio City to absorb extreme amounts of noise and pollution from 2 airports, and, worse, did so without any consideration of ground impacts from the FAA's changes. Los Angeles is better than this. P732-3

Severe negative impacts for a tourist attraction P732-4

Given the above, I am all too familiar with what it is like having transportation "progress" added in the airspace that was not there before. Like FAA NextGen at these airports, commercial gain from the aerial gondola (for a private corporation) is being prioritized while ignoring the negative impacts on communities that unfortunately live, work, and go to school below the proposed aerial pathway. P732-5

These communities will suffer severe negative impacts including loss of privacy (gondolas will be less than 40 feet above homes!) and cluttered airspace ... for a tourist attraction. A $120 ride for a family of 4 to Dodger Stadium is not a transportation solution, but merely a gimmick. P732-6

According to a UCLA Mobility Lab study dated October 24, 2022, LA ART would not significantly reduce traffic around Dodger Stadium, will not reduce greenhouse gas emissions, will carry fewer passengers than LA ART claims, will not likely be used after the games, and will unlikely be used for any transportation aside from the games. There are far better ways to meet the objectives through alternatives, including better use of existing bus lanes. P732-7

LA ART similar to City's push for AAM/UAM implementation P732-8

LA ART is strikingly similar to the city's effort to benefit the aviation industry through the rollout of Advanced Air Mobility/Urban Air Mobility (“AAM/UAM”) in Los Angeles. P732-9

Similar to the gondolas, the AAM/UAM "flying taxis" will hold 2-4 people, fly at low altitude (350 ft AGL), serve only high-income users, and will not reduce freeway traffic. AAM/UAM has been pushed forward at breakneck speed behind-the-scenes without any meaningful community engagement or community input. All while the public is left in the dark on what additional burdens are to come, for the sake of private economic benefit, to those under a flight path or a gondola track. P732-10

Please stop ignoring severe human and environmental costs for monetary gain of private corporations. Include citizens in the process and take their concerns to heart. P732-11

Most importantly, *stop LA ART and stop AAM/UAM*. Neither is an actual transportation solution, but both are nightmares for communities and natural spaces beneath them. P732-12

Sincerely,

Justin Dickerson

To: LAART@metro.net
Subject: Public Comment: Los Angeles Aerial Rapid Transit (LA ART) Project DEIR

Deputy Executive Officer Cory Zelmer,

I am writing to voice my opposition to the Los Angeles Aerial Rapid Transit Project ("The Gondola" at Dodger Stadium). I no longer live in Los Angeles, but from 2001 to 2013 I was the Vice President for Programs at the California State Park Foundation. In that capacity, I work tirelessly with California State Parks on the development of this important, groundbreaking, innovative public park. I watched it grow from a brownfield to a cornfield, to a green park filled with stunning views, beautiful trees, historic interpretation and spaces of all sorts for the community to gather and participate in a wide variety of activities. P733-1

I write now as a private citizen, but my time at the Foundation afforded me a deep inside into the value of this unique park.

The Gondola Project's enormous towers will cause aesthetic impacts in the community. I am concerned that the towers will obstruct views, and that the gondola cars will be used for advertising and electronic billboards. P733-2

The Gondola Project's displacement of traffic onto the surrounding neighborhoods will worsen air quality impacts from tailpipe emissions in an already overburdened community. P733-3

The Gondola Project's will increase traffic around Chinatown and Union Station. This project is designed to displace heavy traffic from Dodger Stadium and push it onto the surrounding communities. P733-4

This project will increase the impacts of air pollution from vehicle emissions in an area already overburdened by air emissions. P733-5

This project will lead to displacement and increase the cost of rent in the area, and will lead to future commercial development in Chavez Ravine, without community input and without disclosure to the community. P733-6

Metro went forward with this project without an open public process and without competitive bidding. I don't understand the ownership or operation of the project because the details have been hidden. Who is paying for this project? Will taxpayers be left holding the bag? This is the absolute opposite of what happened with the development of the park, which involved extensive community consultation and was very transparent. P733-7 P733-8

I strongly urge Metro to view this proposal with a very critical eye and remember the community that fought so hard for this park, which has become a symbol of innovation and beauty far beyond just downtown. P733-9

Sincerely,

Sara Feldman

COUNCILMEMBER DISTRICT 1,
ATTN: EUNISSES HERNANDEZ, COUNCILMEMBER.HERNANDEZ@LACITY.ORG
LOS ANGELES COUNTY METROPOLITAN TRANSPORTATION AUTHORITY,
ATTN: CORY ZELMER, DEPUTY EXEC OFFICER, LAART@METRO.NET

On behalf of the Echo Park Neighborhood Council (EPNC), I would like to submit a comment in response to the Draft Environmental Impact Report (EIR) published by AECOM for LA Metro. The Echo Park Neighborhood Council would like to highlight and echo some concerns already raised by the residents of Echo Park, our neighbors and community partners regarding the environmental and cultural impacts of the proposed project. P734-1

I. Response to Claim of Reduced Traffic Congestion

LA ART is proposing that the new gondola transit system would help to alleviate the traffic caused by the popular games at Dodger Stadium. While traffic congestion and pedestrian safety is a major concern for local residents, the free bus system from Union Station to the Stadium already offers an alternative to driving to the games. In fact, UCLA published an independent study that claimed the gondola system would actually do little to reduce the traffic congestion in and around the stadium. EPNC is concerned that instead of diverting the 3,000 drivers LA ART claims it will divert in its report, the gondola will instead divert less drivers and actually divert users of the free shuttle system. P734-2 Furthermore, LA ART has not discussed any parking plans to accommodate these 3,000 drivers at either of the transit stations at Union Square or Chinatown Gold Line station. EPNC is concerned that with increased traffic and street parking in these areas, pedestrian and cyclist safety will be at risk. P734-3 LA ART also has not proposed additional safety measures to address this concern.

EPNC would like to see further studies on this subject and would like LA ART to incorporate more pedestrian + bike friendly additions to the project to truly alleviate traffic in our neighborhood. P743-4 LA ART has already suggested building a pedestrian

bridge to connect Broadway to LA Historic Park as a part of its contribution to the neighborhood. LA ART could also help to install more public escalators and walkways to make walking to the stadium from the LA Historic/Chinatown area more feasible. With the Project in its present form, EPNC is not convinced that there is in fact a significant benefit to our community as it relates to traffic congestion.

cont'd P743-4

P734-5

II. In Response to Adverse Community Impacts

Our neighbors in Chinatown have raised concerns over noise pollution, privacy and risk of gentrification that would come with the construction of this transit system. Chinatown is already a community that has faced issues of gentrification due to outside investment and subsequent displacement of local residents and businesses. At present, there are no protections for Chinatown residents and legacy businesses that would ensure their survival in the community. EPNC would like to see LA ART do more to ensure the survival of legacy businesses in Chinatown should the project move forward. A suggestion would be to place a Chinatown non-profit as the lease holder for the concession stands planned for the station so that priority can be given to a local legacy business. Cost to ride the gondola for community members should also be free at all times.

P734-6

EPNC would also like to echo that LA ART should do more to invest in the local communities that they are crossing into, and make the addition of shade structures, benches, trees and sidewalk improvements a permanent and 100% assured addition to the project and neighborhood in Chinatown. EPNC also supports the addition of the pedestrian walkway from Broadway to LA Historic Park and the placement of bike ride share stations at each transit station.

P734-7

In conclusion, the proposed project in its present form, does not provide a substantial enough benefit to the community or surrounding environment for EPNC to support. LA ART would need to meet all of its suggested improvements and much more in order for the community to feel like it was a positive addition to our neighborhoods.

P734-8

RESOLUTION

On January 24, 2023, the EPNC Board of Governors held a Brown Act noticed-meeting, at 7pm through zoom. With a quorum of 15 board members present and vote count of 15 yeas, 0 nays, and 0 abstentions, the Board resolved to write a request for action for the application as set forth above.

P734-9

Respectfully,
Echo Park Neighborhood Council

Nick Marcone
Secretary, Echo Park Neighborhood Council

Subject: Most Current Comment on LA Aerial Rapid Transit Project and 1/12/23 Cathedral High School Meeting.

Dear Ms. Wiggins,

Attached are the comments to Mr. Zelmer concerning the LAART "Gondola" project and particularly the meeting hosted by him at Cathedral High School on January 12, 2023. As a result of the meeting, the Los Angeles Union Station's Board of Directors is calling for the reschedule of the meeting because of the complete disarray of the 1/12/23 event and the lack of Disabled Parking which made it unreasonably difficult for people such as myself. We also believe that Mr. Zelmer failed terribly in the execution of his duty hosting the very important and public meeting and request that he be reassigned away from the "Gondola" project.

Respectfully,
/s/

Mr. Cory Zelmer
Deputy Executive Officer
Los Angeles County Metropolitan Transportation Authority
1 Gateway Plaza, Mail Stop 99-22-6
Los Angeles, CA 90012

Ref: Comments and Complaints against LAART, its Draft Environmental Report and DEIR meeting at Cathedral High School

Dear Mr. Zelmer,

I was present at the recent LAART Gondola meeting hosted by you, and/or LA Metro, Frank McCourt, Los Angeles Aerial Rapid Transit, ClimateResolve, Cathedral High School and Does 1 to 10. I attended as the representative of the Los Angeles Union Station Historical Society (LAUSHS). Here are my recollections that in our opinion brings into question the legitimacy of the meeting: P736-1

A) Although I arrived at Cathedral High School meeting venue at the beginning of the meeting, I was delayed by thirty minutes getting to the venue because there was no **Disabled Parking** in or around Cathedral High School. (This has since been confirmed by Cathedral High School staff.) Consequently, I was late because I am a **Disabled Person**, and since all normal street parking was occupied by residents and/or meeting participants, I was obliged to park on the sidewalk after driving about for nearly 30 minutes, in fear of not representing the views of the LAUSHS. Consequently, I waddled with cane in hand to the distance to the meeting. This, in our opinion, a reasonable person would conclude that Mr. Zelmer and/or other "hosts" do not care about providing reasonable accommodations for **Disabled Persons** and myself. Furthermore, it indicates to us Mr. Zelmer's indifference to the **Disabled** and/or his **incompetence i**n hosting same at the public meeting. P736-2

B) When I finally entered the meeting, it had the appearance and sound of a **near riot.** I was told by bystanders that the spontaneous demonstration was because Mr. Zelmer and other hosts refused to take any questions of the 70 to 100 members of the local community in attendance. It is our opinion that a reasonable person might conclude that Mr. Zelmer is incompetent in representing Metro, and LAART in a public forum. P736-3

C) Furthermore, the working press and Community representatives said that they were told to ask Brother John Montgomery, Principal of Cathedral High School for answers to their questions on LAART. Brother John is not to our knowledge a credentialed transit or environmental expert. (All known nonaligned experts and the Sierra Club are against the Gondola.) Brother John then extolled to them via nation-wide TV, the reasons he saw for building the Gondola, without mentioning the pertinent fact that his employer, Cathedral High School, gets significant funds from Frank McCourt, an apparent conflict of interest in our opinion. P736-4

D) Therefore, the Los Angeles Union Station Historical Society has concluded that given all the above, the legal validity of the meeting was compromised and that a new meeting should be rescheduled with a live democratic P736-5

give-and-take on the issues, better crowd control and hosted by an uncompromised Metro meeting expert, not Mr. Zelmer who a reasonable person might conclude is compromised by an apparent conflict of interest in that he is a Metro employee in charge of investigating the Gondola project for the public weal whilst his salary is gifted to Metro by the Gondola's chief proponent and benefactor Frank McCourt.

cont'd
P736-5

Respectfully,
/s/
Thomas R. Savio

Subject: FW: Los Angeles Aerial Rapid Transit - NEW VIRTUAL PUBLIC HEARING 2/8/23

Hi Cory,

Hope you are doing well. Good to see Metro is hosting this public hearing to continue accepting comments after proceedings at Cathedral High were disrupted.

I am following up in hope that you can help me get more information about this virtual hearing's format. Specifically, what measures will the project team be implementing to ensure that the "continued" public hearing format:

- allows ***all*** participants to record their comment(s) and their affiliation (e.g., project area resident, CBO, etc.)
- supports multi-language informational presentation and comment recording, and
- provides interested participants without access to a computer can participate.

P737-1

Thanks so much in advance for your help!

Karina Macias
Senior Deputy, Transportation and Infrastructure
Los Angeles County Supervisor Hilda L. Solis, First District

LA ART: Metro to Hold Continued Public Hearing

LA Aerial Rapid Transit Technologies LLC is proposing the Los Angeles Aerial Rapid Transit Project, which would connect Los Angeles Union Station to the Dodger Stadium property with an intermediate station at the Los Angeles State Historic Park via a zero-emission aerial rapid transit gondola system in downtown Los Angeles. Los Angeles County Metropolitan Transportation Authority (Metro) is the lead agency under the California Environmental Quality Act (CEQA) and has prepared a Draft Environmental Impact Report (DEIR) to evaluate the potential for environmental impacts resulting from the proposed Project.

Today, Metro announced that it will be holding a continued public hearing from the January 12, 2023 public hearing on-line via Zoom on February 8, 2023. This continued public hearing is provided in recognition that interested members of the public may have been unable to provide testimony at the January 12, 2023 in person public hearing due to disruptions from certain attendees. This continued public hearing is for the sole purpose of receiving verbal public testimony on the Draft EIR for the proposed project. Verbal comments received at this continued public hearing will be deemed timely received for the purposes of the Draft EIR public comment period, which concluded on January 17, 2023.

Virtual Continued Public Hearing via Zoom:
February 8, 2023; 5pm to 7pm
Zoom Link: https://us06web.zoom.us/j/85673432272
Webinar ID: 856 7343 2272
Call-in: (669) 900-6833
Toll-Free Call-in: (888) 475-4499

Materials from the prior December 10, 2022, December 13, 2022, and January 12, 2023 public hearings are available here.

LA ART: Metro llevará a cabo una Continuación de Audiencia Pública
LA Aerial Rapid Transit Technologies LLC está proponiendo el Proyecto de Transporte Rápido Aéreo de Los Ángeles (Los Angeles Aerial Rapid Transit Project), que conectaría la estación Los Angeles Union Station con la propiedad del estadio Dodger Stadium, con una estación intermedia en el parque Los Angeles State Historic Park a través de un sistema de góndolas de transporte rápido elevado de cero emisiones en el centro de Los Ángeles. La autoridad de transporte Los Angeles County Metropolitan Transportation Authority (Metro) es la agencia líder, según la Ley de Calidad Ambiental de California (California Environmental Quality Act (CEQA)), y ha preparado un Borrador de Informe de Impacto Ambiental (DEIR) para evaluar el posible impacto ambiental resultante del proyecto propuesto.

Metro ha anunciado hoy que el 8 de febrero de 2023 llevará a cabo en línea vía Zoom una continuación de la audiencia pública del 12 de enero de 2023. Esta continuación de audiencia pública se ofrece reconociendo que pudo haber miembros interesados del público que no pudieron dar su testimonio en la audiencia pública presencial del 12 de enero de 2023 debido a las interrupciones de algunos asistentes. Esta continuación de audiencia pública tiene el único propósito de recibir testimonios verbales del público sobre el Borrador del EIR del proyecto propuesto. Los comentarios verbales recibidos en esta continuación de audiencia pública se considerarán recibidos a tiempo para los fines del período de comentarios públicos del Borrador del EIR, que concluyó el 17 de enero de 2023.

Continuación Virtual de Audiencia Pública vía Zoom:
8 de febrero de 2023; de 5pm a 7pm

洛杉矶空中快捷交通： 都会交通管理局将举办后续公众听证会
洛杉矶空中快捷交通科技有限责任公司提出了洛杉矶空中快捷交通计划，希望在洛杉矶市中心建设一套零排放的空中快捷交通索道系统，由此将洛杉矶联合车站与道奇体育场的场馆连接起来，途中在洛杉矶州立历史公园设置站点。洛杉矶县都会交通管理局（Metro）是加州环境质量法（CEQA）规定的领导机构。Metro起草了一份《环境影响报告草案》（DEIR），用以评估这一拟议计划将会带来的潜在环境影响。

今日，都会交通管理局宣布，继2023年1月12日的公众听证会之后，将于2023年2月8日通过Zoom再举办一场后续的线上公众听证会。 之所以会提供这次后续公众听证会，是因为认识到某些与会者的干扰或许致使感兴趣的公众成员未能在2023年1月12日的线下公众听证会上提供自己的证言。 举办这一后续公众听证会的目标仅为收集公

众对于拟议计划的环境影响报告草案的口头证言。 本次后续公众听证会上所收集的口述评论将被认定为环境影响报告草案公示期内收到的有效意见，即便公示期已经于2023年1月17日结束。

Zoom 线上后续公众听证会：
2023 年2月8日；5pm至7pm
Zoom 链接: https://us06web.zoom.us/j/85673432272
网络研讨会ID: 856 7343 2272
电话参与: (669) 900-6833
免费电话参与: (888) 475-4499

先前在2022年12月10日、2022年12月13日及2023年1月12日举办的公众听证会的资料，可以在这里获取：https://www.dropbox.com/sh/trfpt09to0kp4a8/AAAWMSsj-qJWnORBp9kkK056a/Documents?dl=0&subfolder_nav_tracking=1

洛杉磯空中捷運系統（LA ART）：Metro 將舉辦延續公聽會
LA Aerial Rapid Transit Technologies LLC正在提議洛杉磯空中捷運項目，該項目計畫於市中心建立零排放空中快速纜車系統，連接洛杉磯聯合車站（Los Angeles Union Station）和道奇體育場（Dodger Stadium），並於洛杉磯州立歷史公園（Los Angeles State Historic Park）設立中轉站。洛杉磯郡都會運輸局（Metro）為《加州環境質量法案》（CEQA）的主導機構，已準備了一份環境影響報告草案（DIER），以評估該項目對環境可能造成之潛在影響。

Metro 今日宣布延續 2023 年 1 月 12 日的公聽會，將通過 Zoom 於 2023 年 2 月 8 日舉行延續的線上公聽會。 本延續公聽會為有興趣參與但由於部分參加者干擾而無法參與 2023 年 1 月 12 日公聽會之公眾，能夠親自提出其意見證供。 本延續公聽會的唯一目的為聽取關於擬議項目之環境衝擊報告草案的口頭公開證供。 在本次延續公聽會中所蒐集之口頭意見將被視為於 2023 年 1 月 17 日的環境衝擊報告草案公眾意見徵詢期間所及時收到之意見。

Zoom 線上延續公聽會：
2023 年 2 月 8 日；下午5點至晚上7點
Zoom 連結: https://us06web.zoom.us/j/85673432272

Subject: Public Comment: Los Angeles Aerial Rapid Transit (LA ART) Project DEIR

Deputy Executive Officer Cory Zelmer,

I am writing to voice my opposition to the Los Angeles Aerial Rapid Transit Project ("The Gondola" at Dodger Stadium).

Let me start by saying I am a resident who lives in an apartment building across from LA State Historic Park and one of the reasons we chose the neighborhood was the proximity to public transportation. I take Metrolink trains from Union Station to work, my husband bikes to his work downtown and we've jumped on the Metro lines to get around more than once. We are BIG supporters of more public transportation in the city. P738-1

So when I saw the Stop the Gondola billboards, I was a little confused. More public transportation? What wasn't to like? It was only after investigating the positive and negative impacts that the gondola was projected to have as reported in the Environmental Impact Report (led by LSCMTA) that I realized the negatives far outweigh the positives. P738-2

First of all, the budget is exorbitant for an extremely limited service route. As a train user, I've seen Union Station on game days and know that it's not THE main artery that fans are using to get to Chinatown/Echo Park. Rather that budget could be put towards adding additional free game-day shuttles from the neighborhoods surrounding Elysian (like Silver Lake, Los Feliz, Koreatown, Downtown, Lincoln Heights and more) which would allow exponentially more residents safe, sustainable and easy transport to the stadium. P738-3

As a nearby resident, I also know that there are only 81 home games per season - 25% of the year. My husband and I walk in the park nearly every day. The open views and beautiful landscaping and trees are a welcome respite from our otherwise busy city. We love the hill near the entrance where dog owners gather - it makes it feel like a community and fosters interactions between neighbors. Our favorite view is when we turn around at the end of the park and downtown is perfectly framed. The scale of these gondola towers, the proximity of the cabins to the ground, and the eyesore of the building would ruin the solace we and many others find in the park. It's not worth ruining 100% of the days in the park for a few rush hours on the 25% of days where a game is being played. P738-4

The estimated emissions saved by the gondola are minimal and can not begin to compare to the emissions saved offering free or low-cost shuttles - LARGELY due to the fact most fans would still have to drive to the stations since there will be so few. This neighborhood is already burdened by emissions from being surrounded by highways in all directions. There are real ways to reduce this and I'd like to see our public officials champion those kinds of real changes - not be resistant to public comment like this process has been. P738-5

Again - I'm a big public transportation fan. But there are infinitely better ways of achieving this than the Gondola and I hope you will explore them instead of burdening this community with a developer's misguided project. P738-6

Sincerely,
Zab Steenwyk

Deputy Executive Officer Cory Zelmer,

I am writing to voice my opposition to the Los Angeles Aerial Rapid Transit Project ("The Gondola" at Dodger Stadium). This project will negatively impact the local community. There has not been any consideration on the local residents in the area. The community does not want this gondola flying over it all day and night. Take the bus! P739-1

Hi! I don't know if this is the right phone number, but my name is Sara Clendening, President of Lincoln Heights Neighborhood Council, speaking as an individual in reference to the Gondola project. And I guess this will be my public comment for the record, and that our community, Lincoln Heights, is opposed to the Gondola, as is the historic community of Dogtown, and Solano, and Chinatown. The public private partnership on, you know, public property, that was given away to a corporation—which, that issue was never… we've never seen justice from that—with the three communities of La Loma, Palo Verde and Bishop, getting their land taken, right? Dodgers shouldn't, shouldn't… you know, we can't move forward with the Gondola until, like, that has been dealt with, right? Like, in the terms of, like, land back or reparations, and justice for our community. Now, the Gondola thing. Yeah, no. It can't go anywhere. Taxpayer money should not be going to benefit an evil corporation that, you know, basically destroyed a mountainside with the help of this city, and eradicated the communities. And that is that. And we are absolutely opposed to this Gondola. P741-1

Although, we do appreciate the EIR that metro did with the archeological stuff. Good work on that. P741-2

But yeah, there's no way that you guys should be working with the Dodgers on this. Right. Bye. P741-3

Hey, hello my name is Dennis Rohatyn. I'm interested in the aerial rapid transit project, the so-called Gondola, and I plan to attend the Zoom meeting in a few days. And I'm looking over the report, and the only thing I don't see is the height at which the Gondola is going to fly, or the arch, the trajectory, and what the maximum height will be. Nothing in the description tells me that. I'm wondering if you know that, or can refer me to someone who does, or if there is a diagram or something of that sort that will let me know what that altitude will be for some, if not most, of the 7-minute flight. My name again is Dennis Rohatyn, R-O-H-A-T-Y-N. My number is 619-318-5373. 619-318-5373, and if it's more convenient, you can always send me an email at "drohatyn", D-R-O-H-A-T-Y-N, at cloud dot com [d.rohatyn@cloud.com]. Thank you so much for your time and help! Bye, bye.

Re: Written materials submitted in support of public testimony on the Draft Environmental Impact Report for the Los Angeles Aerial Rapid Transit Project, SCH No. 2020100007; Information Regarding Zero Emission Electric Buses for Use with Transportation System Management Alternative And Alternative Design of Towers on Alameda Street; Request for DEIR Recirculation

Dear Mr. Zelmer:

On behalf of The California Endowment ("TCE") and pursuant to the continuation of public comment through the February 8, 2023 public hearing scheduled by Metro, on the Draft Environmental Impact Report ("DEIR") prepared for the Gondola project ("Project") proposed by Los Angeles Aerial Rapid Transit ("ARTT"), we respectfully submit the attached material and supplemental comments as our written testimony for this public hearing. P743-1

This material underscores the feasibility and reasonableness of choosing the environmentally superior, no-emission alternative, with electric buses operated by Metro. The DEIR claims the Transportation System Management ("TSM") alternative "would generate new emissions as there would be additional Union Station DSE (Dodger Stadium Express) bus service on the existing route." (DEIR, p. 4-65.) However, if the DSE buses were all electric, there would be no emissions at all- zero emissions. P743-2

The DEIR fails to mention that Metro has received a $104 million grant for zero emission electric buses as was reported on August 19, 2022 P743-3

(Enclosure 1) and has committed to having an all-electric bus fleet by 2030 (Enclosure 4). Therefore, claiming the TSM alternative would increase emissions is misleading and fails to present Metro's own plan for zero-emission buses.

cont'd P743-3

This is a substantial and fatal flaw in the current DEIR analysis. It falsely portrays Mr. McCourt's Gondola Project as superior to a low- or no-emission option. Such conclusion in the DEIR is not supported by substantial evidence and creates an erroneous comparison to zero-emission buses. The DEIR should be re-written and recirculated as required by law to provide an accurate and thorough analysis based on substantial evidence of the TSM Alternative.

P743-4

Additionally, construction of towers on Alameda Street on public land for Mr. McCourt's private project will be problematic when those parcels are better used for public-serving purposes such as affordable housing with supportive tenant services. Prior to the publication of the DEIR, the City, which is a responsible agency, designated these parcels for desperately needed housing and entered into negotiations to allow for the construction of affordable residential units to house vulnerable populations.[1] The DEIR fails to inform the public of this conflict with City of Los Angeles policies and plans and fails analyze how this impact is to be mitigated.

P743-5

While the DEIR discusses Option B- a design option (not an alternative) which would eliminate the Alpine Tower but require the Alameda Tower to be taller, it states Option B has "potential technical constraints due to the taller tower that approaches the limits of technical feasibility due to increase angle of bend at the Alameda Tower." (DEIR, p. 6-20.) In other words- a fair inference from this is that a taller version of the Alameda tower approaches the limits of safety- and so would be even less safe than the current design. The DEIR does not explain what "the limits of technical feasibility" are or what it means that a taller tower "approaches" those limits. What are these limits, and what does it mean for the taller tower to approach them? What impact may this likely riskier option have on the communities below the tower?

P743-6

[1] The City of Los Angeles' Chief Administrative Officer's Comment letter dated January 17, 2023 stated "The plan for these sites includes [] transitional housing and affordable housing with supportive services, and a community center. Because of these facts, the City does not intend to divest itself of these parcels for any use besides providing affordable housing."

FN P743-5

CEQA mandates disclosure of this technical evidence and is necessary to allow for informed public participation regarding the merits of the project and its alternatives. As the attached correspondence from the City indicates, the construction of the Alpine Tower is infeasible and should never have been considered given the timing of negotiations that precede the publication of the DEIR. (See Enclosure 5.) Option A was never a viable approach to construction and other options should have been analyzed instead. P743-7

Furthermore, a single tower design is both a visual blight and a structural danger given the weight involved and the fact that it crosses two points of a Metro railway line. In the event of an earthquake, as Southern California is prone to and as the recent very large one in the Turkey-Syria border region demonstrates, there is a risk that the entire structure could collapse leading to mass casualty and destruction. (See https://www.latimes.com/california/story/2023-02-06/earthquake-like-turkeys-would-devastate-southern-california.) Who will be responsible for addressing and mitigating this risk? P743-8

The many failures presented above render the DEIR inadequate and indefensible. It cannot be presented for consideration by the Metro Board. At minimum, the entire process should be corrected, the appropriate lead agency identified, a thorough and not misleading analysis of the Project and its impacts provided, and the entire process started over with a sufficiently informative DEIR. Thank you for your consideration of these materials in support of our public testimony. P743-9

Sincerely,

Douglas P. Carstens

4. Why Won't Metro Promote Its New Electric Buses?
5. Letter of City of Los Angeles Chief Administrative Officer dated January 17, 2023.

ENCLOSURE 1

USDOT awards $104 million to Metro for 160 zero emission electric buses

BY LA METRO , AUGUST 19, 2022

Metro has received a $104-million federal grant for the purchase and deployment of 160 battery-electric buses as well as for the procurement and installation of en-route and depot charging stations. Above is a video from the city of L.A.'s Channel 35 on the news.

Electric buses are cleaner and quieter than buses that run on compressed natural gas. They help Metro fulfill its goal of improving air quality in our region and producing fewer greenhouse gases that are responsible for climate change.

The grant will enable Metro to support the transition to zero emission bus service on routes operating out of Metro's Divisions 9 (El Monte) and 18 (Carson) including the J Line (Silver). The grant also funds related workforce development and training activities.

The grant, announced earlier this week by the U.S. Department of Transportation, is via a national competitive process from the Federal Transit Administration's Low or No Emission Grant Program.

The Metro Board of Directors has approved a goal of converting Metro's bus fleet to zero emission by 2030 — well ahead of the state deadline of 2040 for transit agencies. The G Line (Orange) already has an entire fleet of electric buses.

QUOTES

"Metro is thankful to U.S. Transportation Secretary Pete Buttigieg and his talented team at the Federal Transit Administration for issuing a $104 million Low or No Emission Grant for our agency," said Glendale City Councilmember and Metro Board Chair Ara J. Najarian. "This grant for Metro's Zero Emission Bus and Infrastructure Deployment Project will help bring our agency closer to having a fully electric bus fleet in the coming decade. On behalf of our Board of Directors, I want to personally thank the Biden Administration, the U.S. Department of Transportation – and of course – our Los Angeles County Congressional Delegation for supporting Metro's successful effort to secure these valuable federal funds."

"The J Line, aka the Silver Line, is a vital link for our regional economy, but residents of Wilmington and San Pedro should never have to pay a price for it with their health," said Los Angeles County Supervisor and Metro Board 2nd Vice Chair Janice Hahn. "We need to fight air pollution in our communities with all the tools and technologies available, and with this switch to a fully electrified J Line, we're accomplishing that."

"As we navigate rising temperatures, longer and more severe droughts, and a myriad of other consequences of human-made climate change, let's not forget our commitment to future generations," said Los Angeles Mayor Eric Garcetti. "Through electrifying our transportation system we have so much ground to gain in the fight against climate change — cleaner air, lower emissions, and healthier communities. This historic investment brings us another step closer to meeting our goals and furthers our fight against climate change."

"We are appreciative of the strong support from the federal government in Metro's commitment to convert its entire fleet of buses to zero-emission electric buses," said Metro Board Member and Los Angeles County Supervisor Hilda L. Solis. "These federal grant funds will also be used for workforce training for the operation and maintenance of our growing zero-emission bus fleet – which is vitally important in providing good jobs for those that need them the most."

"Metro's partnership with the U.S. Department of Transportation has never been stronger," said Metro CEO Stephanie N. Wiggins. "This grant will strengthen our agency's efforts to provide clean, dependable zero emission bus service to millions of transit riders. Thank you to Transportation Secretary Pete Buttigieg, FTA Administrator Nuria Fernandez, members of the Los Angeles County Congressional Delegation, and the Metro Board of Directors for supporting this grant request. I cant wait to get these new buses on the road!"

ENCLOSURE 2

L.A. Metro Now Running all Zero-Emission Electric Buses on the G (Orange) Line in the San Fernando Valley

- Dave Sotero
- October 13, 2021

In a major clean air milestone for the Los Angeles region, the Los Angeles County Metropolitan Transportation Authority (Metro) announces the successful completion of its transition to an all-electric bus fleet on the popular Metro G (Orange) Line in the San Fernando Valley, offering Metro customers a non-polluting, quiet and ultra-smooth riding experience.

Metro has phased out its legacy 60-foot articulated compressed natural gas (CNG) buses on the G Line — the type that has run on the dedicated Bus Rapid Transit line since it opened in October 2005 — and replaced them with 40 brand new, 60-foot articulated zero-emissions buses manufactured by New Flyer. Called Excelsior Charge NG, the buses feature zero-tailpipe emissions, employ advanced electric technologies such as high-energy batteries and traction propulsion system. Rapid en-route chargers installed at North Hollywood, Canoga and Chatsworth Stations give the buses an all-day operating capability along the 18-mile corridor. Buses have about a 150-mile range on a single charge even without rapid charging.

The new electric buses contribute to Metro's equity goals to help reduce disparities in access to opportunity, including health outcomes, in key communities along the bus corridor. Of the G Line's 36 stops, for example, 20 (or 55 percent) are directly located in or adjacent to Equity Focus Communities across North Hollywood, Valley Village, Van Nuys, Lake Balboa, Reseda, and Canoga Park.

Metro first began converting its bus fleet to electric buses in July 2020. Since completing its transition from CNG to electricity earlier this year, Metro has officially logged an impressive 900,000 miles on the electric buses.

"Metro is officially on the road to a zero-emissions future with its first official use of electric buses on a major Bus Rapid Transit Line," said Metro Board Chair and Chair of the L.A. County Supervisors Hilda L. Solis. "This marks the beginning of Metro's commitment and long-term investment in a healthier, more equitable and sustainable bus fleet for Los Angeles County,

one that helps our region reduce its greenhouse gas emissions at the tailpipe while greatly improving the customer experience."

"The 2020s will be defined as the decade for climate action," said L.A. City Mayor and Metro Board member Eric Garcetti. "Now, more than ever, bold and ambitious policies are needed to tackle climate change. Metro's transition to electric buses on the G Line is a perfect example of a bold policy made real. We have proven that these next-generation buses are fully capable of meeting this popular bus line's daily service needs."

Valley bus customers as well as residents living next to the G Line will enjoy the buses' quiet operation. The buses are whisper-quiet because they do not need fans CNG buses require to keep their engines cool. Buses contain active suspension that ensures a smooth ride for passengers. Buses also employ dual electrically driven air conditioning units, a particularly good cooling feature for customers during hot summer days in the Valley. Customers can charge their portable devices using USB ports imbedded in the bus seats. The buses boast public Wi-Fi access to better connect Metro bus customers on the go. Lastly, the buses also feature two drive axles for better acceleration and employ regenerative braking to recapture energy.

"Five years ago, the Metro Board supported my motion for a plan to use electric buses on the Orange Line," said Los Angeles City Councilmember and Metro Board Member Paul Krekorian. "At that time, there were still many questions about the feasibility of electrification of the fleet. The success of the transformation of the Orange Line has answered those questions. This important moment in the history of Metro brings us that much closer to achieving our goal of a 100 percent zero emissions fleet by 2030."

Metro's electric buses cost $1.15 million each. The project includes the deployment of the electric buses and associated charging equipment and infrastructure improvements. The total cost of buses, equipment and improvements is $80 million.

Metro is now planning to utilize electric buses on the J line (Silver) that operates between San Pedro and El Monte via the Harbor Gateway Transit Center. The agency is now working closely with Caltrans, Los Angeles Department of Water and Power and Southern California Edison on charging designs along the J Line corridor. The ultimate conversion of the J Line to electric buses is anticipated to be completed in approximately two years.

"Today we are working tirelessly to create a more environmentally sustainable, equitable and resilient public transportation system for all our customers," said Metro CEO

Stephanie N. Wiggins. "Our zero-emission bus goals are an important part of our overall strategy to reduce our agency's carbon footprint and become carbon neutral. We continue as a transit leader in our march towards a more sustainable and resilient transportation system that will benefit our customers, our industry and our planet."

Metro has ambitious plans to transition from a CNG to zero-emissions bus fleet in the years ahead. In 2017, the Metro Board unanimously adopted a motion endorsing a comprehensive plan to transition the agency to a 100 percent zero emission bus fleet by 2030. The agency currently operates approximately 2,300 CNG buses. Metro is the largest American transportation agency to pursue such a goal. The plan is contingent on continuous advancements in electric bus technology – which includes an increase in range, reduction of charging times and extension of battery life cycles – and a drop in price as the technology develops.

Overall, Metro also has strong environmental sustainability commitments. The agency plans to displace over 780,000 metric tons of Carbon Dioxide Equivalent in L.A. County by 2050 through an ambitious suite of sustainability initiatives envisioned in its 10-year Sustainability Strategic Plan, Moving Beyond Sustainability.

For more information on Metro's environmental initiatives, please visit www.metro.net/sustainability.

Editor's Note: Metro Operators are crucial to keeping LA moving. Metro is currently hiring more than 500 bus operators and is offering a $1,000 bonus for coming aboard. This is a great career opportunity. Metro offers competitive hourly rates starting at $17.75 for part-time bus operators and benefits include health insurance, tuition reimbursements, paid training, retirement plan options and part-time flexible hours. Please encourage friends, family and community members to become a part of the Metro team that provides excellence in service and support and keeps our region moving. Apply at metro.net/driveLA.

ENCLOSURE 4

Why Won't Metro Promote Its New Electric Buses?

Read to the bottom for an exciting contest!

By Joe Linton | Sep 9, 2020 | 5 COMMENTS

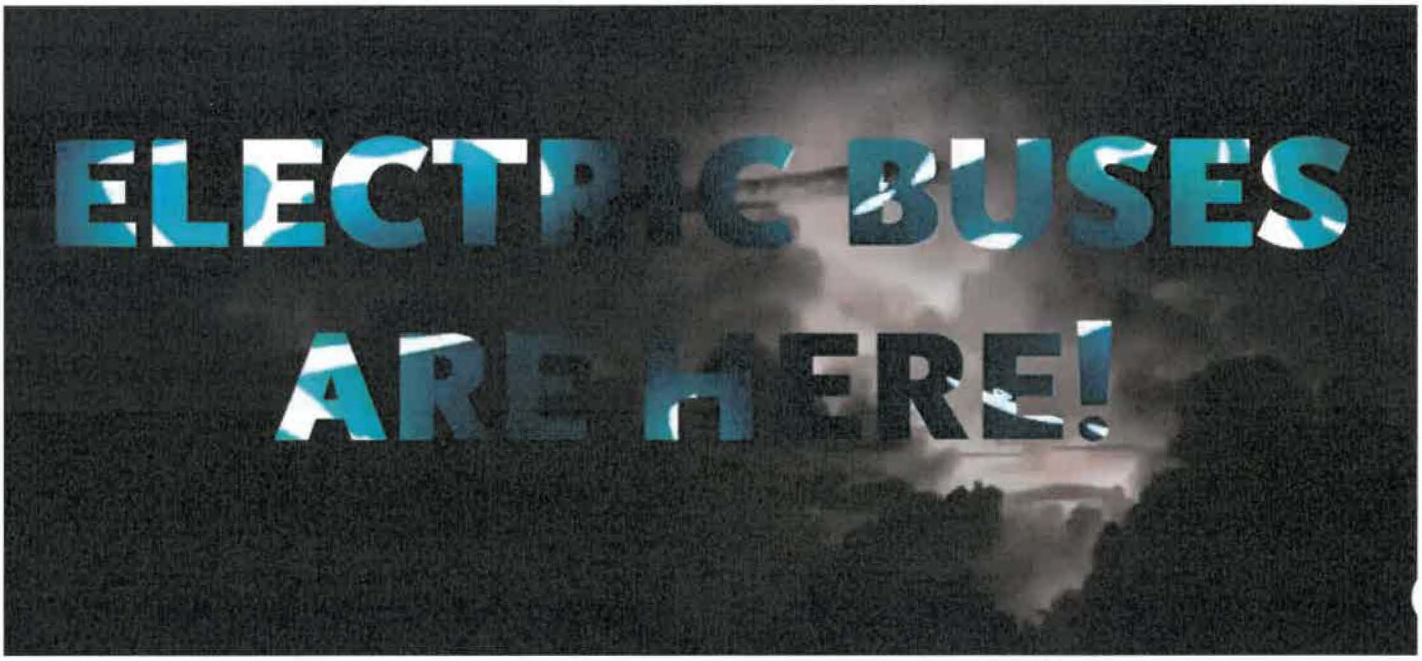
Metro New Flyer Electric bus charging in North Hollywood. All photos by Joe Linton/Streetsblog L.A.

In 2017, Metro approved plans for a fully electric bus fleet by 2030. That upgrade was planned to be well underway with the full Metro G Line (Orange) Bus Rapid Transit fleet all battery-electric by June 2020, but the date slipped. The first electric bus debuted on the G Line in late July. Full G Line electrification is now scheduled for December 2020.

Electric vehicles are pretty nice. They have no tailpipe pollution. Compared with fossil fuel (compressed natural gas CNG or diesel) buses, electric buses are so much nicer to ride and to be around. They are powerful, efficient, very quiet, much less polluting including greatly reduced greenhouse gas emissions, and cheaper to operate and maintain.

One would think Metro would be pretty excited about those new electric buses, right?

Metro did produce one video proclaiming "ELECTRIC BUSES ARE HERE."

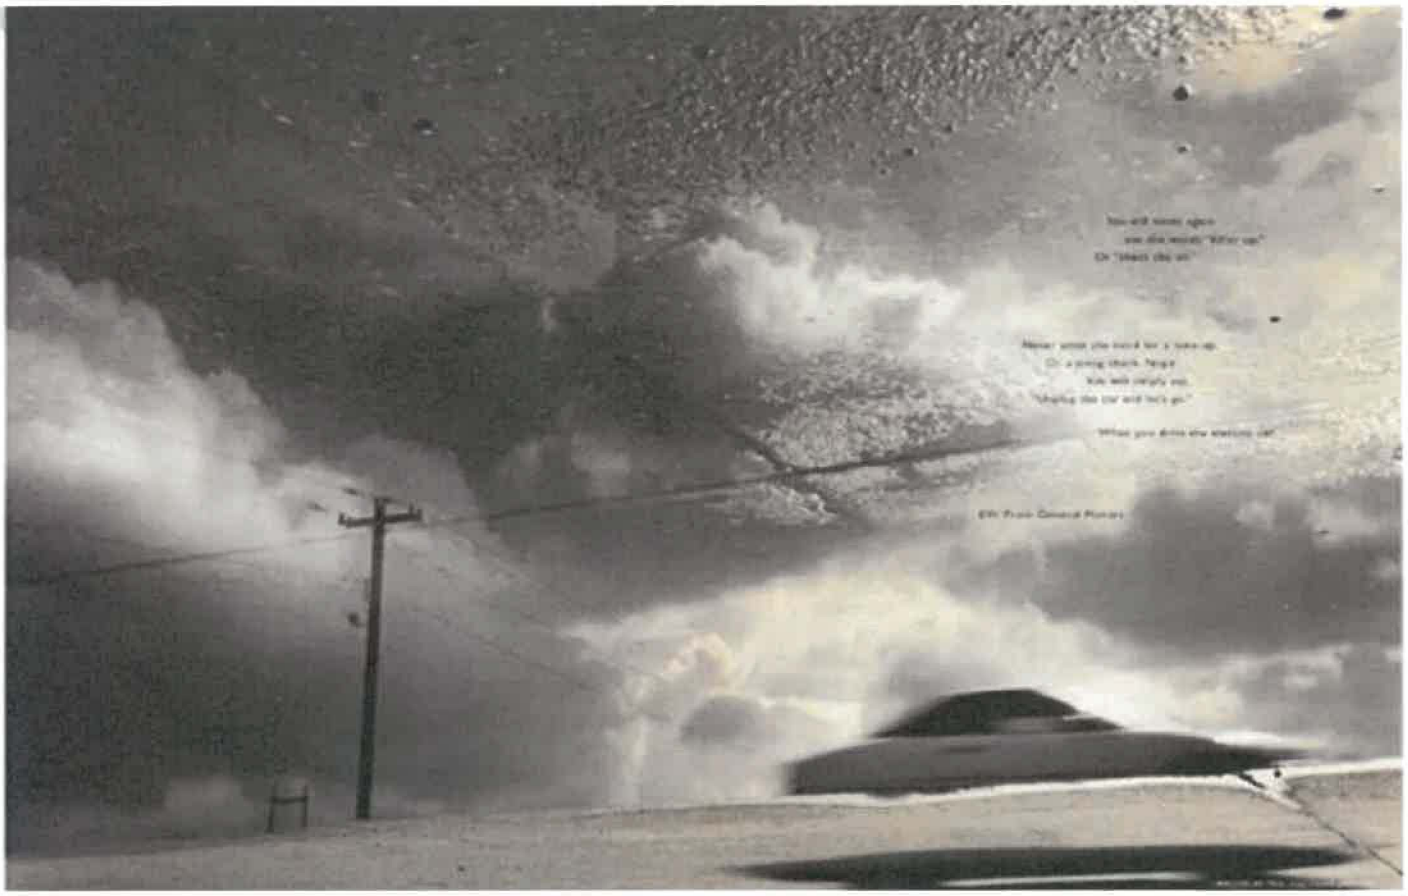


Nothing says clean electric power like... foreboding black clouds. From Metro electric bus video

The cleaner greener dark foreboding future Angelenos are excited about. From Metro electric bus video

The Metro electric bus video is full of dark clouds – because that's something everyone associates with clean electric power, right?

(The dark clouds are kind of reminiscent of those awful bleak 1990s EV-1 electric car ads. Paradisiacal green imagery seems to be reserved for astroturf ads for fossil fuel cars.)



Those dark clouds didn't work too well for EV-1 electric car ads back in the 1990s either.

Maybe somebody, probably an intern, didn't quite get the messaging right in that Metro video.

What about the buses themselves?

Metro – with its award-winning marketing department – can improve on what L.A. City Transportation Department electric DASH buses and Foothill Transit electric buses have done.

A 2017 LADOT DASH electric shuttle bus design – pretty hard to miss that this is an electric vehicle

A 2013 Foothill Transit electric bus with its telltale green-blue splash. From YouTube

Metro loves big banners.

Whenever Metro sneezes there are big banners years or months in advance proclaiming "MORE SNEEZES ON THE WAY."

Metro buses have promotions about "the nation's largest clean-air fleet," APTA awards, all-door boarding, etc. Surely, the electric buses themselves are slathered with feel-good messages about electricity and clean air and apple pie and general Metro wonderfulness.

No?

A sexy new Metro electric bus at North Hollywood station – with all kinds of electric vehicle promotions, no?

It's actually hard to spot the electric buses. Like all the all the other CNG-powered buses on the F Line, they're ~~gray~~ silver. There are a couple of markings that tell the casual observer that it is indeed electric. Can you spot one?

On the driver side near the back, Metro subtly proclaims "Electric" in all-white on gray – with overlapping vesica piscis shapes

Near the front door, white-on-gray lettering quietly states "Electric" plus there are small green USB and Wi-Fi stickers (because USB and Wi-Fi are green – and Electric is... gray?)

Can you tell the difference between Metro's clean green electric bus – and its more common fossil fuel buses?

A Metro CNG bus (with ads placed where those missable "Electric" decals are on the electric version)

Spotters can identify CNG buses by this decal near the rear of the bus

The differences are somewhat hard to tell from photos. The electric buses are a little less colorful, because they haven't been covered with ads yet. Generally the quickest way to know up close is that the CNG buses are much louder – inside and outside – compared to the electric buses.

Why doesn't Metro have highly identifiable branding for their electric buses?

Part of the problem appears to be resistance from Metro operations leadership. As they did in the 1990s when Metro transitioned from diesel to compressed natural gas, operations are pushing to stick with what they are used to. When Metro faces funding questions, whether for project acceleration or from

COVID recession revenue losses, operations leadership are quick to encourage the Metro board to jettison the approved 2030 electrification schedule. That schedule hinges on a 2019-2020 technology assessment that culminates in a now-postponed Spring 2020 Zero Emission Bus Master Plan update that includes procuring new electric buses. If operations leadership can wait out the clock on that, then maybe Metro will just buy more fossil fuel buses.

Operations' concerns are not entirely unfounded. Though the benefits outweigh the costs, battery-electric buses are a fairly new technology, not widely adopted.

One electric bus manufacturer – BYD – has often over-promised and under-performed. (BYD is manufacturing buses for Metro's second BRT electric bus pilot – the J Line [Silver] which is scheduled to be fully-electric by June 2021, assuming Metro sticks to its electrification schedule. BYD also supplies the DASH electric buses, pictured above.)

Other manufacturers – New Flyer and Proterra – have not had those issues. Metro's G Line buses are New Flyer. (Proterra supplies Foothill Transit electric buses, pictured above.)

Streetsblog is excited about the nice quiet New Flyer bus already running on the G Line. So excited that SBLA is announcing a contest for our readers.

How do you think Metro should be marketing its clean green electric bus fleet? Submit your designs via the comments below. Submit a promotional image, a promotional slogan, a video, or a design that Metro could affix to the outside of its electric buses. Designs can be polished or rough sketch concepts; they can be serious, or sarcastic/humorous. Submit your entry by September 30. Streetsblog editors will review all submissions, and select a winner in early October. One lucky winner will receive a signed copy of SBLA editor Joe Linton's *Down by the Los Angeles River* guide book to walking, bicycling, and historic sites on the L.A. River and its tributaries.

RE: Aerial Rapid Transit Project DEIR Comment

Dear Mr. Zelmer:

I am writing to comment on the Draft Environmental Impact Report (DEIR) that Metro released on the Aerial Rapid Transit Project. Specially, I am informing Metro that the properties at 901 and 903 North Main Street, Los Angeles, California, 90012 (Assessor's Parcel Number [APN] 5408-008-909) are owned by the City of Los Angeles (City) and were approved for mixed use development -- affordable housing and services -- by the Mayor and City Council in August 2019 (Council File Number: 18-0930).

The Los Angeles Housing Department currently has an Exclusive Negotiation Agreement (ENA) with Friends of Homeboy, LLC, for these properties and expects to execute the Development and Disposition Agreement no later than June 2023. The plan for these sites includes, transitional housing and affordable housing with supportive services, and a community center. Because of these facts, the City does not intend to divest itself of these parcels for any use besides providing affordable housing.

Thank you for your immediate attention to this matter. If you require additional information, please contact Assistant City Administrative Officer, Yolanda Chavez, at 213-473-7522 or Yolanda.Chavez@Lacity.org.

Sincerely,

MATTHEW W. SZABO
City Administrative Officer

Ref: Additional and Updated Comments *opposing* LAART "Gondola" DEIR For Feb. 8th Meeting.

Dear Mr. Zelmer,

Given today's Zoom meeting for comments concerning LAART's "Gondola" DEIR the Board of Directors of the Los Angeles Union Station Historical Society (LAUSHS Board) has directed me to send the followings additional and updated comments **opposing** the LAART "Gondola" DEIR. P744-1

The LAUSHS Board opposes the "Frank McCourt/LAART/Climate Resolve Gondola" (LAART) private, for profit cable car and real estate development scheme that proposes to link Union Station and Metro's supporting **"**Esplanade-Forecourt-Fountain" project with Dodger Stadium, because it is contrary to Metro's public duty being a **unique special favor for LAART.** P744-2

Our Board believes that LAART's proposed futuristic/carnival-like Union Station Alameda Street Terminal and Metro's supporting "Esplanade-Forecourt-Fountain" project will **blight the viewscape** of the historic and architecturally significant West Facade of Union Station and the greenscape and skyscape of Los Angeles State Historic Park. P744-3

Moreover, Union Station, its trains and patrons could be physically harmed if aircraft from the nearby Los Angeles Police Department's "Hooper Memorial Heliport" airport were to be entangled in LAART's overhead cables and 13+ story support towers. P744-4

Furthermore, the LAUSHS Board opposes Metro's planned **removal of all "Disabled Parking"** from the "Esplanade-Forecourt-Fountain" area, without public hearings and reasonable alternatives, to accommodate a new, large **"water feature"** (a misting water fountain) which would cool LAART patrons cued-up for their cable car rides to Dodger Stadium. The water fountain would be **contrary to the state's water conservation policy** especially during Los Angeles current and likely permanent, record-breaking draught. (Even if the water feature recirculates, at least 10% of its water will be lost to evaporation day after day, year after year.) P744-5

The LAUSHS Board had originally chosen not to take sides in the above controversial, billion-dollar real estate development scheme. However, in view of Metro's obvious pro-active role supporting LAART, a potential competitor of its efficient "Dodger Stadium Express" motor coach service, as well as planning to "gild the lily" of Union Station with its Esplanade-Forecourt-Fountain Project, done **"backstage,"** using Metro's without first consulting the public, LAUSHS Board had no choice but to take a firm stand against the various Gondola schemes. P744-6

Among the reasons for The Board's opposition are, but not limited to:

A) Former Metro Board member, then Mayor of Los Angele Eric Garcetti, who originally introduced the motion for Metro to assist LAART without public participation and to enlist Metro staff to "carry LAART's water" as it were, did receive, according to public records, millions of dollars in both political cash contributions and "behest" contributions from billionaire real estate and LAART developer Frank McCourt, his family and various entities which in the LAUSHS Board's opinion, is an unacceptable **conflict of interest.** P744-7

B) In LAUSHS Board's opinion, Metro Deputy Executive Officer Cory Zelmer and/or subordinates and consultants (Zelmer, etc.) falsified an official environmental document**--**LAART's Draft Environmental Impact Report (DEIR)--by checking-off the DEIR box that states there is no airport within 2 miles (3520 yards) of LAART's proposed Union Station Terminal, when he had been informed repeatedly to the contrary by the LAUSHS Board. Moreover, The LAUSHS Board presented proof to Zelmer, etc. and Metro CEO Stephanie Wiggins, that the Los Angeles Police Department's "Hooper Memorial Heliport" (described as the world's busiest airport for rotary-winged aircraft (aka helicopters) is only 1/2 mile (880 yards) from LAART's proposed Union Station Terminal. Furthermore, The Board reminded Zelmer, etc. that according to the **Los Angeles Police Department, the California Department of Transportation, the California Public Utilities Commission, the Federal Aviation Administration, and the 8th U.S. Circuit Court of Appeals, all heliports are airports** officially defined as any location where flying machines are serviced. The fact that some airports serve only rotary-winged aircraft (helicopters) while others serve fixed-wing aircraft (conventional aircraft) does not change the fact that all heliports are airports in the eyes of all governing agencies and the Federal Courts. Furthermore, the argument presented by Metro that Hooper Heliport is a police facility, not a civilian facility, and therefore not subject to LAART's DEIR, is **illogical and fallacious.** It stands to reason that a helicopter that becomes entangled in LAART's cables, gondolas, and 13+story support towers and consequently crashes into Union Station, its trains, and patrons, could cause **catastrophic harm** regardless had that aircraft launched from a police facility or a public facility. Simply put, **LAART's proposed location is not safe for the Union Station community** and helicopters from Hooper Memorial Heliport airport. Please note, the *Rules and Regulations of Los Angeles Union Passenger Terminal* (LAUS's former name) has for decades stated: **"General Notice A. Safety is of the first importance in the discharge of duty."**? P744-8

C) Contrary to the promises made to the LAUSHS Board by CEO Stephanie Wiggins, Zelmer, etc. and LAART, **no meeting has ever been organized between them and the LAUSHS Board to discuss the difference of opinions concerning the nature of LAPD's Hooper Memorial Heliport airport and the proposed location for LAART's Union Station Terminal.** In fact, Metro forbade The LAUSHS Board's examination of the only known 3-D scale model of Union Station's location because of, in LAUSHS Board's opinion, a **deliberate subterfuge** that the model is dated and furthermore the sharing of the model with the LAUSHS Board would **unexplainably be a conflict of interest.** This **"shadow play,"** the LAUSHS Board believes was performed by LA Metro and LAART to **obfuscate the issues and delay criticism** of LAART. Finally, in December 2022 Metro provided to the general public an aerial diagram of LAART's Union Station Terminal that would be in the **worst possible viewscape location--the front of Union Station's historic Hispanic-style West Facade!** P744-9

D) In LAUSHS Board's opinion, LAART is designed to compete with Metro's "Dodger Stadium Express," a highly efficient motor coach service that could be environmentally improved if **Metro upgraded to modern, environmentally friendly, "green" electric buses** that it might funded by using a portion of the $20,000,000 in Federal funds ear-marked for the Esplanade-Forecourt-Fountain project. P744-10

E) Additionally, given the seasonal nature of baseball, it is also LAUSHS Board's opinion that **LAART is a "Trojan Horse" scheme** to facilitate year-around, for-profit retail and real estate development on McCourt controlled Dodger Stadium parking lots and in the adjacent community which would then be subject to **"gentrification"** forcing **the expulsion of working "ethnic minority" families** not able to afford dramatically increased rents. P744-11

F) Metro's proposed Esplanade-Forecourt-Fountain project, according to Metro employees--who wish to remain anonymous--will be funded by so-called **"overlap money"** that was **"peeled-off" from Metro's defunct LINK-** P744-12

US project that itself was rejected by the LAUSHS Board's and the public's opposition. Moreover, Metro has stated to LAUSHS's Executive Director, via telephone, that ultimately the Esplanade-Forecourt-Fountain project will come to fruition by a two-step process. First, all public parking including **"disabled parking"** would be **"temporarily"** closed in front of Union Station for construction vehicles without public discussion or participation and Step two—well there really won't be a step two because the parking simply will disappear permanently when the construction vehicles depart. The LAUSHS Board believes **this conspiracy** would be a **violation of the Americans with Disabilities Act (ADA).** (A disabled motorist has already filed a formal complaint to the Federal authorities against Metro's Esplanade-Forecourt-Fountain project.) Not only would this **negatively impact the "disabled"** but also the customers of Metro's tenants the Homebound Restaurant and Brewery, TRAXX restaurant and the numerous social and artistic events that take place in the adjacent former "Ticketing Hall." Furthermore, according to a retired Metro staff person, the Esplanade's water fountain will likely attract "homeless" citizens seeking "showers" contrary to Metro's official policy of not catering to the needs of the "homeless." In LAUSHS Board's opinion, Metro's Esplanade-Forecourt-Fountain project is primarily designed to **cool future LAART and adjacent Olvera Street tourist attraction visitors during the hot baseball season.** (Note: while Olvera Street's right-of-way and some of its structures and art works are historic, the "Olvera Street tourist attraction" per se was invented in 1930 by a real estate development team who went on to develop Los Angeles' "New Chinatown tourist attraction." Ironically, Old Chinatown was demolished in a racist bid to rid Los Angeles of the Chinese who settled there after building the railroad to Los Angeles, then Union Station was built on top of Old Chinatown's rubble.)

cont'd P744-12

G) Building the Esplanade-Forecourt-Fountain project's water-feature while semi-desert Los Angeles is experiencing **its worst drought yet** flies in the face of the State of California's policy to **conserve water now and the foreseeable future.** One only needs to recall the classic Los Angeles-based movie **"Chinatown"** to understand what LAUSHS Board believes is driving LAART and Metro's Esplanade-Forecourt-Fountain schemes**—the insatiable greed of billionaire land developers, Metro bureaucratic careerists and Metro's elected officials seeking evermore political contributions!**

P744-13

H) Finally, the proposed route of Frank McCourt's "Gondola" has it trampling the edges of Los Angeles State Historic Park that was **reserved in perpetuity** for the public's enjoyment of the open landscape and skyscape that once was a hallmark of Los Angeles. Consequently, one is forced to ask what part of **"in perpetuity" does Frank McCourt and Metro not understand?**

P744-14

For the above reasons, but not necessarily only because of them, the Board of Directors of the Los Angeles Union Station Historical Society has joined: The Sierra Club, the UCLA Mobility Lab, the LA Parks Alliance, the Aliso Street Historical Society and local community organizations plus others who **oppose Frank McCourt's "greenwashing" Gondola scheme.**

P744-15

Respectfully submitted,

/s/ Tom Savio

Executive Director, Los Angeles Union Station Historical Society

Subject: Comments for February 8, 2023 LA ART Hearing

Dear Mr. Zelmer,

I intend to provide the following comments this evening during the LA Metro Gondola hearing, however, I am concerned that I will not be called on to speak before the 7pm end time. Thus, I would like to submit the following comments.

Good Evening, I am Sunjana Supekar of Chatten-Brown, Carstens and Minteer and on behalf of The California Endowment we wish to express our strong opposition to this unsolicited private tourist attraction representing itself as public transportation. We oppose this project because the community did not ask for it and does not want it—the community wants real public transportation solutions. P745-1

- The project will not reduce, but actually displace traffic, noise, and pollution from Dodger stadium to already impacted communities in and around Chinatown, disrupting businesses and services and accelerating gentrification. P745-2
- This private Gondola project will require the use of public land, air space and likely, public resources, to be able to operate. P745-3
- Finally, a superior, no emission, public transportation option already exists by using electric buses to expand the already effective free Dodger Express bus to Dodger stadium. P745-4

The Draft EIR presents misleading and incomplete analysis to the detriment of the public who instead of getting information are given an infomercial. We submitted two letters detailing the DEIR's deficiencies, and we urge Metro and its staff to carefully review and consider the points raised in those letters. We are also concerned because the proposed Alameda and Alpine towers are located in an earthquake liquefaction zone. P745-5

We close by highlighting the numerous other public comment letters from groups, individuals, and public agencies expressing concern about the Project- or opposition to it. These groups include: P745-6

Homeboy Industries

Gabrieleno/Tongva San Gabriel Band of Mission Indians.

El Pueblo Park Association

Los Angeles Parks Alliance

California State Park Rangers Association

Natural Resources Defense Council

Sierra Club

Los Angeles Union Station Historical Society

Stop the Gondola, including but not limited to Phyllis Ling

Los Angeles River State Park Partners

Coalition for a Beautiful Los Angeles

State of California/ Natural Resources Agency/ Department of Parks and Recreation *and *the Department of Fish and Wildlife

City of Los Angeles- City Administrative Officer

Los Angeles Conservancy

Land Protection Partners

S&R Partners, LLC, a Riboli Family Company

Trust For Public Land

Latino Outdoors

cont'd
P745-6

The extent and breadth of the opposition to, or concern about, this proposed Project is astounding- and should be heard. There are better solutions for Metro and the City of Los Angeles' actual public transportation needs. We ask that you stop this Gondola Project now.

Best,
Sunjana Supekar

Subject: Public Comment: Los Angeles Aerial Rapid Transit (LA ART) Project DEIR

Deputy Executive Officer Cory Zelmer,

I am writing to voice my opposition to the Los Angeles Aerial Rapid Transit Project ("The Gondola" at Dodger Stadium). P746-1

Not only is the project going to disrupt neighborhoods left and right, but it will also disrupt the environment which is already sickened with high amounts of pollution. Additionally, if the dodger stadiums former owner wants an aerial gondola going from union station to dodger stadium, they can pay for it themselves and pay a lot in permits and licenses to the city. We need free shuttles, better one-way connections to far away areas and more climate-friendly forms of transportation. Not a $300 million gondola. P746-2

Subject: Re: Thank you for your inquiry

Thank you. Then my official public comment is as follows:

My name is Iran Carranza, a native of Los Angeles for over 40 years and finally a homeowner in Boyle Heights as of 2020. My comment is against this proposed project. LA Metro is a public agency beholden to Angelenos and I am formally demanding that you not sell out our valuable public resources to private interests and instead put any available money and resources toward improving existing infrastructure, expanding current public transportation options for better coverage, and making it free like it was during the pandemic. If the goal truly is to get more cars off the street this is a much more effective and simpler solution. A gondola is absurd. It is not going to get Dodger fans out of their cars in the long term. I know because I am a Dodger fan and attended 10+ games last year. Those of us who already figured out how to get to union station to take the free Dodger shuttle are already doing so. It's free. The reality is that those who have not done so, are not going to be prompted to give up driving due to a gondola. Dodger traffic is a temporary problem while the money, time, and scenic resources we angelenos will have to give up for this gondola would be permanent. Those are all objective measurable facts. More subjectively, I believe the gondola would be an eyesore to our skyline. There is no other space like the land of State Historic Park and the free unobstructed space above it.

P747-1

Mr. Cory Zelmer, Deputy Executive Officer
Los Angeles County Metropolitan Transportation Authority
One Gateway Plaza, Mail Stop 99-22-6
Los Angeles, CA 90012

Dear Mr. Zelmer:

Re: LA Aerial Rapid Transit Project: From Dodger Stadium to Union Station through Los Angeles Historic State Park, in Chinatown

We know that the DEIR comment period has closed. However, we want to communicate with you and our new Mayor and Council members representing CD-1 and CD-13, covering immediately-impacted neighborhoods such as Chinatown, Cypress Park, Echo Park, Elysian Heights, Elysian Valley, and Historic Filipinotown, Solano Canyon, and Lincoln Heights, the reasons we oppose this project. We hope you will share this with the Metro Board of Directors. P748-1

We are concerned about the proposed Gondola for a number of reasons:

1. Despite being a neighborhood impacted by the Gondola, our Neighborhood Council was never invited for input, briefed on impact, nor considered in the Draft Environmental Impact Report. P748-2
2. We do not support projects that gentrify our communities and economically displace our neighbors from their homes, due to increases in property taxes from property value hikes as well as non-Los Angeles Rent Stabilization Ordinance protected rents, and inflated costs of living. P748-3
3. We are concerned about the social impacts of development and the high cost to the public to provide infrastructure for private development. P748-4
4. We are concerned that this Gondola and subsequent development projects on private property around Dodger Stadium would generate economic displacement of low income families. P748-5
5. We are concerned that should this Gondola project be approved, the greater public would be priced out of using these Gondola Stations. P748-6
6. Will trips be offered at a reduced fare for seniors and students and local residents? P748-7

7. We are concerned that parking in impacted neighborhoods would balloon, considering the limited parking space that currently exists in Union Station, Chinatown Station, and Lincoln/Cypress Station, and due to an influx of Gondola users who would opt to drive to Union Station to access this service.

P748-8

We have many questions over the true public transportation value provided by this Gondola for city residents.

P748-9

Alternatives: We recommend you consider as a non-driving alternative to the Gondola the construction of sidewalks from Dodger Stadium down Stadium way to Riverside Drive for pedestrians and cyclists. Although this was approved with funding in the Elysian Park Master Plan several years ago, sidewalks still have not been built. Furthermore, we believe that bus lanes which would run through Stadium Way and Academy Road with increased frequency on game days, paired with shuttles that run between bus stops and the stadium's myriad entrances, would encourage Metro usage and drastically decrease automobile traffic.

P748-10

On August 16, 2023, our Neighborhood Council voted to approve sending this letter (6 Yes; 0 No; 4 Abstentions).

P748-11

Sincerely,

Carey McDonald

Carey McDonald, President
Elysian Valley Riverside Neighborhood Council

Subject: Los Angeles Aerial Rapid Transit (ART) Gondola System

Good afternoon,
My name is Amanda and I am with ConstructConnect. I had a few questions about the Los Angeles Aerial Rapid Transit (ART) Gondola System project in California . Specifically, I was hoping to find out:

* When is construction expected to begin?

* What stage of design is this project in?

* Who is the architect?

P749-1

Thanks so much for your help. I look forward to hearing back from you.

STOP THE GONDOLA

March 6, 2023

Ms. Stephanie Wiggins
CEO
Los Angeles County Metropolitan Transportation Authority
One Gateway Plaza
Los Angeles, CA 90012-2952

Dear Ms. Wiggins:

We represent community-based organizations from across Los Angeles focused on protecting the interests of marginalized communities that have keenly felt the impacts of displacement and environmental injustice. This letter expresses our opposition to Frank McCourt's proposed gondola project from Union Station to Dodger Stadium. We have serious concerns it will have a negative impact on the neighborhoods surrounding Chavez Ravine, which include Chinatown, William Mead, Lincoln Heights, Solano and Bishops Canyon, and Echo Park. P750-1

The proposed gondola is neither a public transportation nor clean air project but rather a means to pave the way for Frank McCourt to develop the parking lots at Dodger Stadium. McCourt's attempt to brand this project as environmentally friendly and the solution to alleviate traffic to the ballpark are untrue. It is a tourist attraction that does nothing to further the genuine transportation needs of LA County. P750-2

Employing a Nobel Prize-winning method, The UCLA Mobility Lab conducted a study that indicates only 4,690 people would use the gondola on game days. UCLA estimates 8% of fans would take it to the game and only 2% on the way back. Evidence that the gondola will not reduce traffic but will shift it to Chinatown and the communities that surround the stadium. Shifting traffic to these communities will increase pollution there and increase the health burdens that go along with that pollution. The claims that this is a zero-emissions project are, therefore, grossly exaggerated. P750-3

Frank McCourt's plans to create a Dodger-themed entertainment complex similar to LA Live or the Grove are well documented. In addition, court documents related to bankruptcy proceedings and the original conditional use permit stipulate McCourt must replace parking spots or provide public transportation to the venue before development can move forward. We believe he is using LA Metro as a cloak to piecemeal this project using taxpayer resources and leverage the agency's credibility. P750-4

Not only is this in violation of the State of California's CEQA laws, but it is also a recipe for gentrification on a grand scale. It will push out small business owners and residents who are already struggling with skyrocketing rents. If built, the projects will change these historic neighborhoods forever. P750-5

We also object to the lack of transparency and meaningful public outreach by LA Metro and McCourt's company LA Aerial Rapid Transit (LA ART). Public meetings that don't provide a forum for meaningful feedback, ask community groups to sign non-disclosure agreements, and then design a route that goes 40 feet over a residential zone is not public outreach. It's force-feeding a project to a community through backroom deals. P750-6

As opposition began to mount against the project, Frank McCourt distanced himself from the gondola and announced he "donated" it to Zero Emissions Transit (ZET) a new environmental non-profit organization established by Climate Resolve. Neither organization has experience building or managing transportation projects. This week, Frank McCourt's companies refused to answer press inquiries and instead referred questions to Climate Resolve. This is greenwashing pure and simple. The fact that McCourt brought a non-profit from outside our community to serve as a front for a project that won't reduce emissions or traffic is an insult to a neighborhood that has suffered more than its fair share of injustice. P750-7

By the way, the sole source deal entered into by LA Metro, LA ART and now Climate Resolve does not live up to Metro's own procurement standards. It gives cover to a private project supposedly funded by private dollars (the details of the finance plan have not been revealed). It will be managed by a brand-new organization with no experience or money to complete it. We have to wonder if, ultimately, the taxpayers will be left holding the bag. P750-8

As Metro proceeds through the draft environmental impact report, we implore you to reconsider the folly of moving forward with a project that does nothing to address the real transportation needs of our county and provides no guarantee that taxpayers won't pick up the tab for the advantage of one person. LA ART gondola - scanned signed support cards 2023.pdf
231 MB

Message
Cory,

We are pleased to submit to Metro more than 6,000 cards signed by supporters of the LA ART project. These cards were collected from neighbors and businesses along the proposed alignment as a part of LA ART's outreach to the surrounding community. We are encouraged by the support that this innovative mobility project has received, as it will be an iconic and much-needed addition to LA's transportation network.

P751-1

As a volunteer and worker in Chinatown who works with low income Chinese seniors, I do not support this project. This gondola has been ushered through by Frank McCourt to cater to Dodgers fans and not the actual residents. This entire process has left out the most vulnerable in the community and it will further displace people by raising the cost of living. Just today, I invited tenant seniors in who submitted written comments. One of the interpreters read her comment in Chinese, came up to me, and said her point of prioritizing affordable housing over the gondola was illegitimate. This is grossly inappropriate for him to do. That the land this is built on should be used for public good over private interest is within a resident's right to say. It is the most urgent point in all of this. This project is full of miscontext, from the funding, to the rushed public process.

I am against this gondola project. This is masquerading as a public transit project for the greater good, but it is really a means for a billionaire to use public money to take a step forward achieving a huge development project at Dodger Stadium - all the while costing taxpayers millions of dollars, making traffic worse, and destroying the LAStHP and the surrounding neighborhood. Chinatown residents didn't ask for this and have no practical use for this. There are less expensive actions that can be taken to truly alleviate the traffic issue at a lesser cost. Expand and streamline access for Dodger Stadium Express buses - this requires no permanent damage to the community with intrusive infrastructure or noise/visual blight. Chinatown is not for sale to this billionaire. PH43-1 PH43-2 PH43-3

The Los Angeles Aerial Rapid Transit project is an important opportunity to advance zero emissions transportation to build a healthier and more environmentally responsible Los Angeles. LA ART would be the first permanent rapid transit connection from the region's transportation hub, Union Station, to Dodger Stadium and Elysian Park. This would remove thousands of vehicles from the road, thus reducing congestion and pollution while providing a unique and safe experience for the community. As rising temperatures from human caused greenhouse gasses threaten Los Angeles and civilization as we know it - the time to act is now. PH46-1 PH46-2

Me llamo Irinea y mi comentario es sobre este proyecto. que nos dañaria la forestaria de nuestra zona y seguiria el problema de trafico y se terminaria los parques de diversion de niños esto no nos gustaria en donde hemos vivido por 50 años en el mismo domicilio en Nela.

PH53-1

PH53-2

Translation: My name is Irinea and my comment is about this project, which would damage our area's [illegible]. The traffic issue would persist and the children's playground parks would be over. We would not like this to happen in a place where we have lived for 50 years at the same address.

Very excited about this project!
I hope the elected officials / Metro Board do everything in their power to help this project along. The sooner it's in operation, the better. PH56-1

The project team has already done extensive community engagement and adjusted the scope of the project according to what they heard (e.g. extra station in Chinatown). PH56-2
Now it's time to cheer this project along and get it done!
I wholeheartedly support this project.

Hi, I grew up in Chinatown since I was 2 years old and still live in Chinatown today. As there's been a rise of development and gentrification in Chinatown, I fear this Aerial Rapid Transit will contribute to it and my home won't be the same anymore. I personally don't see myself using it and would love the money and effort go toward more to what the community would use instead such as our public transportation. It also looks like it'll take up a lot of parking in Chinatown where ppl already having trouble finding. It's been a huge barrier to the small businesses in Chinatown. Money and effort could've been put into improving the parking situation instead. At the end of the day, who does it really benefit and who is being harm??

que ya esta Sobrecargado por las Emisiones del Aire

cont'd
PH64-3

Este Proyecto es pura mentira no nos dejemos engañar.
Digamos NO a la Gondola

PH64-4

PH64 Translation:

As a resident of North East Los Angeles, I oppose the Gondola, since it will affect our community, our historical park and Chinatown's community.

It will impact rent increases and evictions, because many of us cannot pay, and it will increase the number of homeless people due to the increases that we will have.

This project would only fill up the pockets of Mr. McCourt, who is the most interested in it. But he does not think about us, the people who will be affected. This gondola will increase air pollution because of vehicle emissions in an area [cont.]

that is already overloaded with air emissions.

This project is all lies, let's not be deceived.

Let's say NO to the Gondola.

Hi my name is Monica Vazquez and I would Love for you to Pass this Project. aside from creating Jobs, it will have a good impact on our community. there will be less Polution, traffic Jams. and its a faster an safer way to the stadium. We all know how the Stadium gets when thres a game. With the Gondola Project it will minimize that problem. PH68-1

I support the building of the LA ART project. as someone who frequently travels to LA to meet family as well as for work, taking cars off the streets to reduce traffic, especially during high traffic periods such as game days etc., is a very appealing prospect. PH69-1

i was born & raised in LA & am a long time community member of chinatown. i, my family, my neighbors and the people of LA do not need the gondola project. dodger stadium itself was an over investment that bulldozed over people's homes & the communities of La Loma, Bishop, and Palo Verde to exist. this project is yet another misuse of the people's collective time, funds, and energy. no one asked for or wants this project. there's already public transportation & shuttles that bring people specifically to dodgers stadium. $125 million dollars for a limited worth & limited use project is an irresponsible use of funds when what we desperately need is better public transportation infrastructure. i & all my elderly & working neighbors should not have to wait one, two hours for the bus to get home, or anywhere. there is no hospital in chinatown because of gentrification. many residents have to go to the use Hospital. the quickest route from chinatown is 28 minutes by bus. 19 of those minutes is walking. people are elderly, disabled, living on $1000/month w/ a limited support network. put $125m. more to eliminating transit fare, faster public transit, station hygiene, to bus shelters & real benches, to affordable & free housing. i've noticed some bus shelters renaced over the years, why did installing hostile architecture to keep unhoused people from laying down get too expensive? LA has seen too many harmful, displacing & gentrifying developments. it's insulting that the people behind LA ART try to mislead people into thinking this is a community good. treat people into thinking this is good for us. we know better than that.

Comments | Comentarios | 意见 | 意見

I am very excited by this project. I have lived in NELA for ~8 years and have attended 10-20 Dodger Games / year during that span. This will make my trips faster, cheaper, and produce less emissions. I will also start eating in Chinatown at local businesses instead of the Taco Bell Drive Thru on the way to the stadium. PH73-1

This project is a huge net positive for Angelenos, including myself, my friends, and my neighbors. Cheaper, faster, and safer. Anyone familiar with gondolas knows that they are quieter, more fun, and pollute less than cars or buses. PH73-2

I am happy that the draft EIR found no significant operating impacts, and that the project will remove thousands of cars per game - that means less pollution (aerial, noise) and safer walking for the nearby residents. PH73-3

Go Dodgers!

Comments | Comentarios | 意见 | 意見

I oppose the Gondola Project that is truly intended to create revenue for a private wealthy developer. It will not improve mobility at all and is not the identified preferred alternative contained in the DEIR. A gondola will ruin the open space aesthetic and not allow for users to relax and escape the urban environment. It's a CEQA violation. PH76-1

It won't benefit the community. The DEIR calls for using/upgrading the rapid bus system. We don't want to see a commercial retail/mall project - an expansion of LA Live. PH76-2 PH76-3 PH76-4 PH76-5

From what I've read and understand LA Arts claims that the Gondola is going greatly decrease traffic in and out of Dodger Stadium as well as reduce air pollution is greatly exaggerated! The Gondola at McCourt's plans to put a shopping Mall at Dodger Stadium will increase traffic 365 days a year! Why not just increase E-buses from Union Station to Dodger Stadium which will be less expensive and more efficient? The Gondola is going negatively impact the LA Historic Park and the neighborhood. It is more of a tourist attraction than anything else to help promote McCourt's proposed new Shopping MALL at Dodger Stadium.

Comments | Comentarios | 意见 | 意見

1) You don't own the sky. You cannot overpass people's property.

2) Security. People fight after every Dodgers game, Remember Brian Stow. What kind of altercations could occur in every gondola.

PH83-1

3) If people are not driving, they are more likely to get more drunk — and became more aggressive. Fighting inside Gondola.

4) So much easier to have more shuttle busses to Stadium

Opposing gondola
I'm a resident near Broadway
proposed gondola junction
there are no benefits for our
community. Basically it is for
MC Conti financial gain only!

Comments | Comentarios | 意见 | 意見

Dislike - placement of gondola, would be better in Playa del Rey. — PH85-1

Dislike - parking analysis - only 2 lots, that may not last at all. They are already occupied — PH85-2

Dislike - Esthetic, ugly, non-complimentary

Dislike - cultural trauma of the proposed location

Dislike - $30 ride ticket — PH85-3

ELYSIAN PARK AS THE OLDEST AND SECOND LARGEST CITY PARK IN LOS ANGELES HAS HISTORICALLY BEEN TARGETED BY DEVELOPERS WHO SEE OPEN PARK SPACE W/ DOLLAR SIGNS IN THEIR EYES. ELYSIAN PARK WAS TARGETED FOR A COVENTION CENTER, A SMALL AIRPORT, AND HOUSING AMONG OTHER THINGS. KEEP GREEN SPACE OPEN. NO GONDOLA. NO TO FRANK McCOURT. NO TO DODGER DEVELOPMENT.

The gondola is a stupid, stupid idea. It's obvious that this is not an EIR, it is an advertisment. Just build some damn stairs and sidewalks. PH87-1

Can there be a guarantee that LA ART wont institute a "fast-pass" system where you won't be able to pay to jump the queue? PH87-2

Can there be a guarantee that LA ART ~~won't institute a system where people~~ give all riders equal service for one flat rate, as in just one standard fare for one type of service (similar to public transit)?

No Gondola! Chinatown for the People.
This will displace more people and is a big waste of space, energy, and money.

How can development into a natural park be good for the environment by disrupting animal migration and their peace, ~~[illegible]~~ destroying our biodiversity that is losing trees and more space.

PH90-1

Displacement is death. City should protect People.

PH90-2

AS A RESIDENT WHO LIVES ON NORTH BROADWAY (IN THE PROJECT AREA) I HAVE CONCERNS ON THE FOLLOWING TOPICS: PH91-1

- AESTHETICS - WILL HAVE A NEGATIVE IMPACT ON THE VIEWSCAPE OF THE AREA PH91-2
- AIR QUALITY - CONSTRUCTION OF THE PROJECT WILL WORSEN THE ALREADY POOR AIR QUALITY BY INCREASING TRUCK/VEHICLE IDLING PH91-3
- BIOLOGICAL - PROJECT WILL IMPACT WILDLIFE THAT USE ADJACENT NATURAL OPEN SPACE, INCLUDING THE L.A. RIVER PH91-4
- CULTURAL - PROJECT WILL DISTURB HISTORIC AND CULTURAL ELEMENTS SUCH AS THE ZANJA MADRE AND NATIVE SITES PH91-5
- NOISE - PROJECT CONSTRUCTION WILL CREATE MORE NOISE IN SURROUNDING NEIGHBORHOODS INCLUDING THE STATE PARK PH91-6
- PARKS - PROJECT WILL IMPACT THE USE OF AND AESTHETICS OF THE LA STATE HISTORIC PARK (WHICH WAS CREATED BY AND FOR THE COMMUNITY) PH91-7

• POPULATION/HOUSING -

THIS PROJECT MAY BE INTENDED TO FACILITATE THE FURTHER DEVELOPMENT OF THE PARKING LOTS AT DODGER STADIUM, WHICH ARE OWNED BY FRANK McCOURT. THIS USE OF PUBLIC FUNDS TO SUPPORT A PRIVATE INTEREST AT THE EXPENSE OF THE LONG TERM SUSTAINABILITY OF THE EXISTING LOCAL COMMUNITY IS UNACCEPTABLE. THE MARKET RATE HOUSING AND COMMERCIAL DEVELOPENT INTENDED FOR THE DODGER STADIUM PARKING LOTS WOULD CERTAINLY LEAD TO THE DISPLACEMENT OF THOUSANDS OF LOCAL RESIDENTS DUE TO INCREASE RENT AND PROPERTY VALUES. IT WOULD EFFECTIVELY BE A REPEAT OF THE CHAVEZ RAVINE TRAGEDY THAT PRECEEDED THE CONSTRUCTION OF THE STADIUM. THAT THE INTENTIONS OF THE DEVELOPERS ARE NOT BEING CONSIDERED IN THIS EIR SHOWS THE DISSHONEST AND MALICIOUS NATURE OF THIS PROCESS AND IT SHOULD BE DISCREDITTED. I DEMAND THAT THE FUTURE USE AND DEVELOPMENT OF THE DODGER STADIUM PARKING LOT PROPERTIES (THE REAL OBJECTIVE OF THE GONDOLA) BE STUDIED AND CHALLENGED IN THIS EIR.

Comments | Comentarios | 意见 | 意見

I am writing this comment to OPPOSE the construction of the Gondola project. I am concerned about the impact on housing affordability in the area and potential displacement of long time residents. This does not appear to be neither an efficient or viable effort to effectively address transportation needs in the area. The parking study does not seem to adequately address the impact increased demand would have on locally residentially zoned areas. Incentivizing businesses to provide parking packages appears like an appeal to further alienate and endanger the longevity of the historic businesses already existing that actually serve the local community. PH92-1 PH92-2 PH92-3

Public land should be used for public good!
The LA State Historic Park & the parcels slated for the proposed towers are all public land. PH93-1
Private interest should not be coming into the neighborhood to profit of PUBS. Chinatown is in an affordability crisis. This is a working poor community that does not need the gondola. PH93-2

I am a former CA State Parks + Recreation Commission. The ~~Park~~ LA State Historic Park was the result of one of the foremost environmental justice campaigns in LA history. The effort to build the park involved an environmental ~~impact~~ impact report that DID NOT cover the construction of a gondola - hence the gondola is a CEQA violation. There were 65 public meetings in advance of construction of the park - none of which involved discussion or mention of the gondola. Again - this is a ~~CEQA~~ violation of CEQA - the state's primary environmental quality law. It would be a travesty if the ~~pro~~ gondola is built over LA State Historic Park

We don't need a Gandola. We don't need more people displaced from their homes & more money spent on projects that displace more people out of their homes when he have so many countless issues that are more pressing & ~~demur~~ that demand our attention & resources. This project would mean more money spent on projects that, quite frankly, the residents of this city do not need. We need more money going into housing, houselessness, education, transportation, & infrastructure - what we don't need is a vanity project for the McCourt family that ~~helps~~ doesn't help anyone other than them & their team. DO NOT SUPPORT & BUILD THIS PROJECT!

I have called Los Angeles my home for 7 years. I am deeply concerned by the LA ART Gondola Project. The problems this gondola will "solve" it does nothing to actually solve them. PH97-1

There has been no community input, it will waste taxpayer $$, and cause more gentrification. We cannot allow billionaires to use LA as their playplace. PH97-2

我们坚决反对在中国城上空修建缆车。缆车在中国城上空经过，对中国城一点好处也没有，而且会在中国城上空有这样的一个公害，百害而无一利。今在中国城无再也没有发展的机会。我是中国城住户，某些人全国建缆车可以讲山顶公园去，不能经过中国城上空。

Huang Li Wei

Metro

Translation: We are strongly opposed to the gondola project over Chinatown. The gondola does not provide any benefits when passing through Chinatown. It’s a common nuisance to Chinatown. It’s all harm but no benefit. It limits Chinatown’s future development. I’m a Chinatown resident. Some people just want to ride the gondola to the mountain park, but it doesn’t need to pass over Chinatown.

THIS PROJECT IS CLEARLY A VANITY PROJECT FOR THE CITY AND A SCHEME BY FRANK McCOURT. ANY SUGGESTION THAT THIS GONDOLA SERVES AS AN EXPANSION OF PUBLIC TRANSIT IS A LIE. THE AREA SERVED BY THIS GONDOLA IS MISSING SIDEWALKS, BIKELANES, & BUS SERVICE IN ANY SUFFICIENT CAPACITY. LA METRO SHOULD INVEST IN ITS PUBLIC INFRASTRUCTURE & ADVOCATE FOR THE PEOPLE OF LA, AGAINST MILLION/BILLIONAIRES LIKE FRANK McCOURT. THIS IS A SHAME. PH110-1

Comments | Comentarios | 意见 | 意見

It is absolute disgrace that this project ever reached this stage. None of the affected communities were ever consulted in any meaningful way. Additionally the developers have failed to provide important information about this vanity project's safety, long-term operation costs, and budget. Additionally, the environmental impacts of this project are terrible. It does not alleviate traffic nor improve quality of life of any residents. There are already transit options in place that are more effective than this ridiculous gondola. This is an exercise of greed and corruption. In no way shape or form is the gondola beneficial for Los Angeles. Do not move forward with this project unless you want a legacy of destruction and violence. PH131-1 PH131-2 PH131-3 PH131-4

I am against the Gondola.
The Gondola will not take cars off of the Road.
It is a waste of taxpayer $$$
The result is gentrification.
I do not support using public resources for private profit.
81 home games - Come on! No way.

This project is a scam that only benefits Frank McCourt. It will not relieve traffic at all around Dodger Stadium. It will increase overall traffic because this gondola isn't just being built for Dodger games. It will be used year-round ~~for~~ for events at the stadium during the off-season, which means that the year-round traffic will increase overall. The communities around the stadium will only suffer as a result. PH141-1 PH141-2

~~Also, why does a gondola~~

This gondola project is NOT for residents, and must NOT be approved. The posters showing "impact" fail to take seriously the actual impacts this project will have on long-time working-class residents — gentrification, displacement, and the accelerated conversion of the area into a playground for tourists and a profit-making machine for Frank McCourt's family. PH143-1

Time & time again we've witnessed how these multi-million dollar redevelopment projects prioritize those finding it ~~there~~ rather than using & investing into the communities that will be directly impacted by this. Something the EIR doesn't account for is how this will impact housing, displacement, and ultimately lead to more gentrification. We need to invest into resources that can be accessed by POC communities. Lets invest into hospitals, schools, better public transportation. A gondola will not improve traffic. ~~and~~ Public land should be used for Public good!! ~~(illegible)~~

My name is Xochitl Manzanilla and I oppose the gondola project, for many reasons. We do not need it. We already have free transportation to Dodgers Stadium. And it will be a big mistake doing it on areas where only low income families live. It will affect terribly all the progoams we have at LASHP like flying kites, Farmers Market, Cibic Bike, Art in the Park, Tai chi class, yoga class, base ball, and all Concerts in the Park. People fought hard so this land will be the beautiful Park that it is today, and it's our beautiful LASHP

After careful considaration, and review of LA Arts claims about the benefits of the gondola, they do not solve the real issue of traffic in Chinatown while also potentially contributing to Chinatown's on-going gentrification. In an ideal world, I see the dream of people using this gondola. However the demand isn't there. People would have to use public transport to get to Union Station, which they don't do and still won't do unless it gets better. I live 2 blocks away. This would be an eyesore. Lastly, it would be concerning to me that a private entity would claim to solve a public transportation issue. ~~They~~ They must make profit at the end of the day, and want to use my neighborhood's airspace to make a buck. Where is the money coming from? The LA Art team would not give me a clear answer, and I was very open to hearing their ideas for a solution. All in all, this seems to just be a means to make $$$ on our community's space under the fake guise of curbing traffic which UCLA Mobility Lab has already debunked.

ESTE PROYECTO NO ES NEUTRAL, PUESTO QUE LAS MINORIAS SON AFECTADAS INCLUYENDO LOS RESIDENTES ADJACENTES CON SU PRIVASIDAD Y MAS MOVIMIENTO EN SU COMUNIDAD. ADEMAS NO ES JUSTO QUE EN NOMBRE DE LOS RESIDENTES, Y LA CIUDAD DE LOS ANGELES SE APROVECHEN DE ESTO PARA SU PROVECHO PARTICULAR. PH149-1

Translation: This project is not neutral, since minorities are affected, including adjacent residents' privacy, and there will be more people moving in the community. Also, it is not fair that people take advantage for their own benefit by claiming that they are acting on behalf of the residents and the City of Los Angeles.

I DO NOT SUPPORT THE LA ART / GONDOLA PROJECT. THERE IS ALREADY SUFFICIENT FORMS OF TRANSPORTATION TO DODGER STADIUM INCLUDING THE GOLDLINE, DODGER BUS, RIDESHARES, AND WALKING. THE LA ART / GONDOLA PROJECT PRIORITIZES THOSE WITH THE MOST POWER AND NEGATIVELY AFFECT THE LOCAL COMMUNITY RESIDENTS. MOREOVER, WE HAVE GREATER NEEDS THAN AN AERIAL TRAM OVER US. PH152-1

I am vehemently opposed to the Gondola Project! I don't want my tax money going to this nightmare. I don't want to lose half the Green space of Angeles National Park! Dodgers Stadium already ruins our lives half the year. Now you want to bring traffic, congestion and taxing to our homes year round! It's an absurd, corrupt project that will destroy the property values of everyone who owns a home here for what? To take a few people up to a baseball game. STOP THE GONDOLA!!

I am opposed to the proposed gondola from Union Station to Dodger Stadium. While traffic around Dodger Stadium before and after games has ~~been~~ always been significant, ~~this~~ building permanent infrastructure is a misguided use of resources and is a myopic non-solution to the problem. I am in favor of expanding the already existing shuttle system that runs the same route. ~~Transportation~~ It's unfortunate that Metro has chosen to work with a private company to build transportation that will have lasting effects on multiple neighborhoods – Downtown, Chinatown, Echo Park – especially given the obvious conflicts of interest ~~with~~ with Frank McCourt, his son, Dodger Stadium, and LA ~~ART~~ ART

Como residente que se preocupa por nuestra comunidad, especialmente por nuestros jovenes me opongo a este proyecto. Anahuak ha luchado por años a favor de espacios recreativos para nuestros niños y nuestras familias.
Sabemos que cada cancha de soccer, cada parque no es suficiente y necesitamos mas para que nuestras jovenes puedan disfrutar del deporte.
El proyecto de la gondola no tiene beneficio de trasporte publico; es una atraccion turistica que solo beneficiara las ambiciones de una sola persona. Frank McCourt.
No desperdicien el dinero de nuestro impuesto, federales en un proyecto que ~~solo~~ no hara nada para mantener nuestro ambiente limpio. Les pido que continuen usando el →

This project will not help w/ traffic, it will not alleviate any of the many issues on the roads in L.A. and will only increase traffic in Chinatown. How is this beneficial to the people of L.A.? It is certainly not beneficial for the environment - people will still drive their cars to the gondola stops and more cars will drive to Union Station. Please do not pretend this is public transit - it is a private development masking itself as a public project to access govt dollars and to get the citizens of LA to foot the bill for Frank McCourt, (or LA ART or Climate Resolve or whatever other shell organization is created). I am an Echo Park / Chinatown resident, and I am very opposed to the Gondola. We need safe, reliable, frequent, and affordable public transportation in our neighborhood, that takes us where we need to go. The gondola is none of that. The gondola will hurt our neighborhoods and will not meet our public transportation needs. I am very impacted by traffic for Dodger Stadium, and the gondola won't make it any better. We need more buses!

From what I saw and gathered from the information being ~~communicated~~ here, it's clear that this project puts minimal effort in the quality of life of the people living in this community. The draft ~~sounds~~ feels badly planned and exists solely to sap resources out of ~~the~~ Angelenos. Where is the inclusivity in the design of this project? All it targets is the money sitting in peoples' wallets. This is a cash grab, plain and simple. Angelenos deserve better than what's being offered here. NO TO LA ART!

I don't believe enough alternative solutions were explored. LA has such a strong car culture that is the primary deterrent to public transportation. I don't think the gondola is a long term solution. It'll be nice once or twice and never used again.
I believe the Dodger organization should be looking into more ways to accomodate their fans. Just like stores have to hire security to manage lines outside of their store. This shouldn't be a city problem.

PH163-1

Electrification of Metro busses and incentivizing use of Dodger Express I think should be tried before committing to such a large project that impacts many. Creating more pick up points for fans. Alternative solutions should be enacted before committing to this

Comments | Comentarios | 意见 | 意見

I'm a local resident and represent my neighbors and family on Eastlake Avenue and we are against the plans for a gondola. Money should go towards the community and not to accomodate the money making dodgers stadium / goers / and beneficiaries PH165-1

LAART IS, IN MY OPINION, A CRIMINAL MAFIA. FRANK MCCOURT PAID HIS LACKIE GARCETTI TO PUSH METRO TO MAKE METRO A DEVIL'S ADVOCATE. GARCETTI GOT MILLIONS FROM MCCOURT IN POLITICAL CONTRIBUTIONS. AND METRO CORY ZELMER IS THEIR DONKEY! I HAVE COPIES OF ALL THE STATE RECORDS! PH170-1

MCCOURT, GARCETTI & ZELMER "THE DEVIL'S HAND MAIDENS"!

HELGA!

Creo que va a ayudar mucho con el trafico en especial a personas como yo que nos dan attaques de panico y podemos estar mucho tiempo en la carretera ni tiempo nos va a dar a sentirnos mal porque solo tardara 7 minutos ojala y yo pueda subirme algun dia y que les ayude a otras personas con ansiedad o attaques de panico a querer usar este transporte yo me subi a uno en Chicago. PH340-1

Translation:
I think it will be very helpful with regards to traffic, especially for people like me, who suffer panic attacks, we could be stuck for long on the road; over there, we won't even have time to feel bad because it will only take 7 minutes, I hope I can ride it one day and that it helps other people that suffer anxiety or panic attacks so they want to ride this means of transportation. I rode one in Chicago.

Yo escuche sobre este Proyecto Hace 10 Años
Ya deberia de estar Construido Despues De Tanto Tiempo, Nos Ayudaria Mucho En Nuestra area Con los parqueaderos Porque se parquean aqui y se van Caminando al estadio.

PH346-1

Translation:
I heard about this project 10 years ago.
It should already be built after so long, it would help a lot to our area in terms of parking spots, because they park here and they walk to the stadium.

Hai varios veneficios que traiga
Veneficiar el trafico menos contaminacion
mas turistas, menos tiempo para llegar
al estadio y de regreso a casa, quita el estres
porque no habria tanto trafico como ahi
ahorita, moderno, efficiente y limpia del estres
del trafficio

PH352-1

PH352-2

Translation:
It would bring many benefits
It would benefit in terms of traffic, less pollution, more tourists, less time to get to the stadium and get back home, it will alleviate stress, because there won't be as much traffic as now; it would be modern, efficient and take stress away from traffic.

Appendix D
Public Resources Code Section 21168.6.9 Notice

PUBLIC RESOURCES CODE SECTION 21168.6.9 NOTICE

THIS ENVIRONMENTAL IMPACT REPORT IS SUBJECT TO SECTION 21168.6.9 OF THE PUBLIC RESOURCES CODE, WHICH PROVIDES, AMONG OTHER THINGS, THAT THE LEAD AGENCY NEED NOT CONSIDER CERTAIN COMMENTS FILED AFTER THE CLOSE OF THE PUBLIC COMMENT PERIOD, IF ANY, FOR THE DRAFT ENVIRONMENTAL IMPACT REPORT. ANY JUDICIAL ACTION CHALLENGING THE CERTIFICATION OR ADOPTION OF THE ENVIRONMENTAL IMPACT REPORT OR THE APPROVAL OF THE PROJECT DESCRIBED IN SECTION 21168.6.9 OF THE PUBLIC RESOURCES CODE IS SUBJECT TO THE PROCEDURES SET FORTH IN THAT SECTION. A COPY OF SECTION 21168.6.9 OF THE PUBLIC RESOURCES CODE IS INCLUDED IN THE APPENDIX TO THIS ENVIRONMENTAL IMPACT REPORT.

Appendix E
Senate Bill 44 and Senate Bill 91
(Public Resources Code Section 21168.6.9)

STATE OF CALIFORNIA
LEGISLATIVE COUNSEL BUREAU
AUTHENTICATED
ELECTRONIC LEGAL MATERIAL

Senate Bill No. 44

CHAPTER 633

An act to add and repeal Section 21168.6.9 of the Public Resources Code, relating to environmental quality.

[Approved by Governor October 7, 2021. Filed with Secretary of State October 7, 2021.]

LEGISLATIVE COUNSEL'S DIGEST

SB 44, Allen. California Environmental Quality Act: streamlined judicial review: environmental leadership transit projects.

The California Environmental Quality Act (CEQA) requires a lead agency, as defined, to prepare, or cause to be prepared, and certify the completion of an environmental impact report (EIR) on a project that it proposes to carry out or approve that may have a significant effect on the environment or to adopt a negative declaration if it finds that the project will not have that effect. CEQA also requires a lead agency to prepare a mitigated negative declaration for a project that may have a significant effect on the environment if revisions in the project would avoid or mitigate that effect and there is no substantial evidence that the project, as revised, would have a significant effect on the environment. CEQA establishes a procedure by which a person may seek judicial review of the decision of the lead agency made pursuant to CEQA.

This bill would, until January 1, 2025, establish specified procedures for the administrative and judicial review of the environmental review and approvals granted for an environmental leadership transit project, as defined, proposed by a public or private entity or its affiliates that is located wholly within the County of Los Angeles or connects to an existing transit project wholly located in that county and that is approved by the lead agency on or before January 1, 2024. The bill would require the project applicant of the environmental leadership transit project to take certain actions in order for those specified procedures to apply to the project. The bill would require the Judicial Council, on or before January 1, 2023, to adopt rules of court establishing procedures requiring actions or proceedings seeking judicial review of the certification of an environmental impact report for an environmental leadership transit project or the granting of any project approval, including any appeals to the court of appeal or the Supreme Court, to be resolved, to the extent feasible, within 365 calendar days of the filing of the certified record of proceedings with the court to an action or proceeding seeking judicial review of the lead agency's action related to an environmental leadership transit project. The bill would require the environmental leadership transit project to meet certain labor requirements. The bill would require the lead agency to prepare the EIR for an

environmental leadership transit project in a specified manner and would require the concurrent preparation of the record of proceedings. The bill would specify that these requirements would only apply to the first 7 environmental leadership transit projects obtaining a certified environmental impact report. Because the bill would impose additional duties on the lead agency, this bill would impose a state-mandated local program.

This bill would make legislative findings and declarations as to the necessity of a special statute for the County of Los Angeles.

The California Constitution requires the state to reimburse local agencies and school districts for certain costs mandated by the state. Statutory provisions establish procedures for making that reimbursement.

This bill would provide that no reimbursement is required by this act for a specified reason.

The people of the State of California do enact as follows:

SECTION 1. The Legislature finds and declares all of the following:

(a) The County of Los Angeles is the site of the 2028 Summer Olympic and Paralympic Games, and various transportation agencies have adopted goals to increase public transit opportunities within the county as soon as possible. It is necessary to ensure these public transit options are as sustainable as possible to assist California in meeting its climate change and air quality goals.

(b) In order for California to promote the rapid development of sustainable public transit options, it is the intent of the Legislature that courts take action to quickly resolve actions or proceedings brought pursuant to the California Environmental Quality Act (CEQA) relating to certain environmental leadership transit projects located wholly within the County of Los Angeles or connected to an existing transit project located wholly within the county.

(c) Any existing backlog of civil cases in the Superior Court of California, County of Los Angeles, will not be unduly impacted by prioritizing the resolution of these CEQA actions for all of the following reasons:

(1) It is the intent of the Legislature that only seven environmental leadership transit projects be subject to expedited resolution pursuant to CEQA.

(2) Similar efforts to improve jobs and the economy through environmental leadership development programs, such as Assembly Bill 900 of the 2011–12 Regular Session (Chapter 354 of the Statutes of 2011), have not been shown to negatively impact or exacerbate any existing backlog of civil cases in the County of Los Angeles.

(3) Pursuant to subdivision (b) of Section 21167.1 of the Public Resources Code, the Superior Court of California, County of Los Angeles, has specifically designated five judges to hear CEQA cases such that these judges will be available to hear, and quickly resolve, CEQA cases, including those related to environmental leadership transit projects.

SEC. 2. Section 21168.6.9 is added to the Public Resources Code, to read:

21168.6.9. (a) For purposes of this section, the following definitions apply:

(1) "Environmental leadership transit project" or "project" means a project to construct a fixed guideway and related fixed facilities that meets all of the following conditions:

(A) The fixed guideway operates at zero emissions.

(B) (i) If the project is more than two miles in length, the project reduces emissions by no less than 400,000 metric tons of greenhouse gases directly in the corridor of the project defined in the applicable environmental document over the useful life of the project, without using offsets.

(ii) If the project is no more than two miles in length, the project reduces emissions by no less than 50,000 metric tons of greenhouse gases directly in the corridor of the project defined in the applicable environmental document over the useful life of the project, without using offsets.

(C) The project reduces no less than 30,000,000 vehicle miles traveled in the corridor of the project defined in the applicable environmental document over the useful life of the project.

(D) The project is consistent with the applicable sustainable communities strategy or alternative planning strategy.

(E) The project is consistent with the applicable regional transportation plan.

(F) The project applicant demonstrates how it has incorporated sustainable infrastructure practices to achieve sustainability, resiliency, and climate change mitigation and adaptation goals in the project, including principles, frameworks, or guidelines as recommended by one or more of the following:

(i) The sustainability, resiliency, and climate change policies and standards of the American Society of Civil Engineers.

(ii) The Envision Rating System of the Institute for Sustainable Infrastructure.

(iii) The Leadership in Energy and Environment Design (LEED) rating system of the United States Green Building Council.

(G) The environmental leadership transit project is located wholly within the County of Los Angeles or connects to an existing transit project wholly located in the County of Los Angeles.

(H) For a project meeting the requirements of subparagraphs (A) to (G), inclusive, for which the environmental review pursuant to this division has commenced before January 1, 2022, the project applicant demonstrates that the record of proceedings is being, or has been, prepared in accordance with subdivision (f).

(2) "Fixed guideway" has the same meaning as defined in Section 5302 of Title 49 of the United States Code.

(3) "Project applicant" means a public or private entity or its affiliates that proposes an environmental leadership transit project, and its successors, heirs, and assignees.

(4) "Project labor agreement" has the same meaning as in paragraph (1) of subdivision (b) of Section 2500 of the Public Contract Code.

(5) "Skilled and trained workforce" has the same meaning as provided in Chapter 2.9 (commencing with Section 2600) of Part 1 of Division 2 of the Public Contract Code.

(b) This section applies to an environmental leadership transit project if the project applicant does all of the following:

(1) The project applicant demonstrates compliance with the requirements of Chapter 12.8 (commencing with Section 42649) and Chapter 12.9 (commencing with Section 42649.8) of Part 3 of Division 30, as applicable.

(2) (A) Except as provided in subparagraph (B), the project applicant has entered into a binding and enforceable agreement that all mitigation measures required under this division shall be conditions of approval of the project, and those conditions will be fully enforceable by the lead agency or another agency designated by the lead agency. In the case of environmental mitigation measures, the project applicant agrees, as an ongoing obligation, that those measures will be monitored and enforced by the lead agency for the life of the obligation.

(B) For a project applicant that is a public agency and is also the lead agency, the public agency conditions the approval of the environmental leadership transit project on, and performs, all mitigation measures required under this division. In the case of environmental mitigation measures, the public agency, as an ongoing obligation, shall monitor those measures for the life of the obligation.

(3) The project applicant agrees to pay the costs of the trial court and the court of appeal in hearing and deciding any case challenging a lead agency's action on an environmental leadership transit project under this division, including payment of the costs for the appointment of a special master if deemed appropriate by the court, in a form and manner specified by the Judicial Council, as provided in the California Rules of Court adopted by the Judicial Council under subdivision (d).

(4) The project applicant agrees to bear the costs of preparing the record of proceedings for the project concurrent with review and consideration of the project under this division, in a form and manner specified by the lead agency for the project.

(c) (1) (A) If the project applicant is a public agency, the project applicant of an environmental leadership transit project shall obtain an enforceable commitment that any bidder, contractor, or other entity undertaking the project will use a skilled and trained workforce to complete the project.

(B) Subparagraph (A) does not apply if either of the following are met:

(i) The project applicant has entered into a project labor agreement that will bind all contractors and subcontractors performing work on the project to use a skilled and trained workforce.

(ii) The bidder, contractor, or other entity has entered into a project labor agreement that will bind all contractors and subcontractors at every tier performing work on the project to use a skilled and trained workforce.

(2) If the project applicant is a private entity, the project applicant of an environmental leadership transit project shall do both of the following:

(A) Certify to the lead agency that either of the following is true:

(i) The entirety of the project is a public work for purposes of Chapter 1 (commencing with Section 1720) of Part 7 of Division 2 of the Labor Code.

(ii) If the project is not in its entirety a public work and the project applicant is not required to pay prevailing wages to all construction workers under Article 2 (commencing with Section 1720) of Chapter 1 of Part 2 of Division 2 of the Labor Code, all construction workers employed on construction of the project will be paid at least the general prevailing rate of per diem wages for the type of work and geographic area, as determined by the Director of Industrial Relations pursuant to Sections 1773 and 1773.9 of the Labor Code, except that apprentices registered in programs approved by the Chief of the Division of Apprenticeship Standards may be paid at least the applicable apprentice prevailing rate. If the project is subject to this clause, then for those portions of the project that are not a public work all of the following shall apply:

(I) The project applicant shall ensure that the prevailing wage requirement is included in all contracts for the performance of all construction work.

(II) All contractors and subcontractors at every tier shall pay to all construction workers employed in the execution of the work at least the general prevailing rate of per diem wages, except that apprentices registered in programs approved by the Chief of the Division of Apprenticeship Standards may be paid at least the applicable apprentice prevailing rate.

(III) Except as provided in subclause (V), all contractors and subcontractors at every tier shall maintain and verify payroll records pursuant to Section 1776 of the Labor Code and make those records available for inspection and copying as provided by that section.

(IV) Except as provided in subclause (V), the obligation of the contractors and subcontractors at every tier to pay prevailing wages may be enforced by the Labor Commissioner through the issuance of a civil wage and penalty assessment pursuant to Section 1741 of the Labor Code, which may be reviewed pursuant to Section 1742 of the Labor Code, within 18 months after the completion of the project, or by an underpaid worker through an administrative complaint or civil action, or by a joint labor-management committee though a civil action under Section 1771.2 of the Labor Code. If a civil wage and penalty assessment is issued, the contractor, subcontractor, and surety on a bond or bonds issued to secure the payment of wages covered by the assessment shall be liable for liquidated damages pursuant to Section 1742.1 of the Labor Code.

(V) Subclauses (III) and (IV) do not apply if all contractors and subcontractors at every tier performing work on the project are subject to a project labor agreement that requires the payment of prevailing wages to all construction workers employed in the execution of the project and provides for enforcement of that obligation through an arbitration procedure.

(VI) Notwithstanding subdivision (c) of Section 1773.1 of the Labor Code, the requirement that employer payments not reduce the obligation to pay the hourly straight time or overtime wages found to be prevailing shall not apply if otherwise provided in a bona fide collective bargaining agreement covering the worker. The requirement to pay at least the general prevailing rate of per diem wages does not preclude use of an alternative workweek schedule adopted pursuant to Section 511 or 514 of the Labor Code.

(B) Certify to the lead agency that a skilled and trained workforce will be used to perform all construction work on the project. All of the following requirements shall apply to the project:

(i) The project applicant shall require in all contracts for the performance of work that every contractor and subcontractor at every tier will individually use a skilled and trained workforce to construct the project.

(ii) Every contractor and subcontractor at every tier shall use a skilled and trained workforce to construct the project.

(iii) (I) Except as provided in subclause (II), the project applicant shall provide to the lead agency, on a monthly basis while the project or contract is being performed, a report demonstrating compliance with Chapter 2.9 (commencing with Section 2600) of Part 1 of Division 2 of the Public Contract Code. A monthly report provided to the lead agency pursuant to this subclause shall be a public record under the California Public Records Act (Chapter 3.5 (commencing with Section 6250) of Division 7 of Title 1) and shall be open to public inspection. A project applicant that fails to provide a monthly report demonstrating compliance with Chapter 2.9 (commencing with Section 2600) of Part 1 of Division 2 of the Public Contract Code shall be subject to a civil penalty of ten thousand dollars ($10,000) per month for each month for which the report has not been provided. Any contractor or subcontractor that fails to use a skilled and trained workforce shall be subject to a civil penalty of two hundred dollars ($200) per calendar day for each worker employed in contravention of the skilled and trained workforce requirement. Penalties may be assessed by the Labor Commissioner within 18 months of completion of the project using the same procedures for issuance of civil wage and penalty assessments pursuant to Section 1741 of the Labor Code, and may be reviewed pursuant to the same procedures in Section 1742 of the Labor Code. Penalties shall be paid to the State Public Works Enforcement Fund.

(II) Subclause (I) shall not apply if all contractors and subcontractors at every tier performing work on the project are subject to a project labor agreement that requires compliance with the skilled and trained workforce requirement and provides for enforcement of that obligation through an arbitration procedure.

(d) On or before January 1, 2023, the Judicial Council shall adopt rules of court that apply to any action or proceeding brought to attack, review, set aside, void, or annul the certification of an environmental impact report for an environmental leadership transit project or the granting of any project approval that require the action or proceeding, including any potential

appeals to the court of appeal or the Supreme Court, to be resolved, to the extent feasible, within 365 calendar days of the filing of the certified record of proceedings with the court.

(e) (1) (A) The draft and final environmental impact report for an environmental leadership transit project shall include a notice in not less than 12-point type stating the following:

THIS ENVIRONMENTAL IMPACT REPORT IS SUBJECT TO SECTION 21168.6.9 OF THE PUBLIC RESOURCES CODE, WHICH PROVIDES, AMONG OTHER THINGS, THAT THE LEAD AGENCY NEED NOT CONSIDER CERTAIN COMMENTS FILED AFTER THE CLOSE OF THE PUBLIC COMMENT PERIOD, IF ANY, FOR THE DRAFT ENVIRONMENTAL IMPACT REPORT. ANY JUDICIAL ACTION CHALLENGING THE CERTIFICATION OR ADOPTION OF THE ENVIRONMENTAL IMPACT REPORT OR THE APPROVAL OF THE PROJECT DESCRIBED IN SECTION 21168.6.9 OF THE PUBLIC RESOURCES CODE IS SUBJECT TO THE PROCEDURES SET FORTH IN THAT SECTION. A COPY OF SECTION 21168.6.9 OF THE PUBLIC RESOURCES CODE IS INCLUDED IN THE APPENDIX TO THIS ENVIRONMENTAL IMPACT REPORT.

(B) For an environmental leadership transit project for which a draft environmental impact report was issued before January 1, 2022, the lead agency shall, before February 1, 2022, or before the public hearing on the certification of the environmental impact report, whichever is earlier, provide the notice specified in subparagraph (A), in writing, to all parties that have requested notification regarding the project. The lead agency shall include that notice and the appendix required pursuant to paragraph (2) in the final environmental impact report for the project.

(C) For an environmental leadership transit project for which a final environmental impact report was issued before January 1, 2022, the lead agency shall, before February 1, 2022, or before the issuance of the notice of determination, whichever is earlier, do both of the following:

(i) Issue an addendum to the final environmental impact report containing the notice specified in subparagraph (A) and the appendix required pursuant to paragraph (2).

(ii) Provide notice, in writing, of the addendum to all parties that have requested notification regarding the project.

(2) The draft environmental impact report and final environmental impact report shall contain, as an appendix, the full text of this section.

(3) Within 10 calendar days after the release of the draft environmental impact report, the lead agency shall conduct an informational workshop to inform the public of the key analyses and conclusions of that document, as applicable.

(4) Within 10 calendar days before the close of the public comment period, the lead agency shall hold a public hearing to receive testimony on the draft environmental impact report. A transcript of the hearing shall be

included as an appendix to the final environmental impact report, as applicable.

(5) (A) Within five calendar days following the close of the public comment period, a commenter on the draft environmental impact report may submit to the lead agency a written request for nonbinding mediation, as applicable. The lead agency shall participate in nonbinding mediation with all commenters who submitted timely comments on the draft environmental impact report and who requested the mediation. Mediation conducted pursuant to this paragraph shall end no later than 35 calendar days after the close of the public comment period.

(B) A request for mediation shall identify all areas of dispute raised in the comment submitted by the commenter that are to be mediated.

(C) The lead agency shall select one or more mediators who shall be retired judges or recognized experts with at least five years' experience in land use and environmental law or science, or mediation. The lead agency shall bear the costs of mediation.

(D) A mediation session shall be conducted on each area of dispute with the parties requesting mediation on that area of dispute.

(E) The lead agency shall adopt, as a condition of approval, any measures agreed upon by the lead agency and any commenter who requested mediation. A commenter who agrees to a measure pursuant to this subparagraph shall not raise the issue addressed by that measure as a basis for an action or proceeding challenging the lead agency's decision to certify the environmental impact report or to grant project approval.

(6) The lead agency need not consider written comments on the draft environmental impact report submitted after the close of the public comment period, unless those comments address any of the following:

(A) New issues raised in the response to comments by the lead agency.

(B) New information released by the lead agency subsequent to the release of the draft environmental impact report, such as new information set forth or embodied in a staff report, proposed permit, proposed resolution, ordinance, or similar documents.

(C) Changes made to the project after the close of the public comment period.

(D) Proposed conditions for approval, mitigation measures, or proposed findings required by Section 21081 or a proposed reporting or monitoring program required by paragraph (1) of subdivision (a) of Section 21081.6, if the lead agency releases those documents subsequent to the release of the draft environmental impact report.

(E) New information that was not reasonably known and could not have been reasonably known during the public comment period.

(7) The lead agency shall file the notice required by subdivision (a) of Section 21152 within five calendar days after the last initial project approval.

(f) (1) The lead agency shall prepare and certify the record of proceedings in accordance with this subdivision and in accordance with Rule 3.1365 of the California Rules of Court.

(2) No later than three business days following the date of the release of the draft environmental impact report, the lead agency shall make available to the public in a readily accessible electronic format the draft environmental impact report and all other documents relied on by the lead agency in the preparation of the draft environmental impact report. A document prepared by the lead agency after the date of the release of the draft environmental impact report that is a part of the record of proceedings shall be made available to the public in a readily accessible electronic format within five business days after the document is prepared by the lead agency.

(3) Notwithstanding paragraph (2), documents relied on by the lead agency that were not prepared specifically for the project and are copyright protected are not required to be made readily accessible in an electronic format. For those copyright protected documents, the lead agency shall make an index of the documents available in an electronic format no later than the date of the release of the draft environmental impact report, or within five business days if the document is received or relied on by the lead agency after the release of the draft environmental impact report. The index shall specify the libraries or lead agency offices in which hardcopies of the copyrighted materials are available for public review.

(4) The lead agency shall encourage written comments on the project to be submitted in a readily accessible electronic format, and shall make any such comments available to the public in a readily accessible electronic format within five calendar days of their receipt.

(5) Within seven business days after the receipt of any comment that is not in an electronic format, the lead agency shall convert that comment into a readily accessible electronic format and make it available to the public in that format.

(6) The lead agency shall indicate in the record of proceedings comments received that were not considered by the lead agency pursuant to paragraph (6) of subdivision (e) and need not include the content of the comments as a part of the record of proceedings.

(7) Within five calendar days after the filing of the notice required by subdivision (a) of Section 21152, the lead agency shall certify the record of proceedings for the approval or determination and shall provide an electronic copy of the record of proceedings to a party that has submitted a written request for a copy. The lead agency may charge and collect a reasonable fee from a party requesting a copy of the record of proceedings for the electronic copy, which shall not exceed the reasonable cost of reproducing that copy.

(8) Within 10 calendar days after being served with a complaint or a petition for a writ of mandate, the lead agency shall lodge a copy of the certified record of proceedings with the superior court.

(9) Any dispute over the content of the record of proceedings shall be resolved by the superior court. Unless the superior court directs otherwise, a party disputing the content of the record of proceedings shall file a motion to augment the record of proceedings at the time it files its initial brief.

(10) The contents of the record of proceedings shall be as set forth in subdivision (e) of Section 21167.6.

(g) This section applies only to an environmental leadership transit project that is approved by the lead agency on or before January 1, 2024.

(h) This section shall only apply to the first seven projects obtaining a certified environmental impact report and meeting the requirements of this section.

(i) This section shall remain in effect only until January 1, 2025, and as of that date is repealed.

SEC. 3. The Legislature finds and declares that a special statute is necessary and that a general statute cannot be made applicable within the meaning of Section 16 of Article IV of the California Constitution because of the unique circumstances existing in the County of Los Angeles, as described in Section 1 of this act.

SEC. 4. No reimbursement is required by this act pursuant to Section 6 of Article XIII B of the California Constitution because a local agency or school district has the authority to levy service charges, fees, or assessments sufficient to pay for the program or level of service mandated by this act, within the meaning of Section 17556 of the Government Code.

O

Senate Bill No. 91

CHAPTER 732

An act to amend Sections 21080.50 and 21168.6.9 of the Public Resources Code, relating to environmental quality.

[Approved by Governor October 10, 2023. Filed with Secretary of State October 10, 2023.]

LEGISLATIVE COUNSEL'S DIGEST

SB 91, Umberg. California Environmental Quality Act: supportive and transitional housing: motel conversion: environmental leadership transit projects.

The California Environmental Quality Act (CEQA) requires a lead agency, as defined, to prepare, or cause to be prepared, and certify the completion of an environmental impact report (EIR) on a project that it proposes to carry out or approve that may have a significant effect on the environment or to adopt a negative declaration if it finds that the project will not have that effect. CEQA also requires a lead agency to prepare a mitigated negative declaration for a project that may have a significant effect on the environment if revisions in the project would avoid or mitigate that effect and there is no substantial evidence that the project, as revised, would have a significant effect on the environment.

Existing law, until January 1, 2025, exempts from CEQA projects related to the conversion of a structure with a certificate of occupancy as a motel, hotel, residential hotel, or hostel to supportive or transitional housing, as defined, that meet certain conditions.

This bill would extend indefinitely the above exemption.

Existing law, until January 1, 2025, establishes specified procedures for the preparation of the EIR for, and judicial review of the certification of the EIR and approvals granted for, an environmental leadership transit project, as defined, proposed by a public or private entity or its affiliates that is located wholly within the County of Los Angeles or connects to an existing transit project wholly located in that county and that is approved by the lead agency on or before January 1, 2024.

This bill would, extend the application of those procedures for environmental leadership transit projects to January 1, 2026, for projects approved on or before January 1, 2025.

Because the bill would extend the duties of lead agencies to determine the applicability of the above exemption and to comply with specific procedures for the preparation of the EIR for environmental leadership transit projects, this bill would impose a state-mandated local program.

The California Constitution requires the state to reimburse local agencies and school districts for certain costs mandated by the state. Statutory provisions establish procedures for making that reimbursement.

This bill would provide that no reimbursement is required by this act for a specified reason.

The people of the State of California do enact as follows:

SECTION 1. Section 21080.50 of the Public Resources Code is amended to read:

21080.50. (a) For purposes of this section, the following definitions apply:

(1) "Interim motel housing project" or "project" means the conversion of a structure with a certificate of occupancy as a motel, hotel, residential hotel, or hostel to supportive or transitional housing, and the conversion meets one or both of the following conditions:

(A) It does not result in the expansion of more than 10 percent of the floor area of any individual living unit in the structure.

(B) It does not result in any significant effects relating to traffic, noise, air quality, or water quality.

(2) "Residential hotel" has the same meaning as defined in Section 50519 of the Health and Safety Code.

(3) "Supportive housing" means housing linked to onsite or offsite supportive services and with no limit on length of stay for persons with low incomes who have one or more disabilities and may include, among other populations, adults, emancipated minors, families with children, elderly persons, young adults aging out of the foster care system, individuals exiting from institutional settings, veterans, and homeless people.

(4) "Supportive services" means services that are provided on a voluntary basis to residents of supportive or transitional housing, including, but not limited to, a combination of subsidized and permanent housing services, intensive case management, medical and mental health care, substance abuse treatment, employment services, benefits advocacy, and other services or service referrals necessary to obtain and maintain housing.

(5) "Transitional housing" means temporary housing linked to supportive services that is offered, usually for a period of up to 24 months, to facilitate movement to permanent housing for persons with low incomes who may have one or more disabilities, and may include, among other populations, adults, emancipated minors, families with children, elderly persons, young adults aging out of the foster care system, individuals exiting from institutional settings, veterans, and homeless people.

(b) This division does not apply to an interim motel housing project.

(c) A lead agency that determines an interim motel housing project is exempt pursuant to this section shall file a notice of exemption in accordance with subdivision (b) of Section 21152 with the Office of Planning and Research.

SEC. 2. Section 21168.6.9 of the Public Resources Code is amended to read:

21168.6.9. (a) For purposes of this section, the following definitions apply:

(1) "Environmental leadership transit project" or "project" means a project to construct a fixed guideway and related fixed facilities that meets all of the following conditions:

(A) The fixed guideway operates at zero emissions.

(B) (i) If the project is more than two miles in length, the project reduces emissions by no less than 400,000 metric tons of greenhouse gases directly in the corridor of the project defined in the applicable environmental document over the useful life of the project, without using offsets.

(ii) If the project is no more than two miles in length, the project reduces emissions by no less than 50,000 metric tons of greenhouse gases directly in the corridor of the project defined in the applicable environmental document over the useful life of the project, without using offsets.

(C) The project reduces no less than 30,000,000 vehicle miles traveled in the corridor of the project defined in the applicable environmental document over the useful life of the project.

(D) The project is consistent with the applicable sustainable communities strategy or alternative planning strategy.

(E) The project is consistent with the applicable regional transportation plan.

(F) The project applicant demonstrates how it has incorporated sustainable infrastructure practices to achieve sustainability, resiliency, and climate change mitigation and adaptation goals in the project, including principles, frameworks, or guidelines as recommended by one or more of the following:

(i) The sustainability, resiliency, and climate change policies and standards of the American Society of Civil Engineers.

(ii) The Envision Rating System of the Institute for Sustainable Infrastructure.

(iii) The Leadership in Energy and Environment Design (LEED) rating system of the United States Green Building Council.

(G) The environmental leadership transit project is located wholly within the County of Los Angeles or connects to an existing transit project wholly located in the County of Los Angeles.

(H) For a project meeting the requirements of subparagraphs (A) to (G), inclusive, for which the environmental review pursuant to this division has commenced before January 1, 2022, the project applicant demonstrates that the record of proceedings is being, or has been, prepared in accordance with subdivision (f).

(2) "Fixed guideway" has the same meaning as defined in Section 5302 of Title 49 of the United States Code.

(3) "Project applicant" means a public or private entity or its affiliates that proposes an environmental leadership transit project, and its successors, heirs, and assignees.

(4) "Project labor agreement" has the same meaning as in paragraph (1) of subdivision (b) of Section 2500 of the Public Contract Code.

(5) "Skilled and trained workforce" has the same meaning as provided in Chapter 2.9 (commencing with Section 2600) of Part 1 of Division 2 of the Public Contract Code.

(b) This section applies to an environmental leadership transit project if the project applicant does all of the following:

(1) The project applicant demonstrates compliance with the requirements of Chapter 12.8 (commencing with Section 42649) and Chapter 12.9 (commencing with Section 42649.8) of Part 3 of Division 30, as applicable.

(2) (A) Except as provided in subparagraph (B), the project applicant has entered into a binding and enforceable agreement that all mitigation measures required under this division shall be conditions of approval of the project, and those conditions will be fully enforceable by the lead agency or another agency designated by the lead agency. In the case of environmental mitigation measures, the project applicant agrees, as an ongoing obligation, that those measures will be monitored and enforced by the lead agency for the life of the obligation.

(B) For a project applicant that is a public agency and is also the lead agency, the public agency conditions the approval of the environmental leadership transit project on, and performs, all mitigation measures required under this division. In the case of environmental mitigation measures, the public agency, as an ongoing obligation, shall monitor those measures for the life of the obligation.

(3) The project applicant agrees to pay the costs of the trial court and the court of appeal in hearing and deciding any case challenging a lead agency's action on an environmental leadership transit project under this division, including payment of the costs for the appointment of a special master if deemed appropriate by the court, in a form and manner specified by the Judicial Council, as provided in the California Rules of Court adopted by the Judicial Council under subdivision (d).

(4) The project applicant agrees to bear the costs of preparing the record of proceedings for the project concurrent with review and consideration of the project under this division, in a form and manner specified by the lead agency for the project.

(c) (1) (A) If the project applicant is a public agency, the project applicant of an environmental leadership transit project shall obtain an enforceable commitment that any bidder, contractor, or other entity undertaking the project will use a skilled and trained workforce to complete the project.

(B) Subparagraph (A) does not apply if either of the following are met:

(i) The project applicant has entered into a project labor agreement that will bind all contractors and subcontractors performing work on the project to use a skilled and trained workforce.

(ii) The bidder, contractor, or other entity has entered into a project labor agreement that will bind all contractors and subcontractors at every tier performing work on the project to use a skilled and trained workforce.

(2) If the project applicant is a private entity, the project applicant of an environmental leadership transit project shall do both of the following:

(A) Certify to the lead agency that either of the following is true:

(i) The entirety of the project is a public work for purposes of Chapter 1 (commencing with Section 1720) of Part 7 of Division 2 of the Labor Code.

(ii) If the project is not in its entirety a public work and the project applicant is not required to pay prevailing wages to all construction workers under Article 2 (commencing with Section 1770) of Chapter 1 of Part 2 of Division 2 of the Labor Code, all construction workers employed on construction of the project will be paid at least the general prevailing rate of per diem wages for the type of work and geographic area, as determined by the Director of Industrial Relations pursuant to Sections 1773 and 1773.9 of the Labor Code, except that apprentices registered in programs approved by the Chief of the Division of Apprenticeship Standards may be paid at least the applicable apprentice prevailing rate. If the project is subject to this clause, then for those portions of the project that are not a public work all of the following shall apply:

(I) The project applicant shall ensure that the prevailing wage requirement is included in all contracts for the performance of all construction work.

(II) All contractors and subcontractors at every tier shall pay to all construction workers employed in the execution of the work at least the general prevailing rate of per diem wages, except that apprentices registered in programs approved by the Chief of the Division of Apprenticeship Standards may be paid at least the applicable apprentice prevailing rate.

(III) Except as provided in subclause (V), all contractors and subcontractors at every tier shall maintain and verify payroll records pursuant to Section 1776 of the Labor Code and make those records available for inspection and copying as provided by that section.

(IV) Except as provided in subclause (V), the obligation of the contractors and subcontractors at every tier to pay prevailing wages may be enforced by the Labor Commissioner through the issuance of a civil wage and penalty assessment pursuant to Section 1741 of the Labor Code, which may be reviewed pursuant to Section 1742 of the Labor Code, within 18 months after the completion of the project, or by an underpaid worker through an administrative complaint or civil action, or by a joint labor-management committee through a civil action under Section 1771.2 of the Labor Code. If a civil wage and penalty assessment is issued, the contractor, subcontractor, and surety on a bond or bonds issued to secure the payment of wages covered by the assessment shall be liable for liquidated damages pursuant to Section 1742.1 of the Labor Code.

(V) Subclauses (III) and (IV) do not apply if all contractors and subcontractors at every tier performing work on the project are subject to a project labor agreement that requires the payment of prevailing wages to all construction workers employed in the execution of the project and provides for enforcement of that obligation through an arbitration procedure.

(VI) Notwithstanding subdivision (c) of Section 1773.1 of the Labor Code, the requirement that employer payments not reduce the obligation to pay the hourly straight time or overtime wages found to be prevailing shall not apply if otherwise provided in a bona fide collective bargaining agreement covering the worker. The requirement to pay at least the general prevailing rate of per diem wages does not preclude use of an alternative workweek schedule adopted pursuant to Section 511 or 514 of the Labor Code.

(B) Certify to the lead agency that a skilled and trained workforce will be used to perform all construction work on the project. All of the following requirements shall apply to the project:

(i) The project applicant shall require in all contracts for the performance of work that every contractor and subcontractor at every tier will individually use a skilled and trained workforce to construct the project.

(ii) Every contractor and subcontractor at every tier shall use a skilled and trained workforce to construct the project.

(iii) (I) Except as provided in subclause (II), the project applicant shall provide to the lead agency, on a monthly basis while the project or contract is being performed, a report demonstrating compliance with Chapter 2.9 (commencing with Section 2600) of Part 1 of Division 2 of the Public Contract Code. A monthly report provided to the lead agency pursuant to this subclause shall be a public record under the California Public Records Act (Division 10 (commencing with Section 7920.000) of Title 1 of the Government Code) and shall be open to public inspection. A project applicant that fails to provide a monthly report demonstrating compliance with Chapter 2.9 (commencing with Section 2600) of Part 1 of Division 2 of the Public Contract Code shall be subject to a civil penalty of ten thousand dollars ($10,000) per month for each month for which the report has not been provided. Any contractor or subcontractor that fails to use a skilled and trained workforce shall be subject to a civil penalty of two hundred dollars ($200) per calendar day for each worker employed in contravention of the skilled and trained workforce requirement. Penalties may be assessed by the Labor Commissioner within 18 months of completion of the project using the same procedures for issuance of civil wage and penalty assessments pursuant to Section 1741 of the Labor Code, and may be reviewed pursuant to the same procedures in Section 1742 of the Labor Code. Penalties shall be paid to the State Public Works Enforcement Fund.

(II) Subclause (I) shall not apply if all contractors and subcontractors at every tier performing work on the project are subject to a project labor agreement that requires compliance with the skilled and trained workforce requirement and provides for enforcement of that obligation through an arbitration procedure.

(d) On or before January 1, 2023, the Judicial Council shall adopt rules of court that apply to any action or proceeding brought to attack, review, set aside, void, or annul the certification of an environmental impact report for an environmental leadership transit project or the granting of any project approval that require the action or proceeding, including any potential

appeals to the court of appeal or the Supreme Court, to be resolved, to the extent feasible, within 365 calendar days of the filing of the certified record of proceedings with the court.

(e) (1) (A) The draft and final environmental impact report for an environmental leadership transit project shall include a notice in not less than 12-point type stating the following:

THIS ENVIRONMENTAL IMPACT REPORT IS SUBJECT TO SECTION 21168.6.9 OF THE PUBLIC RESOURCES CODE, WHICH PROVIDES, AMONG OTHER THINGS, THAT THE LEAD AGENCY NEED NOT CONSIDER CERTAIN COMMENTS FILED AFTER THE CLOSE OF THE PUBLIC COMMENT PERIOD, IF ANY, FOR THE DRAFT ENVIRONMENTAL IMPACT REPORT. ANY JUDICIAL ACTION CHALLENGING THE CERTIFICATION OR ADOPTION OF THE ENVIRONMENTAL IMPACT REPORT OR THE APPROVAL OF THE PROJECT DESCRIBED IN SECTION 21168.6.9 OF THE PUBLIC RESOURCES CODE IS SUBJECT TO THE PROCEDURES SET FORTH IN THAT SECTION. A COPY OF SECTION 21168.6.9 OF THE PUBLIC RESOURCES CODE IS INCLUDED IN THE APPENDIX TO THIS ENVIRONMENTAL IMPACT REPORT.

(B) For an environmental leadership transit project for which a draft environmental impact report was issued before January 1, 2022, the lead agency shall, before February 1, 2022, or before the public hearing on the certification of the environmental impact report, whichever is earlier, provide the notice specified in subparagraph (A), in writing, to all parties that have requested notification regarding the project. The lead agency shall include that notice and the appendix required pursuant to paragraph (2) in the final environmental impact report for the project.

(C) For an environmental leadership transit project for which a final environmental impact report was issued before January 1, 2022, the lead agency shall, before February 1, 2022, or before the issuance of the notice of determination, whichever is earlier, do both of the following:

(i) Issue an addendum to the final environmental impact report containing the notice specified in subparagraph (A) and the appendix required pursuant to paragraph (2).

(ii) Provide notice, in writing, of the addendum to all parties that have requested notification regarding the project.

(2) The draft environmental impact report and final environmental impact report shall contain, as an appendix, the full text of this section.

(3) Within 10 calendar days after the release of the draft environmental impact report, the lead agency shall conduct an informational workshop to inform the public of the key analyses and conclusions of that document, as applicable.

(4) Within 10 calendar days before the close of the public comment period, the lead agency shall hold a public hearing to receive testimony on the draft environmental impact report. A transcript of the hearing shall be

included as an appendix to the final environmental impact report, as applicable.

(5) (A) Within five calendar days following the close of the public comment period, a commenter on the draft environmental impact report may submit to the lead agency a written request for nonbinding mediation, as applicable. The lead agency shall participate in nonbinding mediation with all commenters who submitted timely comments on the draft environmental impact report and who requested the mediation. Mediation conducted pursuant to this paragraph shall end no later than 35 calendar days after the close of the public comment period.

(B) A request for mediation shall identify all areas of dispute raised in the comment submitted by the commenter that are to be mediated.

(C) The lead agency shall select one or more mediators who shall be retired judges or recognized experts with at least five years' experience in land use and environmental law or science, or mediation. The lead agency shall bear the costs of mediation.

(D) A mediation session shall be conducted on each area of dispute with the parties requesting mediation on that area of dispute.

(E) The lead agency shall adopt, as a condition of approval, any measures agreed upon by the lead agency and any commenter who requested mediation. A commenter who agrees to a measure pursuant to this subparagraph shall not raise the issue addressed by that measure as a basis for an action or proceeding challenging the lead agency's decision to certify the environmental impact report or to grant project approval.

(6) The lead agency need not consider written comments on the draft environmental impact report submitted after the close of the public comment period, unless those comments address any of the following:

(A) New issues raised in the response to comments by the lead agency.

(B) New information released by the lead agency subsequent to the release of the draft environmental impact report, such as new information set forth or embodied in a staff report, proposed permit, proposed resolution, ordinance, or similar documents.

(C) Changes made to the project after the close of the public comment period.

(D) Proposed conditions for approval, mitigation measures, or proposed findings required by Section 21081 or a proposed reporting or monitoring program required by paragraph (1) of subdivision (a) of Section 21081.6, if the lead agency releases those documents subsequent to the release of the draft environmental impact report.

(E) New information that was not reasonably known and could not have been reasonably known during the public comment period.

(7) The lead agency shall file the notice required by subdivision (a) of Section 21152 within five calendar days after the last initial project approval.

(f) (1) The lead agency shall prepare and certify the record of proceedings in accordance with this subdivision and in accordance with Rule 3.2205 of the California Rules of Court.

(2) No later than three business days following the date of the release of the draft environmental impact report, the lead agency shall make available to the public in a readily accessible electronic format the draft environmental impact report and all other documents relied on by the lead agency in the preparation of the draft environmental impact report. A document prepared by the lead agency after the date of the release of the draft environmental impact report that is a part of the record of proceedings shall be made available to the public in a readily accessible electronic format within five business days after the document is prepared by the lead agency.

(3) Notwithstanding paragraph (2), documents relied on by the lead agency that were not prepared specifically for the project and are copyright protected are not required to be made readily accessible in an electronic format. For those copyright protected documents, the lead agency shall make an index of the documents available in an electronic format no later than the date of the release of the draft environmental impact report, or within five business days if the document is received or relied on by the lead agency after the release of the draft environmental impact report. The index shall specify the libraries or lead agency offices in which hardcopies of the copyrighted materials are available for public review.

(4) The lead agency shall encourage written comments on the project to be submitted in a readily accessible electronic format, and shall make any such comments available to the public in a readily accessible electronic format within five calendar days of their receipt.

(5) Within seven business days after the receipt of any comment that is not in an electronic format, the lead agency shall convert that comment into a readily accessible electronic format and make it available to the public in that format.

(6) The lead agency shall indicate in the record of proceedings comments received that were not considered by the lead agency pursuant to paragraph (6) of subdivision (e) and need not include the content of the comments as a part of the record of proceedings.

(7) Within five calendar days after the filing of the notice required by subdivision (a) of Section 21152, the lead agency shall certify the record of proceedings for the approval or determination and shall provide an electronic copy of the record of proceedings to a party that has submitted a written request for a copy. The lead agency may charge and collect a reasonable fee from a party requesting a copy of the record of proceedings for the electronic copy, which shall not exceed the reasonable cost of reproducing that copy.

(8) Within 10 calendar days after being served with a complaint or a petition for a writ of mandate, the lead agency shall lodge a copy of the certified record of proceedings with the superior court.

(9) Any dispute over the content of the record of proceedings shall be resolved by the superior court. Unless the superior court directs otherwise, a party disputing the content of the record of proceedings shall file a motion to augment the record of proceedings at the time it files its initial brief.

(10) The contents of the record of proceedings shall be as set forth in subdivision (e) of Section 21167.6.

(g) This section applies only to an environmental leadership transit project that is approved by the lead agency on or before January 1, 2025.

(h) This section shall only apply to the first seven projects obtaining a certified environmental impact report and meeting the requirements of this section.

(i) This section shall remain in effect only until January 1, 2026, and as of that date is repealed.

SEC. 3. No reimbursement is required by this act pursuant to Section 6 of Article XIII B of the California Constitution because a local agency or school district has the authority to levy service charges, fees, or assessments sufficient to pay for the program or level of service mandated by this act, within the meaning of Section 17556 of the Government Code.

Memo on Structural Engineering

NABIH YOUSSEF ASSOCIATES
STRUCTURAL ENGINEERS

Date	Wednesday, May 17, 2023
To	Kim Avila, AICP ENV SP
Address	Kimley-Horn 660 S. Figueroa Street Los Angeles, CA 90017
From	Ryan Wilkerson, Principal
Re	LA ART: Structural Design

Nabih Youssef & Associates, Structural Engineers (NYA) is an internationally recognized structural engineering firm providing specialized structural and earthquake engineering consulting for new and existing buildings. NYA has advised on the proposed Project since 2018.

The structural design of the proposed Project's stations, junction, and towers would meet the rigorous safety standards of applicable standards, requirements, and building codes, including all mandated standards addressing environmental factors such as wind and seismic effects and gravity forces, including all impacts from the height and tilt of the structures, to ensure structural integrity and safety.

Further, advanced computer analysis modeling has been used in developing the structural concepts, and will be further employed along with advanced site-specific ground motions earthquake simulations to verify that the safety standards are met. Additionally, state-of-practice knowledge from similar infrastructure construction standards will be utilized to enhance the safety standards of the design similar to bridges, overpasses, elevated rail lines, and high-rise construction for critical infrastructure structural performance.

The structural feasibility of the system, including the cantilevered height of the stations, junction, and towers, is not limited by whether the rigorous safety standard for the design can be achieved; rather, the feasibility to accommodate the sizes of the structures required to meet the high safety standards.

1 INTRODUCTION

LA Aerial Rapid Transit Technologies LLC (the Project Sponsor) is proposing the Los Angeles Aerial Rapid Transit Project (proposed Project), which would connect Los Angeles Union Station (LAUS) to the Dodger Stadium property via an aerial gondola system. The Los Angeles County Metropolitan Transportation Authority (Metro) was the "lead agency" in the preparation of a Draft Environmental Impact Report (EIR) (AECOM 2022a) for the proposed Project in accordance with the California Environmental Quality Act (CEQA). The purpose of the Draft EIR was to evaluate the potential environmental effects that would result from development of the proposed Project. Metro released the Draft EIR for the proposed Project on October 17, 2022, initiating a 90-day public comment period that ended January 17, 2023.

This technical memorandum addresses select comments received during the public comment period for the Draft EIR related to Biological Resources. Comments that pertain generally to the following topic areas are addressed herein:

- Adequacy of Surveys
- Operational Impacts
- Tree Removal
- Impacts to Species not Considered
- Pigeon Roost Inducement

These topics are addressed in Sections 2 through 6 of this memorandum, respectively. Each section lists the relevant comments, provides a synopsis of the primary topics addressed in the comments, and provides a technical response to each of the main points. The Biological Resources section of the Draft EIR (Section 3.4) was prepared based, in part, on information compiled in the Biological Resources Assessment (BRA, AECOM 2022b, Appendix E of the Draft EIR). The BRA evaluated the presence or absence of sensitive species and habitats and assessed the potential project impacts on those resources. Herein, relevant information already presented in these two documents is cited, where applicable.

2 ADEQUACY OF SURVEYS

Comments were received that pertained to the adequacy of surveys used in the Draft EIR biological assessment, including the following:

- P708-2 and P708-3 (Land Protection Partners)
- G014-133 and G014-142 (LA Parks Alliance)

The main points raised by one or more comments fall under one of the following categories: the survey effort in the Biological Survey Area (BSA) was insufficient; the size of the BSA was inadequate; and specialized survey techniques should be used.

2.1 TECHNICAL RESPONSE TO COMMENTS

2.1.1 Survey Effort in the BSA

All wildlife detected during the two initial surveys (April 1, 2020, and April 24, 2021) were noted in the Biological Resource Assessment (BRA)/Draft EIR. The surveys monitored for all wildlife, including any sensitive species. If any sensitive species (e.g., Least Bell's Vireo, burrowing owl) or suitable habitat for sensitive species had been detected, this information would have been included in the BRA and Draft EIR. It is important to note that although the Draft EIR (AECOM 2022a) lists the species detected during the surveys, and states that these are common species, it does not conclude that the observed species are the only ones assumed to *use* the BSA, nor that sensitive species never *occur* in the BSA. Although additional surveys could increase the number of species detected, even exhaustive surveys may not result in detections of sensitive species that occur on site only occasionally. Nonetheless, a third field survey was performed March 23, 2023 to provide an updated habitat assessment for sensitive species (see Section 5) and supplementary wildlife survey effort. During this visit, two biologists surveyed the BSA over a 4.5-hour period (11:00 AM to 3:30 PM) and observed 17 bird species and 2 mammal species (species list provided in Appendix A). This survey effort is discussed in greater detail in Section 5.

In addition to the field surveys, as part of the preparation of the BRA/Draft EIR, an assessment of habitat suitability and a California Natural Diversity Database (CNDDB) records search were conducted to identify records of sensitive species in the USGS *Los Angeles* Quadrangle, within which the BSA is located, and the surrounding eight quadrangles; an area measuring approximately 21.5 miles by 26 miles. As noted in the BRA/Draft EIR, the most recent CNDDB record of special-status species in the BSA was from 25 years ago, with no records of federal or state-listed wildlife species in the BSA in the past 100 years.

2.1.2 Size of the BSA

The BSA encompasses a 500-foot buffer around the proposed Project alignment. Habitats and wildlife occurring outside of this 500-foot buffer were considered to be a sufficient distance away to not be affected by construction or operation of the proposed Project. A commenter suggested that the BSA should be expanded to include the eastern portion of the Los Angeles State Historic Park, due to the potential for the presence of higher quality wildlife habitat (as addressed further in Section 5). The commenter proposed that this area would be impacted by

indirect effects arising from an unavoidable shift in park event activity toward the eastern end of the park. However, although that area appears to contain better quality wildlife habitat than the grassy lawns covering much of the rest of the park, it is more than 1,000 feet from the proposed Project alignment and more than 500 feet outside of the current BSA, and is accordingly located too far away from the proposed Project for construction or operation of the proposed Project to have an impact on potential habitat in this area. Moreover, the park and surrounding area is subject to high levels of disturbance on a regular basis, including concerts, music festivals, outdoor movies, and other events that regularly include high-amplitude speakers, food trucks, and large numbers of people. The habitat in the eastern end of the park is near streets with vehicular traffic, parking lots, and a walking path with regular human foot traffic, in addition to the disturbances noted above. Therefore, birds and other wildlife using the habitat at the eastern end of the State Park should already be accustomed to high levels of disturbance. Finally, Section 5.5.2 of the Draft EIR indicates that most events could still be held underneath or adjacent to the alignment, and that the proposed Project would not interfere with typical existing event stage locations (Figure 5-3). Therefore, it is unlikely that the proposed Project would result in a shift in park event activity towards the eastern end of the park, as the comment suggests.

2.1.3 Specialized Survey Techniques

It was suggested that radar studies and nocturnal surveys be included to evaluate the species of nocturnal bird migrants passing over the BSA, as well as their flight heights. These types of specialized surveys would be warranted if 1) migration were expected to be concentrated in the vicinity of the proposed Project alignment; and 2) potentially significant impacts were anticipated. However, neither of these is expected in this case (see Section 3.4 of the Draft EIR and additional comments in Section 3.1.2 of this memo, below, regarding collision risk), and accordingly, the use of more specialized survey techniques is unwarranted.

3 OPERATIONAL IMPACTS

Comments were received that pertained to the Draft EIR analysis of operational impacts and collision risk to wildlife posed by components of the proposed Project, including the following:

- P708-4 to P708-13 (Land Protection Partners)
- G014-134 to G014-138 (LA Parks Alliance)
- S1-4 to S1-6 (CDFW)
- P700-35 and P700-39 (Phyllis Ling)
- P489-2 (Ana Silva)
- PH315-2 (Diane Weiss)
- P256-4 (Carol Ng)

The main points raised by one or more comments fall under one of the following categories: diurnal collision risk of cables is not different from transmission lines; nocturnal avian and bat collision risk is underestimated; impacts from avian collisions is underestimated; and insufficient avoidance and minimization of collisions.

3.1 TECHNICAL RESPONSE TO COMMENTS

3.1.1 Diurnal Collision Risk of Cables Relative to Transmission Lines

There are limited empirical data available on avian collision with gondola cables, particularly in urban environments. A review of the literature since the publication of the Draft EIR provided no new information on this topic. However, as discussed in Appendix B, Memorandum from Doppelmayr Regarding Comparable System Bird Strikes, to this report, Doppelmayr USA, one of two manufacturers of 3S gondola systems in the world, noted that a similar 3S gondola project measuring about 0.5 mile long and spanning the Rhine River in an urban environment in Koblenz, Germany was recently approved for an extension of their operating permit after the first 3 years of operation, noting that no bird strikes were detected during that period.

Given the paucity of studies on gondola systems impacts to wildlife, using data on wildlife collisions with transmissions lines (see Section 3.4.4 of Draft EIR, discussion under BIO-1, Operational Impacts) is a logical approach for comparison due to greater data availability. However, in the absence of studies that directly compare avian collision rates with transmission lines to their collision rates with ropeway cables associated with gondola systems, it would not be appropriate to assume gondola cables present the same diurnal collision risk. Indeed, several design features of the proposed Project can only be described as more likely to result in lower avian collision risk for gondola systems when compared with transmission lines. First, unlike most transmission lines, the proposed Project's ropeway cables would not be equipped with a shield wire. Shield wires are typically placed above phase conductors on transmission lines to protect the lines from lightning strikes, but in effect also add an additional plane that can contribute to bird strikes. Shield wires are 0.4 to 0.5 inch in diameter, compared to the 1.75 to 2.5 inches in diameter of the system's ropeway cables. The proposed Project would lack this shield wire component, which would be expected to reduce (not increase) collision risk, relative to transmission lines with shield wires.

Similarly, the three ropeway cables (two stationary “track ropes” and the “haul rope”) would be spaced 6 inches to 3 feet apart. This tight clustering, in conjunction with the fact that the ropeway cables are thicker than transmission lines, should make them more visible to birds compared to transmission lines. In addition, the proposed Project would include slack carriers, which are another design component that would increase the visibility of the cables to birds. Slack carriers are devices that support and maintain proper separation between the cables of 3S systems. Slack carriers are attached to the system’s two stationary cables (the “track ropes”) and provide support sheaves for the third cable that circulates continuously around the system (the “haul rope”). While the exact quantity and location of the slack carriers along the track ropes would be determined during the design phases of the proposed Project, it is anticipated that slack carriers would be placed approximately every 350-500 feet with adequate separation from the stations, junction, and towers. The slack carriers of one gondola lane can be staggered from or aligned with the adjacent lane. Finally, the gondola cabins travel along the cables at frequent intervals during the periods of operation, further increasing the visibility of the cables along which they are moving. The number of cabins passing over a given location along the alignment is expected to be 80 per hour during periods of low use, and 314 cabins per hour during Dodger games or events at Dodger Stadium. Furthermore, the windows on the cabins should not pose any collision risk to diurnal birds because they will be non-transparent (tinted), and partially covered with a vinyl window film, which would reduce reflectivity and increase visibility to birds.

There was one comment suggesting that the portrayal of the cables as being highly visible to birds but not overly conspicuous to people was implausible, but there are two factors that must be considered. One factor is that most birds have far higher levels of visual acuity than humans, and can resolve movement much faster than humans. Most diurnal birds have a much higher concentration of rods and cones in their eyes than humans, and their retinal structure allows for resolution of movement above 100 hertz, compared to 60 hertz for humans (reviewed in Gill 2007). Birds are therefore capable of detecting objects from much further away than humans and can react to objects appearing in their visual field much more rapidly than humans. The second factor is that the cables will be approximately between 46 and 175 feet above ground level (agl), relatively far from the perspective of most humans in the vicinity of the proposed Project. For these reasons, the visual disturbance posed to humans from cables of a given diameter is not directly comparable with the detectability of the same cables to birds flying near the cables.

Importantly, avian mortality rates cited in studies associated with transmission lines include mortalities arising from factors other than collision-related trauma, suggesting that avian mortality rate studies may disproportionately attribute avian mortality to collision, rather than other causes of death (which would not occur in association with the proposed Project). For example, some proportion of observed mortality would be due to electrocution resulting from birds interacting with the energized components of transmission lines, and the proportion of birds to which this would apply is rarely quantified in such studies. In fact, a recent study by Thomason et al. (2023) evaluated the cause of mortality for deceased birds found below transmission lines in four western U.S. states. Among the 175 birds for which the cause of death could be determined, they reported that 66% were killed by gunshot, 17% by electrocution, and 17% by trauma.

For the reasons outlined above, the ropeway cables are expected to present, if anything, a lower risk of mortality to birds compared to that associated with transmission lines. However, even if the cables were assumed to pose a similar risk to birds as transmission lines, the impacts would be less than significant for reasons addressed below.

3.1.2 Nocturnal Avian and Bat Collision Risk

Commenters suggested that the cables, gondolas, and towers would pose a collision risk to birds flying at night, especially nocturnal migrants. However, the proposed Project towers and cables are below the heights where most nocturnal avian collision impacts occur. Most avian flight during migration occurs at thousands of feet agl, whereas the proposed Project component heights are all below 200 feet agl.

- Cable heights at:
  - Alameda and Alpine Towers: 175 feet agl
  - Stadium Tower: 159 feet agl
  - All other stations/junction: 74 to 98 feet agl
- Tower heights: all are less than or equal to 195 feet

As noted by Longcore et al. (2008), most avian migrants fly at 200 to 750 m (65 to 2,460 ft) agl (Able 1970, Bellrose 1971, Mabee et al. 2006), with one study estimating that only 2-15% of migrants flew below 91 m (300 ft) agl (Mabee and Cooper 2004). Indeed, according to experts in the field of avian collision risk, structures below 200 feet agl contribute negligibly to overall annual bird mortality (Longcore et al. 2012), *even in weather conditions with reduced cloud ceiling* (USFWS March 2021). Further, as discussed below, these components are located within an urban environment with many other obstacles of similar heights, and because avian flight during migration occurs at thousands of feet agl, the proposed Project components accordingly are not anticipated to contribute significantly to overall annual bird mortality.

Some comments raised concerns about natural migration concentration points near the proposed Project alignment. Such concentration points could include prominent ridgelines or valleys that provide optimal conditions or pathways to migrating birds, or stopover habitat that provides suitable forage or shelter to migrants. The Draft EIR states that migrant birds would pass over the alignment, and there is potential for birds to interact with ropeway cables when flying below 175 feet agl and towers when flying below 200 feet agl. However, there is little evidence to suggest that the presence of natural features, such as the Los Angeles River or Silver Lake Reservoir, would result in concentrated migration, specifically in the proposed Project area. The Los Angeles River, which is approximately 0.5 mile east of the BSA is heavily impacted and is predominantly a concrete water-conveyance structure. The river corridor does not contain appreciable vegetation until it reaches more than 1 mile north of the proposed Project BSA. The Silver Lake Reservoir is more than 2 miles to the northwest. Waterbirds and other migrants may pass over the proposed Project en route to and from these locations, but there is no reason to believe the movement would be concentrated in the vicinity of the proposed Project (and below 200 feet agl) versus along alternate routes. Furthermore, direct movements between vegetated portions of the river and the Silver Lake Reservoir would not result in birds passing over the proposed Project alignment.

Furthermore, birds and bats flying in the vicinity of the proposed Project are already exposed to obstacles that present the potential for collision at heights similar to or greater than (>) the highest-reaching proposed Project components, such as the towers, which would reach 478 to 584 feet above mean sea level (amsl), or the ropeway cables associated with those towers, which would reach 458 to 564 feet amsl. These obstacles include:

- Buildings less than (<) 1 mile west of the proposed Project alignment, in downtown Los Angeles, some of which reach more than 1,000 feet agl;

- A 230 kilovolt LADWP-owned transmission line runs roughly parallel to the proposed Project, along the Los Angeles River corridor, between 2,400 and 3,000 feet to the east, with approximately 120 to 155-foot-tall (agl) transmission towers reaching approximately 400 to 435 feet amsl;

- The radio tower on aptly named Radio Hill, 700 feet northeast of the Stadium Tower, which reaches 640 feet amsl;

- The eight sets of stadium lights atop Dodger Stadium, at the northern terminus of the alignment, which reach 665 to 680 feet amsl; and

- A 23-story (291-foot-tall) building, proposed for construction 400 feet west of the proposed Project alignment.

Regarding the potential for artificial lighting in the vicinity of the proposed Project to attract bats or nocturnal migrant birds and increase collision risk, development in the entire LA Basin provides a major source of light pollution, and there is no evidence that light in the vicinity of the proposed Project would draw bats or migrant birds to the area, any more than similar lighting in other areas over the LA Basin would be expected to. Similarly, although bats have been noted to collide with artificially lighted structures such as radio and television towers or lighthouses (see P708, Footnote 13), these are generally isolated structures in rural areas where the lighting would stand out from surroundings. Likewise, others have suggested that increased ambient lighting associated with the proposed Project may increase the risk collision with stationary objects by bats (see P708, Footnote 12). The lighting associated with the proposed Project would be minimal, contributing only negligibly to the ambient light in this urban environment, and would not be expected to increase the risk of collision for bats. Due to the large amount of lighting already in the environment, the small amount of lighting added by the proposed Project would not be expected to result in avoidance of the area by bats (see P708, Footnote 14).

Regarding the potential for Dodger Stadium field lights to attract birds, it is important to note that the lights from Dodger Stadium are angled downward, not upward into the darkness as in the *Tribute in Light* display in New York City (which was a case referenced by some of the commenters), and are not nearly as bright or concentrated as that display. The occurrence of the greater white-fronted goose that landed at Dodger Stadium in October 2022 that was cited as an example of lights attracting migrants is far from definitive. One example is not an indication of a widespread phenomenon, and unless the bird was examined by a veterinarian before being released, it is impossible to know whether it landed because of the lights or whether it had some other issues that resulted in it landing on the field during the game. Moreover, if lighting at stadiums is a major attractant to birds during migration, there should be many more examples of this phenomenon, given the large number of professional sports (e.g., baseball, football, soccer), and concert events that occur at such venues at night during spring and fall migratory periods. The fact that this greater white-fronted goose case gained nation-wide attention suggests it is not a particularly frequent occurrence.

3.1.3 Risk of Avian Collisions

Based on the information provided in Sections 3.2.1 and 3.2.2 above and in the BRA/Draft EIR, the collision risk to common bird species arising the proposed Project components is expected to be low. Although sensitive bird species such as the loggerhead shrike (*Lanius ludovicianus*) and Peregrine falcon (*Falco peregrinus*) have been documented via the eBird website to occur in the vicinity of the proposed Project (per CDFW, Comment S1-5), the risk of collision for such species would be exceedingly low given the overall low probability of birds colliding with

components of the proposed Project in general, and the fact that these species are relatively rare and would comprise a low percentage of bird species present in the vicinity of the proposed Project. Furthermore, eBird checklists often cover observations made over a broad area, yet all observations are associated with only a single point, making it difficult to understand precisely where each individual observation was made.

4 TREE REMOVAL

Comments were received that pertained to the impacts of tree and brush removal on wildlife and habitat, including the following:

- G014-143 (LA Parks Alliance)
- S1-8 (CDFW)
- GO21-9 to GO21-11 (LA River State Park Partners)
- P608-3 and P608-10 (Yee Ting Huang)
- P677-12 (Ron Frank)
- P702-120
- PH315-2 (Diane Weiss)
- P608-3, P608-10 (Yee Ting Huang)

Although the comments varied in their specific arguments, the main points raised by one or more comments fall under one of the following categories: the proposed replacement ratios are unclear; the location of replacement trees is not stated, and there are constraints; and the removal of trees or brush may cause temporary or permanent impacts to wildlife habitat.

4.1 TECHNICAL RESPONSE TO COMMENTS

4.1.1 Tree Replacement Ratios

Several commenters noted that the replacement plan for trees removed in association with the proposed Project was not clear as outlined in the Draft EIR, thereby making it difficult to evaluate potential impacts to wildlife habitat. There were questions regarding the number of trees that would be replaced, and the ratio at which those trees would be replaced with new trees.

First and foremost, the proposed Project intends to comply with ordinances and requirements applicable to tree replacement, based on the corresponding jurisdiction of the property where each tree is located. Table 4-1 summarizes known mitigation requirements for trees removed in the City of Los Angeles. As noted in the Draft EIR, the City of Los Angeles requires the replacement of trees at specified ratios—depending on the tree type—under the City's Native Tree Protection Ordinance and Street Tree Policy. A tree or shrub is "protected" if it is 4 inches or greater in diameter at 4.5 feet above ground (i.e., diameter at breast height [DBH]) and is one of the protected tree species listed in Table 4-1. Importantly, a tree that is part of a plant program is not protected. As discussed in Appendix E: Biological Resources Assessment of the Draft EIR, in practice, the City of Los Angeles Planning Department considers a tree "significant," even if non-protected, if the trunk is > 8 inches at 4.5 feet DBH. Protected trees require a replacement ratio of 4:1, while significant trees require a mitigation ratio of 1:1. Removed "street trees" that occur in the public right-of-way (ROW) are to be replaced at a ratio specified by the Urban Forestry Division; typically, at a 2:1 ratio (Table 4-1).

A review of applicable regulations of the California Department of Transportation, California Department of Parks and Recreation, California Department of Fish and Wildlife (CDFW), and Santa Monica Mountains Conservancy did not reveal any specific requirements for tree replacement by those agencies. As discussed on page 3.4-23, in Section 3.4, Biological Resources, of the Draft EIR, it is anticipated that mitigation ratios for trees on land administered or managed by one these entities will be agreed to as part of the proposed Project approvals required for implementation of the proposed Project. However, the proposed Project will provide a minimum replacement ratio of 1:1 for all trees removed in the Los Angeles State Historic Park and a minimum replacement ratio of 1:1 for all “large” trees (>trees greater than 8 inches DBH) removed in the State Route (SR) 110 California Department of Transportation (Caltrans) ROW.

Table 4-2 provides additional clarity on the number of trees proposed for removal as part of the proposed Project. Tree numbers are further broken down by property owner, where applicable, to better illustrate proposed tree replacement numbers. Of the 260 trees identified in the tree inventory report, 250 are proposed for removal and 10 would be preserved. Of the 250 trees proposed for removal, 141 are under the jurisdiction of the City of Los Angeles, including: one protected tree, 106 significant trees, and 34 trees in the City ROW. The other 109 trees proposed for removal are under the jurisdiction of an entity other than the City, including 75 trees within the California Department of Parks and Recreation’s jurisdiction. Overall, a total of 145 “large” trees (> 8 inches DBH, regardless of land ownership) and 105 trees with DBH < 8 inches would be removed in associated with the proposed Project, and would be replaced with at least 242 new trees.

Table 4-1. City of Los Angeles Tree Replacement Requirements

Source of Law	Tree Type	Replacement Ratio
City of Los Angeles Native Tree Protection Ordinance (LAMC Section 46.00, *et seq*)	**Protected Trees** • Valley oak (Quercus lobata) • Coast live oak (*Quercus agrifolia*) • Any other tree of the oak genus indigenous to California, but not including the scrub oak (*Quercus dumosa*) • Southern California black walnut (*Juglans californica*) • Western sycamore (*Platanus racemose*) • California bay (*Umbellularia californica*) • Mexican elderberry (*Sambucus nigra*) • Toyon (*Heteromeles arbutifolia*)	4:1[1] [2]
City of Los Angeles Planning Department	**Significant Trees** Non-protected but "significant" trees, i.e., where the trunk diameter is > 8 inches at 4.5 feet DBH	1:1[3]
City of Los Angeles Street Tree Policy (LAMC Section 62.170)	"Street trees" (i.e., occurring in the public ROW)	As specified by Urban Forestry Division; typically, 2:1[4] [5]

[1] Size and number of replacement trees shall approximate the value of the tree. (LAMC Section 46.02, subd. (c)(1).)
[2] A tree that is part of a plant program is not protected. (LAMC Section 46.01.)
[3] Carlberg Associates. 2023. Tree Inventory Report: LA ART Project – Los Angeles, CA.
[4] Carlberg Associates. 2023. Tree Inventory Report: LA ART Project – Los Angeles, CA.
[5] In-lieu fees possible where replacement trees are not feasible. (LAMC Section 62.177, subd. (b).)

Table 4-2. Summary of Proposed Tree Removal and Replacement by Project Component

Project Component	Owner	Total # of Trees	# to be Removed	Per City of Los Angeles Planning Department			Total # Large Trees (>8 in DBH)[2]	# Trees to be Replaced	Tree Replacement Ratio	Assumed # Replacement Trees
				# Protected	# Row Trees	# Significant Trees[1]				
Alameda Station	ROW	12	12	0	12	0	6	12	Discretion of Urban Forestry; typically, 2:1	24
Alameda Tower	ROW	10	10	0	10	0	7	10	Discretion of Urban Forestry; typically, 2:1	20
Chinatown/ State Park Station	ROW	6	6	0	6	0	2	6	Discretion of Urban Forestry; typically, 2:1	12
	State	24	24	0	0	0	7	24	Discretion of California Department of Parks and Recreation, assumed minimum 1:1, all trees.	24
Los Angeles State Historic Park (Alignment)	State	57	51	0	0	0	11	51	Discretion of California Department of Parks and Recreation; assumed minimum 1:1, all trees	51
Broadway Junction	Private Property	20	19	1[3]	0	18[4]	19	19	• 1 Protected Tree (Mexican Elderberry): 4:1 • 18 Significant Trees: 1:1	22
	ROW	6	6	0	6	0	0	6	Discretion of Urban Forestry; typically, 2:1	12
SR-110 Caltrans ROW (Alignment over)	Caltrans	8	5	0	0	0	5	5	Discretion of Caltrans; assumed minimum 1:1, for Large trees (>8 inches DBH)	5
Stadium Tower	Private Property	10	10	0	0	10	10	10	1:1, for Significant trees	10
Stadium Tower – Fire Buffer	Private Property	74	74	0	0	45	45	45	1:1, for Significant trees	45

Project Component	Owner	Total # of Trees	# to be Removed	Per City of Los Angeles Planning Department			Total # Large Trees (>8 in DBH)[2]	# Trees to be Replaced	Tree Replacement Ratio	Assumed # Replacement Trees
				# Protected	# Row Trees	# Significant Trees[1]				
Dodger Stadium Station	Private Property	33	33	0	0	33	33	33	1:1, for Significant trees	33
TOTALS		**260**	**250**	**1**	**34**	**106**	**145**	**205**		**242**

Notes:

= Number

TBD = To be determined

[1] Significant per City of Los Angeles Planning Department. Includes only trees proposed for removal.

[2] Includes all “large” trees (DBH > 8 inches), regardless of ownership or City of Los Angeles designation.

[3] Protected Mexican Elderberry

[4] Excludes Mexican Elderberry

4.1.2 Location of Tree Replacement

Replacement trees would be planted as near to the location of removal as possible. Tree replacement locations would be coordinated with the landowner or party responsible for managing the land, including the City of Los Angeles, California Department of Parks and Recreation, and Caltrans.

Replacement trees for those removed from the Stadium Tower and associated fire buffer area be planted in the vicinity of the original removal site, because the fire buffer is only required during construction, and because the tower and associated cables will be sufficiently high to allow small to medium trees below them. Trees planted under the proposed alignment would be selected to ensure that their maximum potential height would not encroach upon the ANSI required vertical clearance, described in Section 2.0, Project Description, of the Draft EIR.

Trees removed from areas of permanent disturbance (e.g., alignment stations), where replacements cannot be placed, would be replaced with trees planted in nearby areas.

4.1.3 Impacts to Wildlife from Tree Removal and Brush Clearance

As discussed in Section 3.4.2, Environmental Setting, of the Draft EIR, there are no sensitive natural communities such as wetlands, oak woodlands, or coastal sage scrub habitat in the BSA. There are no wildlife corridors in the BSA to support movement of wildlife species. There are no Habitat Conservation Plans that overlap with the BSA, and the nearest Significant Ecological Area is approximately 5 miles north-northwest of Dodger Stadium at Griffith Park. As discussed in Section 3.4.3, Methodology, of the Draft EIR, a proposed project would only have a significant impact on biological resources if it would "have a substantial adverse effect, either directly or through habitat modifications, on any species identified as candidate, sensitive, or special status species." An overview of tree removal in areas that could be considered wooded habitat for common species is provided for informational purposes, below.

The removal of certain of the trees for the proposed Project would result in a small reduction of wooded habitat for wildlife species that depend on these habitats for cover, nesting, roosting, foraging, and other reasons. The magnitude of impacts to wildlife from the removal of this vegetation depends on several factors, including the amount of wooded habitat to be removed and the quality of that habitat. In the long-term, the impacts are also affected by the replacement plan for the removed trees.

The quality of wildlife habitat provided by the trees proposed for removal is relatively low, given that the trees are primarily non-native tree species. Of the 26 tree species identified in the tree inventory report, 20 are considered non-native (and five of those are considered invasive). Furthermore, 122 of the 145 large trees (>8 inches DBH), and 71 of the 105 smaller trees, are non-native species. All of the 57 native trees were planted as ROW trees (12 trees) or were planted as part of a plant program in the Los Angeles State Historic Park, and 34 of these 57 trees are young, with a DBH of <8 inches. Other areas are composed of 100-percent non-native trees, often covered in non-native and invasive vines such as Kudzu (*Pueraria montana*).

The only areas of tree removal that could be potentially described as wooded habitat are the following: the small grove of Fremont cottonwood trees at the western end of the Los Angeles State Historic Park, the non-native woodland at the Stadium Tower and associated fire buffer, and the non-native woodland at the Dodger Stadium Station location. The total area of wooded

habitat that would be removed in each of these areas is 0.24, 1.02, and 0.39 acres, respectively. These areas are relatively small amounts of wooded habitat, compared to the amounts available in the immediately surrounding areas, such as Elysian Park (approximately 600 acres alone, much of which is wooded), Radio Hill Gardens, Victory Memorial Grove, and Point Grand View Park (Figure 4-1).

In the short-term, the removal of trees will result in a marginal reduction of suitable tree habitat for nesting birds, roosting bats, and other wildlife in the vicinity of the proposed Project. Common wildlife species would be expected to utilize adjacent habitats, and substantial population level impacts to common species would not be expected due to the small amount of habitat loss relative to the amount of habitat available in surrounding areas. In the long-term, the replacement of the 145 large trees proposed for removal with 242 new trees (Table 4-2) would more than offset any realized impacts associated with the Project.

The brushy understory in some of the wooded habitat provides potential breeding locations and protective cover for common small mammals and birds. Although the removal of the wooded habitat would similarly result in a reduction in brushy understory, the amount of brushy understory proposed for removal is small in comparison to the amount in the surrounding areas. Brush cleared from the fire buffer area surrounding the Stadium Tower location would be allowed to regenerate naturally after construction, subject to applicable defensible space requirements. Refer to Section 3.20, Wildfire, of the Draft EIR for a discussion of applicable defensible space requirements.

5 IMPACTS TO SPECIES NOT CONSIDERED

Comments were received that pertained to impacts (other than collision-related injury/mortality) on species not specifically addressed in the Draft EIR analysis, including the following:

- S1-7 (CDFW)
- P700-38 (Phyllis Ling)
- G014-138 and GO14-140 to GO14-141 (LA Parks Alliance)

The main points raised by one or more comments fall under one of the following categories: the proposed Project could impact least Bell's vireos; and the proposed Project could impact burrowing owls.

5.1 TECHNICAL RESPONSE TO COMMENTS

5.1.1 Potential for Impacts to Least Bell's Vireo

A commenter suggested the proposed Project could potentially impact endangered least Bell's vireos because a singing male of this species was reportedly detected within the Los Angeles State Historic Park in May of 2022. It is unclear from the information presented, exactly where in the Los Angeles State Historic Park this observation took place. No least Bell's vireo breeding habitat was identified within the BSA during surveys performed for the BRA (AECOM 2022b). The BSA was surveyed again on March 23, 2023, and no suitable habitat was present. There is a small managed area at the eastern end of the Los Angeles State Historic Park that includes some riparian plants and a depression where water collects during wet periods. These are features consistent with least Bell's vireo breeding habitat. However, at best, this habitat would be considered marginally suitable breeding habitat for least Bell's vireos, due to the small patch size and distance to the nearest perennial water source (approximately 1,000 feet from the Los Angeles River).

The patch of habitat at the eastern end of the Los Angeles State Historic Park is more than 500 feet outside of the BSA, and more than 1,000 feet away from the proposed Project alignment, where Project construction would occur. It is well beyond the distance of any expected direct or indirect impacts associated with the proposed Project (see also Section 2.1.2 above for a discussion of potential indirect impacts arising from construction and operation). Both the CDFW (2022) and U.S. Fish and Wildlife Service ([USFWS] 2014) recommend 500-foot disturbance buffers for least Bell's vireos, with protocol surveys in suitable habitat within 500 feet of proposed construction areas. This is, in part, why the 500-foot distance was selected for the BSA. The habitat in question is more than 1,000 feet from proposed Project construction areas, and therefore no impacts to wildlife in that area are expected. Due to the absence of suitable least Bell's vireo breeding habitat in the BSA, least Bell's vireos are not expected to be present in the BSA.

5.1.2 Potential for Impacts to Burrowing Owl

One comment from CDFW (S1-7) noted that observer records on the iNaturalist website, a citizen science website that allows the public to enter observations of plant and wildlife species,

indicated California ground squirrels have been detected in the Los Angeles State Historic Park. Burrowing Owls commonly use ground squirrel burrows for nesting and roosting, suggesting there may be potential for burrowing owl habitat in the BSA. As described in the Draft EIR, no California ground squirrels, burrowing owls, or suitable habitat for burrowing owls were detected during initial surveys. A subsequent survey of the BSA was performed on March 23, 2023, during which potentially suitable burrowing owl habitat (open, flat terrain with short vegetation) and immediately adjacent areas were surveyed for the presence of California ground squirrels or their burrows. No California ground squirrels or burrows were visually detected in the surveyed areas. California ground squirrel vocalizations were heard on the slope between the proposed Dodger Stadium Station and the Stadium Tower locations. Although this area could not be surveyed on foot, it was deemed not suitable for burrowing owls due to the presence of trees, tall ground cover vegetation, and a steep slope.

6 PIGEON ROOST INDUCEMENT

Comments were received that pertained to impacts on species not specifically addressed in the Draft EIR analysis, including the following:

- G014-139 (LA Parks Alliance)
- P708-19 (Land Protection Partners)

The main points raised by one or more comments fall under the following: open canopies of stations likely to result in rock pigeon roosts, which pose a human health risk and could require chemical or potentially inhumane measures to control pigeon numbers.

6.1 TECHNICAL RESPONSE TO COMMENTS

6.1.1 Potential Need for Pigeon Abatement

The platforms at the Alameda Station, Chinatown/State Park Station, Broadway Junction, and Dodger Stadium Station could provide roosting or nesting opportunities for pigeons or other bird species, most notably between the aluminum perforated canopy structure and the bridge crane.

To prevent the use of station canopies by pigeons or other birds, there are numerous non-chemical and non-lethal anti-perching devices (e.g., Nixalite® bird spikes) that can be installed to prevent birds from becoming established. Chemical methods of pigeon removal or control would be avoided. It is also worth noting that the surrounding area contains numerous potential roosting and nesting opportunities (e.g., in the nearby buildings and billboard signs), and that the stations and junction themselves would not be drawing pigeons into the area and concentrating them above current levels.

APPENDIX A: LIST OF WILDLIFE SPECIES OBSERVED DURING MARCH 23, 2023 SITE VISIT AND SURVEY

Table A-1: List of Wildlife Species Observed During Site Visit and Survey of Los Angeles ART Project Biological Survey Area, March 23, 2023 from 11:00 AM to 3:30 PM.

Class	Common Name	Scientific Name	Common Group Name
Aves (Birds)	Allen's hummingbird	*Selasphorus sasin*	Hummingbird
	Anna's hummingbird	*Calypte anna*	Hummingbird
	California towhee	*Melozone crissalis*	Towhee
	cedar waxwing	*Bombycilla cedrorum*	Waxwing
	common raven	*Corvus corax*	Raven
	European starling	*Erithacus rubecula*	Robin
	house finch	*Haemorhous mexicanus*	Finch
	house sparrow	*Passer domesticus*	Sparrow
	killdeer	*Charadrius vociferus*	Killdeer
	mourning dove	*Zenaida macroura*	Dove
	Northern mockingbird	*Mimus polyglottos*	Mockingbird
	red-tailed hawk	*Buteo jamaicensis*	Hawk
	rock pigeon	*Rupornis magnirostris*	Hawk
	song sparrow	*Melospiza melodia*	Sparrow
	spotted towhee	*Pipilo maculatus*	Towhee
	turkey vulture	*Cathartes aura*	Vulture
	American white pelican[1]	*Pelecanus erythrorhynchos*	Pelican
	white-crowned sparrow	*Zonotrichia leucophrys*	Sparrow
	white-throated swift	*Aeronautes saxatalis*	Swift
	yellow-rumped Warbler	*Setophaga coronata*	Warbler

Class	Common Name	Scientific Name	Common Group Name
Mammalia (Mammals)	desert cottontail	*Sylvilagus audubonii*	Rabbit
	California ground squirrel	*Otospermophilus beecheyi*	Squirrel

APPENDIX B: MEMORANDUM FROM DOPPELMAYR REGARDING COMPARABLE SYSTEM BIRD STRIKES

Memorandum

To: Michael J. Kuehn, Ph.D., AECOM
From: Ted Blazer, Doppelmayr USA
Date: June 26, 2023

Subject: Data regarding Bird Strikes at the Koblenz 3S System

Doppelmayr is a leader in aerial transport technology and was the designer and supplier of a 3S aerial gondola system in Koblenz, Germany. During the Buga 2011 horticultural show with more than 3.5 million visitors and nearly 6 million gondola passengers, Doppelmayr was the operator of the urban ropeway installation and as such for several years after. This urban installation connects the city center directly with the opposite side of the Rhine River and provides the best access to the busy Ehrenbreitstein Fortress. It also facilitates access to Koblenz from the remote opposite parking lot toward the city center. Regarding data on bird strikes at this 3S aerial gondola system, the operating permit for Koblenz was recently extended following its first three years of operation. As part of the permitting process for the extension, it was required that information on bird strikes during the initial operating years be submitted. Experts conducted monitoring for bird strikes during the permit compliance. It was found that no bird strikes were documented during this period. As noted in the permitting documents, there is a reduced risk of migratory birds approaching the 3S ropeway because of the cables' visibility due to the thickness of the cables, as well as the presence of slack retainers, which are there to help support the track cables.

Memo Regarding Preparation of KOPs

Memorandum

Date	Tuesday, May 16, 2023
To	Kim Avila, AICP ENV SP
Address	Kimley-Horn 660 S. Figueroa Street Los Angeles, CA 90017
Project	19204 LA ART
Total Pages	2
From	Naseema Asif, RIOS
Re	LA ART: Preparation of View Simulations

This memorandum provides a description of RIOS' process for preparation of the view simulations (referred to as Key Observation Points or KOPs in the EIR) for the LA ART project.

1. Determination of KOP Locations; Photos: The KOP locations and vantage points were provided to RIOS by AECOM, the environmental consultant preparing the Visual Impact Assessment and Aesthetics section of the Draft EIR. Existing ("before") photos for each KOP location and vantage point were provided to RIOS. The "before" photos were not altered. The "after" photos were not altered; rather they are visual simulations that reflect the proposed project components and, in certain circumstances, may include the removal and/or addition of landscape planting elements as part of proposed project. The visual simulations otherwise include the existing landscape planting, buildings, and other visual elements such as open space resources, street trees, and building frontages as they existed at the time the photos were taken.

2. Preparation of the proposed Project 3D Digital Model: RIOS prepared a 3D digital model of the proposed project to match the design, finish materials and dimensions shown in the plans, elevations, sections, and materials descriptions provided in the Draft EIR Project Description.

   In response to comments on the Draft EIR, updated KOPs were prepared to depict the system operating at maximum capacity, including passengers within the cabins. At maximum capacity and during peak operations, outside of the station the cabins would be spaced approximately 450 feet apart.

   Comments also requested visual clarification on the dimensions and spacing of the ropeway cables, as well as the spacing of the slack carriers that maintain clearance between the three ropes that comprise the ropeway. The ropes would be 1.75 to 2.5 inches in diameter. The 1.75 to 2.5 inches in

RIOS

diameter is too small to be visually detectable in many of the view simulation renderings; accordingly, RIOS modeled the ropes with a 6-inch diameter so that they would be visible. Updates were also made to KOPs where it appeared only two ropes were visible instead of three. Slack carriers in the ropeway were also modeled and are spaced 350 feet apart.

KOPs were also updated to incorporate the signage program, as depicted in the signage package included in the Draft EIR.

3. Placement of the Digital Model into Context: RIOS also prepared a 3D digital model of the proposed Project's surrounding urban context utilizing ArcGIS software with source data from the USGS Digital Elevation Model (https://www.usgs.gov/3d-elevation-program) for the topography, and from LARIAC (https://lariac-lacounty.hub.arcgis.com/) for the building locations, footprints and height extrusions.

   This context model allowed RIOS to accurately place the proposed project 3D digital model into context without distortion. RIOS then rendered the proposed Project 3D digital model in perspective to match the KOP vantage point, and place the rendered component into the existing photo via photoshop. This process allows the KOPs to realistically illustrate what the proposed project will look like in the surrounding context.

   Because the proposed project is rendered in perspective to match the pedestrian eye level vantage point of the existing photographs, visual elements in the foreground of the KOP will appear larger than visual elements further in the distance, consistent with how pedestrians experience their surrounding environment. As such, visual elements that are in the foreground can sometimes block the full view of visual elements at a distance even though the foreground element may be of a smaller dimension.

RIOS

Appendix H.2
Supplemental KOPs in Response to Comments

1.0 INTRODUCTION

The purpose of this Appendix H.2 is to provide supplemental KOPs in response to comments received on the Draft EIR. Comments on the Draft EIR requested views of the system operating at maximum operating capacity, additional detail regarding the proposed Project's sign concept plan, and additional clarity regarding design elements of the proposed Project including dimensions and spacing of the ropeway cables, spacing of the slack carriers that maintain clearance between the three ropes that comprise the ropeway, and the width and visibility of the ropes.

Updated KOPs

In response to comments on the Draft EIR, updated KOPs were prepared as follows:

- **Maximum operating capacity**: To depict the system operating at maximum capacity, including passengers within the cabins.

- **Signage program**: To incorporate the proposed Project's signage program, as depicted in the Sign Concept Plan, included as Appendix B to the Lighting Study, which is included in Appendix C, Visual Impact Assessment, of the Draft EIR.

- **Design elements**: Comments also requested visual clarification on the dimensions and spacing of the ropeway cables, as well as spacing of the slack carriers that maintain clearance between the three ropes that comprise the ropeway. The ropes would be 1.75 to 2.5 inches in diameter. The 1.75 to 2.5 inches in diameter is too small to be visually detectable in many of the view simulation renderings; accordingly, RIOS modeled the ropes with a 6-inch diameter so that they would be visible. Updates were also made to KOPs where it appeared that only two ropes were visible instead of three. Slack carriers in the ropeway were also modeled and are spaced 350 feet apart.

All KOPs from the Draft EIR have been included in this Appendix H.2, and those that were updated to the extent described above are listed below.

The following KOPs were updated: KOP 4, KOP 5, KOP 7a, KOP 7b, KOP 8, KOP 9, KOP 10, KOP 11, KOP 12, KOP 13, KOP 14, KOP 15a, KOP 15b, KOP 16a, KOP 16b, KOP 17, KOP 18, KOP 19, KOP 22, KOP 23, KOP 24, KOP 25, KOP 27, KOP 28a, KOP 29

Additional KOPs

In response to comments on the Draft EIR, additional visual simulations of the proposed Project have been provided as follows:

- **Additional Views of Los Angeles State Historic Park**: KOPs 31 through 35 provide additional visual simulations of Los Angeles State Historic park, including views from a cabin over the park, and views of the Chinatown/State Park Station and proposed Park amenities.

- **Additional Views of Alameda Tower and Alpine Tower**: KOPs 36 and 37 provide additional views of the locations of the proposed Alameda Tower and Alpine Tower.

Appendix I
Airspace Analysis Comment Response for the Los Angeles Aerial Rapid Transit Project

Memo

Prepared for: Los Angeles Aerial Rapid Transit Project Final Environmental Impact Report

Prepared By: VMC, LLC

Date: April 18, 2023

Re: Airspace Analysis Comment Response for the Los Angeles Aerial Rapid Transit Project

---

This memorandum responds to the following comment received on the Los Angeles Aerial Rapid Transit Draft EIR:

> *The report on wildfires in the DEIR does not address the impact of the gondola on firefighting – in particular water dropping helicopters. Our neighborhood has frequent brush fires on Radio Hill, especially during the summer. Water dropping helicopters often fly very low over our homes. Would their flight paths be impacted by the gondola over our neighborhood?*

Normal helicopter operations conducted in Visual Flight Rules (VFR) conditions require the pilot to see and avoid obstacles and maintain an altitude of 500 feet above the ground or obstacles in densely populated areas. Firefighting helicopter operations are special. Pilots may be allowed to fly lower than 500 feet above the ground or existing obstacles, but must adhere to the pilot's requirement to see and avoid all obstacles and operate within the limitations of the helicopter performance specifications.

The Radio Hill area has a peak elevation of approximately 540 feet Mean Sea Level (MSL). There are multiple obstacles in the area that a pilot must avoid including trees, poles, antennas and buildings. The critical obstruction on the hill is a large antenna at an elevation of approximately 640 feet MSL.

The proposed Project components are located to the west of Radio Hill along Bishops Road. The height of the compnents ranges from 425 feet MSL near the intersection of North Broadway and Bishops Road (i.e., the Broadway Junction) to 576 feet MSL north of the intersection of SR-110 and Stadium Way (i.e., the Stadium Tower).

Firefighting operations would consider the Project components, which will be marked with red aviation lights and included on navigational charts. However, the flight paths to Radio Hill would not be impeded from any direction as the height of the proposed Project components is lower than the terrain and obstacles on Radio Hill.

In general, as discussed above, helicopter flight paths would not be impeded as a result of the proposed Project because pilots are required to see and avoid all obstacles—which would include the proposed Project— and operate within the limitations of the helicopter performance specifications

Re: Attorney General Wildfire Guidance Overview, Prepared for the Los Angeles Aerial Rapid Transit Project Final Environmental Impact Report

Dear Ms. Avila:

In October 2022, the California Attorney General published guidance for lead agencies to analyze and mitigate wildfire risks under CEQA for new development ("Wildfire Guidance"). The Wildfire Guidance focuses on CEQA compliance related to a proposed project's impacts on wildfire ignition risk, emergency access, and evaluation. The Wildfire Guidance recommends evaluation of local fire history, fire characteristics of the site (weather, slope, etc.), anticipated fire behavior, evacuation, and other factors that may influence a project's potential to cause wildfire impacts under CEQA. The Guidance is not binding on lead agencies and is intended to provide "suggestions" for the CEQA wildfire analysis. The Wildfire Guidance recognizes that projects located within already developed urban areas do not require the same level of analysis as a non-urban project surrounded by wildland and open space.

Consistent with the Wildfire Guidance, and taking into account that the proposed Project would primarily occur within an existing urbanized area, Section 3.1 of our Fire Hazard Assessment issued in connection with the Draft EIR provides an assessment of the local fire history, Sections 3.2 to 3.4 provide an overview of site characteristics, including weather, slope, and fire response, Section 3.5 provides an overview of anticipated fire behavior, Section 4.0 provides an overview of operational fire hazard, and Section 5.0 provides an analysis of site-specific construction hazards, taking into account the topography, fuels, climate/weather patterns, and the fire history for the portions of the Project alignment within the Very High Fire Hazard Severity Zone. Section 6.0 provides a list of recommended project design features to provide additional environmental benefits by further reducing risks associated with wildfires.

Accordingly, the previously issued Fire Hazard Assessment considers the Wildfire Guidance's recommended topics for evaluation in connection with the proposed Project's potential wildfire impacts.

Sincerely,

David B. Rich, PhD
Principal, Reax Engineering

Memorandum

To: Michael J. Kuehn, Ph.D., AECOM
From: Cy Carlberg, Principal, Carlberg Associates
Date: May 11, 2023

Re: Tree Inventory Report Update

Carlberg Associates prepared an inventory of trees located at the proposed locations of the Los Angeles Aerial Rapid Transit project's (the "proposed Project") stations, junction, and towers, inclusive of the component's construction zone and where trees along the alignment may interfere with the proposed ropeway and cabins (the "Tree Inventory Report"). This Tree Inventory Report was included as Appendix B to Appendix E, Biological Resources Assessment, of the Draft EIR.

In response to comments on the Draft EIR, the Tree Inventory Report prepared for the proposed Project has been updated to clarify the criteria for inclusion in the report's inventory. The update clarifies that City of Los Angeles right-of-way trees are inventoried regardless of trunk size. The updated report also clarifies trees within the Los Angeles State Historic Park, including those under the alignment that could potentially interfere with required cabin and ropeway clearances (i.e., those that would or could encroach within 5 feet of the bottom of the cabin and within 50 feet from the centerline of the proposed Project's ropeway). The report was also updated to add a note clarifying the City of Los Angeles' Tree Preservation Ordinance requirements for measuring the diameter of multi-stemmed trees, and the report was updated to use this counting methodology, resulting in an additional 25 "significant" trees inventoried. In addition, certain counting errors were remedied, although the overall number of inventoried trees and the number of protected trees required for removal remain the same as the original Tree Inventory Report.

An Updated Tree Report follows this memorandum.

EXECUTIVE SUMMARY

The proposed Los Angeles Aerial Rapid Transit Project (proposed Project) would connect Los Angeles Union Station (LAUS) to the Dodger Stadium property via an aerial gondola system. The proposed Project would include an intermediate station at the southernmost entrance of the Los Angeles State Historic Park. The proposed Project would provide an aerial rapid transit (ART) option for visitors to Dodger Stadium, while also providing access between the Dodger Stadium property, the surrounding communities, including Chinatown, Mission Junction, the Los Angeles State Historic Park, Elysian Park, and Solano Canyon, to the regional transit system accessible at LAUS. The aerial gondola system would be approximately 1.2 miles and consist of cables, three passenger stations, a non-passenger junction, towers, and gondola cabins. When complete, the proposed Project would have a maximum capacity of approximately 5,000 people per hour per direction, and the travel time from LAUS to Dodger Stadium would be approximately 7 minutes. The proposed Project would provide amenities at the Los Angeles State Historic Park and would provide pedestrian improvements, including hardscape and landscape improvements. The ART system has the ability to overcome grade and elevation issues between LAUS and Dodger Stadium and provide safe, zero emission, environmentally friendly, and high-capacity transit connectivity in the Project area that would reduce greenhouse gas (GHG) emissions as a result of reduced vehicular congestion in and around Dodger Stadium and on neighborhood streets, arterial roadways, and freeways. The proposed Project would operate daily to serve existing residents, workers, park users, and visitors to Los Angeles.

The proposed Project “alignment” includes the suspended above-grade cables and cabins following the position of the proposed Project components along the proposed Project route from Alameda Station to Dodger Stadium Station.

The proposed Project alignment would extend approximately 1.2 miles beginning near El Pueblo and LAUS on Alameda Street. The proposed Alameda Station would be constructed over Alameda Street between Los Angeles Street and Cesar E. Chavez Avenue, adjacent to the Placita de Dolores and planned LAUS Forecourt.

From the Alameda Station, the proposed Project alignment would remain primarily above the public right-of-way (ROW) with portions above private property and travel north along Alameda Street to the proposed Alameda Tower, which would be constructed on the Alameda Triangle, a portion of City ROW between Alameda Street, North Main Street, and Alhambra Street.

From the Alameda Tower, the proposed Project alignment would continue north along Alameda Street and cross Alpine Street. The proposed Alpine Tower would be constructed at the corner of Alameda Street and Alpine Street on a City-owned parcel currently being used as non-public parking storage for City vehicles.

From the Alpine Tower, the proposed Project alignment would follow the public ROW and continue over the elevated Metro L Line (Gold). North of College Street, Alameda Street becomes Spring Street, and the proposed Project alignment would generally follow Spring Street in a northeast trajectory until it reaches the southernmost point of Los Angeles State Historic Park, where the proposed Chinatown/State Park Station would be constructed partially on City ROW and partially within the boundaries of the Los Angeles State Historic Park. The alignment then crosses over the western edge of the Los Angeles State Historic Park and the Metro L Line (Gold) tracks.

The proposed Project alignment would continue traveling north towards the intersection of North Broadway and Bishops Road. The Broadway Junction would be located on the northern corner of the intersection of North Broadway and Bishops Road (1201 North Broadway). From the Broadway Junction, the proposed Project alignment would travel northwest primarily along Bishops Road, with portions above private property, crossing over SR-110 towards Dodger Stadium. The proposed Stadium Tower would be located on hillside private property north of Stadium Way between the Downtown Gate entrance road to Dodger Stadium and SR-110. The northern terminus of the system would be located in a parking lot at the Dodger Stadium property, where the proposed Dodger Stadium Station would be constructed.

BACKGROUND AND ASSIGNMENT

Carlberg Associates was retained to inventory those trees that are located at the proposed locations of the proposed Project's stations, junction, and towers, inclusive of the component's construction zone. We also inventoried those trees along the proposed Project alignment where the ropeway and cabins may interfere with existing trees; this interference is relevant both at the beginning of proposed Project operations and in the future as the trees may continue to grow. Each inventoried tree's current height was determined and a "Preserve" or "Remove" decision was recommended based on the species and its potential height at maturity.

This report addresses our office's site visits to the proposed Project alignment on April 27, May 27, and June 4, 2021, and March 9, 2022. Carlberg was retained to inventory trees along and under the proposed Project alignment. The Project team advised Carlberg to inventory: (1) trees under the proposed Project alignment that would or could encroach within 5 feet of the bottom of the cabin and within 50 feet from the centerline of the proposed Project's ropeway, and (2) all trees at each of the proposed locations of the proposed Project's stations, junction, towers, and their surrounding environs, including: Union Station and El Pueblo (Alameda Station), Alameda Triangle Park (Alameda Tower), the Los Angeles State Historic Park ("Park") (Chinatown / State Park Station), 1201 N. Broadway (Broadway Junction), the hillside private property north of Stadium Way between the Downtown Gate entrance road to Dodger Stadium and SR-110 (Stadium Tower), the proposed fire buffer surrounding the construction zone for Stadium Tower, and Dodger Stadium (Dodger Stadium Station).

Trees within Los Angeles City jurisdictional limits fall within the guidelines of the City of Los Angeles Tree Preservation Ordinance No. 186,873 (Chapter IV, Article 6 of the Los Angeles Municipal Code), as implemented by the City of Los Angeles Planning Department. Protected trees and shrubs as set forth in the Ordinance are coast live oak, western sycamore, Southern California black walnut, California bay laurel, Mexican elderberry and toyon with trunk diameters (measured at 4.5 feet above grade) of 4 inches or greater. If a protected tree species was part of a planting program (e.g., not naturally occurring), it is not considered a "protected" tree as defined in the Ordinance.

The City's Planning Department requires that all other trees with trunk diameters greater than 8 inches ("significant") are included in the inventory; City of Los Angeles rights-of-way trees are inventoried regardless of trunk size. Qualifying trees within the Los Angeles State Historic Park (those under the alignment that would or could encroach within 5 feet of the bottom of the cabin and within 50 feet from the centerline of the proposed Project's ropeway; see paragraph 2 above) were inventoried regardless of trunk size.

Note: The Ordinance (Sec. 2, p. 1) states that for multi-stemmed trees, trunk diameters should be added together ("cumulative diameter") to arrive at a single trunk diameter number for the purposes of determining whether a tree is "significant." Because trunk diameter is used to articulate cross-sectional area of wood tissue, computing the sum of the diameters and calculating cross-sectional area from that sum results in exaggerated numbers. The more accurate method would be to compute cross-sectional areas first and then the sum of the areas; that cross-sectional area sum is then converted back to a single trunk diameter number in order to accomplish necessary formulas. However, for the purposes of this report, we utilized the Ordinance to determine the trunk diameters of multi-stemmed trees.

OBSERVATIONS AND DISCUSSION

We inventoried 260 trees comprised of four categories:

- City of Los Angeles Private Property Tree "PP" (137 trees)
- City of Los Angeles Right-of-Way/Street Trees "ST" (34 trees)
- Los Angeles State Historic Park "State" (81 trees, including 6 within the ROW)
- Caltrans "Caltrans" (8 trees)

The tables on the following pages set forth the data for the 260 inventoried trees.

By virtue of their trunk diameter size of eight inches and greater, 107 (106 to be removed and one to be preserved – OS 158, avocado) inventoried trees are considered significant as defined by the City's Planning Department, all are private property trees. Los Angeles State Historic Park trees are not included in this count; no trees within the Park were categorized as significant since they are within State jurisdictions). There is one private property tree near the location of the proposed Broadway Junction (no. 149, a Mexican elderberry) that is considered a protected tree as set forth in the City's Ordinance.

The 34 rights-of-way trees were inventoried regardless of their species or trunk diameter size. Public, or ROW trees are not included in the Ordinance, but cannot be pruned or removed without a permit from the Bureau of Street Services.

In total, 250 trees are proposed for removal: 1 City Ordinance-protected tree, 106 significant trees (by virtue of their trunk diameter size of 8 inches as defined by the City's Planning Division – this count does not include State Park trees), 34 trees within the City of Los Angeles right-of-way (street trees) and 109 non-protected/non-significant trees. A total of 10 trees will be preserved, one of which is a significant tree (by virtue of their trunk diameter size as defined by the City's Planning Division). No inventoried trees within the City of Los Angeles right-of-way (street trees) will be preserved. The stated mitigation ratio for the removal/replacement of a protected tree is 4:1, using a 15-gallon specimen. The City can and often does change this ratio. Mitigation for the removal of non-protected but "significant" trees require a replacement ratio of 1:1, using a 15-gallon specimen. The City can and often does change this ratio.

Rights-of-way (street) trees will be replaced as specified by the City; in our experience the mitigation ratio has typically been 2:1, with a specimen size determined by the City.

Aside from the one elderberry tree/shrub, there are no City of Los Angeles tree species or sizes that are considered protected by the City of Los Angeles' Tree Preservation Ordinance No. 186,873.

Respectfully submitted,

Cy Carlberg, Registered Consulting Arborist
Principal, Carlberg Associates
cy@cycarlberg.com

TABLE 1 – SUMMARY OF TREE AND PALM SPECIES AND QUANTITIES

Common Name	Botanical Name	Quantity	Remove	Preserve	Protected, Significant or ROW Trees
Australian willow	*Geijera parviflora*	4	4	0	4 ROW (#ST159-ST162)
avocado	*Persea americana*	1	0	1	1 significant (#OS158)

Chinese elm	*Ulmus parvifolia*	1	50	1 significant (#253)
flooded gum	*Eucalyptus rudis*	1	90	1 significant (#251)
golden wattle	*Acacia pycnantha*	11	25	6 significant (#187-9, 216, 250, 254)
	TOTALS	**74**		

Total to be Removed – 74 (#183-256)
Total to be Preserved – 0

TABLE 10 – DODGER STADIUM STATION TREE SUMMARY

Common Name	Botanical Name	Quantity	Height at Maturity (feet)	"Protected", "ROW" or "Significant"
blackwood acacia	*Acacia melanoxylon*	3	40	3 significant (#88, 92-93)
California pepper	*Schinus molle*	20	50	20 significant (#95, 100-101, 103-118, 120)
sugar gum	*Eucalyptus cladocalyx*	6	90	6 significant (#89, 91, 94, 98, 102, 119)
Chilean pepper	*Schinus polygamus*	4	20	4 significant (#90, 96-97, 99)
	TOTALS	**33**		

Total to be Removed – 33 (#88-120)
Total to be Preserved – 0

NOTE: No additional trees located between the Stadium Tower and the Dodger Stadium Station will require removal for the proposed Project.

TABLE 11 – TREE INVENTORY

Tree #	Common Name	Botanical Name	Diameter at 4.5 feet (DBH)* in inches	Height (feet)	Height at Maturity (feet)	Height That Tree Cannot Exceed for 5' Clearance	Canopy Spread (N/E/S/W) in feet	Health	Structure	"Protected", "ROW" or "Significant"	Disposition	Jurisdiction	Comments
1	Brisbane box	*Lophostemon confertus*	2.6	14	50	40	5/5/5/5	B-	B	No	Remove	State	staked, slightly loose in soil
2	Brisbane box	*Lophostemon confertus*	5.2	17	50	40	6/6/8/7	A	A	No	Remove	State	staked
3	Brisbane box	*Lophostemon confertus*	3.5	16	50	40	6/8/6/0	B+	B+	No	Remove	State	staked, leans northeast
4	Brisbane box	*Lophostemon confertus*	3.8	13	50	40	3/2/8/6	B	B+	No	Remove	State	staked, leans southwest
5	Brisbane box	*Lophostemon confertus*	4	16	50	40	5/7/4/3	A	A-	No	Remove	State	staked
6	western sycamore	*Platanus racemosa*	6.2	20	80	40	9/9/10/9	A	A	No	Remove	State	
7	western sycamore	*Platanus racemosa*	5.4	20	80	40	6/7/8/8	C	C	No	Remove	State	mechanical damage, decay at base, canker at base, still leafing out, sparse canopy
8	western sycamore	*Platanus racemosa*	7.5	25	80	40	8/10/12/11	A	A	No	Remove	State	
ST9	western sycamore	*Platanus racemosa*	7	22	80	40	10/9/10/11	A	A	ROW	Remove	ROW	staked
ST10	western sycamore	*Platanus racemosa*	5.8	18	80	40	11/11/10/10	A	B	ROW	Remove	ROW	staked, stakes causing damage, leans north

Tree #	Common Name	Botanical Name	Diameterat 4.5 feet (DBH)* in inches	Height (feet)	Height at Maturity (feet)	Height That Tree Cannot Exceed for 5' Clearance	Canopy Spread (N/E/S/W) in feet	Health	Structure	"Protected", "ROW" or "Significant"	Disposition	Jurisdiction	Comments
ST11	western sycamore	*Platanus racemosa*	6.1	20	80	40	7/9/8/9	A-	A	ROW	Remove	ROW	
ST12	western sycamore	*Platanus racemosa*	6.6	23	80	40	11/10/8/7	A-	A	ROW	Remove	ROW	staked
ST13	western redbud	*Cercis occidentalis*	1, 1, 1, 1, 1, 1.5, 1.5 (8" cumulative)	7	20	40	4/1/2/4	B+	B+	ROW	Remove	ROW	measured at base
14	western sycamore	*Platanus racemosa*	7.5	17	80	40	7/12/9/7	A	A-	No	Remove	State	slight lean, stake still attached, curled leaves
15	western sycamore	*Platanus racemosa*	10.2	21	80	40	13/12/13/11	A	A-	No	Remove	State	
ST16	western redbud	*Cercis occidentalis*	1.5, 1.5, 1.5, 1.5, 2, 2, 2 (12" cumulative)	7	20	35	4/3/4/4	A	A	ROW	Remove	ROW	diameters measured at 1.5 ft.
17	forest pansy redbud	*Cercis canadensis*	3.2	12	30	40	7/7/9/8	A	A	No	Remove	State	staked
18	forest pansy redbud	*Cercis canadensis*	4	12	30	40	5/9/7/6	A	A	No	Remove	State	staked
19	forest pansy redbud	*Cercis canadensis*	2.6	10	30	40	6/6/5/6	B-	A-	No	Remove	State	staked, some bleeding, excessive galls
20	forest pansy redbud	*Cercis canadensis*	2.6	10	30	40	4/10/8/4	B	A-	No	Remove	State	staked, excessive galls
21	forest pansy redbud	*Cercis canadensis*	2.3	10	30	40	6/5/6/7	B+	A	No	Remove	State	some bleeding

Tree #	Common Name	Botanical Name	Diameterat 4.5 feet (DBH)* in inches	Height (feet)	Height at Maturity (feet)	Height That Tree Cannot Exceed for 5' Clearance	Canopy Spread (N/E/S/W)in feet	Health	Structure	"Protected", "ROW" or "Significant"	Disposition	Jurisdiction	Comments
22	forest pansy redbud	*Cercis canadensis*	3.4	10	30	40	7/9/8/4	A	A	No	Remove	State	
23	western sycamore	*Platanus racemosa*	4.7	21	80	30	8/8/10/9	C	B	No	Remove	State	staked, epicormic growth, curly leaves, sparse, moderate to extensive dieback
24	western sycamore	*Platanus racemosa*	2.8	15	80	30	5/5/5/5	A	A	No	Remove	State	planted as group
25	western sycamore	*Platanus racemosa*	3.5	18	80	30	6/6/5/5	A	A	No	Remove	State	planted as group

***Notes*:** Definitions for 'Health' and 'Structure' ratings are provided at the end of this report.

Trees #88-120 at Dodger Stadium, all private property trees, are not of a protected species as set forth in the City of Los Angeles' Tree Protection Ordinance No. 186,873, and therefore health and structure information and canopy spreads were not required to be evaluated or measured.

Canopy measurement directions are N, E, S, W; additional cardinal directions are included when appropriate.

DBH – Diameter at Breast Height – A forestry term used to describe a tree's trunk diameter measured at 4.5 feet above grade. Often used as a representation of tree size.

BT – Brown Trunk. Because palms do not typically increase in trunk diameter as they age, they are measured in "Brown Trunk Height," the distance between grade and the newest emerging spear.

COD – Column of decay
ISHB – Invasive shot hole borer
HOB – History of breakage
MPE – Multiple pruning events
OS – Off-site tree
SS – Stump sprouts
ST – City of Los Angeles right-of-way tree (street tree)
PP – Private property tree
ROW – City of Los Angeles right-of-way tree
State – Los Angeles State Historic Park tree
Caltrans – California Department of Transportation (Caltrans) tree

HEALTH AND STRUCTURE GRADE DEFINITIONS

Health and structure ratings of the trees are based on the archetype tree of the same species through a subjective evaluation of its physiological health, aesthetic quality, and structural integrity.

Overall physiological condition (health) and structural condition were rated A-F:

Health

A. Outstanding – Exceptional trees of good growth form and vigor for their age class; exhibiting very good to excellent health as evidenced by normal to exceptional shoot growth during current season, good bud development and leaf color, lack of leaf, twig or branch dieback throughout the crown, and the absence of decay, bleeding, or cankers. Common leaf and/or twig pests may be noted at very minor levels.

B. Above average – Good to very good trees that exhibit minor necrotic or physiological symptoms of stress and/or disease; shoot growth is less than reasonably expected, leaf color is less than optimal in some areas, the crown may be thinning, minor levels of leaf, twig, and branch dieback may be present, and minor areas of decay, bleeding, or cankers may be manifesting. Minor amounts of epicormic growth may be present. Minor amounts of fire damage or mechanical damage may be present. Still healthy, but with moderately diminished vigor and vitality. No significant decline noted.

C. Average – Average, moderately good trees whose growth habit and physiological or fire-induced symptoms indicate an equal chance to either decline or continue with good health into the near future. Most of these trees exhibit moderate to significant small deadwood in outer crown areas, decreased shoot growth and diminished leaf color and mass. Some stem and branch dieback is usually present and epicormic growth may be moderate to extensive. Cavities, pockets of decay, relatively significant fire damage, bark exfoliation, or cracks may be present. Moderate to significant amounts of insect or disease symptoms may be present; the tree may be shaded or crowded in such a way that it is expected to negatively impact the lifespan of the tree. Tree may be in early decline.

D. Below Average/Poor - trees whose growth habit and physiological or fire-induced symptoms indicate significant, irreversible decline. Most of these trees exhibit significant dieback of wood in the crown, possibly accompanied by significant epicormic sprouting. Shoot growth and leaf color and mass is either significantly diminished or nonexistent throughout the crown. Cavities, pockets of decay, significant fire damage, bark exfoliation, and/or cracks may be present. Significant amounts of insect or disease symptoms may be present; the tree may be shaded or crowded in such a way that it has negatively impacted the lifespan of the tree. Tree appears to be in irreversible decline.

F. Dead or in spiral of decline – this tree exhibits very little to no signs of life.

Structure

A. Outstanding – Trees with outstanding structure for their species exhibit trunk and branch arrangement and orientation that result in a sturdy form or architecture that resists failure under normal circumstances. The spacing, orientation, and size of the branches relative to the trunk are quintessential for the species and free from defects. No outward sign of decay or pathological disease is present. Some trees exhibit naturally inherent branching defects, like multiple, narrow points of attachment from one point on the trunk, which would preclude them from achieving an “A” grade.

B. Above average - Trees with good to very good structure for their species. They exhibit trunk and branch arrangement and orientation that result in a relatively sturdy form or architecture that resists failure under

normal circumstances, but may have some mechanical damage, over-pruning, or other minor structural defects. The spacing, orientation, and size of the branches relative to the trunk are still in the normal range for the species, but they exhibit a minor degree of defects. Minor, sub-critical levels of decay or pathological disease may be present, but the degree of damage is not yet structurally significant. Trees that exhibit naturally inherent branching defects, like multiple, narrow points of attachment from one point on the trunk, would generally fall in to this category. A small percentage of the canopy may be shaded or crowded, but not in such a way that it is expected to negatively impact the structural integrity or lifespan of the tree.

C. Average - Trees with moderately good structure for their species, but with obvious defects. They exhibit trunk and branch arrangement and orientation that result in a less than sturdy form or architecture, which reduces their resistance to failure under normal circumstances. Moderate levels of mechanical damage, over-pruning, or other structural defects may be present. The spacing, orientation, and size of some of the branches relative to the trunk are not in the normal range for the species. Moderate to significant levels of decay or pathological disease may be present that increase the likelihood of structural instability. Influences such as an excessive trunk lean, slope erosion, root pruning, or other growth-inhibiting factors may be present. A moderate to significant percentage of the canopy may be shaded or crowded in such a way that it is expected to negatively impact the structural integrity or lifespan of the tree. Risk of full or partial failure in the near future appears to be moderately elevated.

D. Well Below Average/Poor - Trees poor structure for their species and with obvious defects. They exhibit trunk and branch arrangement and orientation that result in a significantly less than sturdy form or architecture, significantly reducing their resistance to failure under normal circumstances. Significant levels of mechanical damage, over-pruning, or other structural defects may be present. The spacing, orientation, and size of many of the branches relative to the trunk are not in the normal range for the species. Significant levels of decay or pathological disease may be present that increase the likelihood of structural instability. Influences such as an excessive trunk lean, slope erosion, root pruning, or other growth-inhibiting factors may be present. A significant percentage of the canopy may be shaded or crowded in such a way that it is expected to negatively impact the structural integrity or lifespan of the tree. Risk of full or partial failure in the near future appears to be advanced.

F. Severely Compromised – trees with very poor structure and numerous or severe defects due to growing conditions, historical or recent pruning, mechanical damage, history of limb or trunk failures, advanced and irreparable decay, disease, or severe fire damage. Trees with this rating are in severe, irreparable decline, or are barely alive. Risk of full or partial failures in the near future may be severe.

ARBORIST DISCLOSURE STATEMENT

Arborists are tree specialists who use their education, knowledge, training and experience to examine trees, recommend measures to enhance the beauty and health of trees, and attempt to reduce the risk of living near trees. Clients may choose to accept or disregard the recommendations of the arborist, or to seek additional advice.

Arborists cannot detect every condition that could possibly lead to the structural failure of a tree. Trees are living organisms that fail in ways we do not fully understand. Conditions are often hidden within trees and below ground. Arborists cannot guarantee that a tree will be healthy or safe under all circumstances, or for a specified period of time. Likewise, remedial treatments, like any medicine, cannot be guaranteed.

Treatment, pruning and removal of trees may involve considerations beyond the scope of the arborist's services such as property boundaries, property ownership, site lines, disputes between neighbors, and other issues. Arborists cannot take such considerations into account unless complete and accurate information is disclosed to the arborist. An arborist should then be expected to reasonably rely upon the completeness and accuracy of the information provided.

Trees contribute greatly to our enjoyment and appreciation of life. Nonetheless, they are subject to the laws of gravity and physiological decline. Therefore, neither arborists nor tree owners can be reasonably expected to warrant unfailing predictability or elimination of risk.

Trees can be managed, but they cannot be controlled. To live near trees is to accept some degree of risk. The only way to eliminate all risk associated with trees is to eliminate all trees.

Risk assessments were neither requested nor performed on any of the trees for this project.

Re: LA ART: Avocado Tree at 451 Savoy Street, Los Angeles, CA 90012

Dear Ms. Avila,

This letter provides my desktop review and determination of the existing and potential ultimate height of an avocado tree located at 451 Savoy Street in Los Angeles, California as it pertains to the proposed Project.

Based on the photographs provided to me as well as those accessed in Google images included on page 2, the subject avocado tree is between 30 and 40 feet in height. According to Cal Poly's SelecTree website (https://selectree.calpoly.edu/tree-detail/992), the maximum height of any variety of avocado is 40 feet. The tree's trunk diameter (approximated at 4.5 feet above grade; industry standard measurement) is between 20 and 24 inches in diameter, indicating that this is a mature tree. Any increase in height would be negligible.

SCJ Alliance, the proposed Project's gondola systems engineer, confirmed that the height of the bottom of the cabins adjacent to the avocado tree location is approximately 52 feet above the ground. There is no planned ground disturbance at 451 Savoy Street.

In my professional opinion, the aerial gondola project will have no above- or below-ground effect on the avocado tree. Because of the considerable distance from the tree to the cabin, no pruning would be necessary prior to construction or during Project operations.

Please feel welcome to contact me if you have any questions.

Sincerely,

Cy Carlberg, Registered Consulting Arborist

Appendix L
3S Sound Measurements Memo

To: Mike Deiparine, SCJ Alliance

From: Frederic Demoulin, Leitner Poma of America

Date: July 5th, 2023

Subject: 3S Sound Measurements

Following your inquiries on operational sounds from 3S ropeway systems, we have some relevant measurements we can share with you. The measurements were taken outside the station and near towers of a 3S system in Tyrol, Austria at the Stubai Glacier. This 3S system includes 48 gondola cabins and has a cabin capacity of 32 passengers. The towers are all support towers and the system utilizes slack carriers. The drive system for this 3S system is an above-ground drive motor and bullwheel. The station also includes a return bullwheel. You may find these characteristics similar to how you have described your proposed system, which we understand would use an operating speed of 6 m/s. System operations were coordinated with the measurement activities.[1]

The following table lists the location of measurements taken near the station (0 degrees is along the lift line) and the sound pressure levels measured. For this table, all measurements were taken at an operating speed of 6 m/s.

Station Sound Measurements

Measurement Location Description	***Measured L_{eq}, dBA***
Outside of Station 0 degrees at 50 meters	51
Outside of Station 30 degrees at 35 meters	52.6
Outside of Station 45 degrees at 35 meters	53.7
Outside of Station 0 degrees at 50 meters	50.9
Outside of Station 30 degrees at 35 meters	52.6
Outside of Station 45 degrees at 35 meters	55.6
Outside of Station 0 degrees at 20 meters	58.9
Outside of Station 90 degrees at 20 meters	54.5

The following table lists the location of measurements taken near one of the towers at varying operating speeds and two distances *from the tower head*.

[1] While system operations were coordinated with the measurement activities other noise sources may also be reflected in these noise measurements.

Tower Sound Measurements

Measurement Location Description	*Line Speed (meters per second)*	*Measured L_{eq}, dBA*
Tower 90 degrees at 20 meters	7	60.1
Tower 90 degrees at 20 meters	6	55.3
Tower 90 degrees at 20 meters	5	52.6
Tower 90 degrees at 20 meters	4	47.4
Tower 30 degrees at 30 meters	7	57.0

Source: Kimley-Horn, 2023

[1] Review of the Phase I Environmental Site Assessment (DEIR, Appendix K) determined that two of the six Project sites, Alameda Tower and Dodger Stadium Station, did not have any Recognized Environmental Concerns nor were these sites identified in the Environmental Database Report. Based on this information, the soils from these sites were assumed suitable for reuse or other disposal and would not need to be transported to a non-hazardous or hazardous waste landfill. Accordingly, the CalEEMod® default hauling trip length of 20 miles was assumed for exported material from those proposed Project sites.

[2] Refer to Draft EIR Appendix B, Construction Assumptions, at 5.

[3] Kimley-Horn identified three landfills, Azusa Landfill (approximately 21.5 miles from the furthest proposed Project site), Chiquita Canyon Landfill (approximately 39.1 miles from the furthest proposed Project site), and Waste Management Simi Valley Landfill (approximately 42.3 miles from the furthest proposed Project site) as potential disposal locations for impacted, non-hazardous material. As a conservative assumption, it was assumed that all impacted material in this category would be transported to the Waste Management Simi Valley Landfill.

[4] Kimley-Horn identified two landfills, Waste Management Kettleman Hills Landfill (approximately 177 miles from the furthest proposed Project site) and Clean Harbors Buttonwillow Landfill (approximately 139 miles from furthest proposed Project site), as potential disposal locations for non-RCRA and RCRA hazardous waste. As a conservative assumption, it was assumed that all impacted material in this category would be transported to the Waste Management Kettleman Hills Landfill.

[5] Based on analytical results from samples previously collected at the site (available in Draft EIR Appendix K, Phase I Environmental Site Assessment), Kimley-Horn conservatively assumed exported material associated with this proposed Project site would be disposed of at a landfill capable of receiving non-hazardous waste.

[6] While the proposed location of the Alpine Tower (901 North Main Street) was identified in certain compliance related databases, the Phase I Environmental Site Assessment concluded that "[b]ased on the lack of violations and/or listings in other databases indicating a release to soil or groundwater, the site is not considered to present a REC to the proposed Project." Notwithstanding, as a conservative assumption, it was assumed exported material associated with this proposed Project site would be disposed of at a landfill capable of receiving non-hazardous waste.

[7] Based on the information available in Draft EIR Appendix K, Phase I Environmental Site Assessment, Kimley-Horn estimated the length, width, and depth of excavation of material that may potentially require disposal at a landfill as waste. Concentrations of TPH-o in impacted soils beneath and adjacent to the former hydraulic lifts at 1201 N. Broadway range from 6,700 – 27,000 mg/kg. Kimley-Horn assumed half of the estimated volume has concentrations less than 10,000 milligrams per kilogram [mg/kg] (criterion whether the soil requires disposal at a landfill capable of receiving hazardous material), and the remainder could exceed 10,000 mg/kg. Soils impacted with toluene, ethylbenzene, and xylenes associated with the location of the former UST were conservatively assumed to exceed applicable criteria, and conservatively assumed to require disposal as hazardous waste.

[8] Based on the information available in Draft EIR Appendix K, Phase I Environmental Site Assessment, Kimley-Horn estimated the length, width, and depth of excavation of material that may potentially require disposal at a landfill as waste. Although concentrations were not provided, based on the description of heavy metals in near-surface soils, Kimley-Horn conservatively assumed a volume equal to the top one foot of the construction footprint would need to be disposed of as hazardous waste. The remainder of the volume of exported material in connection with development of this site was conservatively assumed to be disposed of as non-hazardous waste.

Appendix N
Additional Separation Buffer

JENSEN HUGHES

Date: September 27, 2023

To: Kim Avila, AICP ENV SP
Kimley-Horn

From: Isaac D. Martinez, PE, Senior Fire Protection Engineer

RE: LA ART: Additional Separation Buffer

Jensen Hughes is recognized worldwide for our leadership in fire protection engineering. Jensen Hughes has advised on the proposed Project since August 2020.

SCJ Alliance, the proposed Project's gondola systems engineer, has provided Jensen Hughes with the horizontal clearance for the proposed Project. Industry standards for the design and operation of ropeways and cabins are documented in the American National Standards Institute (ANSI) Standard B77.1, which is developed in coordination with manufacturers, consumers, and regulators. ANSI B77.1 regulates vertical and horizontal clearances between the ropeway and cabins to elements such as vehicles, pedestrians, vegetation, buildings, and other structures. ANSI B77.1 provides minimum clearance requirements depending on the nature of the element and whether the clearance is vertical or horizontal. To define the width of the ropeway path which must be clear of elements, the horizontal clearance outside of the cabin paths as required by the ANSI B77.1 safety standard for passenger ropeways was used. ANSI B77.1 includes two criteria, both of which must be met, for horizontal clearance between the cabin and an adjacent element: when hanging vertically, the cabins must be no closer than five feet to any obstruction that is not part of the ropeway system; and when the cabins are tilted within a prescribed range (as from wind), the cabins must not come into contact with anything. In consultation with SCJ Alliance, the proposed Project's gondola systems engineer, for the proposed Project, as determined the five-foot requirement is slightly wider than the swing requirement, so the five-foot requirement controls the design path width. The proposed Project would include five feet on each side of the vertically hanging cabins for a required aerial clearance width of 53 feet 2 inches. For purposes of determining the potential Additional Separation Buffer, Jensen Hughes utilized the required aerial clearance width of 53 feet 2 inches.

Beyond the ANSI-required aerial clearance, we have considered potential adjacent separation that may be included due to fire exposure from adjacent buildings, structures, or uses to the proposed Project's ropeway and cabins. Based on the current design, the Additional Separation Buffer is estimated to be approximately 10 feet on each side of the aerial clearance width based on applicable standards, requirements, building codes, and guidelines. The proposed Project's Additional Separation Buffer would comply with the applicable standards, requirements, building codes, and guidelines as determined by the City of Los Angeles and Metro. The final width of the Additional Separation Buffer would be determined by the appropriate agencies during the permitting process for the proposed Project.

Appendix O
Supplemental Graphics of Proposed Alignment Plan and Profile

1.0 INTRODUCTION

The purpose of this Appendix O is to provide supplemental graphics as to the proposed Project alignment plan and profile, in response to comments on Appendix Q, Proposed Alignment Plan and Profile, of the Draft EIR. Some commenters stated that the graphics included in Appendix Q are difficult to read, due to the scale of the graphics. All graphics from Appendix Q of the Draft EIR have been included in this Appendix O, in addition to the supplemental graphics described below provided for informational purposes.

These supplemental graphics are larger-scale insets of the graphics originally provided in Appendix Q of the Draft EIR. No changes to the graphics from Appendix Q were made.

Supplemental Graphics of Proposed Project Alignment Maps

This Appendix O provides supplemental graphics of the Draft EIR Appendix Q proposed Project alignment maps, listed below, with larger scale insets A through D for each map, provided for informational purposes:

- **Map 1:** ANSI Requirements and Additional Separation Buffer Along Proposed Project Alignment Depicting ANSI Requirements and Additional Separation Buffer;
- **Map 2**: ANSI Requirements and Additional Separation Buffer Along Proposed Project Alignment Depicting Public ROW | Publicly-Owned Property and Private Property;
- **Map 3**: ANSI Requirements and Additional Separation Buffer Along Proposed Project Alignment Depicting Public ROW | Publicly-Owned Property and Private Property for which Project Sponsor has an Arrangement for Aerial Rights, and Private Property for which Project Sponsor Does Not have an Arrangement for Aerial Rights; and
- **Map 4**: ANSI Requirements and Additional Separation Buffer Along Proposed Project Alignment Depicting Respective Ownership of Public Property and Private Property; and the Profile.

Supplemental Graphics of Proposed Project Alignment Profile

This Appendix O also provides supplemental graphics of the Draft EIR Appendix Q proposed Project alignment profile graphic, with larger-scale insets A through D, provided for informational purposes.

Appendix P
Design Option A Plan and Profile

1.0 INTRODUCTION

The purpose of this Appendix P is to provide additional detail and graphics as to the Design Option A alignment, including portions of the alignment over public ROW, publicly owned property, and private properties. Design Option A includes a shift in the overall Project alignment between the Broadway Junction and Dodger Stadium Station to avoid aerial rights requirements over 451 E. Savoy Street. Under Design Option A, the portion of the proposed Project alignment between the Alameda Station up to the Broadway Junction is the same as under the proposed Project. This shift in the alignment is shown in the graphics provided in this Appendix P.

This Appendix P provides graphics of the Design Option A alignment maps, listed below, with larger scale insets A through D for each map, provided for informational purposes:

- **Map 1:** ANSI Requirements and Additional Separation Buffer Along Design Option A Alignment Depicting ANSI Requirements and Additional Separation Buffer;
- **Map 2**: ANSI Requirements and Additional Separation Buffer Along Design Option A Alignment Depicting Public ROW | Publicly-Owned Property and Private Property;
- **Map 3**: ANSI Requirements and Additional Separation Buffer Along Design Option A Alignment Depicting Public ROW | Publicly-Owned Property and Private Property for which Project Sponsor has an Arrangement for Aerial Rights, and Private Property for which Project Sponsor Does Not have an Arrangement for Aerial Rights; and
- **Map 4**: ANSI Requirements and Additional Separation Buffer Along Design Option A Alignment Depicting Respective Ownership of Public Property and Private Property; and the Profile.

This Appendix P also provides Design Option A aerial rights over property graphics.

This Appendix P also provides graphics of the Design Option A alignment profile graphic, with larger-scale insets A through D, provided for informational purposes.

Appendix Q
Design Option B Plan and Profile

1.0 INTRODUCTION

The purpose of this Appendix Q is to provide additional detail and graphics as to the Design Option B alignment, including portions of the alignment over public ROW, publicly owned property, and private properties. Design Option B consists of a 50-foot overall height increase at the Alameda Tower, and the removal of Alpine Tower from the proposed Project between the Alameda Station and the Chinatown/State Park Station. Under Design Option B, the portion of the proposed Project alignment from the Chinatown/State Park Station to the Dodger Stadium Station is the same as under the proposed Project. This change to the proposed Project components is shown in the graphics in this Appendix Q.

This Appendix P provides graphics of the Design Option B alignment maps, listed below, with larger scale insets A through D for each map, provided for informational purposes:

- **Map 1:** ANSI Requirements and Additional Separation Buffer Along Design Option B Alignment Depicting ANSI Requirements and Additional Separation Buffer;
- **Map 2**: ANSI Requirements and Additional Separation Buffer Along Design Option B Alignment Depicting Public ROW | Publicly-Owned Property and Private Property;
- **Map 3**: ANSI Requirements and Additional Separation Buffer Along Design Option B Alignment Depicting Public ROW | Publicly-Owned Property and Private Property for which Project Sponsor has an Arrangement for Aerial Rights, and Private Property for which Project Sponsor Does Not have an Arrangement for Aerial Rights; and
- **Map 4**: ANSI Requirements and Additional Separation Buffer Along Design Option B Alignment Depicting Respective Ownership of Public Property and Private Property; and the Profile.

This Appendix Q also provides Design Option B aerial rights over property graphics.

This Appendix Q also provides graphics of the Design Option B alignment profile graphic, with larger-scale insets A through D, provided for informational purposes.

Summary Graphic Showing Approximate Locations for Information Purposes

Address:

1028 N. Alameda St

Aerial Rights Over Property:

ANSI* Required Aerial Rights: 1,250 sqft

Additional Separation Buffer***

Approximate Heights:

Cable Height: 196 ft

Bottom of Cabin Height: 175 ft

*American National Standards Institute (ANSI) Standard B77.1 regulates vertical and horizontal clearances between the ropeway and cabins to "elements" such as vehicles, pedestrians, vegetation, buildings, and other structures.

**All areas are approximate and are rounded up to the nearest ten.

***Based on the current design, the estimated Additional Separation Buffer is approximately 1,480 square feet. The final Additional Separation Buffer would be determined by the appropriate agencies during the proposed Project permitting process.

Summary Graphic Showing Approximate Locations for Information Purposes

LA ART | Aerial Rights Over Property (Design Option B)

Address:

903 N. Main St

Aerial Rights Over Property:

ANSI* Required Aerial Rights: 2,510 sqft

Additional Separation Buffer***

Approximate Heights:

Cable Height: 153 ft

Bottom of Cabin Height: 132 ft

*American National Standards Institute (ANSI) Standard B77.1 regulates vertical and horizontal clearances between the ropeway and cabins to "elements" such as vehicles, pedestrians, vegetation, buildings, and other structures.

**All areas are approximate and are rounded up to the nearest ten.

***Based on the current design, the estimated Additional Separation Buffer is approximately 1,530 square feet. The final Additional Separation Buffer would be determined by the appropriate agencies during the proposed Project permitting process.

Summary Graphic Showing Approximate Locations for Information Purposes

LA ART | Aerial Rights Over Property (Design Option B)

Address:

901 N. Main St

Aerial Rights Over Property:

ANSI* Required Aerial Rights: 2,430 sqft

Additional Separation Buffer***

Approximate Heights:

Cable Height:	127 ft
Bottom of Cabin Height:	106 ft

*American National Standards Institute (ANSI) Standard B77.1 regulates vertical and horizontal clearances between the ropeway and cabins to "elements" such as vehicles, pedestrians, vegetation, buildings, and other structures.

**All areas are approximate and are rounded up to the nearest ten.

***Based on the current design, the estimated Additional Separation Buffer is approximately 900 square feet. The final Additional Separation Buffer would be determined by the appropriate agencies during the proposed Project permitting process.

Summary Graphic Showing Approximate Locations for Information Purposes

LA ART | Aerial Rights Over Property (Design Option B)

Address:

130 Bruno St

Aerial Rights Over Property:

ANSI* Required Aerial Rights: 800 sqft

Additional Separation Buffer***

Approximate Heights:

Cable Height: 153 ft

Bottom of Cabin Height: 132 ft

*American National Standards Institute (ANSI) Standard B77.1 regulates vertical and horizontal clearances between the ropeway and cabins to "elements" such as vehicles, pedestrians, vegetation, buildings, and other structures.

**All areas are approximate and are rounded up to the nearest ten.

***Based on the current design, the estimated Additional Separation Buffer is approximately 1,520 square feet. The final Additional Separation Buffer would be determined by the appropriate agencies during the proposed Project permitting process.

Summary Graphic Showing Approximate Locations for Information Purposes

LA ART | Aerial Rights Over Property (Design Option B)

Address:
130 W. College St

Aerial Rights Over Property:
ANSI* Required Aerial Rights: 0 sqft
Additional Separation Buffer***

Approximate Heights:
Cable Height: 71 ft
Bottom of Cabin Height: 50 ft

*American National Standards Institute (ANSI) Standard B77.1 regulates vertical and horizontal clearances between the ropeway and cabins to "elements" such as vehicles, pedestrians, vegetation, buildings, and other structures.
**All areas are approximate and are rounded up to the nearest ten.
***Based on the current design, the estimated Additional Separation Buffer is approximately 940 square feet. The final Additional Separation Buffer would be determined by the appropriate agencies during the proposed Project permitting process.

Summary Graphic Showing Approximate Locations for Information Purposes

LA ART | Aerial Rights Over Property (Design Option B)

Address:

1251 N. Spring St

Aerial Rights Over Property:

ANSI* Required Aerial Rights: 3,730 sqft

Additional Separation Buffer***

Approximate Heights:

Cable Height:	65 ft
Bottom of Cabin Height:	44 ft

*American National Standards Institute (ANSI) Standard B77.1 regulates vertical and horizontal clearances between the ropeway and cabins to "elements" such as vehicles, pedestrians, vegetation, buildings, and other structures.

**All areas are approximate and are rounded up to the nearest ten.

***Based on the current design, the estimated Additional Separation Buffer is approximately 1,480 square feet. The final Additional Separation Buffer would be determined by the appropriate agencies during the proposed Project permitting process.

Summary Graphic Showing Approximate Locations for Information Purposes

LA ART | Aerial Rights Over Property (Design Option B)

Address:
1201 N. Broadway^

Aerial Rights Over Property:
ANSI* Required Aerial Rights: 14,570 sqft
Additional Separation Buffer***

Approximate Heights:
Cable Height: 67 ft
Bottom of Cabin Height: 46 ft

Footprint Within Property:
Footprint: 1,460 sqft

Structure Above Within Property:
Projected Area: 8,280 sqft

^Project Sponsor has an arrangement with the property owner for aerial rights.
*American National Standards Institute (ANSI) Standard B77.1 regulates vertical and horizontal clearances between the ropeway and cabins to "elements" such as vehicles, pedestrians, vegetation, buildings, and other structures.
**All areas are approximate and are rounded up to the nearest ten.
***Based on the current design, the estimated Additional Separation Buffer is approximately 4,190 square feet. The final Additional Separation Buffer would be determined by the appropriate agencies during the proposed Project permitting process.

Summary Graphic Showing Approximate Locations for Information Purposes

LA ART | Aerial Rights Over Property (Design Option B)

Address:

455 Savoy St^

Aerial Rights Over Property:

ANSI* Required Aerial Rights: 4,980 sqft

Additional Separation Buffer***

Approximate Heights:

Cable Height: 70 ft

Bottom of Cabin Height: 49 ft

^Project Sponsor has an arrangement with the property owner for aerial rights.
*American National Standards Institute (ANSI) Standard B77.1 regulates vertical and horizontal clearances between the ropeway and cabins to "elements" such as vehicles, pedestrians, vegetation, buildings, and other structures.
**All areas are approximate and are rounded up to the nearest ten.
***Based on the current design, the estimated Additional Separation Buffer is approximately 0 square feet. The final Additional Separation Buffer would be determined by the appropriate agencies during the proposed Project permitting process.

Summary Graphic Showing Approximate Locations for Information Purposes

LA ART | Aerial Rights Over Property (Design Option B)

Address:

451 Savoy St

Aerial Rights Over Property:

ANSI* Required Aerial Rights: 1,170 sqft

Additional Separation Buffer***

Approximate Heights:

Cable Height: 70 ft

Bottom of Cabin Height: 49 ft

*American National Standards Institute (ANSI) Standard B77.1 regulates vertical and horizontal clearances between the ropeway and cabins to "elements" such as vehicles, pedestrians, vegetation, buildings, and other structures.

**All areas are approximate and are rounded up to the nearest ten.

***Based on the current design, the estimated Additional Separation Buffer is approximately 1,330 square feet. The final Additional Separation Buffer would be determined by the appropriate agencies during the proposed Project permitting process.

Summary Graphic Showing Approximate Locations for Information Purposes

LA ART | Aerial Rights Over Property (Design Option B)

Address:
1800 W Stadium Way^

Aerial Rights Over Property:
- ANSI* Required Aerial Rights: 25,700 sqft
- Additional Separation Buffer***

Approximate Heights:

Cable Height:	60 ft
Bottom of Cabin Height:	39 ft

Footprint Within Property:

Total Footprint:	28,640 sqft
Station Footprint:	27,770 sqft
Tower Footprint:	870 sqft

Structure Above Within Property:

Total Projected Area:	18,500 sqft
Station Projected Area:	16,020 sqft
Tower Projected Area:	2,480 sqft

Landscape Area Within Property:

Footprint:	61,410 sqft

^Project Sponsor has an arrangement with the property owner for aerial rights
*American National Standards Institute (ANSI) Standard B77.1 regulates vertical and horizontal clearances between the ropeway and cabins to "elements" such as vehicles, pedestrians, vegetation, buildings, and other structures.
**All areas are approximate and are rounded up to the nearest ten.
***Based on the current design, the estimated Additional Separation Buffer is approximately 9,660 square feet. The final Additional Separation Buffer would be determined by the appropriate agencies during the proposed Project permitting process.
****The Landscaped Area adjacent to the Esplanade could also be maintained in its existing condition as parking and/or for vehicle circulation.
